SIXTY-FOURTH CONGRESS,
FIRST SESSION.

VOLUME LIII, PART 6.

(PAGES 5201 TO 6256.)

Congressional Record.

PROCEEDINGS AND DEBATES OF THE SIXTY-FOURTH CONGRESS, FIRST SESSION.

SENATE.

FRIDAY, *March 31, 1916.*

(Legislative day of Thursday, March 30, 1916.)

The Senate reassembled at 12 o'clock meridian, on the expiration of the recess.

NATIONAL DEFENSE.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States.

Mr. CHAMBERLAIN. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Beckham	Hollis	O'Gorman	Stone
Brandegee	Johnson, S. Dak.	Overman	Sutherland
Burleigh	Kenyon	Page	Swanson
Catron	Kern	Pomerene	Taggart
Chamberlain	Lane	Shafroth	Thomas
Clapp	Lippitt	Sheppard	Tillman
Colt	McCumber	Sherman	Underwood
Culberson	McLean	Simmons	Vardaman
Cummins	Martin, Va.	Smith, Ga.	Wadsworth
Curtis	Martine, N. J.	Smith, Md.	Warren
Gallinger	Myers	Smith, Mich.	Weeks
Gronna	Nelson	Smith, S. C.	Williams
Hardwick	Norris	Sterling	Works

Mr. HOLLIS. I desire to announce that the senior Senator from Maine [Mr. JOHNSON] is necessarily absent. This announcement may stand for the day.

Mr. KERN. I wish to announce the unavoidable absence of the senior Senator from Florida [Mr. FLETCHER]. He is paired with the Senator from Idaho [Mr. BRADY]. This announcement may stand for the day.

I desire also to announce the unavoidable absence of the Senator from Arizona [Mr. SMITH] on account of illness. This announcement may stand for the day.

The VICE PRESIDENT. Fifty-two Senators have answered to the roll call. There is a quorum present. The pending amendment is the amendment offered by the Senator from Iowa [Mr. CUMMINS].

Mr. CHAMBERLAIN. I understood the Senator from Iowa [Mr. CUMMINS] had the floor, but he stated to me a little while ago that he is going to yield to the Senator from Colorado [Mr. THOMAS], who gave notice that he would speak today on this subject.

Mr. CUMMINS. While the amendment I have offered is pending the Senator from Colorado has given notice of an address this morning, and I will be very glad, as far as I am concerned, to take the floor after he has finished.

Mr. THOMAS. I thank the Senator.

Mr. NELSON. Will the Senator from Colorado yield to me for a moment?

Mr. THOMAS. Certainly.

Mr. NELSON. I have an amendment to offer to the pending bill, and I should like to present it and have it printed and lie on the table.

The VICE PRESIDENT. It will be so ordered.

Mr. THOMAS. Mr. President, the bill reported by the Senate Committee on Military Affairs and which is now the unfinished business is designed, as far as the committee was able to do so, to meet present requirements and establish a method of progressive increase of the Army. Its companion bill will be that offered by the Committee on Naval Affairs and designed to accomplish a similar end as to that branch of the service.

This bill has been framed with much care and after full information from all points of view. To the distinguished chairman of the committee belongs the chief credit for framing the measure as it has been presented and for a patient investigation of all those details which are essential to any well-prepared scheme of Army organization.

It is not a perfect measure; but, as far as it is possible for human foresight to safeguard the present and care for the future, with a due regard to the general public requirements, we believe it to be as near to what the Congress should do as is possible under all the circumstances.

Some of its provisions do not appeal to me and some others are not so desirable as companion propositions appearing in the House bill. Time may demonstrate that it has many deficiencies not now observable, but these fortunately can be corrected by additional legislation as the demands of the future may require. We are confident that it is free from the reproach of partisanship and that it is the composite result of an earnest desire upon the part of all members of the committee, without regard to politics or party affiliation, to give to the Senate a bill which it can accept with some confidence that it will be practical and successful in operation.

And, indeed, Mr. President, though its imperfections may be many, I am sure that it will monopolize the resources of the department for its development for some time to come, and that through the process of development experiences will be gained and deficiencies discovered which, as I have stated, can and will be remedied by future legislation.

The bill, Mr. President, will not satisfy the extremists in either direction, and particularly those who demand a very large Army and an equipment little, if any, below those of military nations. Cecil said many years ago that "to have too much forethought is the part of a wretch; to have too little is the part of a fool."

I have little sympathy, Mr. President, with the views of extremists upon the subject of preparedness in either direction. At the same time I respect their convictions, and, with the exception of some of the militarists, for their sincerity.

The fact, however, that it does not meet the expectations of these representatives of part of the public sentiment of the country will doubtless result in a challenge of the efficiency of the bill, and therefore it must be justified by its sponsors. Hence the reasons assigned for a larger establishment than this bill provides requires some discussion, for if they are sound, if there is a menace of danger to the country in the immediate future as real as many declare and as some believe, then, of course, this Nation should go upon a war footing as soon as possible and the proposed measure either be amended, very largely transformed in fact, or rejected altogether. For modern wars, Mr. President, are those of nations and not of armies. In the great conflict now raging across the seas every resource of every nation has been marshalled into action, and the fighting and firing line are coterminous in some instances with the boundaries of empires; in others they stretch so far that flanking movements are impossible without violating the territory of neutral nations.

I do not hesitate to say, therefore, Mr. President, that if we are face to face with a probable invasion, if our condition is such as not only to prevent but as to invite the hostile incursions of some first-class power or powers, the conclusion which has been pressed upon public attention so frequently and so much that preparedness to the last degree is an essential element of our future preservation becomes an unanswerable proposition. But I contend, Mr. President, and I shall attempt to show that while there is necessity for extending the national defenses, strengthening our forces on land and on sea, nevertheless the reasons for it can not be found in the menace of a threatened invasion.

It is contended that we are the wealthiest, most helpless, most envied, and most disliked of nations. Of our opulence there can be no question, and opulence is always attended by the envy of those who do not share it, whether it be the opulent individual or the opulent nation. That we are the most helpless is at least admitted to be a debatable question, and that we are the most disliked of nations can be demonstrated to be false.

I agree, Mr. President, that the advantage which we have taken, and very naturally, of the needs of the nations at war, the exacting contracts which have been extorted from them, the

enormous transfer of wealth from them to ourselves, the occasional lapses in performance, particularly with regard to the quality of the goods furnished, have very naturally aroused a feeling of dislike which would be reciprocal if the case were reversed, and there is no doubt that much dissatisfaction has been engendered, which may have ripened or will ripen into resentment consequent upon commercial conditions which the war has created between our own and some of the warring nations and which have been to the immeasurable advantage of America.

It is said that we have incurred the animosity and tempted the cupidity of other nations against whom we must arm thoroughly and speedily lest we be lost; that our armament on land and on sea, if we would be immune from attack, must be second to that of no other first-class power. As one authority has expressed it, "To do less than this were worse than not to arm at all." I repeat that if these premises are true the conclusion is unavoidable.

But, Mr. President, the war scare is no new thing. It has existed and has appeared intermittently for many years; it will continue to manifest itself so long as men are engaged in private occupations, the prosperity of which is dependent in whole or in part upon war conditions.

Surely the public can not have forgotten the charge of Dr. Liebknecht, made in the German Reichstag in 1912, of a world-wide munitions trust, in which were involved not only the capitalists of all the civilized nations, not only distinguished civilians in these several countries but members of the military and naval organizations and clergymen as well, all of whom, through their identification as shareholders with this great combination, were interested in furnishing arms and munitions of war to whatsoever nation might be induced to purchase. It can not have forgotten that the investigation of these charges disclosed their truth; that the Krupps admitted an annual expenditure of some $200,000 in disseminating war rumors and operating upon the fears of hostile peoples for the promotion of contracts for guns and ammunition.

I remember very well, Mr. President, how the exposé shocked this country. Beginning with Germany, it involved all the first-class powers of the world, and among other things disclosed the fact that the so-called Harvey Co., an American corporation, was the connecting link which bound great American concerns like the Bethlehem Co. with those of Great Britain, of France, and of Germany.

Nor can we overlook the fact that Japan is an ancient specter, rising bellicose and defiant on the western horizon with the regularity of the seasons and threatening the invasion of America about 30 days before the meeting of every Congress—a specter, Mr. President, which, as is suggested to me, anticipated the consideration by the Military and Naval Committees of their respective subjects regularly and habitually clothed in the crimson raiment of blood and of rapine, and appeasable only by the propitiatory offering of battleships and ammunition. It may be that these apparitions had, and still have, some foundation, but what I wish to impress upon the attention of the Senate is that, true or false, these warnings of unseen but palpable dangers, the expression of their imminence, and their magnitude are not the offspring of the great war in Europe. That has merely shifted them in a different direction and given them renewed force. It has changed the point of attack, and the threatened invasion has been shifted from the Orient to the Atlantic.

Mr. President, the effect of the sudden outbreak of this great conflict upon the reasoning faculties has been most apparent. The war came with all the shock of a world-wide, unexpected catastrophe. Perhaps we might have known—doubtless many of us foresaw—that the constant and continually expanding military and naval equipments of the countries involved would inevitably lead to the existing debacle; but, generally speaking, mankind had reached the comforting conclusion that great wars were things of the past; that the enormous national liabilities, the control of the finances of the world by comparatively few men, the softening, elevating, and refining influences of our modern civilization made any future great conflict impossible. These delusions, Mr. President, dissipated in an instant, disorganized for the time being the rational faculties of mankind and shattered their capacity for an intelligent consideration of the "change of front of the universe."

In a recent article in the Saturday Evening Post entitled "War's madness," Will Irwin says:

> The great wars of the past have been fought in unanalytical ages. The historians and diarists have recorded battles, diplomatic maneuvers, the thoughts of statesmen and generals. No one, so far as I know, has speculated very much on the state of the public consciousness, and no one, before Armageddon broke out, seems to have understood that the mind of war is an abnormal mind, that he who touches it becomes infected with a madness. It has always been so, I suppose; but it is doubly so now, when war on an unprecedented scale has affected a set of nations highly civilized and possessing, therefore, highly organized nerves
>
> From the very beginning of the war Europe was abnormal, although the abnormality had then a different form from the present madness. No one in those early days seemed ever to smile; and this was equally true of the French, the Germans, the British, and the Belgians. Laughter I heard, but it was metallic laughter. The sound which a London theatrical audience made after a comedian sprang a joke was quite different in quality from the hearty laughter of ordinary times. You perceived it, too, in the people on the streets. A London crowd is always somber enough; but never before did it look like this. People walked stooping, their eyes on the ground. When they raised their faces you saw that their brows were curiously knit. That is the sympton which one notices most commonly in a madhouse. No lunatic's brow ever seems quite in repose. Such was the composite face of London in August and September, 1914.
>
> It was the face, too, of Brussels, as I found when I arrived there, just before the Germans came. Brussels, of course, was anxious and very much afraid. In spite of newspaper yarns about the heroic defense of Liege, the Belgians really expected just what has happened. But anxiety could not exactly account for the strange expressions, for the oddity of the gestures and movements among the people on the streets. They talked and acted by jerks.

These emotional conditions, Mr. President, are kaleidoscopic; they attack the imagination and reasoning powers first from one and then from another angle. Among other things, they breed credulity. Men are prone to believe whatever they hear if asserted with conviction.

Thus, Mr. Irwin calls attention to the fact that shortly after the outbreak of the war—

> Europe was a study in the growth of rumor. Bizzarre reports, great and small, ran from mouth to mouth. There was the famous story of the Russian forces in England, which was told so circumstantially that even the correspondents of neutral nations, comparatively calm in this soul tempest, came to believe it.

And I am reminded by this reflection, Mr. President, of an incident that occurred shortly after the declaration of war against Spain by the United States in 1898. I happened at the time to be in the city of Chicago when a rumor came over the wires that the Spanish fleet was in the lines of European and Atlantic travel under orders to sink or to intercept all vessels bearing the American flag. I saw a mob around one of the telegraph offices with white faces and pallid lips, clamoring for news from the great American trans-Atlantic liners bearing friends and relative to and from America. Every individual in the throng was panic-stricken by the rumor, which was accepted without question as to its accuracy. The public mind was off its balance; hysteria had for the time dethroned common sense; excitement and apprehension were uppermost. Next morning the rumor was dissipated, but the state of the public mind consequent upon the declaration of war was receptive to every rumor, however unreasonable, with which it might be confronted. So the rumors of the Russian invasion of Germany through Great Britain, like the rumors of the Spanish fleet of 1898, mythical and absurd though they were, for the time being were facts as real, as absolute, and important as any which have actually transpired since then.

These mental maladies, Mr. President, are contagious. They inevitably spread to neutrals and arouse the fears and the apprehensions of their people. They also, unfortunately, arouse their cupidity, and this, the greatest of all wars, has for the time excluded dispassionate consideration of all other topics. Our capacity for calm and sober judgment of men and of events has been disturbed by our emotions; our vision has been clouded by the dust and smoke of the conflict; abnormal and horrible conditions have aroused national sympathies, antipathies, and apprehensions. Our indignation has been inflamed by atrocities in Belgium, in Servia, in Armenia, and in eastern Prussia, and we shudder at the thought of their possible repetition in America.

Nations, like individuals, Mr. President, are governed more largely by their fears and their prejudices at all times than by their reason. I think that may be stated almost as an axiom, which can appeal for its truth to the history of civilization. Hence we have been prone to imagine perils impending, but which for our hysteria would unquestionably excite our derision.

War, too, has developed latent race tendencies in our composite citizenship. These have been aroused, and, to some extent, new political alignments have been consequently made. We have been appalled by the brutality of modern warfare, and particularly by the discovery that our civilization, after all, is but a thin veneer; that we are barbarians all; that our knowledge, slowly accumulated by the generations, seems in its last analysis to aggravate our brutality and extend our power to destroy.

I pause here, Mr. President, to say that, in my judgment, the most valuable lesson which America has derived from the great European war is the consciousness of the fact that there is in this country no unity of American citizenship, no oneness of

purpose, no distinctively national policy. On the other hand, we seem to be a polyglot combination of races, which have not been fused in the melting pot, which finds expression each along its own lines of nationality, which have not yet grasped the value or the significance of free institutions or the necessity of maintaining the Government, that its institutions may endure.

We now perceive that our constant pursuit of things material, our strife for wealth and luxury, have taken the flush from patriotic impulse, has dulled the edge of our devotion to the Nation, has made us indifferent to the precious institutions of which it is the custodian, has caused us to forget the terrible cost at which they were acquired. It remains for us to take advantage of that lesson, Mr. President, by cultivating a oneness of sentiment, an equality of citizenship, the establishment and administration of justice in all its aspects, to the end that true Americanism may become the enduring element, binding us all to the defense, as we are bound in the destiny, of the great Republic.

Mr. President, that sort of preparation is indispensable to the success of all others, for without the national feeling, that oneness of purpose, that love of country, that exaltation of American institutions above every other earthly consideration, all the armies and all the navies, the panoply of war, "the captains and the shouting," will be unavailing if the crisis of the Nation's existence, which, God forbid, should ever confront our people.

War, Mr. President, has also profoundly affected us economically, socially, politically, and morally. It has doubtless subjected us to dangers, but at the same time it has offered us marvelous opportunities. These, of course, I can only mention and enumerate in passing. It has given us new markets, stimulated production, shifted the financial center of the world. It has been a graphic verification of the truth of Mr. Seward's celebrated dictum in 1861, "There is no customer like a great nation engaged in offensive warfare."

The war has also doubtless necessitated departure by belligerents from the lines of international law in their treatment of neutrals. These departures have brought us at times into diplomatic difficulties with nations that are leading ifi the conflict, some of which are still existent, but all of which, I trust, will be disposed of without resorting to the close of diplomatic relations or to acts of retaliation.

Advantages caused by war demands have created new lines of production and new captains of industry. These have seized opportunities and have prospered abnormally, not only through the needs and agony of nations by the manufacture of equipment necessary for their purposes, but also through the manipulation of the stock market. Their suddenly acquired gains and their methods of acquirement doubtless makes it difficult for some of them "to sleep o'nights." In the language of Shakespeare they "Weep to have what they so fear to lose"; and perhaps, actuated by a possible sense of danger, they are earnest in their loud and constant clamors for preparation.

Mr. President, those who thrive by war are naturally desirous of continuing war conditions. I think it was Demetrius the silversmith who protested against assaults upon the temple. He was an image maker, and by that means he made his livelihood. The public state of mind resulting from war, the reasoning faculties obscured, the emotions aroused, and the imagination ready to depict or to entertain any and every assertion of existing danger, became fertile soil for the seed of the war-rumor propaganda. Mankind was ripe for suggestions and self-interest was swift to make them.

One prominent newspaper a few days ago asked the question, in arguing for an expanded military organization: "Who would have supposed possible such a war as this? Is our invasion the more impossible?" The answers to such questions, Mr. President, are easily made by an excited and apprehensive audience. Very naturally it accepts the suggestion which such inquiries involves, and recognizes the necessity, because believing the rumor, of providing against the imagined danger by clamoring for most immediate and extensive "preparation."

Mr. President, there is yet another motive which prompts the declaration that our exposed and defenseless condition invites, and may suffer, immediate incursions from other countries. I refer now to those who are interested in the continuation of existing internal conditions and who shrink from all change either as chauvinistic or as injurious. It is well known that this country, at and before the outbreak of the war, was absorbed in the consideration of matters of grave domestic concern. They had reference to abuses which were the outgrowth of commercial and economic conditions and which found expression in discontent, which manifested itself sometimes in very dangerous outbreaks and collisions in election contests, in legislation, and at all times in active agitation of a more or less effective character. Now, the demand for immediate preparedness, if made insistent, necessarily crowds out all other affairs of public concern, and therefore it is to the interest of those who believe in the good old doctrine of laissez faire to substitute the cry for preparedness, for a great naval and military establishment, and to base that cry upon the charge that we are in imminent and immediate danger of invasion, since it is impossible, in the inflamed condition of the public mind, thus aroused and thus appealed to, to consider any other than the immediate question. Therefore, reforms, no matter how badly needed nor how insistent, will be either shelved, postponed, or forgotten.

It is an old saying that when the whole family goes to the circus there is the opportunity of the porch climber; and when the whole Nation has its attention fixed upon the threatened danger, not only of invasion but of extinction, every legislative reform, every social change, however needed, is necessarily postponed to the consideration of the immediate danger, and when postponed the chances are that it may be permanently forgotten in the consequent absorption of the public mind. Plans and policies for internal regulation of economic and social affairs become then no longer prominent, and may reforms which are crystallized into law halt in their operation.

I have noticed that one of the immediate consequences of the war in this country has been the establishment of two great combinations, second in magnitude only to the United States Steel Corporation, one being the Midvale and the other, if I recollect correctly, the Cambria, although I am not positive as to the exact name of the latter. And, Mr. President, their formation, which would have been the signal for excited and determined opposition prior to August, 1914, has not created a solitary ripple of excitement or of more than passing notice anywhere. The time is ripe for these combinations. They have sheltered themselves behind the bulwarks of a supposed necessity for immediate preparation for national defense, and the good work will doubtless continue, as does the process of wealth consolidation, which seems also to proceed unhindered; indeed, that which is used to divert public attention from these things becomes an asset easily coined into gold while we are preparing to meet an enemy of the imagination.

Then, too, Mr. President, increased public expenditures which preparedness necessitates may also force a return to the good old tariff conditions. Extensive preparation means very largely increased public expenditures. People dislike direct taxation or any taxation of which they are cognizant. They submit to indirect taxation easily because it is unobservable, and those infant prodigies which have been disciplined by the enactment of the Underwood bill doubtless look upon this war as a providential occurrence, which, properly handled and wisely conducted, may force the hand of a reluctant Congress to return to the good old days of the Payne-Aldrich tariff, and, as the Senator from Oklahoma [Mr. GORE] suggests, justify the war from that standpoint. I commend this phase of the so-called menace of an invasion particularly to the consideration of my friends on this side of the Chamber.

Then we are told, to use the expression of one of the great New York papers, that New York and Boston and Philadelphia and Chicago are drunk with money. The proceeds resulting not alone from the increased demand for manufactures and foodstuffs, but from the values given to shares and bonds representing the institutions thus engaged, has brought to this country countless millions of dollars, gorging the avenues of trade, and becoming to some degree a positive burden in the economic channels of the country. What better outlet for them than a bond issue, with the people of the United States and their wealth as the basis of the security? These gentlemen are in a position not only to furnish us with everything necesary for preparedness, but also to lend us the money, if so be we shrink from taxing the people directly, at a comfortable rate of interest, and thus have the Nation as the old darky arranged his coon trap—so as to catch the people of the country "a comin' and a gwine."

I have heard many suggestions of bond issues here, and from public men at that, in connection with general and loose discussion of the means to be resorted to for the purpose of securing a needed added revenue. I have noticed that some of the financial papers, first hinting, have afterwards openly advocated that method of financing our new schemes of preparation. For my part, Mr. President, I hope the Congress will not consider them at all. There is no need in this day, with all the wealth that has been accumulated in this country, for mortgaging posterity by the issuance of a single dollar of added indebtedness; and I think it is well that that fact should be made as clear as possible, to the end that this element underlying the propaganda for extensive and unlimited preparation may understand the

situation. As far as I am concerned, I believe, as far as we can do so, in placing the expense consequent upon our necessary military and naval expansion upon the wealth of the country, and particularly upon the war industries, if I may so term them, of the Atlantic States.

What is it that is said to be so attractive to these mercenary countries of the Old World, armed to the teeth, and looking with dripping chops upon the splendid spoils offered to them upon our defenseless shores? What is it but the accumulated wealth, aggregating billions of dollars, and unequally distributed among the people living along the northeastern part of this defenseless shore? Shall your sons and mine be enlisted and take their place in the ranks, equipped with munitions of war to defend this country, and to defend, of course, that wealth, and at the same time be made to pay for it? We who bear the burden of the day, the heat, and the conflict of actual warfare, are offering the supreme test of loyalty and of citizenship. Therefore let those whose accumulations are to be protected, and the amount of which constitutes the tempting lure to the other nations of the world, meet the financial obligations which we must assume so largely on their account.

These various conditions, Mr. President, somewhat crudely stated, have given the old Army and Navy propaganda an added impetus. Japan has been succeeded by Europe as the "accelerator of public opinion," if I may use the expression of a somewhat celebrated New York politician. The propaganda began with the firing of the first gun at Liege, since which time the press, the pamphlet, the moving picture, the perambulating orator, the convention, the church, and the professions have all been enlisted for the crusade. The administration and the Congress have been denounced in unmeasured terms for their supineness, their indifference, and, above all, for their lack of patriotism in failing to recognize and to provide against the danger. If any effort that could have been made has not been resorted to to stampede the Nation, I am at a loss to know what it is. The movement has been organized; it has been well conducted; it is certainly managed with rare executive ability; and while unquestionably it comprises a considerable portion of the patriotism of the country, at bottom, Mr. President, cupidity and avarice and greed are the basis of the propaganda. Its expense has been enormous, but that has not proven at all embarrassing. From these sources and interests have come wars and rumors of war; our helpless military and naval condition have been exploited; our enormous wealth, the ambitious designs of other powers, their hostility toward us, and their contempt for us. With a few honorable exceptions, the entire press of the country has voiced these conditions for months, accentuated with growing frequency, by abuse of the President and denunciations of the Congress for their supineness and indifference to an obvious national peril.

Mr. President, if we are one-tenth as helpless as some of these gentlemen and some of these organizations have declared us to be, true patriotism would have suggested that they keep silent about it instead of advertising our great wealth, our inability to defend it, our sloth, and our opulence to these covetous nations across the sea. As it is, no nation, however insignificant; no invasion, however ridiculous; no menace, however absurd, has been suggested that has not found lodgment somewhere. Apprehension has given way to fear and fear to hysteria, that the future is pregnant with hidden but real dangers to our national peace and integrity. How clearly a moment's reflection reveals the fact that the real menace is to our National Treasury; that the contemplated assault is directed by these national scandal mongers upon the national resources.

Mr. President, this militarist propaganda, which combines a medium portion of patriotism with a very large portion of pelf, is a commercial enterprise. The enormous profits of the makers and venders of war supplies will probably cease with the war itself, unless a new market for their wares can be provided. The best and perhaps the only available new customer is the Government of the United States. If it can be seduced or frightened or stampeded into a policy of unlimited naval and military equipment, the new business will continue, even though the war should end to-morrow.

Mr. President, I do not want to be unfair in this discussion. I am quite aware that cupidity, the desire for gain, the ambition for material progress and benefit through the medium of so-called preparedness, is not confined to the munitions makers. It is an inherent American propensity, and where it is not inherent has been cultivated everywhere. "We all do it." I think I am within bounds when I say from two to three thousand bills have been introduced and are now pending in the two Houses of Congress at the instance of individuals or of localities, based upon the theory of needed preparedness, and having for their purpose and object the securing of appropriations to be expended in those localities, but which, but for the propaganda, never would have been dreamed of. I mention this fact in no spirit of carping criticism. The average citizen can not be blamed for imitating a common example nor for demanding a share in a proposed scheme of nation-wide expenditure. When gain and glory go hand in hand, patriotism waxes not in the crowded marts of commerce only, but in the highways and byways everywhere.

I want to read an extract from a letter which I received some days ago as illustrative of the fact that the material side of the extended and unlimited propaganda is not confined to the Atlantic seaboard. This letter is from the West, although not from my State. It begins with two quotations—one biblical, the other historical:

"The Philistines be upon thee."
"Nero fiddled while Rome burned."

This is a third and final reminder that while Congress sleeps the enemy may be advancing. What will we do when every munitions plant on the seaboard is in his hands and none in the interior? The Almighty has stored in the hills around—

I have omitted the place—

every element essential to the manufacture of war material and the patriotic citizens of the town are anxious to donate a site for a Government plant. Is Americanism dead and the public servant hypnotized?

This is my last appeal. Please tell the President that the alternative is a munitions plant at ———, and other advantageous places west of the Alleghenies, or Roosevelt for President. He must make his choice.

DEMOCRAT.

[Laughter.]

The author of this epistle is neither less sincere nor more ridiculous than the presidents of defense societies nor the frantic advocates of a Navy greater than England's or an Army equal to that of Germany.

Mr. President, our Navy has been decried, our Army has been ridiculed, and our administration denounced by the advocates of this propaganda. Eminent men have convened in this very city and charged the President of the United States with indifference, with neglect of duty, and with cowardice. Congress and members of the Cabinet have been overwhelmed with similar epithets and denunciations. Aye, men heretofore in charge of great departments, in which millions have been expended under their own supervision, have befouled their own nest in denouncing their departments as deficient in organization and entirely unequipped for the exigencies of the hour. Our defenseless coast and our unprotected areas east of the Alleghenies, where the bulk of the Nation's wealth is centered, has been mapped and platted, and gentlemen have discoursed eloquently over its many vulnerable points of attack and the awful consequences of its invasion by a comparatively small army of veteran soldiers, and while manufacturers at the same time are increasing their equipment, extending their plants, enlarging their business in this exposed area of the country, all indifferent to the fact that the "Philistines are upon them."

Mr. President, the Army and Navy officers wherever they have spoken at all, with two or three exceptions, have joined their voices with those who warn and those who prophesy. Far be it from me to say anything derogatory of the officers of the American Army and Navy. They are a splendid body of men. They have no superiors. They are, generally speaking, the soul of honor—men of high purpose and lofty ambition, ready to aid their country wherever they can, not only in the assumption of official responsibility but in giving the benefit of their experience to the Nation.

I do not, therefore, Mr. President, in referring to the association of these gentlemen with the preparedness program, intend to do more than to call attention to what may be called a national trait, a democratic trait, if you please, which characterizes officers of the Army and Navy of the Republic and due largely, if not entirely, to our form of government and its institutions. I am reminded that Lord Salisbury once declared that the average officer, if consulted, would insist upon fortifying Mars against the moon. I do not go quite as far as that although the experience of that great statesman doubtless justified his comment. I think the tendency of an American or a French officer, however, would be in that direction.

Mr. President, one of the greatest books in the English language, and too little read in these days, is De Tocqueville's Democracy in America, written a great many years ago. I shall ask permission to insert at the end of my remarks his twenty-second chapter entitled "Why democratic nations are naturally desirous of peace and democratic armies of war." I shall read only a brief extract from this chapter on page 282 to illustrate what I mean:

In democratic armies the desire of advancement is almost universal; it is ardent, tenacious, perpetual; it is strengthened by all other desires, and only extinguished with life itself. But it is easy to see that of all armies in the world those in which advancement must be slowest in time of peace are the armies of democratic countries. As the num-

ber of commissions is naturally limited, while the number of competitors is almost unlimited, and as the strict law of equality is over all alike, none can make rapid progress—many can make no progress at all. Thus the desire of advancement is greater, and the opportunities of advancement fewer, there than elsewhere. All the ambitious spirits of a democratic army are consequently ardently desirous of war, because war makes vacancies, and warrants the violation of that law of seniority, which is the sole privilege natural to democracy.

We thus arrive at this singular consequence, that of all armies those most ardently desirous of war are democratic armies, and of all nations those most fond of peace are democratic nations; and, what makes these facts still more extraordinary, is that these contrary effects are produced at the same time by the principle of equality.

It is to be expected, therefore, that the occasion of occasions for this tendency to manifest itself is that which contemplates an expansion of our military and naval systems. The motive behind it is commendable. It is wholly free from the taint of avarice and of greed, but it must nevertheless be taken cum grano salis, since it is not entirely disinterested.

It is the best part of the play, but not beyond fair criticism.

Now, Mr. President, what is and has been this danger, and what nation is it that threatens our peace? This is the concrete question which confronts us in view of the propaganda to whose origin I have referred. If I understand it, we are said to be in peril of invasion by some one or more of the great powers now engaged in war, whose resentment we have incurred, or whose cupidity we may have aroused, and that either or all of them can easily land upon our defenseless coasts an enormous veteran army, which, because of our defenseless condition, will overwhelm the country, levy tribute upon its wealth and dictate its own terms of peace, thus humiliating if not subjugating the Nation, because of its supine and slothful indifference to the obvious peril. What evidence do the alarmists furnish to support their warning?

Mr. Henry A. Wise Wood, who is prominently connected with the Aero Club of America, recently related, and I quote from a clipping from one of the circulars of that association, that—

In the archives at Washington there is a document which sets forth the celerity with which these very seas may suddenly be used for an attack upon us. According to its contents, which give the numbers of men, each of several nations could land upon our shores within a given period of time, it lay within the power of one of these nations to set down *upon our Atlantic coast, in 46 days, over 750,000 men,* with artillery, sufficient ammunition, and supplies to last them for three months. *And on our Pacific coast, it was stated, in 61 days there could be landed approximately 350,000 men,* with supplies and weapons.

The italics are mine.

This necessarily implies, Mr. President, that somewhere in the national archives is a plan or document prepared elsewhere which our Government had been fortunate enough to intercept and which both discloses this perilous situation and the probability of its execution. I shall presently show that this is merely a résumé in the author's own language of a calculation of the Army War College as the partial basis of a proper military policy. But Mr. Wood continues:

It would require at least five years to get and train men to meet this contingency. Therefore the plans to increase the Army to 300,000, and to provide for training that part of the citizenry which is willing to train while being employed daily in peaceful pursuits, can not be considered as anything more than a conservative precaution. Nor can the plan to spend $17,500,000 for aeronautics—$7,500,000 for the Navy $5,000,000 for the Army, and $5,000,000 for the militia—be considered excessive.

It may be uncharitable to suggest that the proposed appropriation for aeronautics had much to do with the alarming announcement preceding it, although there can be no doubt about it. Be that as it may, I feel free to offer the comforting assurance that I shall vote for a generous appropriation for that arm of the service, without regard to the sensational situation so prophetically outlined in Mr. Wood's statement, and so vividly portrayed in "The Battle Cry of Peace."

Not Mr. Wood only, but Col. Roosevelt has given his sanction to this paper invasion by referring to it in some one of his multitudinous contributions to the press upon the general subject.

Mr. President, there is no question but that a great many good people in this country, millions of them, have been impressed by these absurdities and really believe them. They are entitled, I think, to definite information with regard not to their existence, for they are mythical, but to their probability, either presently or in the more remote future.

What is the nation which entertains these designs upon America? We certainly have no reason to fear Italy, or Austria, or Russia, or France. The senior Senator from North Dakota [Mr. McCUMBER], in a very able address upon this general subject, with his usual exhaustive ability, demonstrated the absurdity, a few days ago, of the existence of any possible apprehension from those countries. Is it England or Germany? Mr. Roosevelt, in another of his articles, has assured us that we need not fear England, because she is not a military nation.

Germany alone, Mr. President, is left, and every man, if he will admit it, who believes or who thinks of invasion pictures in his imagination the advancing helmets of the German legions. The only nation which possessed 750,000 veteran troops when the "document in the archives" was written was Germany. The only nation whose colonial ambitions might conflict with American policies was Germany. The only nation whose marine equipment and whose military equipment unite and which could therefore secure the needed transportation for such a horde, with its equipment, is Germany. So when war with some country across the sea or the invasion of America by some country across the sea is mentioned, Germany is the one nation which the mind has in view, whether expressed or not.

Of course, Mr. President, I must not be understood as assuming that there is any basis for such an apprehension or that the existence of such a danger is even remote beyond the fact that its status justifies the inference. I merely express what seems to be the inevitable conclusion to be drawn from the attitude which the militarists, so-called, necessarily assume when warning our people of their peril.

But if we admit, for the sake of argument, that these apprehensions are well founded, what sensible, sober-minded man or woman can, upon a moment's reflection, feel that such an invasion is either possible or probable?

I do not overlook the assurance, Mr. President, that the warring nations will be more formidable when peace has been declared than they are now; that the danger will then be more insistent and exigent than ever; that the hundreds of thousands of battle-scarred veterans who have won their spurs on sea and land, the survivors of the greatest war in the world's history, will be the most compact and magnificent fighting forces ever known. This is undoubtedly true, but these forces will be divided then as now; and, without regard to efficiency or truculence, only the improbable amalgamation of the armies of Europe could make them a source of serious apprehension to America. And we may be sure that the animosities of the present will be accentuated when peace shall have come and the nations brooding over the conflict and its destructions come to realize the extent of their calamity.

Moreover, Mr. President, these unhappy countries are weary of conflict, bankrupted in their finances and facing a future so gloomy, so forbidding, and so pathetic, whatever the issue, that further strife will be abhorrent. To say that any nation, the greatest or the least of them or all of them together, in view of these conditions, would immediately, after the close of the present hostilities, provoke a rupture with the United States and attempt to transport a great army 3,000 miles across the sea to wage an offensive war against a nation of 100,000,000 of population, possessed of limitless resources, with all the possible consequences involved, is to picture a possibility so utterly baseless as to be absurd; yet the portent finds currency among many good and thoughtful people all over the country, who will live to laugh at their apprehensions and marvel at their easy but complete deception.

Mr. President, a hostile force can reach us, if at all, only from across the sea. I think that is self-evident. It can not come from any other direction or in any other manner unless the science of aeronautics should advance so rapidly as to enable it to come in transports through the air; and if that be so, then all the preparation in the world we may make by land and on the sea would be of practically little value, lest our artillery shall have been so developed as to enable us to destroy it. I venture the assertion that no such force as would be required for our conquest could come or could disembark successfully, even had there been no great war, with all its casualties and destruction.

What nation possesses both the ships and the hosts required? I am speaking now of possibilities at the end of the war, since we are surely immune from invasion until then. England is not a military nation. She has the vessels; she has not the men in arms; and even the fact otherwise, inasmuch as she has a thousand miles of seacoast of her own to the north of us, with a frontier of 3,000 miles between Canada and ourselves, we might sow the waters with bombs and sea mines and plow the depths with submarines from our northeastern coast extremity to Galveston, and yet, so far as England is concerned, she could carry out her hostile purposes as though we had done none of these things, unless our fleet were sufficiently strong to destroy her armada. She could land her troops upon her own coasts and then attack us across the border. We may therefore leave Great Britain out of our calculations. What of the other nations?

Now, Mr. President, I come to the estimates of the Army College with regard to this subject. But before doing this I will refer briefly to the testimony of Gen. Wood and one of his

aides before the committee, which I think is appropriate in this connection. Gen. Wood calls attention to the fact that 98 ships were able to convoy and land 120,000 men at Gallipoli, his contention being that this historic fact, this military accomplishment, was conclusive of the ability of any of these nations to land even a larger force without difficulty upon our shores if undefended. Gen. Wood, however, stated some of the transports used by the British Army were capable of carrying from ten to twelve thousand men, which gave her an enormous advantage, and which explained the small number of vessels required for the transportation of such a large number of men with their equipment. No other nation possesses transports of such huge capacity.

I recall that it required 35 transports to carry 35,000 men from Canada to Great Britain, and I think that was without their complement of munitions and equipment. This proposition would require ten times that number of vessels for 350,000 men, and perhaps half as many more for the needed impedimenta. With regard to the Gallipoli incident, it must be noted that this convoy was assembled at Alexandria, and very close to the point of disembarkation. The length of time required for the transportation of the troops from Great Britain to the point of assembly will not be known until the war is over. It was, of course, much longer in point of time with the allies in full command of the seas. There was an occasional submarine perhaps; but England and her allies were in absolute command, subject to that one possible disturbing influence, between the point of embarking and the point of disembarkation.

Col. Glenn's attention was called to the same subject. I asked and he answered the following questions:

Senator THOMAS. Colonel, if my figures are correct on a basis of 98 transports to 128,000 men, it would take 311 transports for 400,000 men?

Col. GLENN. Yes, sir.

Senator THOMAS. An armada of that size would encounter some pretty severe and dangerous experiences, would it not? It might be enveloped in fog or meet with storms?

Col. GLENN. Yes, sir; it would have to take its chances on all those things; yes.

Senator THOMAS. Probably resulting in disaster?

Col. GLENN. I do not think so, sir.

Senator THOMAS. With a number of ships like that?

Col. GLENN. I do not think so, sir.

Senator THOMAS. And particularly if it had a large convoy with it?

Col. GLENN. It might, of course. You have to take your chances on that sort of thing; but I do not believe that it would.

Senator THOMAS. Assuming that you had to make a landing with your troops, after reaching the shore somewhere outside of a harbor or along the shore, how far out would it be safe to anchor your transports from the shore in order to debark the troops?

Col. GLENN. It depends entirely on the conditions. Yet, at the harbor of Salem, Mass., I think they would run them right in to the docks. We certainly can not reach them with any guns we have.

Senator THOMAS. Landing at some other place where there is no harbor——

Col. GLENN. I do not catch the point, sir. They would not hesitate to make a landing from several miles out, if it were necessary, sir. They would use their launches.

Senator THOMAS. With small transports like those used by the British Army it would be necessary, would it not, for them to stand off quite a distance from shore, especially if the wind were blowing shoreward?

Col. GLENN. That all depends upon the local conditions of the harbor.

Senator THOMAS. I am eliminating a harbor in these questions, sir.

Col. GLENN. You mean, sir, an open roadstead?

Senator THOMAS. Yes; I am eliminating harbor conditions.

Col. GLENN. I do not quite catch your point. You mean, how far out it would be necessary for them to go——

Senator THOMAS. I must assume that if a landing is attempted where there is no harbor, that those large transports will not be able to come right up to the shore, but that they will have to debark their troops and ammunitions with lighters. About how far out would these 311 ships have to stand in order to safely do that, and how far away from each other?

Col. GLENN. They, of course, would have to have swinging room for their anchor chains when they did that; but I think that the question of just where they would anchor would depend on the depth of water.

Senator THOMAS. Precisely.

Col. GLENN. And it would also depend upon what their facilities were for discharging. With the Navy present and the facilities that should be provided, it makes no serious difference whether it is a mile or whether it is 5 miles; it takes just simply a little bit longer to handle it.

The significance of the extract just read lies in the assumption—the constant assumption by the witness—of the ability of the enemy to disembark within some harbor. My questions had reference to disembarkation upon the assumption that harbor protection would make it the equivalent of such disembarkation as took place at Gallipoli; a very different and a far more perilous situation. While we are told that this is simple and feasible, no expert will discuss it under examination if he can avoid it.

Now, I come to the "Statement of a proper military policy for the United States," by the Army War College, with regard to the subject; and, Mr. President, I believe its close analysis demonstrates, without extended comment, the improbability—nay, the impossibility—of a possible landing of an armed force upon any part of our shores. I read from pages 10 and 11, the subsection entitled "Preparedness of the world powers for over-sea expeditions":

Control of the sea having been once gained by our adversary or adversaries, there is nothing to prevent them from dispatching an over-sea expedition against us.

Of course not; but there is the assumption by the experts at the outset of a condition that our Navy makes impossible, as I think I can demonstrate in a few moments. The statement proceeds:

In order to form an idea of the mobile force we should have ready to resist it, an estimate must first be made of the approximate number of troops that other nations might reasonably be expected to transport and of the time required to land them on our coasts.

The number of thoroughly trained and organized troops an enemy can bring in the first and succeeding expeditions under such an assumption is a function of—

(a) The size of the enemy's army; and

(b) The number, size, and speed of the vessels of the enemy's merchant marine that can be used as transports.

Should our enemy be a nation in arms—that is, one in which all or nearly all of the male inhabitants of suitable physique are given a minimum of two years' training with the colors in time of peace (and this is true of all world powers except ourselves and England), it is evident that the size of the first expedition and succeeding expeditions would be limited only by the number of vessels in the transport fleets.

Note the exception of England, the one nation thoroughly provided with sufficient transport facilities.

Then follows a detailed statement of transport and military strength of the nations. This is already in the RECORD, and it is not necessary for me to reinsert it. The Senator from Oregon [Mr. CHAMBERLAIN] inserted it on the day before yesterday; but I will merely say that the total strength of the armies of Austria-Hungary, France, Germany, Great Britain, Japan, and Russia, and also the tonnage available of ships with a capacity of over 3,000 tons and 2,000 tons and 1,000 tons are given, the number which could be transported on a first expedition, and the number which could be transported on a second expedition, the German Army, of over 750,000 men, being given about 47 days—within 1 day of the time mentioned by Mr. Wood in the clipping to which I have called attention—and Japan some 41 days, about the same time as that stated by Mr. Wood. These are my reasons for declaring that this estimate is that mysterious, that marvelous, that damning document reposing somewhere in the archives of the War Department.

The allowance made in this estimate is 3 tons per man and 8 tons per animal for ships over 5,000 tons and 4 tons per man and 10 tons per animal for vessels under 5,000 tons, which allowance has been used in estimating the capacity of vessels, except where the regulations of other countries prescribe a different allowance.

They also include rations, water, forage, and so forth, for the voyage and a margin for three months' reserve supplies. The tonnage allowance covers men, animals, and all accessories, and is sufficient to provide for vehicles, including guns, and is "that prescribed in our field service regulations."

Mr. President, I do not know when those field service regulations were formulated, but I do know that the impedimenta which must accompany an army, if equipped for modern warfare, as armies now engaged in war are equipped, make this allowance entirely too small, and that, instead of one ship to a thousand men, the tonnage required would be at least 50 per cent greater than this estimate. It would tax to the extreme the energies, the capacity, and the possibilities of the merchant marine of every nation in the world, with the single exception of Great Britain, who, as I have stated, if she desires to invade us, can do so without regard to our efforts at coast protection.

This report is theoretical; it must be theoretical; and if it has slumbered in the archives of the War Department so long, then it certainly must have been made at a time when military and naval conditions were entirely different from what they are at present. The development of the artillery arm by this war, to say nothing of others equally important, would more than double the capacity allowed by this estimate for impedimenta.

Mr. President, let us assume that a nation—I do not care which, but some one of the powerful military nations of the Old World—should design the investment of this country, what would be the effect upon its commerce in commandeering a sufficient number of vessels for the purpose? What time would be required to gather the stores and munitions essential for such an expedition and to load them when gathered? In what port could the armada be assembled? And if in several, where would the several fleets assemble? When one considers the increased paraphernalia of a modern army, aeroplanes, lorries, camp kitchens, hospital supplies, gasoline, provisions, horses, mules, ammunition, modern siege guns, hand grenades, trench tools, telephones, wire, aeroplane attachments, engineering equipment, and all the other varied mechanical combinations essential to modern warfare, and then say that in 46 days or

in 46 weeks a sufficiently formidable expedition could be assembled to invade and swoop upon this country without more than a moment's warning, so to speak, is more than absurd; it is ridiculous. The experience of the British at Gallipoli is, for the purposes we are now considering, no experience at all. And I venture the assertion that the Army College, should it revise its report, will be forced to the same conclusion.

I have here, Mr. President, an article from the Kansas City Journal, which is entitled "What preparedness means," which I ask to insert at this point in my remarks without reading. It throws an illuminating light upon the controversy. I will merely state that, amongst other things, it declares that a million men, marching four abreast, would extend over a line 400 miles long, practically from Kansas City to the Colorado border. Then a statement is made of the various items of equipment which must accompany such an army. I shall not burden the Senate by reading it, but ask that it be printed in the RECORD as a part of my remarks.

The VICE PRESIDENT. Without objection, permission is granted.

The article referred to is as follows:

[From the Kansas City Journal.]

WHAT "PREPAREDNESS" MEANS.

Probably no word has ever dropped more frequently or more glibly from the tongues of the American people and with so little understanding of its real meaning as the word "preparedness." People know, of course, that preparedness means being ready with an army and navy for resistance if the United States is invaded by an enemy, but the immense amount of preliminary work that must be accomplished before a state of actual preparedness is reached, and how it is done, are details to which the average citizen has given little thought. It is customary to imagine that mere soldiers in the bulk constitute a machine for defense, and that with an army of a million men there need be no worry about incidentals.

Assuming that 1,000,000 men stood ready to take up arms for the defense of the Nation against a first-class power, what would they need immediately before they could take part in a single battle? Just to feed them would require 4,000,000 pounds of solid food and 3,000,000 pints of coffee daily. To equip this army would require 750,000 rifles, 2,000 field guns, 200,000 horses to haul these guns, 165,000,000 rounds of cartridges, and hundreds of other things that are not at present available.

That the citizen soldier may have some adequate idea of the tremendous amount of preparation that must be accomplished before preparedness is a fact two Army officers have drawn up a schedule of war from the inside. This is not a manual of training, but a treatise in plain language and a guide by which the layman may inform himself in a general way concerning military rudiments, so that if he is ever called upon to defend his country he may understand better the general nature of things military. In this connection many popular fallacies are pointed out, such as the alleged geographical security of the United States; the idea that Americans are born soldiers; that European nations will be too exhausted to be feared after the war; that lack of money abroad will prevent a war; that, prepared or unprepared, the United States can "lick" any nation on earth, and that money and material resources are synonymous with military strength.

What does an army of a million mean? One million men marching four abreast would extend over a line 400 miles long, practically from Kansas City to the Colorado border. Some of the things that these million men must be provided with before they can fight are:

Seven hundred and fifty thousand rifles and bayonets for them to fight with.
Two hundred and sixty-five thousand pistols, little brothers of the rifle.
Eight thousand machine guns, the military scythe.
Two thousand one hundred field guns to batter down attack.
One hundred and sixty-five million cartridges to carry them into their first fight and as many more for each succeeding fight.
Two million five hundred thousand shells and shrapnel for our field guns for every hour they are in action.
One hundred and ninety-six thousand horses to carry them and pull their carriages.
One hundred and twenty-seven thousand mules to haul their supplies and pack their guns.
Eight thousand wagons to transport their supplies and ammunition.
One million cartridge belts for their ammunition.
One million first-aid packets to bind up their wounds.
One million canteens.
Each of them must have a uniform and equipment:
One million shelter halves to protect them from the weather.
One million ponchos to keep them dry.
Two million blankets to keep them warm.
Two million pairs of shoes.
Two million uniform coats, breeches, leggings, suits of underwear.
One million hats.
Two million shirts.
Four million pairs of socks.
One million haversacks to carry their equipment.
Finally they must eat:
One million pounds of meat each day.
One million pounds of bread each day.
Two million pounds of vegetables each day.
Three million pints of coffee or tea each day.

All this must be purchased, transported, prepared, and cooked each day, and to eat it they must have:
One million cups.
One million plates.
One million knives.
One million forks.
One million spoons.

To provide for proper care, training, and led into battle they should have 25,000 trained officers.

The calling into service of 1,000,000 men would mean the organization, equipping, and training of 10 armies the size of the complete Regular Army of the present time. If 1,000,000 men should apply at the recruiting offices, it would require the uninterrupted effort of 1,000 recruiting parties, working day and night for more than 10 days, to enroll and enlist them. It would require a week to move them to the camp, provided all the suitable railroad equipment of the country were given over to this work alone.

One thousand men would have to work day and night for 10 days to erect the tents for them, and when completed this camp would amount to a city of more than 125,000 tents, covering an area of more than 8,000 acres, an area equal to the size of St. Joseph.

Mr. THOMAS. Now, Mr. President, by way of contrast to the assertions of our many vocal warriors and of course I do not thus refer to our War College nor to the officers whose statements I have referred, I call attention for a moment to what seems to me to be the best-considered article upon the subject of oversea invasion, considered from the nautical standpoint, which I have been able to discover. It was contributed to the Contemporary Review of February, 1909, and is signed "Master Mariner." It was inspired by a report to the British Parliament that an invading force of 150,000 men could be conveyed in 200,000 tons of shipping from Germany to Great Britain, the British Government at that time having under consideration the general subject of a possible invasion of England by the German Empire. This gentleman made that report the subject of the article to which I am calling attention.

He first directs his criticism to the fact that the force would have to be "accompanied by 14,000 horses and a full proportion of guns and wheeled transports, amounting to hundreds of large and small vehicles." He says:

Now, it is one thing to calculate tonnage for infantry alone, but quite another to allow for the other branches and impedimenta of an army fully equipped for service in the field.

Of course, I am only reading extracts—

Another very misleading generalization put forward—

Says this writer—

was contained in the statement—perfectly true in itself—that 200,000 tons of shipping are normally to be found lying in German ports, from which it was inferred that there would be little or no difficulty in commandeering sufficient and suitable sea transport for immediate use by the invading army at any moment. But what does this 200,000 tons represent? It represents the aggregate tonnage of a heterogeneous collection of shipping averaging at least 150 vessels of different sizes and speeds, from Atlantic liners to coasting tramps, or perhaps even steam barges, in which the actual numbers and individual vessels vary, with arrivals and departures, not only every day but every tide. Now, it must be borne in mind that the distribution among different transports of the units of an expeditionary force which intends to land on an enemy's coast in the expectancy of opposition at any moment is mainly governed by the requirements of the disembarkation, for it is obviously a matter of the greatest importance that the force should be landed in such a manner that it can be tactically formed for meeting the enemy with as little delay as possible when once on terra firma, or it may be surprised in a state of unprepared confusion. To insure this it is essential not to split up brigades, battalions, or batteries among different ships more than can be helped, and, in cases where splitting up is imperative, the different vessels carrying separate portions of the same organization or unit must be allotted neighboring berths in the disembarkation anchorage plan—of which more hereafter—or utter confusion will ensue.

He then refers to the expeditionary force of 15,000 men sent by the Americans to Cuba in 1898 as an "instinctive example." He concedes that that was badly managed and worse regulated, and consequently it is not very illuminating. He then refers to the matter of secrecy, which, I think, is to be one of the elements of the prophesied invasion—that it would be upon us almost before we knew it. He says:

A great deal has been said about the powers the German authorities possess of keeping matters secret, but a sudden and wholesale embargo on the national shipping in their ports would occasion so much surprise and even excitement among the neutral shipping lying at the same jetties that every outgoing neutral vessel would carry the news to her destination, often only a few hours' steaming from the German coast. If they were prevented from sailing to stop this, the mere fact of the nonarrival of the usual numbers of expected coasters at various ports would tell its own tale, repeated at once to London.

That is to say, secrecy would be absolutely impossible in connection with such a proposed expedition. Let me say right here that the speed of any fleet must necessarily be regulated by its slowest unit. A fleet of 300 or 400 vessels would necessarily include some which were much slower than others, and, unless they were to be abandoned and allowed to make their way on their own speed and practically without protection, in which event the entire expedition would be imperiled, the faster vessels must accommodate themselves to the slower, and, by a process of mutual progress, reach the point of destination at the same time. Hence, to say that under such conditions a swift expedition, even after it has been assembled, is a possibility is to reckon without a due consideration of that important factor.

If, however, for the sake of argument, we assume that the ships have been commandeered, and the troops, guns, and horses of a large force embarked on a rough general plan, after more or less unavoidable delay, the next question inviting attention is that of getting the vessels clear of the harbors into open water, and here we enter the domain of purely nautical discussion, where only seamen can speak with authority. Now no seaman in the world would undertake to empty this huge and motley crowd of shipping out of the basins and pilot it down the long and tortuous estuaries of the German coast.

Of course I must assume that some of the physical conditions which are here involved might not exist with regard to the supposititious expedition which forms the basis of this demand for universal preparedness—

to open sea in less than two, or perhaps even three, high tides, and even then in the general hustle the grounding of a large steamer in a narrow part of the channel might delay the whole exodus for hours.

When all were clear of pilotage waters, however, and fairly in the open, fresh difficulties would arise. The unwieldy armada must either cross independently in a "go as you please" fashion or make the voyage in company. If they crossed independently, the first vessels would anchor off our coasts a full 24 hours before the last and give notice of what was following, thus destroying still further that element of surprise which would be essential to success. It is plain, therefore, that they must keep together somehow, although they could only do so as an unordered mob of ships. It would be just as impossible to form, dispose, and maneuver 200 vessels of different sizes that had never moved together before, and whose masters were destitute of all practice in maneuvering in company, as it would be to put 500 men, taken at random from the streets and placed on a parade ground, through intricate battalion movements forthwith. This mob of ships would probably cover at least 20 miles from van to rear and throw smoke visible for another 10 to 50, according to the state of the atmosphere. They would have to cross lines of trade frequented by neutral shipping and pass through fishing grounds, and could not possibly evade observation unless in a fog, and if a fog set in, their state of danger and confusion would be appalling.

Of course that is obvious. A huge armada proceeding in company, and convoyed by perhaps as many more vessels, overtaken by a thick fog, when dependence would be placed entirely upon sound signals, and these entirely unreliable under such atmospheric conditions—why, Mr. President, we can imagine, from the appalling accident on the New York Central Railroad day before yesterday, as the consequence of a thick fog on land, what the frightful possibilities of disaster would be to such a fleet under such circumstances.

Their speed would be that of the slowest vessel, and her speed itself would be below its own average unless the weather were exceptionally calm, for the wind would be from the westward and therefore against them. It must not be forgotten that landing on an open coast is only possible with the wind blowing offshore—that is to say, a westerly wind as regards our east coast—and unless that were the case the expedition would never start. The speed of the fleet, as a whole, would not therefore exceed 6 or 7 knots.

Without reading further as to that particular subject, Mr. President, I may say that the conclusion of this writer is that such an expedition from the near-by country of Germany to Great Britain would exhaust three weeks at the lowest, and in the event of any casualty the time would be correspondingly extended.

But he proceeds:

But the passage across would not be the least of the nautical difficulties to be faced. If German seamanship proved equal to all these obstacles, a yet further test would await it in the task of anchoring this cumbersome host of shipping in an ordered and prearranged disposition, such as is essential for disembarking a force in the face of an enemy.

He also says:

When a fleet of transports sails for a hostile coast, a detailed plan of anchorage berths has to be prepared beforehand by the admiral commanding the escorting squadron, and issued to each master of a transport before sailing, in order that he may know exactly where he is required to place his ship on arrival. *This necessitates, of course, a previous knowledge of the exact point of disembarkation* and the features of the coast line.

The italics are mine.

Then he discusses the length of the line necessary for a systematic and safe disembarkation.

When a fleet of 150 to 200 vessels has to be considered such a method of proceeding is out of the question, and the transports would have to pick up their berths independently on arrival as best they could. Two hundred vessels in a single line would cover about 50 miles of coast from wing to wing. In three parallel lines they would cover about 16 miles.

If 300 vessels would be essential for the transportation of 250,000 men with a competent equipment to the coast of the United States, they would, of course, require a third more of coast-line distance, which would be somewhere between 70 and 75 miles for a single line; and three lines are about the maximum number of lines that would be practicable for speedy disembarkation. If four or more lines were used, the outer ships would be so far from the beach that very great delay in landing their troops would ensue. Every half mile farther out means an extra mile from the ships to the beach and back, and when a boat made 10 trips in 24 hours she would cover 10 more miles in that period—a loss of time perhaps quite four hours for every such extra half mile.

I read another extract:

If, in order to avoid this delay, the transports anchored at haphazard on arrival, the confusion on the beach would be stupendous.

* * * * * * *

Fair weather must be assumed throughout as a matter of course.

What possibilities are involved should a storm at sea overtake such a fleet? Fogs are omnious things; a raging storm in a sea thickly peopled with crowded ships would sow death and destruction everywhere, and it would be a miracle if upon a voyage of 3,000 miles no storm would be encountered.

Mr. President, in view of these difficulties, so graphically portrayed by a man evidently a thorough master of the business of transportation at sea, what becomes of this nightmare of a possible over-seas invasion of our defenseless coasts even were the ships collected and the men embarked? I am surprised that some of the obvious difficulties have not long ago suggested themselves to the deliberate judgment of thinking people. But I have observed nothing of the sort.

Let us ask, however, where this expedition, if it comes, would be landed? What would be the point of disembarkation? Of course, if any capacious harbor were available it is obvious that such harbor would be the point. But assuming that there is some sort of defense—and I think the assumption is borne out by existing conditions—that some defensive preparation in and around the different available harbors of the Atlantic coast, then the disembarkation must overcome such defenses or be made along the open shore. "Master Mariner" declares that this requires a number of things in combination—fair weather, a breeze off the shore, and not less than 20 to 25 miles of available frontage, with 3 columns of ships at the farthest, for a relatively speedy and successful disembarkation. Can such a feat be accomplished? If so, we deserve defeat.

I contend that we have at least the nucleus of both Navy and Army. We certainly have paid well for both. Our construction of a navy began with the administration of President Arthur. Its strength in 1909, according to President Roosevelt, was ample. I wish to read an extract from Mr. Roosevelt's last literary production, "Fear God, and Take Your Own Part," page 226. That sounds like an utterance of the Kaiser. Mr. Roosevelt there says:

In February, 1909—

Only seven years ago—

when the battle fleet returned from its voyage around the world, the United States was in point of military—that is, primarily naval—efficiency in such shape that there was no people that would have ventured to attempt to wrong us, and under such circumstances we could afford to keep the Philippines and to continue the work that we were doing. Since then we have relatively to other powers sunk incalculably from a military standpoint; we are infinitely less fitted than we were to defend ourselves.

Of course it may perhaps be assumed that since Mr. Roosevelt ceased to be actively engaged in the affairs of the Nation everything has deteriorated, and particularly the military and the naval arms. If that were true, it were pity; and if it is true it is the most cogent reason why the party to whose embraces he is so anxious to return should receive him with open arms, and strive to make him President of the United States once more.

But, Mr. President, is it true that since 1909 our Navy has deteriorated? I know the libel is made and reiterated and unfortunately believed to some extent throughout the country. Unfortunately, too, some naval authorities have given the weight of their opinions to that assertion. And yet, Mr. President, if it is true, then it must be true also either that we have lost or abandoned a considerable portion of our fleet, or that they have been placed out of commission, or that our strength in men has so deteriorated that our warships are useless because our complement of marines have not been or can not be secured.

I hold in my hand a copy of Pearsons Magazine for February, which contains an article entitled "Proof that big navy increase is not needed now," and I will read one or two extracts there published from the testimony regarding our naval strength in December, 1914, by Admirals Fletcher and Badger before the House Committee on Naval Affairs. At that time the late lamented Representative Witherspoon was a member of the House committee and in the full possession of all his wonderful faculties. He has since passed into the great beyond. His death was little short of a public calamity. I think he knew more about naval conditions the world over, including our own, of course, than any other man in public life. He was diligent, earnest, capable, practical, and useful, and as a member of the House Committee on Naval Affairs he was of indispensable value to the people of the United States. He took occasion to closely question these gentlemen regarding our strength at sea. The report is not easily available, the issue having been practically exhausted.

Mr. McCUMBER. On what date?

Mr. THOMAS. This was in December of 1914. The report is of comparatively recent date. Admiral Fletcher, I think, has recently been somewhat conspicuous in giving testimony reflecting upon the strength and personnel of the Navy. On

page 548 of the report occurs the following examination, the subject being the comparative strength of the American and other navies:

Mr. WITHERSPOON. How many battleships has England got?
Admiral FLETCHER. According to this table here [indicating] England has 20 dreadnaughts built.
Mr. WITHERSPOON. The total number? How many has she in all?
Admiral FLETCHER. This table puts it at 60.
Mr. WITHERSPOON. That is, 60 battleships?
Admiral FLETCHER. Sixty battleships.
Mr. WITHERSPOON. I did not ask you about that statement. I have seen that old statement before. I do not care anything about that statement. The Navy Yearbook puts down the number of English battleships completed, building, and authorized at 72. Now, your idea is that if those 72 ships were pitted against ours we would not be able to resist them. Is that it?
Admiral FLETCHER. We could resist them, but we would probably be defeated.
Mr. WITHERSPOON. That is what I mean. We could not resist them successfully?
Admiral FLETCHER. No; all else being equal.
Mr. WITHERSPOON. It has been told this committee by high authority in the Navy Department, among others Admiral Vreeland, that if we had a war with England on account of its relations with other nations in Europe it could not afford to send more than half its ships against us. Do you believe that is so?

The admiral was not disposed to answer that question directly. He said:

That is a question of policy and of political conditions in Europe upon which I would not pretend to pass judgment.
Mr. WITHERSPOON. Then your statement that we could not resist England would be on the assumption that she could send her entire fleet or more than half of it against us?
Admiral FLETCHER. Yes, sir; she would control the sea if she could keep there a more powerful fleet than ours.
Mr. WITHERSPOON. Or not afraid of war with the rest of the world, not afraid to take all the ships away from her own coast, and to send all of them, or a large majority of them, against us? Your statement is based on that?
Admiral FLETCHER. Yes, sir: it is based on actual superiority.
Mr. WITHERSPOON. Well, on the assumption that what other naval experts have told us is correct—that she could not send more than 50 per cent of her 72 against us—you would not say then that we would not be able to resist them successfully, would you?

The admiral replied:

I would not like to pass judgment on a supposititious case of that kind.

And yet that "supposititious case" was based upon other competent naval testimony, common-sense testimony, that neither England nor any other European nation would deprive her coast and her people of the protection of her entire navy in the event of a war with America. It is not only not supposititious but it represents an obvious condition of naval warfare.

But Mr. Witherspoon was persistent:

Now, according to the Navy Year Book, Germany has battleships built, building, and authorized, 39.

I may say, in passing, that we then had 40.

Would you say that, if she could send all those ships against us, we would not be able to resist them?
Admiral FLETCHER. I should say that we ought to, if we have the greater force.
Mr. WITHERSPOON. Yes; we ought to. Certainly we ought; and we could?
Admiral FLETCHER. Yes, sir; the greater force should win.
Mr. WITHERSPOON. Yes; we could.
Admiral FLETCHER. I think so.
Mr. WITHERSPOON. Now, it has been stated to us that if Germany were at war with us she could not afford, either, to send more than one-half her ships against us.
Admiral FLETCHER. That I do not know.
Mr. WITHERSPOON. I am not asking you whether you do or do not. Assuming that she could send only half her 39, would you not say that we could successfully resist that number?
Admiral FLETCHER. Yes, sir; I would say so if all our force is available to meet her.
Mr. WITHERSPOON. I would, too. Now, take France. This Navy Yearbook says that France has a grand total of battleships, built, building, and authorized, of 29—11 less than we have. Would you not say that if she sent all hers against us that we would be able successfully to resist them?
Admiral FLETCHER. Yes; our force available being the greater.
Mr. WITHERSPOON. And if she sent only one-half of them we would not have much of a fight, would we?
Admiral FLETCHER. No; we ought not to.
Mr. WITHERSPOON. That is the way I look at it. Here is Japan, which, according to the Navy Yearbook, has only 19 battleships, or 21 less than we have got. If Japan should send all of her 19 against us, do you not think we would be able successfully to resist them?
Admiral FLETCHER. Yes, I should say, if all of our force were free to meet them at the time.
Mr. WITHERSPOON. And if she did not send but half of them, there would not be much of a scrap, would there?
Admiral FLETCHER. Probably not.
Mr. WITHERSPOON. Now, here is Russia, that the Navy Yearbook says has a grand total of battleships, built, building, and authorized, of 15. If she should send all of them against us, would you not say that we could successfully resist them?
Admiral FLETCHER. Yes, sir.
Mr. WITHERSPOON. And if she sent half of them, there would not be any fight at all, would there?
Admiral FLETCHER. Not much.
Mr. WITHERSPOON. Here is Italy, that has a grand total, according to the Navy Yearbook, of 17 battleships. We could successfully resist them, whether she sent all of them or a part of them, could we not?
Admiral FLETCHER. Yes; I think so.
Mr. WITHERSPOON. Now, Austria-Hungary, according to the Navy Yearbook, has a grand total of battleships, built, building, and authorized, of 10. We could successfully resist them, could we not?
Admiral FLETCHER. I think so.
Mr. WITHERSPOON. Then what nation is there we are not prepared successfully to resist? There is not one on earth, is there, Admiral—not a single one?
Admiral FLETCHER. Well, Judge, I think there is.
Mr. WITHERSPOON. Well, which one? I have gone through the big ones. Tell me which one.
Admiral FLETCHER. I should say that England has a navy so much more powerful than that of any other nation in the world that she could easily keep control of the seas.
Mr. WITHERSPOON. England. Well, what other one, then?
Admiral FLETCHER. I do not think we need greatly fear any other single nation.

But Mr. Witherspoon pressed his question:

Then there is no other country except England that, in your judgment, we could not successfully defend ourselves against?
Admiral FLETCHER. I think that is correct; yes, sir.

And yet, though England concededly entertains no designs of conquest against us, though we can, according to this high authority, successfully defend ourselves against any other country, men who should know better, men high in the confidence of the Nation, persistently and constantly slander and belittle our Navy, abuse and villify its Secretary, and proclaim from the housetops our utter helplessness should any country declare war against us and embark a hostile force to attack us. This is not patriotism; it is gross commercialism, coining fear into appropriations and apprehension into dividends.

Mr. President, that testimony has not appeared anywhere in any of the recent discussions upon this subject. None of the great newspapers, designed to instruct the people and acquaint them with public affairs, has even referred to it; and yet it is available to all of them.

Then Judge Witherspoon asked the witness if England had any battleships as large as some of ours. Of course, this was before the appearance of the *Queen Elizabeth*.

Admiral FLETCHER. England has many ships which are very nearly of the same power of our own ships of same date of building.
Mr. WITHERSPOON. Let us see about that, now. I do not believe she has, though you know more about it than I do. In this Navy Yearbook, which gives a list of the English battleships, I find that the last five dreadnaughts that England built or is building are named the *Royal Sovereign, Royal Oak, Remiles, Revolution,* and *Revenge,* each of which has a tonnage of 26,000.
Admiral FLETCHER. Yes, sir.
Mr. WITHERSPOON. And we have two ships—the *Pennsylvania* and the *No. 39*—which have a tonnage of 31,400, and then we have authorized three more that are to have a tonnage, as I understand, of 31,000.
The CHAIRMAN. Thirty-two thousand.
Mr. WITHERSPOON. Thirty-two thousand tons. In other words, the tonnage of the *Pennsylvania* and *No. 39* is 5,400 tons greater than that of the last five English dreadnaughts that are building, and the last three dreadnaughts that we are building have a tonnage of 6,000 tons greater than the last five English ships. Do you tell me that these English ships are equal to ours?
Admiral FLETCHER. No; I did not say that.
Mr. WITHERSPOON. Do not you regard them as inferior to ours?
Admiral FLETCHER. Yes; as near as we can estimate.
Mr. WITHERSPOON. I do, too. And the armament of these five ships is eight 15-inch guns, while the armament of the five American ships I have referred to is twelve 14-inch guns. Which is the more powerful armament—eight 15-inch guns or twelve 14-inch guns?
Admiral FLETCHER. I think the twelve 14-inch guns more powerful, but I am not sure this opinion is concurred in by all authorities.
Mr. WITHERSPOON. Then, understanding your testimony, after reviewing it, do you want us to understand that England is the only nation on earth that has a navy that we could not successfully resist?
Admiral FLETCHER. I think that is the fair conclusion; yes, sir; at the present time.

Here is a short extract from the testimony of Admiral Badger.

Mr. WARREN. What is the date of that?
Mr. THOMAS. December 14.
Mr. HUSTING. Mr. President——
The PRESIDING OFFICER (Mr. ROBINSON in the chair). Does the Senator from Colorado yield to the Senator from Wisconsin?
Mr. THOMAS. I yield.
Mr. HUSTING. I should like to ask the Senator whether the question of speed was taken into consideration as well as the efficiency of our battleships?
Mr. THOMAS. The Senator will have to draw his own conclusion from what I read. There was nothing said on the subject of speed in these extracts. The practical efficiency of our fleet was the subject considered during the course of the witness's examination.
Mr. HUSTING. I merely wish to say that in some article I read very recently it is claimed that the highest speed of American battleships is less than the slowest speed of a first-class battleship of either England or Germany.
Mr. THOMAS. One is apt to hear anything in regard to our Navy now if it is of a derogatory nature. In the popular acceptation of the preparedness propaganda it ought all to go into the scrap heap; we have nothing. What I am reading is something of record, falling from the lips of gentlemen high in our Navy, reluctantly conceding that less than 18 months ago we

had a very respectable Navy and one second only to Great Britain.

Mr. HUSTING. I was merely asking for my own personal information. I wish to state to the Senator that in one of the recent fights, in which the *Bluecher* was sunk, the speed of that boat, I think, was given at 24 knots.

Mr. THOMAS. That was a battle cruiser.

Mr. HUSTING. Yes.

Mr. THOMAS. A battle cruiser, as the Senator from New Hampshire [Mr. GALLINGER] suggests to me, has much more speed than a modern battleship.

Mr. HUSTING. I understood it was claimed there that the lowest speed, as the figures were given, was greater than the highest speed of our vessels, and I merely asked the Senator whether those figures were correctly given or not. It was stated that the slowest boat in that fleet was faster than any boat we have in our Navy.

Mr. THOMAS. I have not much doubt that the slowest cruiser of that particular fleet was faster than any battleship we have or that Great Britain or Germany has. I was not referring to the speed, and my recollection is that no battleship was engaged in that battle. As the Senator from New Hampshire suggests to me, no battleship has yet been engaged in any naval conflict since the outbreak of the war.

Mr. HUSTING. The claim is made that the slowest boat fighting in that battle was faster than any boat we have in the American Navy.

Mr. THOMAS. It may be. I will not pretend to pass on that subject. I freely admit that there are deficiencies in our Navy. Among them is the absence of battle cruisers and transports, which, as the Senator from New Hampshire suggests, we ought to provide for, and which I doubt not we will provide for.

The testimony of Admiral Badger is short and is negative, but valuable. He says:

Mr. WITHERSPOON. Well, I wanted to get your views about that, because I do not like to hear Americans running around and talking about the German Navy being superior to ours. I know it is not so.

Admiral BADGER. You have not heard me say that.

Mr. WITHERSPOON. No; and I am glad that is so. I hope you never will say it, because there is not any truth in it.

Mr. President, the disparagements of our existing Navy are not confined to naval officers. If the statements of some high in authority are to be accepted, but which I question, we have fallen from what was second to what is now fourth place. If this is so, the change has occurred since December, 1914. I am unable to credit the possibility except upon the theory that some of our boats have been retired or that our naval force has fallen off, and, as far as I have been able to follow the testimony before the Committee on Naval Affairs, neither of these things can be said to have occurred. I affirm that the American Navy is competent and is prepared to confront any hostile expeditionary force that may threaten us, and that its development should proceed normally and wholly free from the hysterical and unpatriotic disparagements which self-seeking leagues and associations are circulating about it.

Now, a word as to our coast defenses. The charge has been reiterated that any respectable fleet with hostile designs, under present conditions, could invade our coast, which is practically defenseless, and capture or destroy our large cities, levy tribute upon their citizens, ravish their women, and inflict the greatest calamity upon the Nation that it has ever encountered; and this because we have failed to make due provision for their protection by a proper system of coast defense. Gen. Weaver is at the head of our coast defenses and has been for a great many years. He is a very competent, a very capable, and a thoroughly experienced officer. I asked and he answered the following questions before our committee upon that subject:

Senator THOMAS. I would like to ask you before you leave us how our coast defenses, as constructed at the present time, compare with the coast defenses of other nations?

Gen. WEAVER. I think there is no question, Senator, that our coast defenses are superior to those of any other nation, so far as the matériel is concerned. There is no question about it whatever. The only element, in my opinion, that makes them inadequate now is the shortage of personnel.

Senator THOMAS. You have got the guns, but not the men behind them?

Gen. WEAVER. That is the point, exactly.

Senator THOMAS. Well, I think you ought to have them.

Gen. WEAVER. I will say this, so that I may not be misunderstood: The evolution of gunfire on board warships has developed a type of ordnance that was not contemplated when our fortifications and our guns were mounted, and therefore it is possible at the present time for an enemy's ships to come up and take position beyond the range of our guns and fire at us without our being able to reach them in reply.

Senator THOMAS. You mean changes in trajectory?

Gen. WEAVER. I am going to come to that, so as to make it clear. There are certain places, like the Rockaway Beach and at San Francisco, where it is necessary for us to provide additional fortifications to defend cities. In order to meet the attack of this new naval ordnance against the forts themselves we have a number of surplus 12-inch guns which were intended to replace those guns which are now mounted in our fortifications; but with the advance of ordnance it is desirable now to substitute a larger caliber and a more powerful gun. Since, however, these 12-inch guns are in existence, it is proposed to take them and to mount them on carriages that will admit of firing them under high angles of elevation, giving a range that is superior to that of any range that can be brought against us. While the projectile is only 12 inches in diameter, and therefore not as large as that of the projectiles of the 15-inch guns mounted on ships of the *Queen Elizabeth* type, still our range will be greater, and with our superior range-finding equipment ashore our fire will be more accurate, and we can contend with advantage against any naval fire that may come against us.

There is the language of the chief of our coast fortifications.

Mr. SHAFROTH. Will the Senator state when that testimony was given?

Mr. THOMAS. It was given the first of the present month or the latter part of February, before the Committee on Military Affairs.

Mr. President, it is true that the equipment in men for our coast defenses is and has been deficient, but with a proper complement of men to man our coast fortifications, there is no more danger of hostile incursions resulting in the wreckage and plunder of any of our great coast cities than there is of a similar catastrophe through an assault by the Swiss fleet upon the fortifications of the city of Denver.

Mr. PHELAN. Will the Senator permit me?

Mr. THOMAS. With pleasure.

Mr. PHELAN. Does the Senator assume that an enemy would seek out the fortified places upon our coasts or make a landing where there was no preparedness against attack?

Mr. THOMAS. I am sorry that the Senator did not do me the honor to attend during the course of my previous remarks upon that subject; and inasmuch as I have spoken now longer than I intended and still have a few things to say, I shall have to refer the Senator to the record of my speech.

Mr. PHELAN. I shall take great pleasure in reading the report of it.

Mr. THOMAS. I may say to the Senator, however, if there is any place that is not either fortified or protected with sea mines or susceptible of swift protection with sea mines and submarines that is entitled to the name of a harbor, I do not know where it is. If the Senator thinks it is possible for any large expeditions to disembark anywhere except at a harbor—an assumption which is freely made these days—I feel reasonably sure that if he will do me the honor to read what I have said on the subject, he will at least be partially reassured.

Mr. McCUMBER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from North Dakota?

Mr. THOMAS. I yield.

Mr. McCUMBER. The Senator might carry his conclusions a little further than he has done so far. Suppose the shells from one of these battleships should strike one of our defense fortresses, could it have much more effect than merely dislodging the guns?

Mr. THOMAS. Upon the assumption of the correctness of Gen. Weaver's statement—and I think it is entitled to absolute credence—it is inconceivable that it would have a greater effect than that.

Mr. McCUMBER. Suppose that one of the projectiles from our land batteries should strike a warship, what chance would it have of existing after being struck fully and fairly?

Mr. THOMAS. Up to this time the experience of the past has demonstrated that a battleship is more dangerous to its own crew than to the crew of the enemy ships. In other words, more lives have been lost by internal battleship explosions and other accidents than by the destructive forces of an enemy; and there can be no question, owing to the character of the construction, that such a catastrophe as the Senator suggests would result in the annihilation of the ship.

Mr. McCUMBER. Then is it not almost certain that no commander of a battleship would ever engage his ship in a duel of that character?

Mr. THOMAS. Well, if he did he would have to be extraordinarily successful in order to escape a court-martial.

Mr. President, it is a well-known fact that in the accumulation of sea mines and facilities for strewing them, as well as in the matter of submarine construction, we have been making great progress since this war began, and doubtless we shall make much greater progress. I think a commander who would approach within the range of sea mines and possible submarines would be more hazardous and more foolhardy than would be the commander who would make such an attack as the Senator from North Dakota suggested.

Mr. President, our Army is admittedly small. Such has been the policy of our people from the inception of the Government. It is effective, in my judgment, to the extent that in the wisdom of Congress it has been permitted to expand. What we have on

land and on sea has, however, cost the people of this country during the last 15 years more than $3,500,000,000. Our naval expenditures during that period of time have exceeded those of any other nation in the world, with the single exception of Great Britain.

I have a table showing the naval appropriations of the principal powers from 1900 to 1914 which I will ask leave to insert at this time in connection with my remarks without reading.

The PRESIDING OFFICER. Without objection, that will be done.

The table referred to is as follows:

Naval appropriations of the principal powers from 1900 to 1914, inclusive.

Fiscal year.	Great Britain, Apr. 1–Mar. 31.	United States, July 1–June 30.	Germany, April to March.	France, January to December.
1900–1901	$145,792,850	$61,721,695	$37,173,074	$72,683,180
1901–2	150,569,190	68,438,301	46,315,800	67,079,011
1902–3	150,679,328	82,977,641	48,818,700	59,217,558
1903–4	173,548,058	104,126,192	50,544,000	59,740,222
1904–5	179,138,049	116,655,826	49,110,300	60,178,623
1905–6	161,117,947	109,725,059	54,918,000	61,565,779
1906–7	152,954,342	98,392,144	58,344,300	59,514,295
1907–8	151,880,617	117,353,474	69,133,500	60,685,813
1908–9	156,401,161	120,421,579	80,737,626	62,194,916
1909–10	181,936,341	122,247,365	95,047,820	64,899,589
1910–11	202,056,258	111,791,980	103,302,773	74,102,439
1911–12	211,596,295	133,559,071	107,178,480	80,371,109
1912–13	224,443,296	129,787,233	109,989,096	81,692,832
1913–14	237,530,459	136,858,301	112,091,125	90,164,625
1914–15	260,714,275	141,872,786	113,993,329	123,828,872

Fiscal year.	Russia, January–December.	Italy, July 1–June 30.	Japan, April–March.	Total.
1900–1	$42,101,212	$23,829,206		
1901–2	45,488,462	23,875,532	$21,373,954	$423,140,250
1902–3	50,769,465	23,522,400	17,654,528	433,639,620
1903–4	60,018,895	23,522,400	17,553,279	489,053,046
1904–5	58,076,543	24,300,000	10,018,024	497,477,365
1905–6	60,228,444	24,494,400	11,378,202	483,427,831
1906–7	60,703,557	25,865,668	30,072,061	485,846,368
1907–8	43,012,166	27,516,454	35,124,346	504,706,370
1908–9	49,682,482	30,453,697	39,347,332	539,238,793
1909–10	58,059,040	31,812,885	35,005,719	589,008,759
1910–11	46,520,465	40,595,204	36,889,158	615,253,277
1911–12	56,680,915	40,780,987	42,944,329	673,111,187
1912–13	82,019,633	41,893,420	46,510,216	716,335,726

1914–15	128,954,733	56,920,440	69,111,653	895,396,083

Mr. THOMAS. I am not prepared to admit that all this money has been squandered. Some of those who so contend libel preceding administrations. Of course, their zeal for fat contracts makes that an easy albeit a most disreputable task. That there have been expenditures which were not warranted by a strictly scientific military and naval program no one can doubt. On the other hand, I take pride as an American in asserting that to the extent to which the law has authorized a military organization ours is as good as any other in the world, and to the extent to which we have provided for naval construction we have produced a Navy which, with the exception of deficiencies in transports and battle cruisers, is equal to-day, if not superior, to every navy that is afloat, with the single exception, of course, of that of Great Britain.

We should not forget, Mr. President, that during the past 25 years about 71 cents of every dollar that has come into the Treasury of the United States has been expended upon wars fought and wars expected. This is $71 out of every $100 of revenue. Of course, I include payments for pensions and interest on the public debt in the statement.

Mr. CHAMBERLAIN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from Oregon?

Mr. THOMAS. Certainly.

Mr. CHAMBERLAIN. I think it might be well for the Senator to state in this connection that a large proportion of that money has been spent simply because we had not an Army. Take the very large pension appropriation that is made every year. If there had been a proper military policy in vogue at the time the Civil War broke out, that pension appropriation would have been very much diminished, because the 90-day men, and even those serving a shorter enlistment, receive the same pension as men who practically served during the war.

Mr. THOMAS. I have no doubt that is true. I am not criticizing the expenditure; I am merely stating what I understand to be the fact.

Mr. NORRIS. In connection with what the Senator from Oregon has said, I should like to ask the Senator from Colorado if preparation for preparedness had taken place prior to the Civil War would it not have been true that there would have been preparedness on both sides, so that it would not have made any difference? There would have been as much preparedness on one side as the other.

Mr. THOMAS. I can not say as to that. I have not the time either to analyze or to criticize these expenditures. The subject was first called to national attention by Representative Tawney, who at the time was chairman of the House Committee on Appropriations. It was to me a startling fact, and I have heard it reemphasized by competent authorities a number of times since. I use it in this connection for the purpose of calling attention to the fact that we have paid well for what we have gotten, and that we are now about to embark upon a policy where these expenditures will be increased. So I would not be at all surprised if hereafter 80 or 85 cents of every dollar will be used for military or naval purposes. And if we yield to the clamor of militarism our martial establishments will exhaust our total revenues, however large.

Mr. WARREN. Mr. President——

Mr. THOMAS. I yield to the Senator from Wyoming.

Mr. WARREN. The statement made by the Senator from Colorado that 71 per cent has been expended for military and naval purposes has been made before, or rather it has been stated at 70 per cent. As the Senator has stated it, and the first time I ever heard it, it was stated by a former Representative from the Northwest, at that time the chairman of the Committee on Appropriations. I questioned that statement then, and I looked over the estimates and expenses. I am prepared to say that investigation will not prove that that percentage is correct or nearly so.

Among other things, at that time the pension list was very large. Among other things figured in were the salaries of the great number of officers engaged in river and harbor improvements, going on to improve the rivers and lakes and deepen the channels at cities and other points. That was all charged in this computation. Of course we require deep water in certain places for warships, but no one claims that all that is chargeable to military expenditure, because it is for the commerce of the country. There were included a very great number of items and expenses through or by so-called Army appropriations. That was entirely and altogether apart from Army or war support.

There were many other things added, and the alleged percentage, I will state to the Senator, was claimed to be as he has stated. It was questioned by me and by a great many others who have given it some attention. It falls far short of 71 per cent.

Mr. NORRIS. Mr. President——

Mr. THOMAS. I yield.

Mr. NORRIS. In this same connection, I should like to say to the Senator that when that statement was made by the chairman of the Committee on Appropriations of the House, I myself had a computation made by the clerk of the Committee on Appropriations and the item suggested by the Senator from Wyoming was not included. Nothing was included for rivers and harbors. As I remember it now, and I am speaking only from memory, I think that the percentage was 68. It included fortifications; it included the Navy; it included everything, I think, that could be properly chargeable to the past wars or to future preparation for war, but nothing like river and harbor improvements were included.

Mr. WARREN. The Senator does not doubt my statement?

Mr. NORRIS. I have not doubted what the Senator said.

Mr. WARREN. The Senator stated that he made it but 68 per cent. The statement I figured on, of Mr. Tawney's, was 70 per cent. I say, in making that, they did include such items as I mentioned. They may not have been included in the statement of the Senator.

Mr. NORRIS. I have not denied that. I simply wanted to interject here what I believe to be the real statement upon which a proper percentage could be based. I did not want the impression to go out that in the right kind of an estimate river and harbor improvements were included. I do not know anything about what the Senator from Wyoming included. I know what I used in the computation I made, and I know what the result was.

Mr. GORE. Mr. President, I should like to say in this connection that the leader of the majority party of the other House, Mr. KITCHIN, recently issued a statement in which he estimated our expenditures for military purposes—past, present, and prospective—at 60 per cent of our entire revenue. The proportion in Germany, I think, was 55 per cent; in Japan, 45 per cent; in France, 35 per cent; and in Great Britain, 37 per cent, as I recall it, the ratio of this country being larger than

that of any other country, military or nonmilitary, in the entire world. These estimates were based on expenditures prior to the outbreak of the present war.

Mr. THOMAS. The percentage which I gave may not have been precisely that announced by Mr. Tawney; the entire statement may not stand the test of investigation, but to my mind it is a remarkable fact that a statement coming from such a high source so many years ago, if untrue, should not have been exposed, or at least publicly challenged, long ago. I mention it in connection with the subject of the items of expenses which any new departure upon military and naval lines will necessarily require, and also because these things are apt to grow by what they feed on. In fact, the proposition of large preparedness—militarism, if I may so speak—is very much more extensive now than it was when the subject began to receive the serious consideration of the public.

Mr. WARREN. There has been a large portion of the expense of the National Government in military affairs, and probably always will be with all nations. In fact, most of the expenses of government in this country are carried on by the several States, and there is not so much left for the United States Government except the matter of fortifications and military defenses. In the last decade or two we have had to put in all the fortifications that we have, either new or rebuilt. The Senator will remember that we laid out the work expected to the extent of $100,000,000 succeeding the war, and yet twice as much more has been necessary in constructing fortifications where none existed before or where imperfect ones only existed. It was the same with the Navy. We had no Navy of consequence for many years, so that the expenditures have been larger of later years along that line.

Then came the Spanish War and the increase of our forces. Then came the buildings, the difference between housing 25,000 men and 100,000 men. So the expenditures have been larger of late years than they proportionately would be over a long period, and they may have been larger than they will be in the future. That they have been larger than they will be in the future I doubt, because from the remarks made by the Senator, which he so well put, we will feel it necessary to increase our fortifications perhaps and to increase our mobile Army, and perhaps increase our Navy; but, as I said before, we must remember that that is bound to be the main expense of the United States Government as a Government.

Mr. THOMAS. Mr. President, I must again say that I am neither criticizing nor complaining of the fact, if it be a fact, which I have been stating. I am trying to point a moral, if not to adorn a tale, to emphasize the fact that these expenditures are apt to permanently increase by the increasing demand for first one and then another enlargement of our military or our naval equipment. I think this is illustrated very well by a comment of the New York World upon the proposed establishment of a small army in the Canal Zone. The editorial is entitled "Round and round," and it was prompted by the assertion that an army of 25,000 men was needed for the purpose of protecting our fortifications there against a land attack. I read the editorial. It is very short:

ROUND AND ROUND.

The building of the Panama Canal by the United States was advocated on the ground that it would double the strength of the Navy.

The canal was only about half built when the experts found that it must be heavily fortified to protect the Navy in protecting it.

The canal has now been fortified with what Gen. Edwards, military governor of the Canal Zone, calls the biggest guns and finest gun emplacements in the world. But these might be seized by an enemy operating from the land side, and therefore need the protection of an army of 25,000 men on the spot all the time.

Where is this chain of successive and "essential" dependencies to reach an end? If the canal must have a strong Navy to protect it, and if the strong Navy must have big canal fortifications to protect the Navy in protecting the canal, and if the big fortifications must have a sizable Army to protest the fortifications in protecting the Navy in protecting the canal, who or what is to protect the sizable Army in protecting the fortifications in protecting the Navy in protecting the canal?

There is a "round robin" of expenditures which, if we once begin a policy of military and naval equipment based upon fear and apprehension, will exhaust our revenues much more than the 71 per cent to which I directed the attention of the Senate.

Mr. WARREN. I do not wish to delay the remarks of the Senator, but I think he will agree with me that quite a large percentage of the so-called military expense is that which ought not to be properly charged to actual military expense, for instance, the Panama Canal. The Senator may remember what proportion was charged to the War Department in respect to the canal. There was the cleaning up of Habana, the work of putting in an expensive road system in Cuba and Alaska, and putting in the telegraph system there. All of it has been put in by the Army, and such work is being done practically all over the country. Where officers are in charge of that work it is charged to the Military Establishment.

Let me at this point submit a partial list of many things charged up as military, which, as a matter of fact, are in nowise expenses properly chargeable to military:

Sanitary work at Habana, Cuba—doing away with yellow fever.

Payment of annuities to an enlisted man, and the widows of certain medical officers who sacrificed themselves to the yellow-fever experiments.

Sanitary work in Panama Republic outside of Canal Zone.

Work of medical officers with American National Red Cross.

Furnishing of subsistence, clothing, tentage, blankets, and so forth, from quartermaster supplies of Army to sufferers and refugees from various earthquakes, floods, and fires.

Raising the *Maine*. (While this followed and was incident to war, the work and expense were incurred not only for sentimental reasons, but for the safety of commerce in Habana Harbor.)

Furnishing of transportation, subsistence, and medical supplies of Army for relief of destitute American citizens in Mexico, including transportation to their homes in the United States.

Extensive reclamation work in China, by officer of Corps of Engineers, Army, for the prevention of floods and resultant famines in China.

Employment of officers, employees, vessels, and supplies of Military and Naval Establishments for relief, protection, and transportation of American citizens in Europe during the existing political disturbance there.

Care and maintenance of lepers and special patients in Guam and Culion, P. I.

Instructing the youth of the country at various universities and colleges, and instructing students at the two United States academies in nonmilitary subjects.

Assisting in the civil government of the Philippines.

Employment as Indian agents and superintendents.

Employment on California Débris Commission, and various other nonmilitary commissions.

Employment in rivers and harbors work.

Employment in construction of Panama Canal.

Investigating proposed sites for Government reclamation projects.

Employment as engineer commissioner of District of Columbia.

Building military and post roads, bridges, and trails in Alaska.

Building telegraph and telephone lines in Alaska, for commercial purposes, which have earned hundreds of thousands of dollars.

Employment of engineer officer for service in connection with the location and construction of the Alaskan Railroad.

Building and maintaining roads, bridges, and so forth, in the parks of the District of Columbia, for the use and pleasure of the people.

Employment as superintendent of public buildings and grounds in and around Washington.

Employment of Army engineers in connection with maintenance and improvement of roads, bridges, culverts, and so forth, in various national parks both in and out of the District of Columbia.

Preservation and purchase of specimens for the Army Medical Museum and Library, used for educational purposes by civilian physicians and others.

Building of Washington Monument.

Building of Cabin John Bridge.

Reclamation and development of Anacostia River and flats, under supervision of Chief of Engineers of the Army.

Maintenance and care of national cemeteries, containing bodies of many persons (widows and others) who performed no military service for the country; and furnishing headstones for unmarked graves of civilians in military post cemeteries.

Participation of officers and men of Army, Navy, and Marine Corps in various international and other expositions of commercial nature.

Mr. SHAFROTH. I should like to ask the Senator from Wyoming a question.

The PRESIDING OFFICER. Does the Senator from Colorado yield to his colleague?

Mr. THOMAS. Certainly.

Mr. SHAFROTH. The Senator from Wyoming has been upon the Committee on Military Affairs for many years, and I should like to have his estimate as to the proportion of expenditures for preparation for war and for past wars as compared with the total expenditures of the Government.

Mr. WARREN. Well, in my opinion, the miscellaneous matters are really not properly chargeable to war expenditures,

and they would reduce the percentage which the Senator has stated from 12 to 15 per cent or more.

Mr. CHAMBERLAIN. Let me answer the Senator.

Mr. SHAFROTH. So that it would be 55 per cent.

Mr. WARREN. I think it would be possibly 50 per cent. I think it will be more than that in the future if we provide a sufficient Army. We might as well meet these questions fairly and squarely.

Mr. CHAMBERLAIN. Mr. President, in answer to the Senator, I will say that I have before me a copy of the statement that has been prepared by the clerk of the Appropriations Committee, showing the appropriations for the fiscal years from 1875 to 1916, inclusive, for each of the services, for each of the departments—and I assume that he has correctly prepared it—showing that, as a basis, I will say to the Senator, that in round numbers the appropriations for 1916 were $421,000,000 for the Army and Navy for fortifications and for pensions, and $164,000,000 of that sum, in round numbers, was for pensions, leaving $257,000,000 that was properly expendable for the Army out of a total appropriation of $991,000,000, in round numbers. This tabulated statement gives the appropriations for all of these years. So, if this be true, the proportion is very much less. It is not 50 per cent.

Mr. WARREN. Undoubtedly that is true, and I am allowing for pensions and all that may be charged, though some of them are really not properly chargeable.

Mr. SHAFROTH. I ask the Senator whether that nine hundred and some odd million dollars of total revenues includes the postal receipts?

Mr. CHAMBERLAIN. This is just an itemized statement of appropriations; it does not give the items of receipts.

Mr. SHAFROTH. Does it include appropriations for the Postal Service?

Mr. CHAMBERLAIN. It includes everything. It includes the Agricultural Department, the Army, the Diplomatic and Consular Service, the District of Columbia, fortifications, the Indian Service, the legislative appropriations, the Military Academy, the Navy, pensions, including deficiencies, the Post Office Department, rivers and harbors, and sundry civil appropriations.

Mr. SHAFROTH. The Post Office Department, supposing it to be self-supporting, is usually not put in as a governmental expenditure.

Mr. SUTHERLAND. Mr. President——

The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from Utah?

Mr. THOMAS. I yield.

Mr. SUTHERLAND. Mr. President, it seems to me that all of these comparisons of the proportion of our revenue which is spent for military purposes are, to a certain extent at least, very misleading. The Senator from Oklahoma a moment ago stated that we were spending a very much larger proportion of our revenue for military purposes than was England or Japan or France.

Mr. GALLINGER. Or Germany.

Mr. SUTHERLAND. I speak of those three. I do not need to remind the Senator from Colorado of it, because he recognizes that those Governments are altogether different from ours. They have, unless for purely local purposes, but a single budget. Out of their revenues all of the general expenses of government must be met, while in the United States we have a dual form of government. If we were to institute a fair comparison, we should ascertain what proportion of all the public revenues of the National Government and of the State governments are spent for military preparation. If we should do that, we would find that the proportion of our expenditures for military purposes would fall far below what is expended in these other countries.

The Federal Government has limited functions. Most of the affairs of government are carried on by the States. Schools are maintained, roads are built and kept in operation, and the hundred and one functions of domestic government are carried on by the individual States instead of by the General Government, while in the case of England, in the case of France, and in the case of Japan there is a single treasury from which the general expenditures must be made.

Mr. THOMAS. Mr. President, I still decline to be beguiled into a criticism or a discussion or an analysis of the statement which I made, the authority for which I have given. I am aware that the subject is one of importance, but I simply mentioned it, almost in passing from one subject to another, and because I thought, and still think, that it has some bearing upon the relation of expenditures to our proposed new military and naval organizations.

I regard the matter of expenditure as second in importance to no other feature of our program. It is true that the distinguished ex-President of the United States dismisses the subject with the flippant remark that it is of only secondary consideration; but we have to raise the money and therefore it is well to understand that the proposed extension, although insignificant in the eyes of the average militarist, will impose upon the taxpaying people of this country an additional expense of not less than $150,000,000 to $250,000,000 a year to begin with; and those of us who are responsible, as representing the administration, for the raising of this revenue must necessarily consider it in conjunction with the question of necessity as contrasted with the question of the expediency of our action upon these mighty subjects of present importance.

Mr. President, I believe I have established the proposition that the menace of a foreign invasion, the existence of an impending peril of tremendous dimensions just across the eastern horizon and threatening us with devastation, compared with which that of the Goths and Vandals of other times was as nothing, simply exists as an asset in the skillful hands of those whose purposes are more largely material than patriotic. But there are reasons, perfectly cogent ones, why this country should rearrange and strengthen its military and naval organizations.

Mr. GALLINGER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from New Hampshire?

Mr. THOMAS. I yield.

Mr. GALLINGER. In that connection, I will ask the Senator from Colorado if he has read the statement of Gen. Miles made before the Military Committee only a few days ago?

Mr. THOMAS. I heard it.

Mr. GALLINGER. In that statement Gen. Miles scouts the idea of any nation in the world being able to invade our coasts and to defeat our armies on American soil.

I will say, before I proceed further, that I propose to follow the Committee on Military Affairs, so far as I can, in the bill that they have with such great care prepared. I am neither an alarmist nor a pacifist. I think we ought to have adequate preparedness, so called; but if Gen. Miles is at all correct in his testimony we need not be unduly alarmed over the possibility of our coasts being invaded by a hostile fleet or a hostile army.

If the Senator from Colorado will permit me, I should like to read just a few words from what Gen. Miles said.

Mr. THOMAS. I have no objection to the Senator doing so.

Mr. GALLINGER. Gen. Miles was asked by the Senator from Florida [Mr. FLETCHER]:

GEN. MILES ON THE DANGER OF INVASION.

Senator FLETCHER. General, perhaps you would not want to express any opinion about it, but, frankly, it seemed to me rather far-fetched and absurd that it was a feasible thing for an army to be transported across the ocean and landed on Rockaway Beach, or Block Island, in such way that it could take that portion of the country and then come on down and string a 400-mile line from Chesapeake Bay to Lake Ontario. That is one of the important dangers, apparently, in the minds of some people. I would like to get your views about that, if you care to express them.

Gen. MILES. I dislike to give my views on that, as I consider it an unreasonable and impossible proposition. * * * The placing of an army on American soil is the last thing any European Government would attempt; it could never be reembarked. It would dissolve like snow beneath the midday sun. Whenever it has been attempted it has resulted in disaster.

Senator FLETCHER. It would be impossible for the enemy's ships to carry coal enough to bring them over here and take them back, would it not?

Gen. MILES. If the enemy could not be destroyed by the patriotism and valor of the American people before they could send their ships back and get another load, then I would want to live in some other country.

And a note on this slip which I hold—I admit it has been issued by an antimilitary organization—is very impressive to me. It says:

At the outbreak of the war it took Great Britain, with full control of the seas, 33 days to transport 30,000 men, without equipment, across the Atlantic from Quebec to Southampton.

As I said before, Mr. President, I am for preparedness; but I do not share the apprehensions that I think were in the mind of the Senator from California when he asked the question a little while ago as to whether or not we could repel an army if it should come across the ocean and attack our forts and our seacoasts. I apprehend that, while such an army was coming here, if it took Great Britain 33 days to send 30,000 men across the ocean to reenforce the British Army in the European war, we would be pretty well prepared to meet an army before it invaded our territory. We would have our submarines, if we are wise enough to build some; we would have our mines; we would have our battleships; we would have made all our preparations to give them a warm welcome as they approached our coast. I think probably we would be able to protect ourselves from an invasion of that kind.

Mr. BRANDEGEE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from Connecticut?

Mr. THOMAS. I am becoming somewhat weary, and I had no intention when I took the floor this morning of occupying it for so long a time. I have comparatively little more to say, and while I always welcome interruptions I want to get through sometime. However, I yield to the Senator from Connecticut.

Mr. BRANDEGEE. I simply wish to say with reference to the statement just read by the Senator from New Hampshire [Mr. GALLINGER] that I have seen it stated in print, which is of equal authority with the print which the Senator read from, that the reason it took Great Britain 33 days to move those troops to which he referred was that the troops were not ready to move before that time, and not because the authorities were embarrassed about facilities for moving them.

Mr. THOMAS. Another reason was that the ships were not ready, as they never are ready in emergencies such as are assumed to confront us at the present time.

Mr. President, I believe that we should have a good Army and a good Navy, including coast defenses. I believe that we should utilize the present occasion to begin, I will not say a new, but a more extended and well-reasoned policy with regard to these great subjects. The reasons why we should do so seem to me to be obvious. But one of them may be said to be the outgrowth of the great war in Europe.

These reasons appeal to me as being, first, that we are a great commercial Nation; that commerce we propose to expand until it again reaches every quarter of the globe. Commerce breeds differences—that of one nation can increase only at the expense of another. I think that in its final analysis the prime cause of the existing conflict will find its roots in commercial sources and commercial conflicts. With the expansion and extension of our commerce we must have a Navy sufficiently powerful to protect the rights of our citizens and establish justice for every interest which pertains to America and Americans.

We are, moreover, through the announcement of the Monroe doctrine, the guardian of the Western Hemisphere, and that guardianship, Mr. President, has been extended in many directions, some of which never could have been foreseen by those who enunciated that doctrine. It has been necessary for us to take control of the financial affairs of some of the weaker powers upon this continent, to assume some influence in their general policies everywhere, and, as time advances, these obligations will doubtless increase and conditions will present themselves which will make it necessary either that we recede from or insist upon a more active recognition of this doctrine; indeed, I think it is safe to say that, but for the outbreak of the war, that contingency would have arisen before now. The public possesses the information which leads me to make that statement and I need not enlarge upon it.

Moreover, we have insular possessions which must be safeguarded. Those outlying possessions would be the first to feel the effect of foreign conflict or foreign aggression. In order to reach them, and reach them speedily if necessary, we must have a navy powerful in its structure and in its equipment, and a land force sufficiently formidable to accompany, for purposes of defense, any naval excursion made necessary for the protection of any of our insular possessions.

Moreover, Mr. President, overpopulated nations must find an outlet somewhere. Some of the nations of the earth are to-day overcrowded, with no sign of a diminution of the ever-increasing number of their inhabitants. They necessarily burst their bonds in obedience to an inexorable law of natural expansion, and if these outlets are directed toward the Western Hemisphere they must be either prevented or controlled by the Government of the United States.

Mr. President, there is no question that every nation in the world is to a greater or less degree involved in the conflict now raging in Europe and Asia. Neutrality is in some respects an abstract term. So great a conflict as this, with its ramifications extended in every direction, necessarily comes in contact with, if, indeed, it does not frequently overlap, the rights and interests of neutral nations. Ours is the only great power not directly involved in the conflict, and it may be that in a week, in a day, possibly in an hour, some crisis may overtake us which may make it absolutely necessary to go beyond the point where we can find safety with honor in maintaining peaceful international relations. God grant that such a time as that and such a crisis may never come; but that nation is indeed indifferent which, in view of the experiences of the last 14 months, does not perceive the possibilities which make preparation to a certain degree an inevitable and predominant duty.

So, Mr. President, while the propaganda of universal preparation may well be regarded as a call to the trough instead of a call to the trenches, the sober, reflective judgment of the people of this country overwhelmingly approves of the intention of the Sixty-fourth Congress, without regard to party or to personal differences as to details, to meet and recognize and perform this duty, and perform it with such expedition as its importance justifies.

I regret, Mr. President, that the many so-called defense societies, journals, associations, and other institutions which have been holding meetings, listening to frenzied speeches, and passing resolutions denouncing and instructing us, proclaiming our dire needs and more dire helplessness, have none of them suggested a method of raising the revenue needed for their purposes. We have been told that our Atlantic and Pacific coasts were exposed and defenseless; we have been told that we needed a Navy equal to that of the greatest navy afloat, and that our Army should be swelled to millions of active, militant soldiers; and yet, so far as I can remember, not one of these associations or leagues, not one of these conventions, has given the slightest consideration to the financial side of the problem, or if they have they have kept their views to themselves, leaving us to flounder along as best we may. This is a part of the problem also, Mr. President, which this Congress must determine and, unfortunately, must rely upon its own views as to details because of the absence of any outside suggestions.

Economy should be practiced by the Nation, but, unfortunately, I see no signs of it on either side of this or the other Chamber. If there is any tendency toward the reduction of expenditures in any direction, I should be very glad if some Senator would interrupt me and point it out. If there has been any diminution in the appropriations either for necessary objects or for matters which might well be left to a more propitious time, I have been unable to perceive it. Mr. President, this lack of economic forethought is due not so much, in my judgment, to the good intent of Senators and Representatives as it is to the insistent demands of their several constituencies. The man who preaches and attempts to practice economy in public life is disliked by his associates, but it is equally true that if he attempts to put his purposes into effective operation he must look for repudiation by those whom he represents.

The amount of added revenue which we are obliged, therefore, to raise must be taken in connection with the certain fact that there will be no corresponding reduction of public expenditures; in other words, we are going right ahead, every department of Government in full blast, and every possible appropriation to be made just as heretofore. The raising of millions of dollars necessary to meet these urgent additional needs which can not be postponed or disregarded will, I regret to say, be accompanied by no reductions in the public expenditures.

For one, Mr. President, I am prepared to take my share of the responsibility. I stated at the outset that I had no sympathy with the extremists, however conscientious and sincere, upon this question, whether it be in the direction of military preparedness or no preparedness at all. I love peace, Mr. President, as dearly as any man on earth. In my earlier years I had some bitter experiences with war, and I know full well its horrors and its consequences; but I am not vain enough, Mr. President, to believe that human nature will ever so change that "wars and rumors of wars" will cease to ebb and flow with the tides of civilization. We can only strive to make our wars, if wars there are to be, just and unavoidable ones. Let us avoid them, if this is consistent with duty and with honor, with the maintenance of our national self-respect and our obligations to mankind. Such wars are frightful and horrible to contemplate. But, Mr. President, such wars have their compensation in the spiritual values which spread from them like a benediction. Who can estimate the far-reaching, the priceless spiritual values of the War between the States to this Nation? It is beyond all estimate. It has consecrated the North and the South to the destiny of a single people; it shines through eyes that are filled with tears of suffering and of sacrifice, and clusters around battle flags scarred and grimed with conflict; it rises from the grave of every soldier and lifts us into an atmosphere redolent with the aroma of nationalism. Its memories are as sacred as they are precious. It is worth all that it cost our people, and will ever give courage to those who may falter in their guardianship of justice and of liberty. Our Nation is dedicated to the rights of man, to the arts of peace, and to the regeneration of the world. Our example should be commensurate with our ideals; but, Mr. President, until all the nations shall reach this high plane of lofty purpose peace may fly on frightened wings to other lands and we may become involved in war's deadly circuit. We must therefore shape our policies and make our preparations as the experiences of the past demand,

not for conquest, nor yet for glory, but that our loins may be girded for whatever ordeal the future may provide for us.

I shall support this bill, Mr. President, in the main. I feel sure it will have in its favor the preponderance of public sentiment and that in its practical operation it will give general satisfaction.

APPENDIX.

DEMOCRACY IN AMERICA.

[By Alexis de Tocqueville.]

(Vol. 2, chap. 22.)

WHY DEMOCRATIC NATIONS ARE NATURALLY DESIROUS OF PEACE AND DEMOCRATIC ARMIES OF WAR.

The same interests, the same fears, the same passions which deter democratic nations from revolutions deter them also from war; the spirit of military glory and the spirit of revolution are weakened at the same time and by the same causes. The ever-increasing numbers of men of property—lovers of peace, the growth of personal wealth which war so rapidly consumes, the mildness of manners, the gentleness of heart, those tendencies to pity which are engendered by the equality of conditions, that coolness of understanding which renders men comparatively insensible to the violent and poetical excitement of arms, all these causes concur to quench the military spirit. I think it may be admitted as a general and constant rule that amongst civilized nations the warlike passions will become more rare and less intense in proportion as social conditions shall be more equal. War is nevertheless an occurrence to which all nations are subject, democratic nations as well as others. Whatever taste they may have for peace they must hold themselves in readiness to repel aggression, or, in other words, they must have an army.

Fortune, which has conferred so many peculiar benefits upon the inhabitants of the United States, has placed them in the midst of a wilderness where they have, so to speak, no neighbors; a few thousand soldiers are sufficient for their wants; but this is peculiar to America, not to democracy. The equality of conditions and the manners, as well as the institutions resulting from it, do not exempt a democratic people from the necessity of standing armies; and their armies always exercise a powerful influence over their fate. It is therefore of singular importance to inquire what are the natural propensities of the men of whom these armies are composed.

Amongst aristocratic nations, especially amongst those in which birth is the only source of rank, the same inequality exists in the army as in the nation; the officer is noble, the soldier is a serf; the one is naturally called upon to command, the other to obey. In aristocratic armies the private soldier's ambition is therefore circumscribed within very narrow limits. Nor has the ambition of the officer an unlimited range. An aristocratic body not only forms a part of the scale of ranks in the nation, but it contains a scale of ranks within itself; the members of whom it is composed are placed one above another in a particular and unvarying manner. Thus one man is born to the command of a regiment, another to that of a company; when once they have reached the utmost object of their hopes they stop of their own accord and remain contented with their lot. There is, besides, a strong cause, which in aristocracies weakens the officer's desire of promotion. Amongst aristocratic nations an officer, independently of his rank in the army, also occupies an elevated rank in society; the former is almost always in his eyes only an appendage to the latter. A nobleman who embraces the profession of arms follows it less from motives of ambition than from a sense of the duties imposed on him by his birth. He enters the army in order to find an honorable employment for the idle years of his youth, and to be able to bring back to his home and his peers some honorable recollections of military life, but his principal object is not to obtain by that profession either property, distinction, or power, for he possesses these advantages in his own right and enjoys them without leaving his home.

In democratic armies all the soldiers may become officers, which makes the desire of promotion general and immeasurably extends the bounds of military ambition. The officer, on his part, sees nothing which naturally and necessarily stops him at one grade more than at another, and each grade has immense importance in his eyes, because his rank in society almost always depends on his rank in the army. Amongst democratic nations it often happens that an officer has no property but his pay and no distinction but that of military honors; consequently as often as his duties change his fortune changes and he becomes, as it were, a new man. What was only an appendage to his position in aristocratic armies has thus become the main point, the basis of his whole condition. Under the old French monarchy officers were always called by their titles of nobility; they are now always called by the title of their military rank. This little change in the forms of language suffices to show that a great revolution has taken place in the constitution of society and in that of the army. In democratic armies the desire of advancement is almost universal; it is ardent, tenacious, perpetual; it is strengthened by all other desires, and only extinguished with life itself. But it is easy to see that of all armies in the world those in which advancement must be slowest in time of peace are the armies of democratic countries. As the number of commissions is naturally limited, whilst the number of competitors is almost unlimited, and as the strict law of equality is over all alike, none can make rapid progress—many can make no progress at all. Thus the desire of advancement is greater and the opportunities of advancement fewer there than elsewhere. All the ambitious spirits of a democratic army are consequently ardently desirous of war, because war makes vacancies and warrants the violation of that law of seniority which is the sole privilege natural to democracy.

We thus arrive at this singular consequence: That of all armies, those most ardently desirous of war are democratic armies, and of all nations, those most fond of peace are democratic nations; and what makes these facts still more extraordinary is that these contrary effects are produced at the same time by the principle of equality.

All the members of the community, being alike, constantly harbor the wish and discover the possibility of changing their condition and improving their welfare; this makes them fond of peace, which is favorable to industry and allows every man to pursue his own little undertakings to their completion. On the other hand, this same equality makes soldiers dream of fields of battle by increasing the value of military honors in the eyes of those who follow the profession of arms and by rendering those honors accessible to all. In either case the inquietude of the heart is the same, the taste for enjoyment as insatiable, the ambition of success as great; the means of gratifying it are alone different.

These opposite tendencies of the nations and the army expose democratic communities to great dangers. When a military spirit forsakes a people, the profession of arms immediately ceases to be held in honor, and military men fall to the lowest rank of the public servants; they are little esteemed, and no longer understood. The reverse of what takes place in aristocratic ages then occurs; the men who enter the army are no longer those of the highest but of the lowest rank. Military ambition is only indulged in when no other is possible. Hence arises a circle of cause and consequence from which it is difficult to escape; the best part of the nation shuns the military profession because that profession is not honored, and the profession is not honored because the best part of the nation has ceased to follow it. It is, then, no matter of surprise that democratic armies are often restless, ill-tempered, and dissatisfied with their lot, although their physical condition is commonly far better and their discipline less strict than in other countries. The soldier feels that he occupies an inferior position, and his wounded pride either stimulates his taste for hostilities, which would render his services necessary, or gives him a turn for revolutions, during which he may hope to win by force of arms the political influence and personal importance now denied him. The composition of democratic armies makes this last-mentioned danger much to be feared. In democratic communities almost every man has some property to preserve; but democratic armies are generally led by men without property, most of whom have little to lose in civil broils. The bulk of the nation is naturally much more afraid of revolutions than in the ages of aristocracy, but the leaders of the army much less so.

Moreover, as amongst democratic nations (to repeat what I have just remarked) the wealthiest, the best educated, and the most able men seldom adopt the military profession; the army, taken collectively, eventually forms a small nation by itself, where the mind is less enlarged and habits are more rude than in the nation at large. Now, this small, uncivilized nation has arms in its possession, and alone knows how to use them; for, indeed, the pacific temper of the community increases the danger to which a democratic people is exposed from the military and turbulent spirit of the army. Nothing is so dangerous as an army amidst an unwarlike nation; the excessive love of the whole community for quiet continually puts its constitution at the mercy of the soldiery.

It may therefore be asserted, generally speaking, that if democratic nations are naturally prone to peace from their interests and their propensities, they are constantly drawn to war and revolutions by their armies. Military revolutions, which are scarcely ever to be apprehended in aristocracies, are always to be dreaded amongst democratic nations. These perils must be reckoned amongst the most formidable which beset their future fate, and the attention of statesmen should be sedulously applied to find a remedy for the evil.

When a nation perceives that it is inwardly affected by the restless ambition of its army the first thought which occurs is to give this inconvenient ambition an object by going to war. I speak no ill of war; war almost always enlarges the mind of a people and raises their character. In some cases it is the only check to the excessive growth of certain propensities which naturally spring out of the equality of conditions, and it must be considered as a necessary corrective to certain inveterate diseases to which democratic communities are liable. War has great advantages, but we must not flatter ourselves that it can diminish the danger I have just pointed out. That peril is only suspended by it, to return more fiercely when the war is over, for armies are much more impatient of peace after having tasted military exploits. War could only be a remedy for a people which should always be athirst for military glory. I foresee that all the military rulers who may rise up in great democratic nations will find it easier to conquer with their armies than to make their armies live at peace after conquest. There are two things which a democratic people will always find very difficult—to begin a war and to end it.

Again, if war has some peculiar advantages for democratic nations, on the other hand it exposes them to certain dangers which aristocracies have no cause to dread to an equal extent. I shall only point out two of these. Although war gratifies the army, it embarrasses and often exasperates that countless multitude of men whose minor passions every day require peace in order to be satisfied. Thus there is some risk of its causing under another form the disturbance it is intended to prevent. No protracted war can fail to endanger the freedom of a democratic country. Not, indeed, that after every victory it is to be apprehended that the victorious generals will possess themselves by force of the supreme power, after the manner of Sylla and Cæsar; the danger is of another kind. War does not always give over democratic communities to military government, but it must invariably and immeasurably increase the powers of civil government; it must almost compulsorily concentrate the direction of all men and the management of all things in the hands of the administration. If it lead not to despotism by sudden violence, it prepares men for it more gentley by their habits. All those who seek to destroy the liberties of a democratic nation ought to know that war is the surest and the shortest means to accomplish it. This is the first axiom of the science.

One remedy, which appears to be obvious when the ambition of soldiers and officers becomes the subject of alarm, is to augment the number of commissions to be distributed by increasing the Army. This affords temporary relief, but it plunges the country into deeper difficulties at some future period. To increase the Army may produce a lasting effect in an aristocratic community, because military ambition is there confined to one class of men, and the ambition of each individual stops, as it were, at a certain limit; so that it may be possible to satisfy all who feel its influence. But nothing is gained by increasing the Army amongst a democratic people, because the number of aspirants always rises in exactly the same ratio as the Army itself. Those whose claims have been satisfied by the creation of new commissions are instantly succeeded by a fresh multitude beyond all power of satisfaction; and even those who were but now satisfied soon begin to crave more advancement; for the same excitement prevails in the ranks of the Army as in the civil classes of democratic society, and what men want is not to reach a certain grade, but to have constant promotion. Though these wants may not be very vast, they are perpetually recurring. Thus a democratic nation, by augmenting its army, only allays for a time the ambition of the military profession, which soon becomes even more formidable, because the number of those who feel it is increased. I am of opinion that a restless and turbulent spirit is an evil inherent in the very constitution of democratic armies and beyond hope of cure. The legislators of democracies must not expect to devise any military organization capable by its influence of calming and restraining the military

profession; their efforts would exhaust their powers before the object is attained.

The remedy for the vices of the Army is not to be found in the Army itself, but in the country. Democratic nations are naturally afraid of disturbance and of despotism; the object is to turn these natural instincts into well-digested, deliberate, and lasting tastes. When men have at last learned to make a peaceful and profitable use of freedom, and have felt its blessings—when they have conceived a manly love of order and have freely submitted themselves to discipline—these same men, if they follow the profession of arms, bring into it, unconsciously and almost against their will, these same habits and manners. The general spirit of the nation being infused into the spirit peculiar to the army, tempers the opinions and desires engendered by military life, or represses them by the mighty force of public opinion. Teach but the citizens to be educated, orderly, firm, and free, the soldiers will be disciplined and obedient. Any law which, in repressing the turbulent spirit of the army, should tend to diminish the spirit of freedom in the nation, and to overshadow the notion of law and right would defeat its object; it would do much more to favor, than to defeat, the establishment of military tyranny.

After all, and in spite of all precautions, a large army amidst a democratic people will always be a source of great danger; the most effectual means of diminishing that danger would be to reduce the army, but this is a remedy which all nations have it not in their power to use.

Mr. CHAMBERLAIN. Mr. President, yesterday the Senate adopted an order authorizing the printing in parallel columns of House bill 12766 and Senate bill 4840, concerning the national defense. The printing clerk advises me now that it is found impossible to print these bills in parallel columns, for the reason that one section of the House bill, for instance, may be involved in a half dozen sections of the Senate bill and vice versa. It would involve an expense of several hundred dollars, and would not assist the Senate at all if we simply printed the bills in parallel columns, without paralleling the subject matter of each bill, and that is the impossible thing to do. Therefore, unless the Senate objects, I should like to ask that the vote by which the order was made be reconsidered.

The VICE PRESIDENT. Without objection, the vote is reconsidered, and the order is rescinded.

Mr. CUMMINS. Mr. President, before the pending measure reaches a final vote I hope to have an opportunity to discuss the general subject of preparedness for both war and peace; but at the present moment I intend to direct my observations to the bill itself, with special reference to the amendment which I have offered and which is now pending. It is probable that during the progress of the bill I will offer a number of amendments; but I assure the chairman of the committee who has the bill in charge and all Senators that these amendments will not be presented in a hostile spirit. They will be for the purpose of harmonizing and strengthening the bill, rather than for the purpose of disarranging or weakening it.

The bill reported by the committee divides the armed, organized, active land forces of the United States into three parts or divisions: First, the Regular Army, so called; second, the Volunteer Army, so called—I say "so called," because the word "volunteer" is entirely inappropriate in its use in connection with that particular division, for the entire armed strength of the United States is a volunteer armed strength; third, the National Guard, or, as it might be termed, the Organized Militia of the United States.

I have always been in sympathy with the traditional policy of the American people, which, as I understand it, has been opposed to a large standing army; but I do not find that the force here proposed is in any way inconsistent with the policy to which I have referred when the situation with which we are confronted is taken into account. I intend to favor the increase of the Regular Army to the point provided for in the bill, first, because our relations toward Mexico are in such a state that I think we ought, having that danger in view, to increase the Regular Army as greatly as is here proposed; second, because the increase of something like 80,000 men is to be made in five years, a very limited addition in any one year; and, third—although this is not technically a reason, possibly—because I fear that the entire increase provided for in the Regular Army will not be realized. I fear that it will be impossible to enlist the men necessary for the proposed increase.

Service in the Regular Army is not attractive to the young men of the country. The compensation is small, and the duties are such as naturally repel the ordinary American citizen. It is only in times of great danger, when the spirit of patriotism is invoked, and the determination to preserve the country from threatened peril is paramount, that we will be able to enlist or maintain an Army of any considerable extent.

The second division, the Volunteers—while I do not intend to discuss the merits of the proposition fully at this time—in my judgment ought to be entirely eliminated from the measure. It is not only impracticable in operation; it will not only, as I look at it, fail to provide an additional force, but it will be a very serious obstacle in the way of recruiting the National Guard, which I look upon as the real source of strength, so far as training and discipline are concerned, and will divide the energies of the country and of Congress in the maintenance of these two bodies of men, both of which have for their chief purpose the education and the training of young men in the military science. In my judgment, this section of the bill encounters all the difficulties from the constitutional standpoint that are urged against the National Guard. I shall present my views upon that subject more fully at another time; but in order that Senators may have the matter in mind, let me remind those who are here that the Constitution plainly contemplates two great resources of military strength, so far as land forces are concerned: First, the Regular or the Standing Army, the Army of the United States, supposed to be in service during the entire period of enlistment, whatever that may be; second, the militia, which, as I said the other day, is as purely a Federal force and as entirely under the power and jurisdiction of Congress as is the Regular Army in all respects save one, and it is this—that while the Organized Militia is not in the active service in time of war or imminence of war, its officers are to be appointed or selected by the several States.

It is my opinion that section 56 of the bill, the section that refers to the so-called Volunteer Army, simply creates another organized body of the militia, and that the provision of the Constitution which reserves to the States the authority to appoint officers will be just as applicable to the so-called Volunteers in times of peace as it is applicable to the Organized Militia, known as the National Guard.

With that I pass to the immediate subject of my amendment.

I do not profess to great expertness in the military science, but my general reading and observation have led me to the conclusion that in the national defense the land force is quite as important as the naval force. Indeed, if I were compelled to rank the importance of these two arms or branches of our military strength, I would give precedence to the land force. I understand perfectly that the office of the Navy is to prevent landing upon our shores, to protect our commerce, and the like; but, after all, one engagement may entirely destroy the naval force as a protection to the people of the country. One engagement may so dissipate or disintegrate the Navy that it will thereafter become practically useless in defending our land against invasion.

Do not understand me even to suggest that our Navy should be weak or inconclusive. I am entirely in favor of an adequate naval force; but I repeat that for the protection of the United States against invasion we must depend more largely upon the strength and efficiency of the land force than of the sea force. No foreign power will ever attempt an invasion if it knows that it will be met upon the shore with an army of adequate strength and of adequate equipment, for there would be no motive whatsoever for the invasion if it were reasonably sure that the invading force would be forced back into the sea.

I am therefore particularly interested, and I think every Senator is, in so organizing our land forces that all the world may know that, even though our naval fleet is swept away, nevertheless no hostile foot can ever be planted upon American soil.

The bill, Mr. President, inaugurates a new era. It is an entirely new era so far as the Organized Militia is concerned; that is, so far as the National Guard—for I shall hereafter speak of it as the National Guard—is concerned. It establishes new relations between the General Government and the guard. It creates a new atmosphere which surrounds the whole armed strength of the United States; and it is my desire to see the guard brought into as close connection with the War Department at Washington as it is possible to bring it. If we are to depend—and we must depend—upon these forces, that are in the service in time of peace only to be trained and educated and disciplined in military affairs, there must be between such force and the supreme commander in the War Department that relation and feeling of confidence and closeness that will make all of them understand that they are moving and working for a single object.

I hope that the jealousy and aloofness heretofore existing between the Regular Army and the National Guard may be overcome, and that each will regard the other as a body of faithful, patriotic soldiers, each attempting in its own way and within its own field to further the great purpose for which our armed strength is created.

The National Guard will be from now henceforth, if this bill is passed, a Federal instrumentality. Most people have been in the habit of thinking of the guard or the Organized Militia as a State organization, as a State militia, as State troops, to be called into the Federal service only in times of great peril when it is necessary to make additions to the power of the Regular Army. There is nothing in our Government, there is

nothing in our Constitution, upon which any such belief or sentiment can be founded.

The militia are not State troops only. The truth is that there is no State in the Union that can organize and equip and arm a militia without the consent of Congress, and that consent has been given in times past; but Congress never has assumed to exercise all the power that is given to it in the Constitution with regard to the Organized Militia. This bill, for the first time in the history of our country, puts the National Guard in its proper relation to the General Government, and makes every officer of the National Guard as subject to the orders of the President as is any officer of the Regular Army.

Many people have seemed to believe that when the President of the United States desired to call upon the militia of the country it was necessary for him to make a requisition upon the governor of the State in which the particular militiamen or body of militia happened to be. It is not so. The President of the United States has the power, or we can give him the power, to issue all the orders that may be necessary to completely govern the militia or the National Guard directly to the officers commanding the guard, and there must be as complete and as full obedience to orders of that sort as though they had been directed to officers of the so-called regular force.

The word "regular" has crept into the literature of this general subject without any authority whatever. We have used it without very much discrimination to define that body of men who were continuously in the service of the Federal Government; but the forces provided for in the bill before us, and who are designated as parts of the Regular Army, are in fact no more parts of the Regular Army than are the officers and the men of the Organized Militia or National Guard.

The Constitution, which confers upon Congress the power to legislate upon this subject, does not suggest that one force is "regular" and the other "irregular." As I recall, there is no such word employed in the Constitution with reference to military matters; and I hope in the very beginning, as we go forward with this bill, that the somewhat vague and prejudicial impression many men have had that the Regular Army was a Federal instrumentality and the National Guard purely a State instrumentality, will disappear, because one, like the other, is subject to the laws of Congress and to the orders of the President of the United States.

Mr. NELSON. Mr. President, will the Senator permit me to ask him a question?

Mr. CUMMINS. Certainly.

Mr. NELSON. I should like to hear the Senator, in connection with his remarks, interpret this provision of section 2, Article II, of the Constitution:

> The President shall be Commander in Chief of the Army and Navy of the United States, and of the militia of the several States, when called into the actual service of the United States.

That contemplates that the States may have a militia, and that the President has no command over them until they are called into the actual service of the United States. I should like to hear the Senator interpret that provision of the Constitution.

Mr. CUMMINS. Mr. President, I do not think so. In order to interpret it, I will begin at the origin of this power as given to both Congress and the President in the Constitution.

In Article I, section 8, there will be found the authority respecting the armed strength of the country; that is to say, the authority to provide for the national defense. I read——

Mr. NELSON. From what section does the Senator read?

Mr. CUMMINS. I am reading now from section 8 of Article I. We all know that it is preceded by the words "The Congress shall have power."

> To raise and support armies, but no appropriation of money to that use shall be for a longer term than two years.
>
> To provide and maintain a Navy.
>
> To make rules for the government and regulation of the land and naval forces.

It has been generally supposed that the parts of the Constitution I have just read relate to what I have called the Regular Army so far as the land force is concerned. I continue:

> To provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions.

I have heard it doubted, oftentimes, whether the clause I have just read gave Congress the authority to empower the President to send the militia beyond the confines of the country. That question was long ago definitely settled by the Supreme Court of the United States, but I shall not pause to read the opinion. It is to the effect that the President, in order to repel invasion, may send the militia, which has been organized under the authority of Congress beyond the limits of the United States, because oftentimes the most effective way of repelling invasion is to invade, thus prevent the invasion which is anticipated or feared.

Mr. HARDWICK. Mr. President, will the Senator pardon me for just a moment?

Mr. CUMMINS. I yield to the Senator from Georgia.

Mr. HARDWICK. The decision to which the Senator refers does not go to the effect, however, of holding that the militia can be sent off for a long foreign campaign, if I remember it correctly.

Mr. CUMMINS. No; it does not go to the extent of holding that if the United States were to enter upon a war of aggression, and desired to occupy a foreign country in order to conquer it, the militia could be dispatched upon an errand of that kind.

Mr. HARDWICK. No.

Mr. CUMMINS. It is limited to the precise case I have already suggested.

Mr. HARDWICK. Yes. If the Senator will pardon me, I want to suggest that the illustration I have in mind, remembering that case, is this: If the President saw troops massed against us across the Canadian border or the Mexican border, he might send the militia across to strike first at those troops, but the case does not go any further in principle than that.

Mr. CUMMINS. It is also true that when the President of the United States, under the authority of Congress, determines that a particular fact or situation exists which authorizes the use of the militia, his determination can not be questioned anywhere or by anybody.

Mr. STERLING. Mr. President, I will ask the Senator from Iowa if he will give us the volume and page of the case to which he refers?

Mr. CUMMINS. The title of the case is Martin versus Mott, Twelfth Wheaton, 19. There is also the case of Houston versus Moore, Fifth Wheaton, 1.

Mr. SMITH of Georgia. Before the Senator passes from that, will he not make this qualification of his statement as to the discretion of the President? Suppose the President should deliberately undertake to send the National Guard across the sea into Asia to take part in the war there, would it not be so clearly violative of the Constitution that he would be subject to impeachment?

Mr. CUMMINS. I am not prepared to deny the proposition just suggested by the Senator from Georgia. I can conceive that the action of the President might be so arbitrary and so clearly colorable that it might be inquired into. But so far as I am concerned, this limitation commends the National Guard to me rather than otherwise. I do not believe we ought to organize the armed strength for the purpose of conquering any country in the world. I do not believe that we ought to impose upon the people of this country the burden that is necessarily entailed in the maintenance of military strength in order to do more than to repel invasion and to resist attack. If we ever reach a time when the American spirit desires to subject other countries to our power, that desires to enlarge the territory of the United States by conquest, the Constitution, from which I am quoting, will already have disappeared as a living force among the American people. I hope that no part of our military strength, whether it be denominated as the Regular Army or denominated as militia, will ever be employed for any such purpose.

Mr. SMITH of Georgia. Will the Senator allow me to say that in calling attention to this limitation with reference to the National Guard I did not at all mean to indicate that I thought it was an objection. I think it is a desirable limitation.

Mr. CUMMINS. I am sure of that.

Mr. SMITH of Georgia. I hope there never will be an effort to send them abroad for any such purpose.

Mr. CUMMINS. I am sure the sentiment of the Senator from Georgia is in exact accord with my own.

Mr. NEWLANDS. Mr. President——

The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from Nevada?

Mr. CUMMINS. I yield.

Mr. NEWLANDS. I wish to ask the Senator from Iowa how the militia could be used in case it is necessary in the maintenance of the Monroe doctrine to defend the soil of some Central American or South American Republic against foreign invasion?

Mr. CUMMINS. Mr. President, I am not very much concerned about the Monroe doctrine in building up our land force. It may be that some time we will be so unfortunate as to be compelled to take a large army to a distant country in order to sustain the Monroe doctrine. I am praying that no such contingency will ever occur, and if it does unhappily come I am

quite willing to depend upon the 250,000 men and officers who are provided for in the earlier parts of the bill.

Mr. NEWLANDS. I suppose the Senator also assumes that the militia can not be used for any such purpose and he realizes, of course, that one of the chief——

Mr. CUMMINS. I do not say so. I do not want to drift into a disscussion of what the Monroe doctrine is or a discussion of the principle upon which it is founded, but if I understand it the Monroe doctrine is based upon self-interest. It is a doctrine which restrains foreign powers from occupying with their sovereignty the Western Hemisphere because we believe their presence in the Western Hemisphere with the governmental views they entertain would constitute a peril to the United States, and it is quite likely that that is the equivalent of a threatened invasion.

I quote the next paragraph of the Constitution upon this point:

To provide for organizing, arming, and disciplining the militia—

There is no suggestion there that it is a State force alone—

and for governing such part of them as may be employed in the service of the United States.

Mr. NELSON. Does not that mean that the Federal Government has no control unless they employ them directly in the service of the United States.

Mr. CUMMINS. Not at all. The militia generally is composed of all the people of the United States. What is the militia? The unorganized militia under this bill is declared to be all men or boys from 16 to 60 possibly, or 65, and that is simply an interpretation put upon the word "militia." The unorganized militia of the United States is composed of every man, and I suppose, in the future, of every woman who is capable of bearing arms and defending the liberties and the integrity of the country. There is no description of militia in its general sense short of the one I have just suggested.

And for governing such part of them as may be employed in the service of the United States, reserving to the States, respectively, the appointment of the officers and the authority of training the militia according to the discipline prescribed by Congress.

In the same article and in section 10 we find this provision:

No State shall, without the consent of Congress, lay any duty of tonnage or keep troops or ships of war in time of peace.

What are troops? I assume that troops, as distinguished from men, are men organized, armed, and equipped for the purpose of carrying on warfare.

Mr. SUTHERLAND. Mr. President——

The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from Utah?

Mr. CUMMINS. I do.

Mr. SUTHERLAND. The Senator from Iowa is always very accurate in his investigation and in his interpretation of the Constitution; but I ask the Senator whether he does not think that the word "troops" there means something entirely different and distinct from the word "militia"—whether the word "troops" does not mean a standing army as distinguished from the militia?

Mr. CUMMINS. I do not think so, although that is, of course, a mere matter of judgment. The word "militia" includes all the men of the United States who are capable of carrying on war. The word "troops" is distinguishable from the word "militia" in this, that it signifies organized men, armed men, trained men, who are capable of moving under the orders of superior officers. That is the interpretation I put upon it.

Mr. SUTHERLAND. The State keeps the militia.

Mr. CUMMINS. No State keeps such militia without the consent of Congress.

Mr. SUTHERLAND. I am not so sure about that.

Mr. CUMMINS. At least I——

Mr. SUTHERLAND. The Senator is presenting a phase of the matter that I confess I have not had occasion to think about. However, it occurs to me that what is meant by the provision to which the Senator has just referred is that the State shall not keep troops in the sense that it shall not maintain a standing army, but that the State may maintain militia as distinguished from troops.

Mr. CUMMINS. Does the Senator think the State may maintain an army for nine months in the year?

Mr. SUTHERLAND. It may maintain the militia all the time, in the sense that it is a force upon which the State may call. The State may execute its own laws by calling upon the militia.

Mr. CUMMINS. When the militia is unorganized?

Mr. SUTHERLAND. It creates the militia and appoints the officers of the militia, and in that sense it keeps the militia.

Mr. CUMMINS. When the militia is organized, what does it become then?

Mr. SUTHERLAND. It is still the militia.

Mr. CUMMINS. They may organize the militia and keep them throughout the year, but they could not keep troops during the whole year?

Mr. SUTHERLAND. That is my interpretation of it. I think that is precisely what it means.

Mr. CUMMINS. It does not seem to me that distinction can be accepted.

Mr. CURTIS. I think the latter part of section 10 explains that the State militia are considered as troops, because it says:

No State shall, without the consent of Congress, lay any duty of tonnage, keep troops or ships of war in time of peace, enter into any agreement or compact with another State or with a foreign power, or engage in war, unless actually invaded or in such imminent danger as will not admit of delay.

Mr. CUMMINS. Undoubtedly.

Mr. CURTIS. So the State may maintain troops.

Mr. CUMMINS. Congress can authorize a State to have troops and use them. I have no doubt about that at all. It can maintain troops without the consent of Congress when it constitutionally engages in war—that is, when invaded. Of course this is very largely an academic question, for I hope there is no Senator here who desires to destroy the National Guard entirely, although that would seem to be the view of some of its opponents.

The next suggestion with regard to the militia found in the Constitution is the one quoted by the Senator from Minnesota [Mr. NELSON], and I read it:

The President shall be Commander in Chief of the Army and Navy of the United States and of the militia of the several States.

The militia have a habitation, of course, and it is not inaccurate to speak of the militia of the States even though it were not intended to mean that the States have exclusive power over the militia.

But the second suggestion in response to that of the Senator from Minnesota is this: When are they called into the actual service of the United States? Whenever the United States attempts to organize them and train them and discipline them in order that they may be efficient in war they are in the actual service of the United States. There is no difference in law between the period of preparation and the period of performance. Otherwise how can you reconcile these two provisions of the Constitution? In one it is said Congress shall have the power to organize, to equip, to discipline, to arm the militia, whether in time of war or in time of peace, and they are employed, as I think, under Article I, section 8, of the Constitution whenever they are preparing themselves for the work to which they may be ultimately called.

Mr. NELSON. Will the Senator allow me right there to interrupt him?

Mr. CUMMINS. Certainly.

Mr. NELSON. I want to call the Senator's attention to the specific language of the paragraph of the Constitution which he has quoted in part. It is paragraph 16 of Article I:

To provide—

That is, Congress may do this—

To provide for organizing, arming, and disciplining the militia—

That is, to lay down and prescribe the rules—

and for governing such part of them as may be employed in the service of the United States.

Congress has no power or the President has no power to govern them unless they are directly employed in the service of the United States. And then it adds:

Reserving to the States, respectively, the appointment of the officers and the authority of training the militia according to the discipline prescribed by Congress.

That is, Congress could lay down the rules and regulations for the training of the militia, but it is with the States to appoint the officers and to carry on the practical training before they are called into the service of the United States.

Mr. CUMMINS. Mr. President, there is a part of what the Senator from Minnesota has just said that can be accepted, but there is a part that is not justified by the language he has read. I have already discussed it to some extent, and I have reached a conclusion, and I have no doubt whatsoever that the power reserved——

Mr. NELSON. Perhaps I ought not to have interrupted the Senator, and I will not interrupt him if it does not suit him.

Mr. CUMMINS. I have not suggested that the Senator from Minnesota shall not interrupt me. I will be very glad to have him interrupt me at any time. I have, however, considered that section or article of the Constitution as fully as I can, and I will not attempt to add to what I have already stated with respect to it.

Mr. SUTHERLAND. Before the Senator passes to another subject—I said in the colloquy a moment ago that I thought the

term "troops" referred to a standing army and not to the militia. Since then I have obtained the volume of the Century Dictionary dealing with the word "militia," and I invite the Senator's attention to this definition among others:

3. In the United States, all able-bodied men over 18 and less than 45 years of age amenable to military service. Divided into organized militia, or the National Guard and "reserve militia."

Then follows a quotation from Lincoln, in which he says:

It has been necessary to call into service, not only volunteers, but also portions of militia of the States by draft.

Then follows a quotation from Fiske's American Political Ideas, page 98, where it is said:

The Regular Army is supported and controlled by the Federal Government, but each State maintains its own militia, which it is bound to use in case of internal disturbance before calling upon the Central Government for aid. In time of war, however, these militias come under the control of the Central Government.

Now, this is the part to which I invite the Senator's attention:

4. A body of men enrolled and drilled according to military law as an armed force, but not as regular soldiers, and called out in emergency for actual service and periodically for drill and exercise.

Then follows something else which it is not necessary to read. So that the author of this dictionary seems to regard the militia not as regular soldiers but as a body of citizens armed for emergencies and not regular soldiers, and I think that that is the sense in which the word "troops" is used in the Constitution.

Mr. CUMMINS. I see nothing whatever in the definition just read that is inconsistent with anything I have said. I understand perfectly that the militia is that portion or part of our organized strength that is not in continuous service and is called into active service or continuous service only in the event of war or the imminence of war. I have no doubt whatsoever about that. But it does not at all impinge upon my argument or my conclusion to assert that the power to call the militia is in the Congress of the United States, and that the power to organize it and discipline it and train it under officers appointed by the State is also in Congress. By that I do not mean to say that the States may not lawfully organize the militia, because Congress has given the authority to organize it, and it is not necessary even to say that the States could not organize the militia without the consent of Congress. All that I am attempting to establish is the power and authority of the General Government over the Organized Militia known as the National Guard, and when that is established the whole contention, in so far as I am concerned, is proven.

I have entered upon it only because there is a disposition, or has been a disposition, to belittle the National Guard as an essential part of our national armament. I believe it is the agency and the only practicable agency for the training of the young men of this country so that in the event of war we can command a sufficient and efficient Army, and it is with that in view that I have offered the amendment which is now pending and which I now call to the attention of the Senate.

It will be remembered that we have in the Regular Army a General Staff. This bill perpetuates the General Staff. Whether it makes any changes in its personnel I do not know, nor is it material. The provision is found in section 6, and I will read but a little of it:

SEC. 6. The General Staff Corps: The General Staff Corps shall consist of 1 Chief of Staff, detailed in time of peace from major generals of the line, who shall while so serving have the rank, pay, and allowances prescribed for a lieutenant general, and shall take rank and precedence over all other officers on the active list of the Army; 3 assistants to the Chief of Staff, brigadier generals, detailed in time of peace from the brigadier generals of the line, 1 of whom shall be the president of the Army War College and 1 of whom shall be Chief of the Division of Militia Affairs; 10 colonels; 12 lieutenant colonels; 32 majors; and 34 captains—

In all, 92 officers of the Regular Army. These officers constitute the General Staff. Their functions are purely advisory. Neither the staff nor any of its members as such staff officers have any authority whatsoever. It is a board created in order to exchange views, to discuss military affairs, to look into the future, to apprehend military needs, to provide in a broad way for the national defense. It is, I think, an invaluable arm of the service. I think its existence has vindicated the wisdom of the men who not long ago organized it, and I have no criticism upon it or quarrel with what it is appointed to do.

The amendment which I have offered is as follows:

The President shall detail five officers of the National Guard of not less than 10 years' service, who shall constitute an additional section of the General Staff to be known as the National Guard section. Such officers shall be detailed as follows: One for a term of one year, one for a term of two years, one for a term of three years, and two for a term of four years, and after the expiration of each detail the successor shall be detailed for a period of four years—

I will say, in passing, that is the period of the detail of the officers from the Regular Army—

unless such detailed officers shall be sooner relieved. In the event of a vacancy in this section the detail shall be for the unexpired term. No officer having served in this section of the General Staff shall be again detailed for such service within two years after the service has ceased. National Guard officers so serving shall receive the pay and allowances of officers of similar grade in the Regular Army.

My amendment is intended to bring into close cooperation and consultation the officers of the Regular Army and the officers of the National Guard. It is to secure the harmony and good feeling that must exist between these two arms of the service if all the purposes of this bill are to be realized.

It will be remembered that the National Guard under this bill is to consist of practically 117,000 men and officers for the first year. That is the actual strength at this time. It is to be increased during succeeding periods until it reaches the actual strength of substantially 265,000 men and officers. That is the peace strength. When it is recruited to the point of 265,000 it will constitute the most reliable, the most effective, and I think the most patriotic reserve force for the defense of the Union that can possibly be organized. It is composed and will be composed mainly of young men of high ambitions, deeply attached to the institutions of the country, anxious and willing to take on the training and receive the instruction necessary to make them efficient soldiers and capable of defending their country in time of need.

Is it possible that a force of 265,000 such men preparing themselves to discharge the highest duties a citizen can owe his Government ought not to be represented upon the General Staff? Is it possible that there is a Senator here who will deny that privilege to this body of men? No matter what you pay them, they will have served their country in preparation with actual loss to themselves. Are you willing to deny such a body of men, through their officers, participation in the military councils of the Nation? When the moment of danger comes they are the men who will spring to the country's defense, and they are the men upon whom we must rely for immediate and efficient organization.

Mr. SMITH of Georgia. I was called out for a moment. Is the Senator now discussing his amendment which looks toward placing the officers of the National Guard at the head of the bureau here that directs the National Guard?

Mr. CUMMINS. No; I am discussing the amendment now which proposes to create an additional section, known as the National Guard section of the General Staff, to be composed of five officers of the National Guard. I have described in a general way what the General Staff is and the office which it performs, and I am attempting now to show how wise it will be to attach to the General Staff of the Regular Army five representatives of the National Guard.

Mr. SMITH of Georgia. Will the five so attached to the General Staff have any control over the National Guard Bureau in the War Department, which heretofore has been presided over and controlled exclusively by Regular Army officers, who are not familiar with the work of the National Guard and really are not so capable of sympathizing with and directing it as if there were some officers of the National Guard in that bureau?

Mr. CUMMINS. The amendment now under consideration will not change the present organization in the War Department known as the Division of Militia Affairs. I have another amendment, which I shall offer later, possibly, which puts at the head of the Militia Division in the War Department an officer of the National Guard, but that is not the question now under consideration.

Mr. SMITH of Georgia. I asked of the Senator from Iowa the question I did, because I read his amendment last night, and I did not think it reached that division. It seems to me that we ought to reach that division also with the presence of an officer of the National Guard.

Mr. CUMMINS. Mr. President, I am trying to take one step at a time. No matter whether those who believe in the National Guard are successful in putting an officer of the National Guard in charge of the Militia Division or not, there should be little difference of opinion with regard to the propriety of having the guard represented in the General Staff. The members of the General Staff, as such, have no duties to perform, except advisory and consulting duties. It is a committee of the whole upon the state of the Union, so far as military affairs are concerned.

This particular amendment places five representatives of the guard upon the General Staff, in order that they may meet with them, exchange views with them, explain to them, if you please, the necessities or wants of the National Guard, and who can, by their personal association, destroy, as I hope, the unreasoning, unfounded hostility which some of the officers of the Regular Army have manifested toward the National Guard.

Mr. SMITH of Georgia. Can the Senator from Iowa tell us what number of officers there are now in the General Staff?

Mr. CUMMINS. I do not know how many there are now.

Mr. SMITH of Georgia. But under this bill how many are provided for?

Mr. CUMMINS. The bill provides a General Staff composed of 92 officers of the Regular Army.

Mr. SMITH of Georgia. And the Senator proposes by his amendment to add five officers of the National Guard?

Mr. CUMMINS. I ask a representation of five officers from the National Guard. Those officers could not under any possible circumstances overcome the judgment or the conclusions of the General Staff. They would constitute so slight a proportion that the only influence they could exert would be through the persuasiveness of their reasons for the course advised. If, as some people have fancied, the National Guard were to attempt to take possession of the General Staff and were to attempt to administer the military affairs of the country, every Senator would object; but why the military councils of the Nation should not welcome the presence of these few officers of the guard, who come directly from a body which, when the terms of this bill are fully realized, will number 265,000 young men, who are giving their time, devoting their energies, and making sometimes almost infinite sacrifices in order that they may be ready when the time of emergency or danger approaches, I can not conceive.

Mr. SMITH of Georgia. Mr. President, will there not be as many more also of the National Guard reserve under the terms of this bill?

Mr. CUMMINS. Gradually there will be many more. In the course of years the National Guard reserve, it is to be hoped, will largely outnumber those who are actively enrolled and under immediate training, and whose duty it is to go to camp, to maneuver, to drill, and the like.

Mr. President, I have occupied a great deal more time than I had intended to do upon this amendment. My only excuse is that we drifted away into a constitutional argument, with respect to the status of the National Guard under the laws of the country. While I do not deplore or regret the argument, I hope Senators will understand that it is not in anywise involved in the amendment which I have offered. If the views of the Senator from Minnesota [Mr. NELSON] or the views of the Senator from Utah [Mr. SUTHERLAND] are sound, the amendment that I have offered is just as essential, it is just as necessary, it is just as wise, and will be just as effective as though the views which I have held and attempted to state shall be found to be true.

I hope, with all my heart, that the men and the officers of the National Guard, who have for so many years manifested in the most conclusive way their interest in the military strength of the country and their willingness to do all that they can do to provide for the national defense, will hereafter be represented upon the General Staff.

Mr. BRANDEGEE obtained the floor.

Mr. SHERMAN. Mr. President, I merely wish to ask a question of the Senator from Iowa before he resumes his seat.

Mr. BRANDEGEE. I yield to the Senator from Illinois for that purpose.

Mr. SHERMAN. It will take me but a few moments to do so. Before the Senator concludes his remarks I should like to have him add his views upon this statement in the report from the War College under date of September, 1915. It is found on page 22, near the foot of the page of this document, in the following langunge:

> Due to constitutional limitations, Congress has not the power to fix and require such an amount of training for the Organized Militia. No force can be considered a portion of our first line whose control and training is so little subject to Federal authority in peace.

I wish to ask, in connection with that statement, the Senator's interpretation of the sixteenth clause of the powers of Congress, as defined in the Constitution, which has been referred to here. Among other powers it refers to the appointment of officers of the militia by the States and "the authority of training the militia according to the discipline prescribed by Congress." Will the Senator state what he believes "discipline" as there used to include? Does it not include requiring some length of training in the State militia so as to give adequate military strength to that organization?

Mr. CUMMINS. Obviously, Mr. President, it involves the power of Congress to prescribe the time the training shall continue. If that be not true, this whole bill is founded upon a false view of the Constitution. It has given the President the power to prescribe the period of training and the character of the training. It must be carried on under the eyes of an officer of the Regular Army. There is not a movement of the National Guard, from the moment of organization, when both officers and men are not under the control of the General Government. I can not imagine anything connected with the National Guard that will not come within the term of "organizing, arming, and disciplining the militia." If anyone can imagine what more could be done with a military organization I shall be very much interested to hear it.

Mr. CURTIS. Mr. President, may I add just one word, with the permission of the Senator from Connecticut, which I think will interest the Senator from Illinois?

Mr. BRANDEGEE. I yield to the Senator from Kansas.

Mr. CURTIS. I wish to read an extract from a document prepared by the military council of the State of Missouri in reference to the power of the Federal Government over the militia under the Constitution. I read as follows:

> Save and except the appointment of officers reserved to the States, but one power remains in the States, and that is to train the militia according to the discipline prescribed by Congress. What does this mean? It means that while the State shall superintend the actual drill and instruction of the National Guard, such instruction must be according to the discipline prescribed by Congress; that is to say, the method of drill and instruction and the observance of all things which go to make up military discipline must be according to Federal standards.

Mr. CHAMBERLAIN. Mr. President, I did not catch the name of the document from which the Senator from Kansas has been reading.

Mr. CURTIS. I have read from an article prepared by the military council of the State of Missouri.

Mr. WARREN. Mr. President, I ask permission to have read at the desk a telegram from the seat of war in Mexico.

Mr. BRANDEGEE. I shall be very glad to yield to the Senator for that purpose.

The VICE PRESIDENT. In the absence of objection, the Secretary will read as requested.

The Secretary read as follows:

[Statement for the press.]

WAR DEPARTMENT, *March 31, 1916.*

Following telegram received to-day:

"SAN GERONIMO, *March 30.*

"Dodd struck Villa's command, consisting of 500, 6 o'clock March 29 at Guerrero. Villa is suffering from a broken leg and lame hip; was not present. Number of Villa's dead known to be 30; probably others carried away dead. Dodd captured two machine guns, large number of horses, saddles, and arms. Our casualties, 4 enlisted men wounded. None serious. Attack was surprise, the Villa troops being driven in a 10-mile running fight and retreated to mountains northwest of railroad, where they separated into small bands. Large number Carranzista prisoners, who were being held for execution, were liberated during the fight. In order to reach Guerrero Dodd marched 55 miles in 17 hours and carried on fight for 5 hours. * * * Elisio Hernandez, who commanded Villa's troops, was killed in fight. With Villa permanently disabled, Lopez wounded, and Hernandez dead, the blow administered is a serious one to Villa's band.

"PERSHING."

Mr. BRANDEGEE. Mr. President, I think one of the most important features of this bill is the attempt to federalize properly the so-called National Guard, which I assume to be the Organized Militia of the several States. That feature is covered by section 112 of the bill, which I will not read in full, but which I will ask to have printed in full in connection with my remarks. I will read that portion which commences at the bottom of page 191 and provides:

> The National Guard * * * may be ordered into the service of the United States by the President to serve for a period of three years within or without the continental limits of the United States, unless sooner discharged by the President.

The section entire is as follows:

> SEC. 112. When Congress shall have authorized the use of the armed land forces of the United States requiring the use of troops in excess of those of the Regular Army, the officers and enlisted men of the National Guard, who have signed an enlistment or agreement to render military service to the United States and have received and accepted compensation for training for such service under the provisions of this act, and who have passed the required physical examination at the time of their enlistment, may be ordered into the service of the United States by the President to serve for a period of three years within or without the continental limits of the United States, unless sooner discharged by the President. Officers and enlisted men in the service of the United States, under the terms of this section, shall have the same pay and allowances as officers and enlisted men of the Regular Army.

Mr. President, I very much fear that Congress is exceeding its power under the Constitution in enacting that provision. It is not entirely a new subject. In 1840 the then Secretary of War, Mr. Poinsett, submitted to Congress a program, one section of which provided:

> SEC. 17. That the President of the United States be authorized to call forth and assembie such numbers of the active force of the militia, at such places within their respective districts, and at such times, not exceeding twice, nor —— days, in the same year, as he may deem necessary; and during such period, including the time when going to and returning from the place of rendezvous, they shall be deemed in the service of the United States, and be subject to such regulations as the President may think proper to adopt for their instruction, discipline, and improvement in military knowledge.

Secretary of War Poinsett submitted his provision to the Speaker of the House of Representatives and in due course it

vent to the House Committee on Militia. On March 6, 1840, the chairman of that committee made reply thereto, inviting the Secretary's attention to several points in his proposed reorganization of the militia which presented a "contrariety of opinions to the Committee on Militia," and stating that at their request he was writing to suggest the difficulties and to ascertain a more complete exposition of his views, and further remarking thereon as follows:

By the seventeenth provision, the power of the President to call forth and assemble such numbers of the active force of the militia as he may deem necessary, and subject them to such regulations as he may think proper to adopt for their instruction, discipline, and improvement in military knowledge, is an organization supposed to be incompatible with the eighth section of the first article of the Constitution, that "provides for calling forth the militia and reserves to the States, respectively, the appointment of the officers and the authority of training the militia according to the discipline prescribed by Congress."

Under date of April 8, 1840, Secretary Poinsett, with reference to the foregoing contention, replied as follows—

Mr. President, as I am very hoarse this afternoon, I do not want to read any more than is absolutely necessary, and so I will ask the Secretary to read the reply of Secretary Poinsett.

The VICE PRESIDENT. The Secretary will read as requested.

Mr. SMITH of Georgia. Will the Senator from Connecticut kindly indicate what the matter referred to is?

Mr. BRANDEGEE. It is the report of the Secretary of War, Mr. Poinsett, in 1840, upon a very similar proposition to federalize the State militia or the National Guard.

The Secretary read as follows:

With regard to the seventeenth article, the same difficulty which presented itself to the committee occurred to me when considering this subject, viz: That provision of the Constitution which restricts the power of Congress over the militia to organizing, arming, and disciplining them, reserving to the States, respectively, the appointment of officers and the authority of training the militia according to the discipline prescribed by Congress. Although the word "disciplining" is susceptible of a different interpretation from that given to it here, *yet the subsequent reservation to the States of the power to train the militia according to the system of discipline adopted by Congress would seem to define its meaning;* and as we can not be too scrupulous in our interpretation of the Constitution, I propose that in the event of its becoming necessary to resort to drafts in order to fill the ranks of the active class of militia, *to apply to the States to place by law their contingents at the disposition of the General Government* for a period not more than 30 days of every year for the purpose of their being trained in conjunction with regular troops and by veteran officers. It is not probable that this cooperation will be withheld by any State when the advantages are presented to it of possessing a body of well-organized, well-armed, and well-disciplined militia, without any expense either to the States or to the citizens thereof, and when they are made aware that it is the intention of the Government to assemble such militia at convenient points within each State and in the vicinity of depots of arms, which it is proposed to establish as a part of the system. [Italics supplied.]

Mr. BRANDEGEE. In other words, Secretary Poinsett conceded the force of the constitutional objection raised by the chairman and changed his plan so as to rely, not upon the authority of the Congress to call the militia into the service of the United States for training, but upon a draft by the State in pursuance of State law, effective only to bring the militia of a given State to a rendezvous within that State.

The Hay provision is even broader than the Poinsett provision. Its effect is to authorize the President to call the militia of a given State into the service of the United States for the purpose of training, not only to encampments within the State but at joint encampments with the Regular Army, which will in the general case be without the State.

Mr. President, it will thus be seen that this proposition has been considered previously by Congress and abandoned on the theory that they had no constitutional authority to federalize the militia, subject to the order of the President, to make it a part of the Regular Army and to send it out of the country.

The Senator from Iowa has alluded to the case in Fifth Wheaton, and now I wish to allude to the case of Peter J. Dunne against The People, reported in Ninety-fourth Illinois, State Reports, being a decision of the supreme court of that State. It is a very instructive case, and answers a good many of the questions about which we are more or less confused, I think, judging from the running colloquy which has developed on this subject. After reading two or three paragraphs of the syllabus, I will ask permission to print in the RECORD, where it may be studied at the leisure of Senators, such portions of the case as I have marked—not the entire case—as it deals with some other points.

The syllabus says:

The power in Congress to provide for organizing, arming, equipping, and disciplining the militia is not exclusive. It is merely an affirmative power and not incompatible with the existence of a like power in the States; and hence the States have concurrent power of legislation not inconsistent with that of Congress. It is only repugnant and interfering State legislation that must give way to the paramount laws of Congress constitutionally enacted.

3. The Federal Constitution does not confer on Congress unlimited power over the militia of the several States, but it is restricted to specific objects enumerated, and for all other purposes the militia of the States remains subject to State legislation. The power of a State over its militia is not derived from the Constitution of the United States. It is a power the States had before the adoption of that instrument, and its exercise by the States not being prohibited by it, it still remains with the States, subject only to the paramount authority of acts of Congress enacted in pursuance of the Constitution.

6. By any fair construction of the Constitution of the United States, a law to organize the militia of a State for its own purposes, not inconsistent with the laws of Congress on that subject, is valid. In right of its sovereignty a State may employ its militia to preserve order within its borders, where the ordinary local officers are unable, on account of the magnitude of the disturbance, or any sudden uprising to accomplish the result.

7. The organization of the active militia of the State is not in violation of that clause of the Federal Constitution which withholds from the States the right to keep troops in time of peace. Such a militia is not embraced in the term "troops," as used in the Constitution. The State militia is simply a domestic force, distinguished from regular troops, and is only liable to be called into service when the exigencies of the State make it necessary.

I now ask that the portion of the case I have marked be printed in the RECORD.

The VICE PRESIDENT. In the absence of objection, permission to print the matter referred to in the RECORD is given.

The matter referred to is as follows:

PETER J. DUNNE v. THE PEOPLE OF THE STATE OF ILLINOIS.

1. Juror—Exemption of active militia: The provision of the act of May 28, 1879, entitled "An act to provide for the organization of the State militia," etc., which exempts an active member of a company of the State militia from serving upon juries, is a valid and constitutional law.

2. State militia—State and Federal power—and herein of their concurrent powers: The power in Congress to provide for organizing, arming, equipping, and disciplining the militia is not exclusive. It is merely an affirmative power and not incompatible with the existence of a like power in the States; and hence the States have concurrent power of legislation not inconsistent with that of Congress. It is only repugnant and interfering State legislation that must give way to the paramount laws of Congress constitutionally enacted.

3. The Federal Constitution does not confer on Congress unlimited power over the militia of the several States, but it is restricted to specific objects enumerated, and for all other purposes the militia of the States remains subject to State legislation. The power of a State over its militia is not derived from the Constitution of the United States. It is a power the States had before the adoption of that instrument; and its exercise by the States not being prohibited by it, it still remains with the States, subject only to the paramount authority of acts of Congress enacted in pursuance of the Constitution.

4. The reservation to the States of the power of appointing the officers of the militia and authority to train the militia according to the discipline prescribed by Congress does not place any restriction upon the States in respect of its power of concurrent legislation concerning its militia. The exception from a given power can not be considered as an enumeration of all the powers which belong to the States over the militia.

5. There is no question of the power of a State to organize such portion of its militia as may be deemed necessary in the execution of its laws and to aid in maintaining domestic tranquillity within its borders. The power given to the chief executive of the State to call out the militia to execute the laws, etc., by implication recognizes the right to organize a State militia.

6. By any fair construction of the Constitution of the United States, a law to organize the militia of a State for its own purposes, not inconsistent with the laws of Congress on that subject, is valid. In right of its sovereignty a State may employ its militia to preserve order within its borders, where the ordinary local officers are unable, on account of the magnitude of the disturbance or any sudden uprising, to accomplish the result.

7. The organization of the active militia of the State is not in violation of that clause of the Federal Constitution which withholds from the States the right to keep troops in time of peace. Such a militia is not embraced in the term "troops," as used in the Constitution. The State militia is simply a domestic force, as distinguished from Regular troops, and is only liable to be called into service when the exigencies of the State make it necessary.

8. It is a matter dependent on the wisdom of Congress whether it will provide for arming and disciplining the entire body of the militia of the United States. The citizen is not entitled, under any law, State or Federal, to demand, as a matter of right, that arms shall be placed in his hands.

9. It is for the legislature to determine of what number the active militia of the State shall consist, depending on the exigency that makes such organization necessary.

10. Same—Validity of act of 1879—Under the constitution of 1870, and in respect to Federal laws: The act of the general assembly of May 28, 1879, providing for the organization of a State militia, etc., is not in conflict with any provision of the present constitution of this State.

11. Nor is that act repugnant to the national law relating to the militia, either in its spirit, intent, or effect. In defining what persons shall constitute the State militia, it is in strict accordance with the act of Congress of 1792.

12. The provision in the State militia law making it the duty of the governor, as commander in chief, by proclamation, to require the enrollment of the entire militia of the State, or such portion thereof as shall be necessary, in the opinion of the President of the United States, and to appoint enrolling officers, and to make all necessary orders to aid in the organization of the militia, is not in contravention of any of the provisions of the act of Congress of 1792, or any other act of Congress in relation to the organization of the militia, but is rather in aid of such laws.

13. The organization of a State militia, when not in actual service, but for the purpose of training under the act of Congress, into divisions, brigades, regiments, battalions, and companies, shall be done as the State legislature may direct. When called into the national service, it is made the duty of the executive to organize the militia as the act of Congress directs.

14. The adoption of the discipline, exercises, and equipment required in the Regular Army of the United States, in the State system, will not render the law invalid.

15. The fact that the men composing the active militia of the State are required to take an oath to obey the "orders of the commander in chief, and such other officers as may be placed over them," is no just ground of objection to the law. The obedience to the orders of the governor is when they are in the service of the State, and not in the actual service of the United States.

16. The provision of the militia code of the State which provides that no military company shall leave the State with arms and equipments without the consent of the commander in chief was intended to apply to the militia when not in the actual service of the United States, and is a valid law.

17. The provision of the militia law making it unlawful for any body of men other than the regularly Organized Volunteer Militia of this State and of troops of the United States, with an exception in favor of students in educational institutions where military science is taught, to associate themselves together as a military company or organization, or to drill or parade with arms, in any city or town of this State, without the license of the governor, is not inconsistent with any paramount law of the United States, and is a binding law.

18. Same—The act not defeated if some provisions are invalid: If the militia law, in some minor matters of detail in the organization of the active militia, or in some of its regulations, should not be found in harmony with the acts of Congress, that would not invalidate the whole act. The most that can be said is that they should yield to the paramount laws of the United States.

19. If the general provisions in sections 4, 5, and 6 of article 11 of the militia act were repugnant to the laws of the United States respecting the militia, they might be eliminated from the statute without affecting in the slightest degree the efficient organization of the active militia; but they are not inconsistent with or repugnant to any acts of Congress on the subject.

20. Nonessential differences in the regulations as to the militia not in the actual service of the United States, contained in a State law, from those in acts of Congress, will not render the former invalid.

21. Police power of the State—Generally: In matters pertaining to the internal peace and well-being of the State, its police powers are plenary and inalienable. It is a power coextensive with self-protection. Everything necessary for the protection, safety, and best interests of the people of the State may be done under this power. Persons and property may be subjected to all reasonable restraints and burdens for the common good.

22. Where mere property interests are involved, this power, like other powers of government, is subject to constitutional limitations; but when the internal peace and health of the people are concerned, the only limitations imposed are that such "regulations must have reference to the comfort, safety, and welfare of society." What will endanger the public security must, as a general rule, be left to the wisdom of the legislative department.

23. Same—Prohibiting parade, etc., of armed bodies of men: It is a matter within the regulation and subject to the police power of the State to determine whether bodies of men, with military organizations or otherwise, under no discipline or command by the United States or of this State, shall be permitted to parade with arms in populous communities and in public places.

Writ of error to the criminal court of Cook County; the Hon. William H. Barnum, judge, presiding.

Mr. Charles A. Gregory, for the plaintiff in error.

Mr. Lyman Trumbull, Mr. Harry Reubens, and Mr. Wolford N. Low, for the defendants in error.

Mr. Justice Scott delivered the opinion of the court:

Peter J. Dunne, having been summoned to serve as a juryman in the criminal court of Cook County at the September term, 1879, it was made to appear he was a citizen of Illinois, 22 years of age, and that he was an enlisted, active member of the "Illinois National Guard," in Company G, First Regiment, a military company organized and existing under a statute of this State, approved May 28, 1879, and in force July 1, of the same year, entitled "An act to provide for the organization of the State militia, and entitled the 'Military Code of Illinois,'" and because of the facts appearing he claimed, under the provisions of the act, which so expressly declares, he was exempt from jury duty, but the court deemed the cause assigned insufficient in law to excuse the juror from service, and notwithstanding the decision of the court he refused to serve in the capacity of a juror, and on account of his contumacy he was fined in the sum of $50.

Acting on the suggestion of counsel, that it is the desire of both parties to obtain the opinion of this court as to the validity of the act of the general assembly "to provide for the organization of the State militia," approved May 28, 1879, all preliminary considerations as to the manner in which the case comes before the court, and the invalidity of the act under the constitution of the State, will be waived with a view to proceed directly to the question whether the act, or such parts of it as provide for the organization of the active militia of the State, known as the Illinois National Guard, is void by reason of its repugnancy to the Constitution of the United States, and to the laws passed in pursuance thereof. It may be remarked, although no point is made that the act in question contravenes any provision of our State constitution, it seems to be in entire harmony with that instrument. Article 12, section 1, constitution of 1870, is, "The militia of the State of Illinois shall consist of all able-bodied male persons resident in the State between the ages of 18 and 45, except such persons as now are or hereafter may be exempted by the laws of the United States or of this State." And section 2 of the same article is, "The general assembly, in providing for the organization, equipment, and discipline of the militia, shall conform as nearly as practicable to the regulations for the government of the armies of the United States." On examination it will be seen the act of the general assembly under consideration conforms exactly with these constitutional requirements, as will be made to appear more fully in the sequel of this discussion.

If, therefore, this act of the legislature is void, it must be for one of two reasons assigned, (1) because of its repugnancy to the Constitution of the United States (2) because it is inconsistent with and repugnant to the acts of Congress on the same subject, passed in pursuance with authority conferred by the Federal Constitution. The importance of the questions involved has induced the most careful consideration, but it will be our purpose to avoid all unnecessary discussion and state our views as briefly as practicable.

The first proposition submitted against the validity of the act known as the military code, is that the power of organizing, arming, and disciplining the militia, being confined by the Constitution of the United States to Congress, when Congress has acted upon the subject and passed a law to carry into effect the constitutional provision, such action excludes the power of legislation by the State on the same subject. This is not, in our judgment, an accurate—certainly not a full—expression of the law. Two things must be assumed to maintain this proposition: 1, that the constitutional provision in respect to the militia is of that character it can only be exercised by Congress, and that any State legislation would of necessity be inconsistent with Federal legislation under that article of the Constitution; 2, that the Constitution itself places a restriction, either directly or by implication, upon all State legislation in respect to the militia. Neither assumption is warranted by any fair construction of the Constitution of the United States, nor by contemporaneous explanations by writers whose authority is to be respected, or by any subsequent judicial determinations with which we are familiar.

Article 1, section 8, division 15, confers power on Congress "to provide for organizing, arming, and disciplining the militia and for governing such part of them as may be employed in the service of the United States, reserving to the States, respectively, the appointment of the officers and the authority of training the militia according to the discipline prescribed by Congress." Neither this clause nor any other of the Constitution inhibits in express terms State legislation in regard to the militia. Our understanding is, it is a matter upon which there may be concurrent legislation by the States and Congress. No doubt it is true that some powers granted to Congress are exclusive and exclude by implication all State legislation in regard to the subject of such powers. It is not true, however, that all powers granted to Congress are exclusive, unless where concurrent authority is reserved to the States. Examples of concurrent authority readily suggest themselves. Congress has power, under the Constitution, "to lay and collect taxes, duties, imposts, and excises," but it has never been supposed that grant of power was a restriction upon the States "to lay and collect taxes" for State purposes. Such a construction would destroy all State governments by taking from them the means of maintaining order or protecting life or property within their jurisdictions. Other examples might be mentioned, but this is sufficient for our present purpose.

It might be well in this connection to call to mind that "powers not delegated to the United States by the Constitution nor prohibited by it to the States are reserved to the States, respectively, or to the people." The power of State governments to legislate concerning the militia existed and was exercised before the adoption of the Constitution of the United States, and as its exercise was not prohibited by that instrument, it is understood to remain with the States, subject only to the paramount authority of acts of Congress enacted in pursuance of the Constitution of the United States. The section of the Constitution cited does not confer on Congress unlimited power over the militia of the States. It is restricted to specific objects enumerated, and for all other purposes the militia remain as before the formation of the Constitution, subject to State authorities. Nor is there any warrant for the proposition that the authority a State may exercise over its own militia is derived from the Constitution of the United States. The States always assumed to control their militia, and, except so far as they have conferred upon the National Government exclusive or concurrent authority, the States retain the residue of authority over the militia they previously had and exercised. And no reason exists why a State may not control its own militia within constitutional limitations. Its exercise by the States is simply a means of self-protection.

The States are forbidden to keep "troops" in time of peace; and of what avail is the militia to maintain order and to enforce the laws in the States unless it is organized? "A well-regulated militia" is declared to be "necessary to the security of a free State." The militia is the dormant force upon which both the National and State Governments rely "to execute the laws, * * * suppress insurrections, and repel invasions." It would seem to be indispensable there should be concurrent control over the militia in both governments within the limitations imposed by the Constitution. Accordingly it is laid down by text writers and courts that the power given to Congress to provide for organizing, arming, and disciplining the militia is not exclusive. It is defined to be merely an affirmative power, and not incompatible with the existence of a like power in the States; and hence the conclusion is the power of concurrent legislation over the militia exists in the several States with the National Government.

The case of Houston *v.* Moore (5 Wheat., 1) is an authority for this construction of the Constitution. The question before the court in that case, as concisely stated by Kent in his Commentaries, in discussing the power of Congress over the militia, was whether "it was competent for a court-martial, deriving its jurisdiction under State authority, to try and punish militiamen, drafted, detached, and called for by the President into the service of the United States, who refused and neglected to obey the call"; or, as stated by Story, J., the only question cognizable by the court on the record before them arose on the refusal of the "State court of common pleas to instruct the jury that the first, second, and third paragraphs of the 21st section of the statute of Pennsylvania of the 28th of March, 1814, as far as they related to the militia called into the service of the United States under the laws of Congress, and who failed to obey the orders of the President of the United States, are contrary to the Constitution of the United States and the laws of Congress made in pursuance thereof, and are therefore null and void. The court instructed the jury that those paragraphs were not contrary to the Constitution or laws of the United States, and were therefore not null and void." Notwithstanding there was a law of Congress that provided for the organization of courts-martial for the trial of militia drafted, detached, called forth into the service of the United States, to be conducted as courts-martial for the trial of delinquents in the Army, the court decided that the militia, when called into the service of the United States, were not to be considered in that service or in the character of national militia until they were mustered at the place of rendezvous; and until then the State retained a right, concurrent with the Government of the United States, to punish their delinquency. The statute that formed the ground of controversy in the State court enacted that noncommissioned officers and privates in the militia who should neglect or refuse to serve when called into the actual service of the United States in pursuance of an order or requisition of the President should be liable to certain penalties, defined in the act of Congress of 1795. The judges concurring in the decision of the court did not concur in all the reasoning by which the conclusion was reached, and they seem to have coincided only in the decision the State law was valid. Washington, J., delivered the principal opinion. Johnson, J., gave a concurring opinion, and Story, J., delivered a dissenting opinion, in which another member of the court concurred.

Although neither opinion had the sanction of a majority of the courts as to all it contains, yet on many subjects discussed the judges all agreed, and as the several opinions contain the views of these eminent legists on these important questions they are entitled to the highest consideration. After stating his conclusion that the offense of disobedience to the President's call upon the militia is not exclusively cognizable before courts-martial of the United States, Washington, J., adds: "It follows, then, as I conceive, that jurisdiction over this offense remains to be concurrently exercised by the National and State courts-martial, since it is authorized by the laws of the State and not prohibited by those of the United States." There being no repugnance in the State law with the law of Congress, in his opinion, the conclusion he reached, after an extended examination of the case, was the State court-martial had a concurrent jurisdiction with the tribunal pointed out by the act of Congress to try a militiaman who had disobeyed the call of the President and to enforce the laws of Congress against such delinquent.

Johnson, J., conceded fully that concurrent power of legislation over the militia existed in the States with the National Government. Story, J., in the opinion he gave, was even more pronounced in the expression of similar views, and, in speaking of the power granted to Congress by the Constitution to call forth the militia to execute the laws of the Union and to organize, arm, and discipline the same, said: "It is almost too plain for argument that the power here granted to Congress over the militia is of a limited nature and confined to the objects specified in these clauses, and that in all other respects and for all other purposes the militia are subject to the control and government of the State authorities." All the judges concurred, as we understand their opinions, in the proposition that when Congress has once acted within the limits of the power granted in the Constitution its laws for organizing, arming, and disciplining the militia are supreme, and all interfering regulations adopted by the States are thenceforth suspended, and for the same reasons all repugnant legislation is unconstitutional. That principle applies only where Congress has assumed control of the militia under granted powers, and does not militate against the construction uniformly given to the Constitution by Kent and other writers, "That a State may organize and discipline its own militia in the absence of or subordinate to the regulations of Congress." It is only repugnant and interfering State legislation that must give way to the paramount laws of Congress constitutionally enacted. The cases that support this doctrine are numerous and of the highest authority. (Houston *v.* Moore, 5 Wheat., 1; Sturgis *v.* Crowenshield, 4 id., 122; Livingston *v.* Van Ingen, 9 Johns., 507; Houston *v.* Moore, 3 Ser. and Rawle, 170; Opinion of the Justices, 14 Gray, 614; Gilman *v.* Philadelphia, 3 Wall., 713; United States *v.* Cruikshank, 92 U. S. R., 542; Blanchard *v.* Russell, 13 Mass., 1; Caldee *v.* Bull, 3 Dallas, 386; 1 Kent's Com., 265, 389.) No case has been cited that holds a contrary doctrine except Golden *v.* Prince (3 Wash. C. C. R., 313), and what was said by the same judge in Houston *v.* Moore, supra. We are not aware that the opposite views expressed by Judge Washington in either of those cases have ever been followed by any court. In Houston *v.* Moore, Johnson, J., expressly controverts the proposition "that within the scope Congress may legislate the States may not legislate," and speaks of it as an exploded doctrine.

Nor do we think the reservation of the power "to the States, respectively, the appointment of the officers and the authority to train the militia according to the discipline prescribed by Congress," as suggested by counsel, puts any restriction upon the States in respect to the concurrent legislation concerning the militia. Mr. Justice Story, in speaking of that clause of the Constitution, says: "That reservation constitutes an exception merely from the power given to Congress to provide for organizing, arming, and disciplining the militia, and is a limitation upon the authority which would otherwise have devolved upon it as to the appointment of officers." Obviously that is all that clause of the Constitution does mean, and we adopt as our own view what that able jurist added: "The exception from a given power can not upon any fair reasoning be considered as an enumeration of all the powers which belong to the States over the militia."

But the principal argument is made on the other branch of the case, viz, that the act of the general assembly "to provide for the organization of the State militia" is repugnant to the laws of Congress on the same subject constitutionally enacted, and is for that reason null and void. Wherein the "spirit, intent, and effect of the Illinois statute is in conflict with the provisions of the act of Congress," as insisted on the argument, is not apparent. Neither in the title of the act nor in any of its provisions does it appear the object of the State law is in conflict with the National law. The first section declares "that all able-bodied male citizens of this State between the ages of 18 and 45 years, except such as are expressly exempted by the laws of the United States, or are State or county officers, or on account of their profession or employment are exempted by the commander in chief, shall be subject to military duty and designated as the 'Illinois State Militia.'" That is in exact conformity with the act of Congress of 1792, and what more could the legislature do? The contention of counsel is that an act of the State legislature to organize the militia, if in conformity with the act of Congress on that subject, "is inoperative and amounts to nothing," and if it differs from the act of Congress it is "equally inoperative and void." Assuming that to be a correct proposition—and if it is confined to the organization and arming of the militia called to enter the active service of the United States it is the law—then the act of the legislature is as comprehensive as it could constitutionally be made, so far as it purports to declare who shall constitute the whole body of the militia under the act of Congress.

The second section is a declaration of legislative intention on the part of the State to cooperate with the General Government in the matter of enrolling and organizing the entire militia of the State when it shall become necessary "to execute the laws, suppress insurrection, or repel invasions or quell riots, or when a requisition shall be made by the President of the United States for troops," and should be read in the light of facts historically known to all. For many years after the adoption of the Federal Constitution State laws provided for enrolling and training of the militia in conformity with the act of Congress. It was usual to have annual, and in some States more frequent, days for drilling and training, and persons liable to military duty were compelled to attend under penalties; but for a third of a century or more there has been very little effort, if any, made to organize and train the entire body of the militia, and all State laws designed to effectuate that purpose have either been repealed or suffered to fall into disuse. It has become the settled conviction in the public mind that militia training, as it was practiced in the States, was of no practical utility. Besides that, it would be a most gigantic and expensive undertaking to enroll and supply the entire militia of the United States with arms and ammunition, as provided in the act of 1792. The annual appropriation of the sum named in that act for that purpose is insignificant as compared with the amount it would necessarily cost. As the laws now are, it is improbable the entire militia of the States will ever be enrolled or summoned for discipline under the act of Congress, unless some great impending danger shall make it necessary. When such an exigency does occur, this statute makes it the duty of the governor, as commander in chief, by proclamation, to require the enrollment of the entire militia of the State, or such portion thereof as shall be necessary, in the opinion of the President, and to appoint enrolling officers and to make all orders necessary to aid in the organization of the militia. Such a law is not in contravention of the act of 1792 or with any other act of Congress in relation to the organization of the militia, but is rather in aid of all such laws.

The remaining sections of the act, with the exception of those contained in article 11, relate to organization, arming, drilling, and maintaining the "active militia" of the State. The designation "Illinois National Guard," applied to the active militia, is a matter of no consequence, and the act will be construed as though it did not contain those words. That a State may organize such portions of its militia as may be deemed necessary in the execution of its laws and to aid in maintaining domestic tranquillity within its borders is a proposition so nearly self-evident that it need not be elaborated at any great length. "A well regulated militia being necessary to the security of a free State," the States, by an amendment to the Constitution, have imposed a restriction that Congress shall not infringe the right of the "people to keep and bear arms." The chief executive officer of the State is given power by the constitution to call out the militia "to execute the laws, suppress insurrection, and repel invasion." This would be a mere barren grant of power unless the State had power to organize its own militia for its own purposes. Unorganized, the militia would be of no practical aid to the executive in maintaining order and in protecting life and property within the limits of the State. These are duties that devolve on the State, and unless these rights are secured to the citizen, of what worth is the State government? Failing in this respect it would fail in its chief purpose. But what reason is there why a State may not organize its own militia for its own purposes? As we have seen, the State has the power of concurrent legislation with the National Government over the militia, when not in the actual service of the United States, within limits quite accurately defined in law as well as in the decisions of courts, both State and Federal. Certainly Congress has not exclusive jurisdiction over the militia not actually employed in its service. Congress may provide for "organizing, arming, and disciplining" the militia, but the appointment of officers and the authority to train the militia according to the discipline prescribed by Congress is reserved to the States. There can, therefore, be no efficient organization of the militia when not called into the service of the Union, without the cooperative aid of the States. Congress may not deem it necessary to exercise all the authority with which it is clothed by the Constitution over the militia. Historically we know there has been no efficient organization of the militia in this State within the last 30 or 40 years.

Mr. Story, in the opinion he gave in Houston *v.* Moore, said: "It would certainly seem reasonable that in the absence of all interfering provisions by Congress on the subject, the States should have the authority to organize, arm, and discipline their own militia. The general authority retained by them over the militia would seem to draw after it these necessary incidents." These were but an expression of his individual views, but anything written by that eminent jurist on this subject is entitled to great consideration, and as his views are an accurate expression of our understanding of the meaning of the Constitution in this respect, we adopt them as our own.

Judge Washington, in the opinion he gave in Houston *v.* Moore, conceded that if Congress did not exercise the power of providing for organizing, arming, and disciplining the militia it was competent for the States to do it.

Gibson, J., in the opinion he delivered in Houston *v.* Moore (3 Ser. and Rawle, 192*) said: "It can not be questioned but that the Federal and State Governments have concurrent authority over the militia when not in actual service of the United States. Congress has power to organize and arm—a State may do the same. The Government of the Union may draw out the militia in any of the exigencies mentioned in the Constitution. A State may employ its own militia for its own purposes."

In the opinion of the justices (14 Gray, 614), after announcing their conclusion that the commonwealth could not constitutionally provide for the enrollment in the militia of any person other than those enumerated in the act of Congress of 1792, they said: "We do not intend by the foregoing opinion to exclude the existence of a power in the State to provide by law for arming and equipping other bodies of men for special service of keeping guard and making defense under special exigencies or otherwise, in any case not coming within the prohibition of that clause of the Constitution (art. 1, sec 10) which withholds from the State the power to keep troops." But, aside from all authority, on any fair construction of the Constitution, a law to organize the militia of the State for its own purposes, not inconsistent with any law of Congress on that subject, is valid. In right of its sovereignty a State may employ its militia to preserve order within its borders when the ordinary local officers are unable, on account of the magnitude of the disturbance, or of any sudden uprising, to accomplish the result. Our conclusion, therefore, is the general assembly might enact the law in question, and that its general scope and effect are not in antagonism with any act of Congress on the same subject. Although, in minor matters of detail in the organization of the active militia of the State, some regulations might be found not in harmony with the act of Congress, the utmost that could be said would be that they would give way to the paramount laws of the United States.

That being the case we might here close the discussion, for if the law in relation to the militia in the main is a constitutional enactment, it would be a sufficient warrant for the conduct of defendant, notwithstanding some minor regulations might be invalid because in conflict with the laws of the United States.

But, as we have been urged by both parties to do so, we will briefly state our views on some of the most important provisions and regulations found in the State law which, it is insisted, are in conflict with acts of Congress, and for that reason render the whole act inoperative and void. We will be assisted to a clearer understanding of the remaining questions to be discussed, by keeping in mind a few propositions which are so plain as to admit of no controversy:

1. The repugnancies alleged to exist in the Military Code of the State with the acts of Congress, are all to be found in those sections of the statute which relate to the organization of the active militia when organized for State purposes, and not to those sections which

relate to the entire body of the militia, nor to the militia when called into the service of the United States.

2. The acts of Congress prescribe essentially different regulations for the organization of the militia when called into actual service, and for the organization for training under State authority. Many of the latter seem to be only directory, while the former all appear to be mandatory.

3. When not in actual service the act of 1792 provides "the militia of each State shall be arranged into divisions, brigades, regiments, battalions, and companies, as the legislatures of the States may direct."

4. Nonessential differences in the regulations as to militia not in actual service of the Union, contained in a State law, with acts of Congress, will not render the former invalid.

It is no valid objection to this act of the legislature that it does not require the entire militia of the State to be enrolled as "active militia." Counsel do not wish to be understood as claiming that no militia law is valid unless it provides that each and every male inhabitant of the specified age should at all times be armed and equipped and engaged in drilling and maneuvering. But the argument made is, that the performance of military service in times of peace can not be legally confined to a select corps consisting of a limited number of volunteers to the exclusion of all other able-bodied male residents of the State. The argument admits of several conclusive answers that may be shortly stated: (1) It is a matter dependent on the wisdom of Congress whether it will provide for arming and disciplining the entire body of the militia of the United States; (2) the citizen is not entitled under any law, State or Federal, to demand as a matter of right that arms shall be placed in his hands; and (3) it is with the legislative judgment of what number the active militia of the State shall consist, depending on the exigency that makes such organization necessary.

Mr. BRANDEGEE. Mr. President, to my mind that case, if it is authority—and I think it is—decides distinctly that what we call loosely "the National Guard" is a State militia, officered by the States and trained by the States, subject to the declaration by Congress of the kind of discipline that is to be applied in the process of training. But the training and the officering are reserved distinctly to the States. This bill, if I comprehend it, attempts to put the State militia under the control of the President of the United States and turns over to the General Government the training of those troops.

Of course, I am aware that this subject is going to be debated at great length, and I do not care to enter upon any extended discussion of it at this time, but I did want to put that case in the RECORD.

I have here three very able articles on this subject, written by ex-Secretary of War Stimson, which I would like to have printed in the RECORD in connection with my remarks, provided they have not already been printed. I am not sure but that they may have been printed in the House proceedings. The printer will know; and if they have been, of course I do not ask to have them inserted again.

The VICE PRESIDENT. Without objection, it will be so ordered.

The matter referred to is as follows:

H. L. STIMSON ANALYZES THE ARMY BILLS—THE ADDITIONS TO OUR LAND FORCES NOW BEING CONSIDERED BY THE SENATE AND THE HOUSE.

[By Henry L. Stimson, Secretary of War in President Taft's Cabinet.]

(First article.)

MARCH 15, 1916.

To the EDITOR OF THE NEW YORK TIMES:

You have courteously asked me for an expression of my views in regard to the military bills now pending before Congress. I am glad to comply, although any such expression must necessarily deal only with the salient points of a very complicated mass of proposed legislation.

At no time since the beginning of the Government has there been such fundamental and general overhauling among thinking people throughout the world of the postulates of military system and policy. The great European war has driven home to us even in America the fact that the last half century has completely revolutionized national methods of making war. As a consequence, the foundations of our own policy have been submitted to a scrutiny and criticism which they probably have not received before, even in the stress of our own wars.

Unfortunately, the effect of this has been manifested in Congress later and less thoroughly than among the people of our Atlantic seaboard, and thus, though the pending bills show the beneficial results of the agitation, it has not been sufficient to save us from some fundamental errors.

AS TO THE REGULAR ARMY.

So far as the Regular Army is concerned, the agitation for preparedness has had, on the whole, gratifying results. Mr. HAY, of the House, who originally proposed to add no new regimental units in the Army but merely to raise the number of enlisted men in the existing regiments, has now reported a bill which contains increases substantially corresponding with Secretary Garrison's recommendations. Mr. CHAMBERLAIN, from the Senate, goes much further, and reports a bill which presents substantially the increase recommended by the General Staff. If the House bill becomes a law, we shall have 10 new regiments of Infantry and 6 new regiments of Field Artillery, besides 15 new companies of Engineers and 52 new companies of Coast Artillery. If the Senate bill becomes law, we shall have 34 new regiments of Infantry, 10 new regiments of Cavalry, and 15 new regiments of Field Artillery, besides 92 additional companies of Coast Artillery and 6 entirely new regiments of Engineers. Mr. HAY'S bill would give us, within the continental United States, 3 Infantry divisions and 1 Cavalry division, besides an additional Cavalry brigade. This is the same number of tactical organizations which we have at present, but our present divisions are partly skeletonized and lack the requisite number of regiments to make them complete. Mr. HAY'S additions would complete them.

Mr. CHAMBERLAIN'S bill would give us within the United States 4 Infantry divisions and 2 Cavalry divisions. A fair argument can be made for each of these propositions. Having in mind merely the military needs of the country, preference should be given without hesitation to the larger proposal. The Regular Army under both plans is to be our first line of defense, and in our rapily growing country a mobile force inside the United States of 4 divisions of Infantry and 2 divisions of Cavalry, or from 100,000 to 140,000 men, according as the units are at peace or war strength, is certainly none too large for that purpose.

The reasons which are cited against the larger and in favor of the smaller proposal are, first, the supposed impossibility of recruiting under our voluntary system the additional men necessary for Senator CHAMBERLAIN'S proposal, and, second, the fact that we have not in existence sufficient accommodations in our posts for such a number and that the cost of building such accommodations would be very great. The Senate bill proposes to meet the first of these difficulties by changing our faulty enlistment law so as to permit men to be furloughed into the reserve after two years' service or even after one year, in the case of such men as are reported as proficient and sufficiently trained by their company commanders. Our present law requires a maximum of four years and a minimum of three years with the colors before they can be so furloughed. Experiments have been made with provisional companies, troops, and batteries of the Regular Army which have indicated that not only can the men be sufficiently trained within the shorter period but that there can be developed in this way a much greater interest and stimulus among both the men and their officers. Most of our progressive officers believe that under such a system of reward for proficiency and good conduct the Regular Army might be made to appeal to a class of men which it does not now reach and that enlistments would be very greatly increased if these better men felt that by applying themselves diligently they could get the requisite training and an honorable discharge after a year's service. I have long been of that opinion myself, and I believe that this is one of the strong points in favor of the Senate bill.

So far as the difficulties of housing the Army are concerned I am inclined to think that this could be made a blessing in disguise. It would make it necessary for us to devise a system of housing large masses of troops in cantonments instead of supporting them at many small and expensive posts. We faced just such a problem when we moblized a division on the Mexican border at Galveston in 1913, and we solved it with fair satisfaction and with comparatively little expense. Although placed in a very uncomfortable situation, owing to the military exigencies of the mobilization, the men and officers built their own cantonments, and the bulk of them have remained on the border ever since.

If we had to face the problem of housing an additional division or two of troops it would necessarily force us to house them in a more practical and less expensive way than at present. And it would result, in my opinion, in the new units being kept together instead of scattered. This would be an incalculable advantage from the military standpoints of training, discipline, and usefulness.

RESERVE OFFICERS.

One of the great needs which have been made clear by the public discussion of military matters of the last year has been our shortage of officers and the necessity of establishing a system of reserve officers upon which the President can call in case of war, both to take junior positions in the Regular Army and to help officer the volunteer or citizen army upon which the Nation must rely in any serious emergency. Both the Senate and the House bills have provisions for establishing such a reserve officers' corps, but each follows a different method. The Senate bill provides for the organization of courses at our universities and colleges and other educational institutions at which students may receive either elective or compulsory instruction in military training under officers of the Army detailed as professors of military science and tactics.

It then provides for reserve officers' training camps where such students can receive further training out of doors, and finally provides for temporary commissions as second lieutenants in the Regular Army, by which such reserve officers can be given practical instruction in that best of all schools—the Regular Army—for a period not exceeding six months.

The House bill, on the other hand, provides for the establishment of 30 cadet companies to be attached to the various branches of the Army, in each of which from 50 to 100 cadets between the ages of 20 and 27 years, and recruited from officers of the National Guard and graduates of educational institutions to which regular officers are detailed to give instruction, can receive a year's training, after which they at once become members of the officers, reserve corps.

While it is perhaps a fair matter of argument as to the merits of either system, I am personally inclined to the belief that more satisfactory results will be obtained through the Senate program. It seems to me that it will appeal to a more broadly and better educated class of men and that it will permit more intensive as well as more flexible training. A member of a cadet company who is trained for a year straight in such a company must necessarily spend a large part of that year in garrison or posts where much of the duty to be performed is mechanical and a matter of routine. While it is important that every officer should be thoroughly grounded in such duties it is also true that with the class of men which we should hope to get as reserve officers the time spent in such routine and garrison duty need not be nearly so long as is necessary to train recruits of a less intelligent class. It is much more important that we should get for our reserve officers a class of men who not only have the capacity for the higher branches of study which are now so necessary in modern warfare, but who have spent a requisite amount of time on such matters rather than on mere garrison drill.

Finally, the chance of serving for six months as an officer in the Regular Army, which is provided by the Senate bill, will give a training in responsibility to a serious and ambitious man which service in a cadet company could not possibly do.

The foregoing, I think, are the most salient provisions of the bill, so far as they concern the Regular Army. There are other features in each bill which are of great importance, but for the most part they are not matters of general interest. The Senate bill provides for a tactical organization by brigades and divisions. It increases the number of the General Staff and provides for additional general officers of the line. These are all good provisions. On the other hand, the numbers which it prescribes for certain units, particularly in the case of machine-gun companies and troops, are much below those indicated as necessary by the experience of the European war, and in this respect the Senate bill is inferior to the House bill. On the other hand, the House bill in providing for admission to the Regular Army of new officers of the grade of second lieutenants gives a preference to officers of the National Guard over enlisted men of the Regular Army

and members of the Officers' Reserve Corps. This is a reversal of the present law, and I do not believe it is just to the enlisted men in the Army. Under the House bill enlisted men are also required to take examinations for commissions, while no such requirement seems to be exacted of officers of the National Guard. As a rule, candidates for a commission who have served an enlistment in the Regular Army are better grounded in the rudiments of the training necessary for a junior officer than are officers of the National Guard. As the bill now stands it would be quite possible for a man to obtain an election as an officer of a National Guard organization and then to enter the Army practically without examination, taking precedence over specially qualified enlisted candidates and over members of the Officers' Reserve Corps. I think this is unsound, and would tend to break down the provisions for officers' training, which the bill in other portions seeks to establish.

The House bill also contains some provisions, particularly in section 8, which will tend to narrow and restrict the wise system of detail in the staff departments, and would thus tend to a reversion to the system of permanent departmental staffs which existed before the Spanish War, and which was terminated by the reforms of Secretary Root.

Taken as a whole, therefore, the general treatment of the Regular Army and its problems by both bills is an improvement over existing legislation and would tend to give us a larger and better Regular Army than we could have expected a little while ago. Provisions of the Senate bill follow much more closely the recommendations and views of our military advisers, the General Staff, and that bill, while far from perfect, is consequently more free from imperfections than the other.

HENRY L. STIMSON.

THE PROPOSALS TO "FEDERALIZE" THE MILITIA—WHEREIN THE BILLS BEFORE THE SENATE AND HOUSE FAIL TO PROVIDE THE MEASURE OF DEFENSE NEEDED.

[By Henry L. Stimson, Secretary of War in President Taft's Cabinet.]

(Second article.)

NEW YORK, *March 17, 1916.*

To the EDITOR OF THE NEW YORK TIMES:

In my previous letter I discussed the provisions of the bills pending before Congress relating to the Regular Army. What I regard as the most serious and dangerous provisions in the proposed legislation are found in the remaining portions of the bills which relate to our citizen soldiery. This is also the most important part of the program of national defense. The function of the Regular Army in the scheme of national defense is narrow. It is the nucleus and pattern with the aid of which we are to train our citizen soldiers, and it is to serve as the meager first line to delay and hold off an invasion while the citizen forces are mobilizing. The ultimate safety of the country has always depended and must in future depend upon the efforts of men who are not professionals, but citizens leaving civil pursuits to serve their country in time of war.

Our Federal Constitution provides clearly for two classes of soldiery—the one national and the other local; the one organized and controlled exclusively by the National Government, the other primarily a force which belongs to the separate States, although it is subject to national use under certain conditions. The power to raise national forces is broad enough to include all kinds of soldiery, both professional and citizen. Under it we support our Regular Army and under it, in nearly all our wars, we have raised forces of citizen soldiers, either as volunteers or under the draft. Gen. Upton, our foremost military writer, speaks of this constitutional authority as "unqualified" and as giving "every war power that the most despotic ruler could ask."

On the other hand, the authority given by the Constitution over the local forces or militia of the several States is narrow and restricted. They can only be called into the service of the General Government for three purposes, namely, "to execute the laws of the Union, suppress insurrections, and repel invasions." Congress has power only to enact the general statutes providing for their organization, arms, and discipline, while to the States is intrusted the administration of such statutes, and to the States is reserved expressly the power of appointing the officers and training the men. While the President is the Commander in Chief of our national forces at all times under the Constitution, he commands the militia only when "called into the actual service of the United States."

This distinction between local and national forces goes back to the very beginning of the Government, and as the country has grown larger the necessity for the distinction has grown more acute. There have always been men in the country who, while they could and would serve for home defense, nevertheless found it a great hardship, owing to their business or domestic ties, to undertake to serve anywhere and under all conditions. On the other hand, there always have been other men, usually younger, to whom the distinction was of no such importance. I think it is safe to say that to-day, when the New York militia are confronted with the possibility of being sent 2,000 miles away to the Rio Grande, this old question presents itself to the various men of those organizations in quite as sharp colors as it did in the Revolution, when the militia of New England were reluctant to serve in New York, and Washington was writing to Joseph Reed of the "desire of retiring into a chimney corner" which had "seized the troops of New Hampshire, Rhode Island, and Massachusetts."

The very training of our militia has taken on a character suited for home-defense troops with domestic ties rather than for national troops. We drill them at night, once a week, in the armory instead of sending them out into the field for several months of consecutive, intensive training, and have thus adopted a way which is the least effective method of teaching a man to be a soldier.

Now the European war has suddenly brought us face to face with the fact that we must have a national force of citizen soldiery, trained in time of peace to stand behind the Regular Army in time of war, whenever and wherever it may be needed. We have suddenly learned that the progress of military science makes it impossible for us any longer to wait until the outbreak of war before we begin to train and discipline such a citizen army. At the same time the experience of our young men in the students' and business men's camps has shown that there are thousands of Americans outside of the militia ready to make the sacrifice necessary for such preparation, and that, under the conditions of intensive training in the field and under the guidance of regular officers, they can make greater progress in learning how to be soldiers in even one month than they can in three years of weekly armory drills in the militia.

Under these circumstances, the natural and constitutional method to follow would clearly seem to be to establish a force of national volunteers under the national powers of the Constitution, leaving it free for such units of the National Guard as may desire to do so to transfer themselves from the militia to this new force, while the others, composed, perhaps, of a different class of men, retain their old status of militia and play their old part as a home defense.

There ought to be no real antagonism between these two classes of citizen soldiery, and I do not believe there would be. Each would have a separate and an honorable part to play in the scheme of national defense, and each could do it without either straining the Constitution or disrupting the occupations of their respective members. The men who were young and foot free would naturally go into the national soldiery; the men who were older and more tied down would remain in the militia.

Instead, however, of taking this apparently simple and natural course, both the Senate and House bills contain elaborate provisions aimed to "federalize" the militia.

By this it is proposed that we shall still retain them as militia, and yet will try to increase the power of the Federal Government over them, so that we can use them as first-line national forces.

In their attempt to do this it is inevitable that the authors have inserted many provisions whose constitutionality—to put it most mildly—is very doubtful. The whole effort is an attempt to give the Central Government an authority over the militia which it has not been hitherto believed to have.

But for the purpose of this discussion I shall not argue any of these doubtful questions, but shall only endeavor to point out that under the restrictions of the Constitution, which are admitted and clear, such an attempt will be a failure in its results from a military standpoint. It will not provide the measure of national defense which, in this year of grace 1916, we are all aiming to get.

The two perfectly clear limitations which the Constitution puts upon the use of these State troops by the Central Government are, first, that they can only be used by the Federal Government for the three purposes above mentioned, and, second, that they are under the direct command and control of the President only in time of war, after they have been called into the service of the United States; that in other times they are under the command of the governors of the separate States. These two limitations—divided control and limited use—are violative of the first principles of military efficiency as applied to a national army. We do not have to speculate about this or to argue from the experience of other nations. We have tried it ourselves in our own history under the same Constitution and with the same divided control over our militia, with results so disastrous that it seems inconceivable that we should want to make such a system the keystone of our arch of national defense. We tried to fight the War of 1812 in a large part with militia, and it was the most disastrous war in our history. On April 10, 1812, Congress authorized the President to call upon the governors of the States for 80,000 militia. The War of 1812 against England was unpopular in New England—just as a war here against any one of the European nations would be unpopular in certain parts of the country. The governors of Massachusetts and Connecticut refused to furnish their quota or to obey the President's call. They were backed up in this by the Supreme Court of Massachusetts, which held that the State authorities and not the President were to judge whether the exigency requiring the services of these militia existed. A quarter of a century later the Supreme Court of the United States decided this question contrary to the Supreme Court of Massachusetts, but that was a matter of cold comfort when an enemy was threatening and the troops were needed. The same practical difficulty would exist to-day in case the authorities of any State refused. What is needed under such circumstances is not a lawsuit or a writ of mandamus, but the undisputed authority of a single commander in chief to order the men to obey on the pain of death, and no such power exists in the President of the United States over militia troops which are not yet in his service.

In September, 1814, a British force invaded New York and began an attack on Plattsburg. The American commander, Gen. Macomb, called upon the governor of Vermont to send troops to his assistance from across the lake. This governor, Martin Chittenden, was an opponent of the war. He declined to comply. The Vermont Militia were anxious to go to the help of their compatriots, but could get no order to do so. In the language of the historian Ingersoll:

"An officer of the militia, Gen. Newell, tendered his brigade to the governor to repair to Plattsburg or anywhere else to oppose the enemy, to which the governor's cold-blooded answer was that he had no authority to order the militia to leave the State. On the 6th day of September, the cannonade then begun was distinctly audible at Burlington and at Gov. Chittenden's residence at Jericho. But housed and recreant there, the chief magistrate still held off, when the people on their own spontaneous motion in numbers crossed the lake and following the cannonade hurried to Plattsburg without distinction of party to tender their services for their country."

Unfortunately the militia were not always as patriotic as these men of Vermont. On October 13, 1812, Gen. Van Rensselaer had assembled a force, consisting of about 900 Regulars and 2,270 Militia on the New York side of the Niagara River for the purpose of attacking a British fort across the river on Queenstown Heights. Early in the morning he sent over the Regulars and a few of the militia to surprise the British. The attack was completely successful, and the Americans took possession of the fort. Later in the day the British commander assembled reenforcements and began an attempt to retake it from the Americans. Gen. Van Rensselaer then sought to bring over the rest of his force to the rescue of the sorely beset advance guard. But, in the language of Gen. Upton:

"The rest of the militia on our side of the river, although ordered and implored by their commander, absolutely refused to cross over, under the plea that, according to the Constitution of the United States, they could only be called out to resist an invasion."

During the rest of that day these men stayed on the bank on the American side and watched their comrades driven out of the fort, down to the river's bank, until they were killed or captured to the last man. Gen. Van Rensselaer, in his report of the action, said:

"I can only add that the victory was really won, but lost for the want of a small reenforcement; one-third part of the idle men might have saved all."

In precisely the same way during the same year a body of Ohio Militia refused Gen. Hull's order to cross the boundary at Detroit, "alleging as a reason that they were not obliged to serve outside of the United States." Still another force of militia under Gen. Dearborn refused to cross the line at Plattsburg for the same reason, and still another force acted in the same way under Gen. Smyth.

It is idle to say that such things could not happen to us to-day. These incidents were not the result of chance; they were the fruits of faulty methods. American soldiers in 1812 were no less brave and patriotic than they are to-day. The American people to-day contain within them many more discordant elements than they did a century

ago, and the governors of our States in the twentieth century will be quite as quick to listen to local political considerations as those New England governors were during the War of 1812. Indeed, it was less than two years ago when the governor of South Carolina disbanded his entire militia force in order to block the attempts of the National Government to restore discipline out of chaos in those South Carolina militia. It is as true to-day as when Washington was writing from Valley Forge that the safety of this country as a Nation can only be maintained by national forces under undivided national control.

In my next letter I shall endeavor to discuss in more detail how the provisions of the pending bills have failed to meet this national requirement.

HENRY L. STIMSON.

THE WAY TO A REAL ARMY OF CITIZENS—ONE SECTION OF THE SENATE BILL OFFERS AN OPPORTUNITY NOT FOUND IN THE "FEDERALIZATION" OF THE MILITIA.

[By Henry L. Stimson, Secretary of War in President Taft's Cabinet.]
(Third and last article.)

NEW YORK, *March 20, 1916.*

To the EDITOR OF THE NEW YORK TIMES:

In my last letter I discussed the attempt of the House and Senate bills to "federalize" the militia from the standpoint of our military experience in the War of 1812. I pointed out that the experience of that war conclusively demonstrated the weakness of the system of divided control and of limited use under which our militia is placed by the Federal Constitution. I tried to point out how such a force under such divided control inevitably broke down in time of war.

This defect of divided control can be demonstrated to be as fatal to the development of the numbers and efficiency of a national force in time of peace as the experience of 1812 showed it to be fatal to the fighting ability of such a force in time of war. The underlying proposition of both the bills proposed in the Senate and the House is that the Federal Government shall purchase the authority over these State troops which the Constitution has failed to give it as an original right. The authors of these bills apparently recognize, as indeed they must, that the power of the President to command the militia is limited by the second section of article 2 of the Constitution to those times when they are "called into actual service of the United States," and that by article 1, section 8, there is reserved to the States the "authority" to "train the militia" in time of peace as well as to appoint the officers. The bills, therefore, provide a system of payments from the Federal Treasury. It is then argued that although the President can not compel obedience to his orders to the State troops in time of peace by force, he can, by withholding these appropriations from the Federal Treasury, purchase their obedience and discipline.

This would be considered a singular doctrine amongst the students of military science in other countries. And yet, singular as it is, there are already in existence precedents in our own experience which will demonstrate its foredoomed failure here with almost mathematical certainty.

We judge our success in the development of a national force of volunteers by their readiness to enlist and their resulting numbers on the one side and by their efficiency and discipline on the other. Our own experience with the method of Federal payments to the militia has already demonstrated that it is a failure in both of these directions.

In 1903, under the Dick law, we instituted the policy of making payments to the National Guard for the purpose of recruiting up its numbers and improving its discipline. These appropriations covered not only arms, ammunition, and supplies, but pay, subsistence, transportation for the men during their maneuvers in the field, and also aid to the various State encampments as well as to the joint maneuvers. Beginning with appropriations aggregating about two and one-half millions a year they were steadily increased until we are now paying six millions a year to the militia. Simultaneously the numbers of the Guard have diminished in comparison with the population of the country. Money has failed to give us numbers. In 1903 the National Guard consisted of 116,542 officers and men. In 1915 it consisted of 129,398 officers and men. The population of the country by the census of 1900 was less than 76,000,000. In 1915 it is reported as over 100,000,000.

In respect to efficiency and discipline I take the following from the official reports: In 1915, 564 officers and 19,382 men were absent from the annual inspection. During the year 1914 the average number of men absent from each weekly drill of instruction was 63,201, or nearly 50 per cent of the entire strength of the Organized Militia. The amended Dick law required the attendance on the part of the men of the militia at 24 drills during the year. Thirty-seven per cent of the militia failed to attend this absurdly low minimum requirement in 1914. At the last Federal inspection the instruction of 330 companies, or equivalent units, was rated as poor, and 932 companies were below the standard of efficiency. In 1914 only 34.8 per cent of the National Guard qualified as second-class marksmen or better. In other words, only about one-third of our Organized Militia could shoot well enough to be rated as indifferent marksmen or attain the lowest standard recognized in our military shooting.

Again, the standard of care and the responsibility which the National Guard has shown in respect to the Federal arms, uniforms, and equipment which have been issued to it under the Dick law has been so low that there is now a total shortage of $1,352,761 of such property issued to it, as to which the Federal authorities are unable to get either a report of the property or a proper accountability as to its disposition. Four years ago, in 1912, drastic steps were initiated by the Secretary of War to reduce such shortages. Under the system of divided control it has been found practically impossible to accomplish this. In the case of many States the shortages are so great that if they were charged against the Federal appropriations coming to such States there would be nothing left for rifle practice or camps of instruction or any other training for several years to come. This would mean that to apply the discipline of this method of purchasing efficiency would result in depriving the States of some of the vital elements of training which they can not afford to lose. In other words, the system proposed by these bills for extending the authority of the Central Government over the militia by Federal payments has been tried and has failed. It has failed in respect to numbers, in respect to marksmanship, in respect to discipline, and in respect to equipment.

It would, of course, be unfair not to remember that there are some militia organizations to whom these criticisms do not apply. Our best militia regiments have attained a degree of soldierly efficiency and patriotic devotion to duty which, in view of the handicaps of system under which they labored, is in the highest degree commendable. It is particularly gratifying that the State of New York in this respect stands at the top. But when a system is proposed for the development of a national force, it should be judged by its results throughout the Nation. It must be judged not by the exceptions but by the average, and judged by the average this system is a failure.

This failure lies at the root of the system proposed in the two bills. There is no use in enacting, as the bills do, that the militia must keep up to certain standards when there is no way provided of making it keep up to such standards except a way that is a proved failure. It is absurd to provide that hereafter the President may direct the militia to recruit its companies up to maximum war strength when hitherto, under the same system, he has been unable to keep it up even to a minimum strength. Thus the report for 1915 showed that the infantry of the militia of the country was 21,571 men below the minimum enlisted strength required by law. If the President has been unable to purchase compliance with this low standard in the past, how can he be expected to purchase compliance with a higher standard in the future?

It is true that the present bills propose to remedy this evil by increasing the Federal payments. But such a remedy does not touch the real evil. It still leaves the Federal Commander in Chief in the position of a benevolent adviser with no power to command. The administration of his plans is in the hands of people over whom he has no control. The Federal Government can advise, can make general regulations, can scold and threaten to withhold the pay, but the vital functions of administration, of giving the orders and seeing that they are obeyed, is in the hands of the State governors and their subordinates. Dollars spent without the direct power to see to their application are dollars wasted.

So far as the numbers of the militia are concerned, there is an additional reason why they can not be kept up; a reason which the proposed bills not only do not remove but, on the contrary, perpetuate. The main reason which keeps down enlistments in our National Guard is the liability of the militia to strike duty and the consequent antagonism which has grown up on the part of our laboring men against this form of military service. It is this hostility on the part of the men upon whom the Nation should most rely for its national defense which keeps down the numbers of our State militia. So long as it remains State militia and remains liable to this kind of police duty, it will be difficult if not impossible to keep its numbers full. The present bills expressly continue that liability. The House bill contains a provision in section 26 "that nothing contained in this act shall be construed as limiting the rights of the States and Territories to the use of the National Guard within their respective borders in time of peace."

This is the real reason why in Great Britain, where the territorial army is really a national army and not a local police, five young Englishmen enlist where only one young American enlists in our National Guard, and why in Canada six young Canadians enlist in the national guard where one young American enlists in ours. So long as we persist in this faulty system, so long as we try to make the same man do duty as a national soldier and at the same time as a State policeman, we shall fail, even with the aid of individual pay, to bring our enlistments up.

On the other hand, the introduction of such a system of individual pay unconnected with any field duty will introduce a most serious evil into our body politic. Under the new bills, the National Guard officer and soldier will receive individual pay not directly connected with outdoor service or with the specific performance of any military duty. He will be on the annual pay roll of the Federal Treasury, subject only to certain conditions which may not be rigidly enforced. This will thrust the National Guard into politics. It means the creation of another vested interest in the pork barrel. Some of the provisions of these bills seem almost purposely designed toward the accentuation of such an interest. In the House bill is a provision which forbids any militia organization to be disbanded without the consent of Congress. In other words, no matter how low the standard of discipline may sink in such a regiment or company, its commander in chief, the governor, can not discipline it by mustering it out without the consent not of the President or the Secretary of War but of Congress. If the Congressman from that district has a number of loyal supporters in that regiment on the pay roll of the Federal Treasury, the consent of Congress will be hard to obtain. No provision could be more skillfully adapted to turn what is ostensibly a system of military pay into a system of congressional patronage.

In 1912 a minority of the same House committee which now recommends this legislation filed a minority report in which, unless I am mistaken, Mr. HAY himself concurred, which uttered this solemn warning on the dangers of such legislation. After stating that it was "a measure that is pregnant with greater possibilities of evil in a financial way, and that gives less assurance of compensating advantages of any kind than any measure that has ever been enacted by Congress with regard to the State militia," the report went on to say:

"The minority making this report is convinced that the legislation proposed by the pending bill is not only unwise, but that it is dangerous in the extreme. Rather than enter upon a legislative course that will inevitably entail upon the General Government an enormous expense, which may be found in dire emergency to have been wasted, a course that will surely lead to the creation of a great military force that will become so powerful politically that Congress will be no more able to resist its demands than it has been to resist the demands of the far less compactly organized and manageable army of pension applicants and their friends, this minority would favor a reasonable increase of the Regular Army, leaving the States to maintain their own troops in their own way and at their own expense without any aid whatever from the United States." (Rept. 1117, Pt. II, 62d Cong., 3d sess.)

For the reasons which I have given in this and my preceding letter, I fear that the attempt to build up under the militia provisions of our Constitution a national Army as an immediate line of defense behind the Regular Army will meet with failure; that under it in time of peace there can not be developed the numbers or the efficiency necessary for such a purpose, and that in time of war the same dangers will be encountered which made our experiment in 1812 so disastrous.

There has been, however, reported in the Senate bill as section 58 a provision which, if enacted, would open the door toward the creation of a truly national army of citizens. We have already in existence, enacted in 1914, a statute which permits the President in time of war to raise an army of Federal volunteers wholly under the discipline and control of the Federal Government. The operation of this statute is limited to time of war. It has now been abundantly shown by the discussion of the past year that it is too late to wait until the opening of war to raise such a force of volunteers. The requirements of modern war would make such a course disastrous to any nation which tried it. Therefore, in section 58, the Senate bill proposes to permit the President to organize and train such a force in time of peace. Under the

section there is wisely left to the President a certain amount of discretion in respect to the term of enlistment, the period of training, and of service with the colors and with the reserve, which will permit not only experiments to be made to determine which methods will be best suited to our needs, but will permit different methods to be used according to the requirements of the different parts of the country and the varying needs of an urban or rural population. If this section becomes law I believe that we could successfully lay the foundations of a really national reserve. We could feel our way so as to do no injustice to existing institutions or faithful and effective militia organizations. And yet we should be upon the right military and constitutional road. Coupled with the provisions which are also fortunately in both bills providing for the development and encouragement of our present system of military training camps for students and business men there would be laid the foundations for gradually building up an intelligent and effective system of citizen soldiery—a force which could absorb such units and men of our present militia as desire that kind of service and leave other units and other men to be developed along the line of home defense. Along that road, I believe, lies the wisest solution of our present problem.

HENRY L. STIMSON.

Mr. SMITH of Georgia. Mr. President, of the three distinct classes of troops provided in this bill, I hope we will adopt the first and the third, striking out the provision in section 56 for the second. I do not believe that 30-day-a-year trained men will amount to any efficient force or be any substantial contribution to the armed forces of our country; and I think it would be far better to spend what money is spent to develop the Regular Army and the National Guard.

Now, Mr. President, I wish to say just a word about the National Guard. I have had occasion to call out the National Guard and see them called out in my own State, and for the length of training and service they have had I know they make splendid soldiers. I believe that with some eliminations from the provisions of this bill applicable to the National Guard, and some additions, they can be greatly strengthened as an effective force.

One of the provisions to which I call attention—and there are others upon the same line, though perhaps not quite as shocking—is the provision in section 71 which requires that each member of the National Guard shall sign an agreement that—

In the event the President of the United States shall order the National Guard into active service because of actual or threatened war within three years from the date of enlistment I agree to serve as a member of the National Guard in the service of the United States within or without the continental limits of the United States for the period of three years.

Then, again, a little later on, is the provision that all of this act, so far as compensation to the National Guard is concerned, depends upon the signing of the agreement to serve without the continental limits of the United States. I do not believe the Constitution contemplated their serving without the limits of the United States except to repel an invasion by temporarily invading some other country to prevent the invasion of our own country, and I do not believe that a member of the National Guard should be required to sign the proposed agreement. I do not think I could give my consent to vote for a measure which required such an obligation from a member of the National Guard. I think it is an effort to force the National Guard into a contract to do that which the Constitution does not permit Congress to require from a member of the National Guard.

I trust we may make amendments along the line of the amendment suggested by the Senator from Iowa [Mr. CUMMINS], which will permit some of the officers of the National Guard to serve upon the General Staff or in the War College; and I think there ought to be one or more officers of the National Guard in the particular division of the War Department which has charge of the National Guard. I think their work and the difficulties which surround their work should be better understood by the division of army headquarters which controls and directs their work. I think a more sympathetic support from that division to the National Guard would strengthen and help them, and broaden those in charge in the War Department.

Mr. President, if we do rely upon the first provision—the Regular Army and the National Guard—what will this bill give us? This bill contemplates the increase of the Regular Army to 175,000 or 180,000 men with the colors with a possible 250,000; and under its provisions in a few years we ought to have 400,000 reservists who have been trained until they are thorough soldiers. The bill wisely provides that the General Staff may have all the time at least a paper organization of the reservists. It provides a plan by which the General Staff will know who are still reservists and where they are. It keeps the reservists in shape where they can be quickly called into active service; and it will give, in a few years, a force of 400,000 men who have had training as soldiers, who can be called at once to the colors in case they are required.

I think these provisions of the bill are such that those who have done the work upon it ought to receive from us our fullest appreciation. If they limit the force to 180,000—and I do not know what the pleasure of the Senate will be upon that subject—it would still develop in a few years a reserve of 400,000 men; and that reserve consists, under the plan of this bill, of men who have been trained to efficient work as soldiers. Although they receive only $24 a year, the expense to the Government being very small, it still gives, if we need them, a splendid body of trained men who in almost no time—in 30 days—could be called to the colors and quickly organized, as the bill provides that their nominal organization, though they are not with the colors, is to be continued all the time.

Mr. President, I especially desire this evening to call attention to one amendment that I have offered to that part of the bill which applies to the Regular Army. It is the provision which brought laughter or smiles from some Senators when it was read on yesterday, but which I intensely favor and from the work of which I have great faith that much good will come. It is the amendment providing that so much time as can be taken without interfering with their military training shall be given to study and to instruction for the private soldiers while they are with the colors, with a view of fitting them for civil life. It provides that vocational instruction shall be given to the private soldiers in agriculture and in mechanical arts. It provides that the Secretary of War shall provide rules and regulations for the conduct of this instruction.

Is it feasible? Surely no one will question the value of such instruction if it is feasible and practicable.

I shall have the privilege a little later during this session of bringing to your attention our vocational education bill, which has been worked out by the commission appointed by the President 18 months ago under a joint resolution of Congress, and I trust the bill will be approved by the Senate and also by the House. I think it will be.

There is no question of greater importance for our national life than the better preparation of our young men for the work in which they will engage. The power of the German Empire to-day lies in the vocational instruction which has been given to its men. The thoughtful business man engaged in commerce, the thoughtful business man engaged in manufacturing enterprises, to-day approves the modification of our system of education and calls for more time to be given to pedagogical instruction of the young, specializing them for particular lines of work.

It has been recently pointed out by a large gathering of our most thoughtful business men that part-time studies for those under 19 who go into work of any kind are essential for their development for life; and I am gratified to say that especially in the State of Wisconsin there is the fullest recognition of the fact that part-time instruction on vocational lines, particularly for those who before the age of 20 engage in occupations looking toward support, is absolutely essential if we are to develop our young men, and our young women also, to their fullest capacity, not only for the welfare of individuals but as a great economic problem involving our entire country, and as a great problem of better developing the citizenry of our country.

Mr. VARDAMAN. Mr. President——

The VICE PRESIDENT. Does the Senator from Georgia yield to the Senator from Mississippi?

Mr. SMITH of Georgia. Certainly.

Mr. VARDAMAN. I should like to ask the Senator if his amendment provides for compulsory teaching?

Mr. SMITH of Georgia. It does.

Mr. VARDAMAN. It will require the soldier to take some branch of study?

Mr. SMITH of Georgia. Yes; it will be a part of his work. It will be compulsory.

I want to say to the Senate that a few days ago a young officer gave me a most interesting account of the work done upon this line in the fort where he was stationed two or three years ago. The value of the work it is hardly necessary for me to argue, if it can be conducted in such a way as not to interfere with their military training, and really better prepare them to return to civil life. This young officer told me that at a fort at which he was stationed he and a number of other young officers determined to do something for the private soldiers, and they asked for volunteers to take a course in instruction of a certain number of hours each day, and about one-third of the privates volunteered. They thereupon worked out a line of studies which they could give in the fort. They had electrical works in the fort. They could give them instruction in electricity. They had a boiler plant in the fort. They felt that they could give them instruction in boiler handling and in steam operation. They had a shoe shop, they had a harness shop, they had a small machine shop, they had a bakery. Out of these possibilities just around them in the fort

they classified certain lines of vocational instruction, and invited the men to make their selections, and then these young officers trained them three or four hours a day, part of the time in vocational work, part of the time in general educational work; and the officer assured me that the development of those men was really remarkable. Only a short time ago, he said, he received a letter from one of them in Chicago, a private soldier who had no vocational training prior to that time, recalling to his mind that he took the bakery instruction, and stating that he was in Chicago running a bakery of his own and making from $150 to $200 a month.

Mr. President, I desire to ask that at the close of my remarks there may be printed in the RECORD an article by Mr. Charles Johnson Post on "How a big army could be made a social asset—vocational training in many trades needful in defensive preparation would fit men for civil career." In this article he points out that after the private soldier had been with the colors a sufficient length of time to be proficient, his detail could be made, in many instances, to plants or workshops belonging to the Government.

I ask that this article may be printed at the end of my remarks.

The VICE PRESIDENT. Without objection, it will be so ordered.

Mr. SMITH of Georgia. But it might be suggested that nothing could be done for agriculture.

Mr. CLAPP. Mr. President——

The VICE PRESIDENT. Does the Senator from Georgia yield to the Senator from Minnesota?

Mr. SMITH of Georgia. Certainly.

Mr. CLAPP. If the Senator will pardon an interruption, I have this thought to suggest: I most earnestly hope the Senator's amendment will prevail. As a Republic, we have to bear a certain burden with reference to war; and, bearing that as a necessity, we ought to get whatever resultant good can be gotten out of that necessity.

If the Senator will pardon me for just a moment further, I have always been a strong believer in the National Guard, not so much with the view of its use in a war, which I hope we never will have, but I have believed it would be a good investment for this country to appropriate more for the National Guard, supplementing the school life and the business training of the young man with camp life, discipline, and the traditions of military achievement. Now, we can supplement that by supplementing the military training of the regular soldier with a certain amount of training for civil life; and I, for one, am most heartily in accord with the Senator's amendment.

Mr. SMITH of Georgia. I thank the Senator.

Mr. President, I hold in my hand an article by Gen. Wood, one of the brainiest and strongest of the men who have been connected for some time past with the Regular Army of this country, in which he cordially indorses the view that vocational instruction can be given to the privates while they are with the colors; that the time can be taken by the officers to give them instruction that will greatly contribute to their value as citizens when they return to private life. I ask that this article by Gen. Wood may be incorporated at this point in my remarks.

The VICE PRESIDENT. Without objection, it will be so ordered.

The matter referred to is as follows:

VOCATIONAL TRAINING IN ARMY O. K.'D BY GEN. WOOD—NOTED COMMANDER SAYS PLAN PROPOSED BY CHARLES JOHNSON POST IS SOUND IN THEORY, PERFECTLY PRACTICAL IN APPLICATION, AND IS WORTH MOST SERIOUS CONSIDERATION AS SERVING THE DOUBLE PURPOSE OF MILITARY EFFICIENCY AND ECONOMIC EFFICIENCY, TO BE ATTAINED SIMULTANEOUSLY.

[By Maj. Gen. Leonard Wood.]

The plan of army industrial and vocational training that has been worked out by Mr. Charles Johnson Post, and has appeared in the pages of this paper, has many excellent points from the military point of view. This plan also is more complete in its development than any plan in Army preparedness along vocational lines that I have so far seen.

It has been transmitted to the War College for study and report upon it. Mr. Post approaches the problem of army service from the angle of a volunteer army, while I personally believe that some form of universal training is absolutely essential; yet I believe that certain of the features of vocational training along the lines that he has developed should be added to it.

His plan as a whole contemplates two things: (1) Efficiency as a soldier in military duties, and (2) the attainment of such efficiency under conditions that also prepare him for his return to the civil, industrial life. This would give a twofold efficiency to the country—a military efficiency and an economic efficiency. Men would return to civil life not only better but also more useful members of society. Such a system avoids any economic waste in a standing army.

What this country needs in the way of an army is not an army of men who remain in it permanently, except officers and noncommissioned officers; it should be in the nature of a great military training organization, constantly giving back to society men of military efficiency against the days of emergency. This is one feature of this plan that is taken care of. Under it the actual period of military training is a variable factor, though the standard of efficiency for all is the same; for, as Mr. Post provides, no man can avail himself of the vocational apprenticeship until he has first become an efficient, first-class soldier. There is no confusion between these two periods, and it is necessary that they should be kept as distinct periods, even under the term of the single enlistment.

In brief, Mr. Post's plan proposes to give an opportunity to considerable portions of men under training as soldiers to secure, during the course of that training, an increase in their wage-earning capacity so that they are sent back to society and civil life not only ready as a soldier, but prepared for a higher degree of economic citizenship. This is a good idea if it can be put into operation without unduly extending the period of military service.

One of the great problems we have in this country is considerably due to the fact that great portions of our population develop in racial areas, reading a dialect press and controlled in the intervening years by dialect interests. Some sort of a community of service must be established in order to develop a proper and necessary appreciation of the duties and obligations of American citizenship—for equality of opportunity means an equality of obligations. I believe that the best method is by some sort of systematized military training of a universal character wherein Mr. Van Rensselaerbilt will rub shoulders in the ranks with Mr. Podunski; under such service how long would it be before there is established a fellowship—an appreciation of what a democracy is and means, and of what American citizenship opens up? These large racial areas come from countries of racial oppression.

We must have some plan. And I believe that military training is invaluable for the purpose. I am anxious to see some form of the Australian or Swiss military systems adopted here. A man gets in military training control of his body—knowledge of health for himself and of preventable diseases that is of benefit to himself, his family, and to posterity; he gets discipline—a knowledge of the relationship of himself to social and economic forces; he learns to coordinate himself with society and to take his place and part effectively; he learns duty, obligation, and efficiency in many channels of American citizenship. If, then, we add to the purely military and civic features of army training a system whereby he is enabled to acquire a vocation—a trade or a profession—we have added that much to the industrial efficiency of our society, and, as I have said, made the Army a source of economic gain of great value. The Army and the Military Establishment would be as efficient a social instrument in times of peace as it would be of protection in international emergency.

That the basic principle of the system Mr. Post proposes is sound in theory and perfectly practicable in application, subject to certain modifications in matters of detail, appears to me obvious, and equally so that it should be developed along with any army reorganization and extension whether on the volunteer basis of enlistment or upon a basis of some form of universal military training. The plan he proposes is worth most serious study and consideration.

Mr. SMITH of Georgia. Senators, this view receives the support of many of the very best officers in the Army. I claim for it no novelty. I in no sense claim that it is an invention of mine. I am presenting to you the suggestions of others. No one appreciates more than I do the importance of preparing the young men of this country for the struggle of life, for usefulness in life, for effective force in life. But while I might believe it practical to give such instruction and such benefits to privates in the Regular Army, I would not be so sure that it could be done had I not the confident opinion of those highest in the Army, and those who in the Army have made from their military service the greatest success, that it is practicable.

Do you know that the Coast Artillery put this practice into effect the 1st of January, 1915? I send to the desk and ask that the Secretary may read the order of the Chief of Staff to the Coast Artillery on this subject, passed in January a year ago.

The VICE PRESIDENT. Without objection, the Secretary will read as requested.

The Secretary read as follows:

During the indoor season, the Artillery instruction period will be one and one-half hours. The remaining two hours of the daily instruction period will be devoted to courses in vocational instruction under the initiative, direction, and control of coast-defense commanders. As many separate vocational courses will be inaugurated and conducted as may be possible, utilizing commissioned officers as supervisors of such courses, and the Artillery noncommissioned staff officers, enlisted specialists, and rated men as instructors. Attendance upon these courses will be obtional with the enlisted men. Those enlisted men not engaged in these courses will be assigned to police or other work about the post during the instruction period. Among the courses that may be given are those in telephony, care and operation of combustion and steam engines, surveying, wire and radio telegraphy, firing and care of boilers, electric wiring, typewriting, bookkeeping, and stenography. These subjects are to be considered as merely suggestive, and it is not intended to exclude other vocational subjects which may suggest themselves to coast-defense commanders. In so far as practicable the installed Coast Artillery matériel may be utilized in connection with this instruction.

Mr. THOMAS. Mr. President——

The VICE PRESIDENT. Does the Senator from Georgia yield to the Senator from Colorado?

Mr. SMITH of Georgia. Certainly.

Mr. THOMAS. May I ask the Senator if he does not think the proposition he is now stating would also operate as an inducement for enlistment?

Mr. SMITH of Georgia. Unquestionably. Mr. President, if you will democratize the Army, if you will break the caste that exists in the Army, if you will make the private a man and an American citizen just as much as the officer, and if you will enlist the officers in the development of the men, in the development of their mental and moral strength, in the training of the men for civil as well as military life, you can make the position of the private in the Army a very different one from what it

has been in the past, and you can make the button worn by the private as a member of the national reserve a badge of honor wherever he goes, second only to the uniform of the West Point graduate.

Mr. WORKS. Mr. President——

The VICE PRESIDENT. Does the Senator from Georgia yield to the Senator from California?

Mr. SMITH of Georgia. I do.

Mr. WORKS. I am very much interested in what the Senator is saying about democratizing the Army; but does he think he will secure the cooperation of the officers in the Army to any great extent in an effort of that kind?

Mr. SMITH of Georgia. To a very great extent; yes.

Mr. WORKS. I am very glad to hear the Senator say so.

Mr. SMITH of Georgia. I did not know until to-day that the Coast Artillery had adopted that rule. An officer of the Coast Artillery came over to me with the report of the successful work that has been done in the past 12 months under that order, showing what great progress the men have made under their tuition in vocational lines in 12 months. Then I asked him how it happened that the work had been done. "Why," said he, "an order was passed the first of last year requesting it of the officers, and making it a matter of volition with the men"; and a large part of the men, he said, volunteered to take the training.

I have here a report on their work, which shows, Mr. President and Senators, that they succeeded in establishing courses for bakers, carpenters, blacksmiths, painters, firemen, engineers, telephone and telegraph operators, radiotelegraph operators, plasterers, plumbers, stenographers, and typewriters. I desire, without stopping to read it, that it be printed in connection with what I have just said.

The VICE PRESIDENT. Without objection it is so ordered.

The matter referred to is as follows:

OPPORTUNITIES FOR EDUCATION IN THE COAST ARTILLERY CORPS.

The Coast Artillery Corps gives a young man an exceptional opportunity to learn some trade outside of the purely military business, and to improve his general education very materially. While vocational training has been optional with the enlisted men, a great many have taken an interest in this work, and have left the service with a knowledge of some vocation outside of the military profession. Among the courses which have been held are courses for bakers, carpenters, blacksmiths, painters, firemen, engineers, telephone and telegraph operators, radiotelegraph operators, plasterers, plumbers, stenographers, and typewriters. In many instances enlisted men have become quite proficient in the courses which they have pursued.

In addition to the subjects enumerated above, many enlisted men have taken a special interest in the electrical installations connected with coast fortifications. The Coast Artillery enlisted men operate the power plants in which electric power is generated for use in the fortifications, and thus become familiar with electrical machinery of all kinds. They also learn to operate steam-power plants, fire boilers, run gasoline engines, and operate searchlights. In connection with submarine mine work, they learn considerable about boats and their operation.

For men who take an exceptional interest in their work there is maintained at Fort Monroe, Va., a school for enlisted men. At this school they are trained for the duties of master electricians, electrician sergeants, engineers, firemen, master gunners, radiotelegraphers, and sergeants major. The last-mentioned grade includes a course in stenography and typewriting. The electrician sergeants take care of the lines of communication at the posts, they keep all telephones in good condition, they install wiring, and assist generally in any work pertaining to the electrical installation. The engineers have charge of the power plants and make all ordinary repairs on the boilers and the machinery in the plants. The firemen have charge of the firing and operation of boilers. The master gunners are charged with the preparation of charts, maps, drawings, range tables, etc., in a coast-defense command. Radio sergeants are used to communicate with vessels and for other signal work. These courses are open to men who are ambitious and who take an interest in their work. Every enlisted man who serves a tour in the Coast Artillery Corps, and who is ambitious to learn, has numerous opportunities to better himself in both theoretical and practical subjects.

Radio operators are always in demand by commercial firms, as are the electricians, engineers, and firemen, who have learned their vocations while enlisted men of the Coast Artillery Corps.

Mr. SMITH of Georgia. I to-day learned first of this work in the Coast Artillery, and I ask Senators who smiled yesterday when the amendment that I offered was read whether they can not now smile with approving praise at this splendid work that has been voluntarily done by these men in the Coast Artillery.

I do not desire at this time to discuss the amendment further; it will formally come up for consideration later on; but I wished to put this much in the RECORD and say this much at the present time to the Senate that it may be the subject of thought, that Senators may overcome the first view that such work would be impossible, and that they may prepare themselves for becoming accustomed to it by a knowledge of the fact that it has been done and has worked well. If Senators will only give the subject thought, they will be ready to accept it as a part of the bill.

APPENDIX.

HOW A BIG ARMY COULD BE MADE A SOCIAL ASSET—VOCATIONAL TRAINING IN MANY TRADES NEEDFUL IN DEFENSIVE PREPARATION WOULD FIT MEN FOR CIVIL CAREERS.

[The Globe prints below a synopsis of a comprehensive plan for raising and maintaining an army adequate to our needs, which has been submitted to the War College at Leavenworth for study and report upon it. Its author possesses technical fitness and experience. He has seen fighting service in the field in the War with Spain, he was a commissioned officer in both Infantry and Coast Artillery in the guard of this State, and, together with four other officers, organized the first class in military field engineering which, at its own expense, engaged a Regular Army officer as an instructor—this was in the days when there was no widespread fervor of preparedness—and is the author of the textbook on "Horse Packing" for military and frontier use. The plan has the double advantage that it would not cripple our industrial resources during either the raising or the maintenance of a competent army, but, on the contrary, would prepare us for greater industrial development while preparing us effectively to resist military invasion. Sacrificing no part of the proficiency in arms which our men of military age should possess, it would at the same time provide them with proficiency in the useful arts.]

[By Charles Johnson Post.]

This country needs an army. It needs it just as any subdivision of society needs a police force.

Such army must be efficient; it must bear a relation to the probabilities of its service; it must be an army not merely for the sake of an army; it must be an army proportioned to our needs and to its social usefulness, and the feudal elements in it of social and economic waste must be reduced to a minimum.

In other words, the army of our future must not be merely an increase in the size, in the raw bulk, of that feudal instrument with feudal principles that has so far been retained; it must be a part of our social system—an instrument of social use and value in place of the heavy burden borne by society against the plunge of war.

The ideal system of army defense existed in those simpler times or exists to-day in those communities less complex than those with which we are generally familiar. In every frontier the ordinary struggle of survival was easily interchangeable with the necessities of camp and field. The hunting, the open life, and the necessities of primitive existence were a constant training of youth along lines that made him the finest fighting material in the world. History is full of examples. The march of progress advances both the complexities of society and the arts of war, and the old interchangeable relationship is supplanted. Let this old relationship be reestablished; take from the Army the singleness of its rarely used function; let it be in times of peace an instrument of social use, of economic training as well as of military training, and there is no more danger in it of militarism than there was in the days when men wore coonskin caps and shot Indians or turkeys on the day before Thanksgiving with equal skill. The dangers from militarism lie in the feudal survivals in our Army system and not in the fact that men are taught to handle firearms or drill in masses.

PRESENT TRAINING DEMORALIZING.

With certain special and technical exceptions our Army—or, for that matter, any army—taking young men at the formative period of their manhood, gives them nothing that is of value in meeting the problems of life and livelihood that confront them on their return to civil society. On the present feudal basis our army training is, in its economic and social aspects, wasteful and demoralizing.

But take the feudalism out of the Army; make it efficiently constructive in the time of peace as it is efficiently destructive in time of war; establish it along lines wherein young men may acquire the industrial equipment for industrial civil life that is ahead of them—give them these things as well as the requirements of military proficiency—and the country will have an army of defense, in which there lies no more menace of militarism than exists in so many vocational schools or technical colleges.

It is along the lines of these principles that the following plan is based.

Here is a plan for raising and maintaining an army adequate to our needs which neither in the raising nor in the maintenance of it would cripple our industrial resources, but, on the contrary, would in both respects prepare us for greater industrial development as well as to resist armed attack. The practicability of the plan seems to be obvious from a lay point of view. Its value from a military point of view is under consideration by the War College at Leavenworth.

Experiments in military training by the War Department have shown that a recruit can be turned into a soldier in less than a year of training. The present enlistment period is three years—two years of wasteful reiteration.

Let the recruit join the Army for a term that will give him three years' apprenticeship at the trade of his choice; this period would be a fixed quantity. Preliminary to this he would serve through various degrees of military training until he has acquired standing as a private of the first class. He could not enter upon his vocational apprenticeship until he was certified as a first-class private.

TRAINING IN GOVERNMENT SHOPS.

This vocational training would be in the Government shops, in which the implements and munitions of war would be, in the largest measure, constructed. The Army should be self-sustaining through its own manufactures in its own shops, but none of the articles so made should be sold at any time in competition with private manufacture. We think of Government Army shops as merely engaged in turning out guns. This is not so; in the Army upkeep there is and would be every activity drawn upon that is called into play in civil society. In gun making there is the finest kind of training for mechanics; range finders and the instruments of precision call for the higher mechanical skill in the naturally talented; garrisons must be kept up in their plant—masonry, carpentry, plumbing—while the Quartermaster's Department, with its transportation equipment alone, is an enormous field for the acquiring of trades used in civil society. The list is limitless.

The adoption by the Government of these functions would serve a double purpose; it would furnish the opportunity for a widespread industrial training that would react directly in the economic advantages of this country, with a population of highly skilled men constantly created, and it would eliminate the commercial interest that thrives best on war scares and war. The iniquitous Krupp scandals are too recent to permit us to overlook the warning they conveyed and to take preventive measures lest we, too, be Kruppized. Moreover, war and

all pertaining to it are matters of so great national and individual sacrifice that it is intolerable that any class of Army contractors should alone be protected in the profits that to all the rest of us spell destitution and death.

During this period of vocational training the young man would keep with him his uniform and equipment in a locker of his shop and be responsible for the condition thereof—much the same as in Switzerland. In the event of war he could be mobilized by changing from his shop clothes to his uniform—a matter of 15 minutes or less.

During the first year of such vocational apprenticeship there would be two months' field service with the colors.

During the second year there would be six weeks' field service with the colors.

And during the third and final year of apprenticeship he would serve one month of field service. This would crystallize the military training of his first and preliminary military service.

There would be a certain percentage of these young men—just as there are now—to whom the military life would appeal. These would, in place of the trade apprenticeship, pass into a special military school that would train them up to the degree required of the highest grade of noncommissioned officer—a sergeant. From this school they would then pass back into the regular, permanent Military or Army Establishment. A man would pass back with the rank of a private and the capacity of a sergeant, subsequent promotion depending upon his capacity in that branch. From this permanent section would be drawn the drill instructors and the minor officers of the whole Military Establishment. A sergeant under our present system is in command of a section—three squads of 24 men, including 3 corporals. Allowing for staff details and the general contingencies of an enlarged organization, there would be in this permanent section an army of sergeants, each capable of taking command of 16 volunteers. In other words, the Army could be enlarged 16 times and have a full equipment of noncommissioned and commissioned officers, for noncommissioned officers in the permanent section would become officers in war time.

And this takes no count of those men, first-class privates and trade apprentices, who are trained as soldiers ready to step fully armed into the ranks.

SHOULD BE FEDERAL UNIVERSITY.

There is one other phase of the matter that needs attention. Into the Army would come men of the capacity of professional men and with the ambition to achieve such rank. The trade school would limit their usefulness not only to society but to the Army Establishment. There would also be men of the capacity of officers. At the present we regard the latter capacity as the only one to be encouraged, so we have West Point. But if it is sound in principle to educate American citizens for a certain governmental department it is equally sound to train them for other needed governmental service.

West Point should be more than a local academy on the Hudson. It should be a great Federal university open to all who can pass the necessary requirements. There should be military training sufficient to qualify a man for a commission for all who entered—an obligatory course. For those training for officers in the Regular (permanent) Establishment it should be most extensive. Every department under each Cabinet officer has need of men with college training and technical degrees, and it is here that the graduates should be drafted for a certain period. There can not be too much education among a people nor can too many people have too much of it. This plan would abolish those stories of men struggling through college on peanuts and popcorn as a steady four years' diet. But that loss would be only of a mass of pathetic anecdotes and in no way reflected in the economic ability that would be represented in this country.

Let us be concrete and offer an illustration in figures:

Assume an army of 100,000 apprentices a year—not a high number, as is well known to any who are familiar with the craving in the working classes that their boys shall have a trade—and a permanent establishment of 50,000 Regulars. For the first year this means only 150,000 men.

The second year—with the next class of apprentices—it means 250,000 men.

The third year 350,000. And the fourth year and every year thereafter 450,000 men ready in 15 minutes after the bugle blows.

PRESENT SOCIAL WASTE WIPED OUT.

And this is not counting the possibilities that lie in expanding the very highly trained military specialists comprising the 50,000 of the permanent establishment. Expand them by sixteen times—every private in it a sergeant—and there are 800,000 men in a fully officered additional army. And these additional soldiers would be from the graduated apprentices, who should be held to respond to military service, in case of need, for a certain period after acquiring their trade in the Government shops.

Under a plan like this there would be no great mass of soldiers in an army who served no function in time of peace. The social waste of the present feudalistic army system would be gone. In place of the great Army budget there would be virtually an educational budget to be passed by Congress. The military training would be incidental to acquiring a civil career; there would be no more menace of militarism than there is in a public school or a college that requires service in return for an education. There would be no menace of militarism, for the Army would be a social instrument of service in which the service it performed in the civil functions of our economic and social life would overshadow the militaristic.

It would be, as it should be, a highly efficient posse comitatus, ready for indefinite expansion in time of need, in place of a feudalism; and it would relate itself usefully to the complexities of modern civilization in the functions of peace.

Mr. WADSWORTH. Mr. President, I desire to express just a few sentiments with respect to the amendment offered by the Senator from Iowa [Mr. CUMMINS], and at the same time to assure the Senate Committee on Military Affairs that in supporting the amendment of the Senator from Iowa I am not intending to express any opposition or hostility to the bill itself which has been reported to the Senate by the Military Affairs Committee, a bill which, in my judgment, is the best piece of military legislation that has ever been presented to the Congress of the United States. I do believe, however, that there are one or two points in the measure which may be strengthened and which by being strengthened will add to the efficiency of the armed force of the country.

The amendment of the Senator from Iowa, as Senators have heard, seeks to add that officers of the National Guard shall be detailed by the President for a fixed term of years to serve with the General Staff of the Army. I shall not make a plea to the Senate that this detail of five National Guard officers should be made by the President on the ground that the National Guard morally is entitled to this consideration, although I believe it is entitled to consideration on that ground, but on the ground of increasing the military efficiency and value of the General Staff itself.

It must be remembered in considering this matter as to the National Guard and the Regular Army, constituted as they will be if the bill passes as a force jointly responsible for the defense of the country, that different problems affect them, different conditions confront them. The General Staff, as I understand it, is expected in time of peace to study out in advance all the contingencies which may arise in time of war, all problems of supplying troops in the event that they are called into active service, all the problems of transporting troops to points of mobilization, and of supplying them when they have reached the point of mobilization. The General Staff, I understand, will be an aid to the War College in laying out in advance a campaign and methods of defense in the event of certain kinds of attack being made upon the country, so that should war or emergency exist and confront the country suddenly the management of the Army might proceed intelligently and promptly to meet the situation.

The problems concerning the mobilization and supply of the National Guard are necessarily somewhat different from the problems confronting the mobilization and supply of the regular forces. The Regular Army, as we know, lives in barracks at Army posts scattered over the country—in my judgment too many of them. In any event the Regular Army is always permanently stationed at Army posts and the men live in barracks, and they are constantly under the immediate control and direction of the officers. The mobilization of the Regular Army at a given point on either coast is a thing which any Regular Army officer can very easily and efficiently and promptly work out by a plan adopted in advance.

But I think it can be stated that it is not so easy for a Regular Army officer to work out the problem of mobilizing the National Guard or of supplying it while it is in transit or while it is collected for the time being, as at its home station, for the National Guard is scattered all over the country and the men do not live in barracks. They live at their homes, and the problem of getting them to their armories is one which National Guard officers have studied for years and years. I know the problem has been worked out in the State of New York to the extent that it is now contemplated that should the New York Guard be called into service to meet an emergency, all the organizations in the State could be packed up and ready to go on the trains wherever they are expected to go within 12 hours.

The problem of getting those men from their homes to the armories is essentially a different problem from that involved in mobilizing Regular troops. The same may be said in securing them the proper amount of supplies in the event they are so mobilized. I have believed for some time—and particularly do I believe it now, when it is apparent that the National Guard is to be considered at least as an important part of the Federal force—that those particular difficulties and problems of mobilizing and supplying the National Guard in case of an outbreak of war should be taken into consideration by the General Staff here at Washington, and I think that can be done with far greater promptness and efficiency if a few officers of the National Guard who are particularly able and capable of studying this thing from their own standpoint—the standpoint of the peculiar difficulties of the National Guard with which they are familiar—are called into consultation.

That, to my mind, is, from the military standpoint, the argument back of the amendment offered by the Senator from Iowa. It is to establish cooperation between the two forces. It is not to hinder the Regular Army officer; it is not to challenge his control; it is not to defy his authority; it is not to attempt to undermine his influence in the management of Army forces of the United States. It is to help him at a point where the National Guard officer is peculiarly qualified to help him. I do not believe that any Regular Army officer who has studied the peculiar difficulties confronting National Guard mobilization would refuse to have that kind of help. I do know of one case, at least, where the War Department authorities requested that kind of help and have acknowledged that it was of the greatest assistance.

I think it was but two years ago, when the Mexican situation was looking somewhat cloudy, that the War Department began making inquiries of the officers of the various State guards as

to what they could do in the event of trouble on the Mexican border in the way of turning out troops, because it is well understood that the Regular Army at its present size is helpless to carry on a thorough intervention in Mexico, and reliance must be had at this day and hour, as was the case two years ago, upon the National Guard to reenforce and assist the Regular Army in any such operation as they might be called upon to undertake. At that time, two years ago, an officer of the National Guard was requested to come to Washington to help the officers here in the War Department to work out plans of mobilizing the men of the guard of New York, and that officer spent some time here. I have heard from many sources, and most of them exceedingly reliable, that he pointed out more things to Regular Army officers with respect to peculiar difficulties and peculiar problems confronting the mobilization and supply of National Guard troops than they had ever thought of; and that is not surprising, for they had never attempted to do any such thing, whereas this particular officer had studied this problem for months, and, in fact, for years. I have had it on the highest authority that his assistance at that time was very highly appreciated by Regular Army officers.

I do believe that if we are to have a force of two hundred and sixty-odd thousand troops under the term and caption of National Guards, to be a part of the Federal force, to act with the Regular Army in case of necessity, it will accrue to the efficiency of both those elements, Regulars and National Guardsmen, if officers of the National Guard are permitted by authority of Congress, expressed in a statute, to come to Washington and stay here for a term of five years and consult and confer with the men with whom they will have to cooperate in time of war.

Mr. President, I hope that the amendment will prevail.

Mr. NELSON. Mr. President, I purpose to detain the Senate for only a very few moments. In all that the Senator from Georgia [Mr. SMITH] has said about vocational training for the benefit of the soldiers of the Army I heartily concur, but I could not concur in that part of his remarks which would eliminate the Volunteer Army from the bill and rely only upon the militia. I will in the briefest possible manner point out to the Senate how as to numbers the National Guard that we could depend upon is, as one might say, a man of straw. We are wholly at the mercy of the several States. Let me read again this paragraph of the Constitution:

> To provide for organizing, arming, and disciplining the militia, and for governing such part of them as may be employed in the service of the United States, reserving to the States, respectively, the appointment of officers, and the authority of training the militia.

That authority of appointing the officers and training the militia is given exclusively to the States. There can be no militia force organized in any of the States unless officers are appointed. The Supreme Court of the United States in the case of Houston against Moore, Fifth Wheaton, page 36, while passing upon this paragraph of the Constitution, remarked:

> Indeed, extensive as their power over the militia is, the United States are obviously intended to be made in some measure dependent upon the States for the aid of this species of force. For, if the States—

Now, listen to this—

> For, if the States will not officer or train their men there is no power given to Congress to supply the deficiency.

So when you come to the question of determining how much the Army will be increased by what is termed the National Guard provision of the bill, you are utterly at the mercy of the several States, and no one can determine in advance how big our force will be. Some States may provide for the organization of two or three regiments of infantry, a battery of artillery, and a company of cavalry. Some may not; and if they fail, how can you compel them to do it? There is no power in Congress. You can not organize the militia into companies or battalions without appointing officers, and if the different States make no provision for doing that, where is the number of your National Guard? One State may provide for a National Guard of a thousand men, another State may provide for a National Guard of 10,000 men, and another State may provide for a National Guard of 5,000 men, but whatever the number is, Congress can not control it. It is a matter under the control of the respective States.

So I say, Mr. President, you can not settle the numbers of the National Guard by this legislation. It is entirely at the mercy of the several States. The bill assumes that all the States will organize a militia on a given basis, but there is nothing in the Constitution and nothing in the law by which we can compel the States. Suppose the governor of any State in the Union refuses to appoint officers and to organize and train regiments, what then? Where is your National Guard? Where is your State militia? I am not hostile to the State militia, but we are left in an entire sea of uncertainty as to the number we can count on.

What about the Volunteer Army? That is enlisted. We know the numbers of that. The men we enlist in the Volunteer Army are soldiers of the United States. We know their number, because we know the number we enlist, and they are subject to Federal control. The volume of that branch of the service we can determine and fix, but it is not so, Mr. President, with the National Guard.

During the days of the Civil War, while we had many so-called militia regiments in the several States, as a matter of fact the regiments, bodily as such, did not go into the service. In a few isolated cases the regiments were mustered in, but in most cases the men were mustered in as individual volunteers, and our great Army during the Civil War was not composed of militia regiments or militia companies; it was composed of volunteers, such as are contemplated under this proposed law.

This is not a new thing, Mr. President. During the Spanish-American War we had a Federal Volunteer Army. It differed from the volunteer State regiments in this, that the officers of that Federal volunteer force were appointed by the President of the United States, and, as a rule, they were officers who had had training and experience in the Regular Army. They got commissions in those volunteer regiments and they proved themselves to be very efficient. Some of those regiments were recruited in the far South, and they made most excellent soldiers.

As I have said, while I have no opposition to the National Guard as such, and while it is well enough to make use of them so far as we may, in view of the fact that in so using them we are at the mercy of the States, I believe it is unsafe to entirely rely upon them, and that, by all means, we ought to have a volunteer army of the United States of America. The Volunteers are as much soldiers in one sense as are the men in the Regular Army. The only difference is as to the manner and the time of their service. As I pointed out to the Senator from Iowa [Mr. CUMMINS] while he was on the floor, the militia of the several States are not under the control of the Federal Government until actually called into the service of the United States. The Constitution, Mr. President, is quite plain on that point, and I quote from it as follows:

> The President shall be Commander in Chief of the Army and Navy of the United States, and of the militia of the several States when called into the actual service of the United States.

The mere fact that the militia companies are organized in the different States and that they are drilled by officers appointed by the Government, and are trained by them according to Army regulations, does not make them a part of the military force of the United States. They are not in the service of the United States until they are actually called into that service and mustered in as soldiers of the United States. So long as they remain pure and simple militia regiments, a part of the National Guard, and nothing else, they are not soldiers of the United States Army in the proper sense of the term; they are simply nothing else than State militia. It is only when the President, in the exercise of his constitutional authority, calls those troops into the service of the United States that they become a part of the military force of the United States.

Mr. GALLINGER. Mr. President——

The VICE PRESIDENT. Does the Senator from Minnesota yield to the Senator from New Hampshire?

Mr. NELSON. I yield.

Mr. GALLINGER. I notice that the Senator from Iowa [Mr. CUMMINS] took a different view of this provision of the Constitution, as I recall. I want to ask the Senator from Minnesota exactly what is the status of these soldiers after the exigency for which they are called out has passed? They are called into the service of the United States; they become soldiers of the United States; do they remain soldiers of the United States after that?

Mr. NELSON. Not at all.

Mr. GALLINGER. Do they go back to their respective States?

Mr. NELSON. They go back and become a part of the State militia, subject to the rules and the laws of the State, and the State may discharge them. The State controls the mustering in of the forces. The State may never muster in a single battalion or a single company, because of the failure to appoint officers.

Mr. GALLINGER. I think the Senator from Minnesota is right on that point; but what was troubling me was, if these men are called out in the event of a war of greater or less importance and the necessity for their service ceases, how are they sent back to their respective States—by proclamation that they are not needed any longer?

Mr. NELSON. No definite rule has been laid down, so far as I am aware, as to that. I suppose they could be discharged

from the service of the United States, and would then go back to their respective States.

Mr. GALLINGER. That is the point on which I wanted to get the Senator's opinion.

Mr. NELSON. Whilst I agree with the Senator from Georgia [Mr. SMITH] in one of his contentions, I disagree with him in respect to another. I believe under the Constitution we have no power to use the militia outside of the boundaries of the United States except in such an instance as that to which I will refer. The language of the Constitution on the subject is perfectly plain. It is that—

> The Congress shall have power to provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions.

Under that provision of the Constitution manifestly we should have no right to take that force out of the country. The only exception is in such a case as the Senator from Georgia suggested. Suppose we sent a force down to the Mexican border to repel invasion, and if for the purpose of repelling that invasion and as an incident to it that force should cross the border and go into foreign territory, I do not think that that would violate the spirit of the Constitution; but if we should attempt to transport our State militia over to one of the South American countries or over to Europe or to Canada in an offensive war, I believe it would be utterly beyond our power under the Constitution.

Mr. PAGE. Mr. President——

The VICE PRESIDENT. Does the Senator from Minnesota yield to the Senator from Vermont?

Mr. NELSON. I yield.

Mr. PAGE. I should like to ask the Senator from Minnesota if, in his opinion, there is any doubt that the patriotic purposes of every State and the governor of every State would not be a sufficient guaranty that the officers of the militia would be duly appointed for all the National Guard regiments?

Mr. NELSON. Does the Senator from Vermont mean to their full quota?

Mr. PAGE. Yes, sir.

Mr. NELSON. To the full number contemplated by this bill?

Mr. PAGE. Yes; and for the drilling of those regiments?

Mr. NELSON. I have my doubts about that. The States would undoubtedly appoint some officers; they would undoubtedly organize some regiments to form a little skeleton of the National Guard; but I doubt whether any of the States would come up to the maximum contemplated by the bill.

Mr. PAGE. I have an idea, Mr. President, that they would.

Mr. NELSON. Let me ask the Senator how many members of the National Guard there are in Vermont?

Mr. PAGE. We have only one regiment; but I have no doubt that, if we were called upon, the patriotic impulses of Vermont would be sufficient to guarantee that everything that could be asked for by the Federal Government would be done, and be promptly and willingly done.

Mr. NELSON. Well, I doubt it, Mr. President. I remember what has occurred in the past. I believe the citizens of Minnesota are as patriotic and are as willing to fight for this country as are any other men in this Union. We had two or three regiments in the Spanish War of State volunteers; we were ready to furnish any additional number that might be required; and yet during all of the time since then we have only had two or three skeleton regiments. They meet once a year in an encampment and have a jolly good time. I once had an opportunity to inspect them when I was governor of the State of Minnesota. It was a very interesting and clever performance, but it never struck me, as an old soldier who had served during the Civil War, that there was much real soldiering about such State encampments.

I remember one encampment very well, which occurs to me now, and so I will refer to it. I went down to Lake City as governor of Minnesota to inspect the National Guard of our State. They furnished me, from a livery stable at Lake City, with an old plug of a horse to ride. I think the boys had "set it up on me," as they say. I discovered, however, what was up before the exercises commenced. I put big spurs on and spurred that old horse to such an extent that he got so excited he could hardly stand still. One of my staff, when I came riding back in the woods on that old horse, was nearly scared to death for fear the horse would kill me; but I avoided that catastrophe and succeeded in inspecting the guard in a proper manner on that old plug of a horse, but the whole thing was like a circus to me. [Laughter.]

Mr. CUMMINS. Mr. President, will the Senator from Minnesota yield to me?

Mr. NELSON. I yield to the Senator from Iowa.

Mr. CUMMINS. I wish merely to ask the Senator how long ago it was that the distinguished Senator was governor of Minnesota?

Mr. NELSON. It was in 1893, 1894, and part of 1895.

Mr. CUMMINS. Does not the Senator realize that the National Guard has radically changed since that time?

Mr. NELSON. Oh, it has improved somewhat.

Mr. CUMMINS. Since that time the National Guard has improved its training, its discipline, and its purposes.

Mr. NELSON. All things improve, Mr. President.

Now that I have given one picture of the National Guard, I must say, on the other hand, that I have seen the National Guard give some very fine exhibitions. I recall, especially the Pennsylvania troops that I saw on the occasion of the inaugural ceremonies some years ago. I see my good and genial friend from New Jersey [Mr. MARTINE] in front of me. I do not recall having seen any of the New Jersey troops on that occasion, but I saw several regiments of the Pennsylvania Militia, which I very much admired. They had something of the gait and something of the swing which the old soldiers had in the days of the Civil War.

Mr. MARTINE of New Jersey. Mr. President, let me say that I fear the Senator's failure to see the New Jersey troops was because of a lack of proper vision. I am not willing to stand here and not pay a tribute to the troops of that State. It can not be said that at the inaugural ceremonies or at any other time the New Jersey troops have failed, either in presenting a proper appearance or in giving indications of splendid discipline.

Mr. NELSON. I simply meant to say that I did not observe the New Jersey troops on the occasion I had in mind.

Mr. GALLINGER. Perhaps they were not properly labeled.

Mr. NELSON. Mr. President, while I am on my feet I can not help adding a few words more.

Mr. SMITH of Georgia. Mr. President, just a moment, if the Senator will allow me. As Senators are telling of the National Guard of their respective States, I want to say to the Senator that we have in Georgia something over 3,000 men enlisted in the National Guard, and I think the companies of that organization on drill make as fine an appearance as any troops I ever saw. They outclass regular soldiers in competitive drills, and are really in such splendid shape that they could almost be called into active service at any time. The service in which they are engaged is the pride of those young men. They have competitive company drills at fairs all over the State, and the people have great pride in their militia.

Mr. NELSON. While we are on the subject, Mr. President, of the National Guard, having given one side of the picture, I desire to give another experience I had while governor. A very serious strike occurred in the iron mines on Lake Superior, back of Duluth. The men of two of the mines left their work in order to go to another mining camp in an effort to induce others to join the strike. The sheriff of St. Louis County said he was unable to handle the situation and asked me to send the militia to help him. At that time the general of the militia was a very pompous, dignified man, who, while the strike was pending, came to my office almost every day and wanted to go with the militia to the district where the disturbance prevailed. I knew that if he went to the strike district there would be shooting. My adjutant general was an old German who had served in the Civil War. His name was Muhlberg, and a fine old fellow he was. I called him up, and I said, "Gen. Muhlberg, take a militia company, go to Duluth, and stop the disturbance, but do not have any shooting if you can help it." He replied, "Never mind, Governor, I will go up there, and I will fix them without shooting." He went there and maintained the peace. He marched troops up there and camped them, made a little speech to the strikers, and they went back to their quarters. I am satisfied if the brigadier general of the militia at the time had gone to the mines there would have been bloodshed.

Mr. President, if I may be pardoned for these wandering remarks, I want to say a word in behalf of the Army in general. I am surprised to note in very many quarters a prejudice against a so-called standing army and against soldiers in general. The fact is seemingly overlooked that the majority of the men in the Army are of our own flesh and blood, citizens of the United States, and they do not lose the attributes of citizenship or the American spirit because they join the ranks of the Army. Our own history and the history of the South demonstrate that the old soldiers are not a danger to the Republic in any form.

The historian Macaulay tells us that when the Stuarts returned to power in England after the death of Oliver Cromwell and his son, and it became necessary to disband the great army of Puritans who had marched under Oliver Cromwell, the Stuarts were afraid that those old army veterans when disbanded would be a disturbing and vicious element in the body politic and prove a menace to society. The historian, however, tells us that these expectations were never realized. He said that if you went into any community in England after those

veterans were discharged and found a thrifty and prosperous blacksmith or a thrifty and prosperous carpenter or a thrifty, prosperous, and energetic tailor, if you scratched his head a little you would generally find that he was one of Oliver's old soldiers. Instead of those men being a menace to the country they were a blessing to it; their training in the army had made them good citizens. Exactly the same thing occurred at the end of our great Civil War. When that war was over the veterans in the Confederate Army retired to the walks of civil life and became the leaders and the best citizens in their respective communities. So with the veterans of the North, the veterans of the Grand Army of the Republic. When they returned to civil life they became industrious, prosperous, thrifty citizens of the United States. Neither the old Confederates nor the old Union veterans who retired to civil life after that long and dreary war proved themselves to be bad citizens or to be a menace to the public interest; and I am surprised, Mr. President, to think there are any men in this country who are hostile to a fair-sized standing army.

We are a rich and a wealthy country. We ought to be well equipped both in peace and in war—well equipped in peace in order to prevent war—and I hope that before we enact the pending proposed legislation we will secure a somewhat ampler force than is provided even in the Senate bill.

It is very strange—I dislike to go into the domain of politics, but I can not help doing so—that 18 months ago our good President was opposed to preparedness; he did not think it was necessary; but within six months he has come around and is now strongly in favor of it.

Mr. WILLIAMS. Does not the Senator think something has happened in 18 months?

Mr. NELSON. Yes; something has happened in 18 months, as the Senator from Mississippi suggests.

Mr. WILLIAMS. And not alone in the mind of the President, but in the history of the world.

Mr. NELSON. Mr. President, I do not intend exactly to criticize the President, because we do not all see the light of truth at an equally early period. I think the President 18 months ago did not apprehend that the war in Europe would be on such a stupendous scale or would continue so long.

Mr. MARTINE of New Jersey. He was not alone in that thought.

Mr. NELSON. Oh, no; I am conscious of that fact; but the events which have occurred within the last 12 months have led the President to change his mind; and I congratulate him on the position he has now taken.

He and some of his advisers prepared a plan. The only criticism of that plan which I have to make is that it was a homeopathic plan. His idea of preparedness was a good one; but he did not carry it far enough; it was on too narrow a scale. To my mind, the plan proposed by Secretary Garrison was by all odds the best and wisest plan.

Now, coming to this bill, I am not only in favor of the Regular Army—and a little larger Regular Army, if we can have it, than is provided for in the pending bill—but I am in favor of a volunteer army, and I am not opposed to the militia. Let us take it just as it is, with all of its virtues and all of its infirmities, but let us have a real reserve force in the shape of a volunteer army, upon which we can depend—such an army, Mr. President, as we had in the days of the Civil War.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by J. C. South, its Chief Clerk, announced that the House had passed a bill (H. R. 10384) to regulate the immigration of aliens to, and the residence of aliens in, the United States, in which it requested the concurrence of the Senate.

The message also announced that the House insists upon its amendments to the bill (S. 4399) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors, disagreed to by the Senate, agrees to the conference asked for by the Senate on the disagreeing votes of the two Houses thereon, and had appointed Mr. SHERWOOD, Mr. RUSSELL of Missouri, and Mr. LANGLEY managers at the conference on the part of the House.

The message further announced that the House insists upon its amendments to the bill (S. 3984) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors, disagreed to by the Senate, agrees to the conference asked for by the Senate on the disagreeing votes of the two Houses thereon, and had appointed Mr. SHERWOOD, Mr. RUSSELL of Missouri, and Mr. LANGLEY managers at the conference on the part of the House.

PETITIONS AND MEMORIALS.

Mr. GALLINGER presented memorials of 16 citizens of Center Barnstead, N. H., remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which were ordered to lie on the table.

He also presented a petition of the Woman's Club of Center Harbor, N. H., praying for an investigation into conditions surrounding the marketing of dairy products, which was referred to the Committee on Agriculture and Forestry.

He also presented a petition of the German Alliance, of Manchester, N. H., praying for the removal of restrictions on the shipment of milk to Germany, Austria-Hungary, and Poland, which was referred to the Committee on Foreign Relations.

He also presented a petition of the Berger Manufacturing Co., of Boston, Mass., praying for liberal appropriations for the maintenance of the Bureau of Standards, which was referred to the Committee on Appropriations.

He also presented a petition of the Department of Louisiana and Mississippi, Grand Army of the Republic, praying for the retirement of Volunteer officers of the Civil War, which was ordered to lie on the table.

Mr. PHELAN presented a petition of the Woman's Council of Sacramento, Cal., praying for an investigation into conditions surrounding the marketing of dairy products, which was referred to the Committee on Agriculture and Forestry.

He also presented a memorial of the congregation of the Adventist Church, of Mountain View, Cal., remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which was ordered to lie on the table.

He also presented a petition of Local Union No. 338, Cigarmakers' International Union of America, of Eureka, Cal., praying for the enactment of legislation to further restrict immigration, which was referred to the Committee on Immigration.

Mr. BURLEIGH presented a petition of sundry citizens of Greenville, Me., praying for national prohibition, which was referred to the Committee on the Judiciary.

Mr. WADSWORTH presented memorials of sundry citizens of Saranac Lake and Lincklaen, in the State of New York, remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which were ordered to lie on the table.

He also presented petitions of sundry citizens of Wayland, Parishville, and Middletown, all in the State of New York, praying for national prohibition, which were referred to the Committee on the Judiciary.

REPORTS OF COMMITTEES.

Mr. PHELAN, from the Committee on Public Lands, to which was referred the bill (H. R. 406) to authorize exploration for and disposition of coal, phosphate, oil, gas, potassium, or sodium, reported it with an amendment, and submitted a report (No. 319) thereon.

Mr. NELSON, from the Committee on Commerce, to which was referred the bill (S. 4426) to regulate the salaries of keepers of lighthouses, reported it with amendments, and submitted a report (No. 320) thereon.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. CULBERSON:

A bill (S. 5339) to amend section 1 of an act entitled "An act to regulate commerce," approved February 4, 1887, as heretofore amended; to the Committee on Interstate Commerce.

By Mr. WILLIAMS:

A bill (S. 5340) to confer jurisdiction on the Court of Claims to readjudicate the cases of Mattie W. Jackson, widow, and others, against The United States, and Mattie E. Hughes against The United States; to the Committee on Claims.

By Mr. TAGGART:

A bill (S. 5341) granting an increase of pension to Charles Leffler (with accompanying papers);

A bill (S. 5342) granting an increase of pension to Michael Galligan (with accompanying papers); and

A bill (S. 5343) granting a pension to Anna Stanley (with accompanying papers); to the Committee on Pensions.

By Mr. SMITH of Maryland:

A bill (S. 5344) for the regulation of the practice of podiatry in the District of Columbia, and for the protection of the people from empiricism in relation thereto; to the Committee on the District of Columbia.

By Mr. OLIVER (for Mr. PENROSE):

A bill (S. 5345) granting a pension to William R. Miller; to the Committee on Pensions.

NATIONAL DEFENSE.

Mr. WORKS submitted an amendment intended to be proposed by him to the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States, which was ordered to lie on the table and to be printed.

Mr. LEE of Maryland submitted amendments intended to be proposed by him to the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States, which were ordered to lie on the table and to be printed.

Mr. SMITH of South Carolina submitted an amendment intended to be proposed by him to the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States, which was ordered to lie on the table and to be printed.

THE JUDICIAL CODE.

Mr. OLIVER (for Mr. PENROSE) submitted an amendment intended to be proposed by him to the bill (S. 1412) further to codify, revise, and amend the laws relating to the judiciary, which was referred to the Committee on the Judiciary and ordered to be printed.

MILITARY POLICY OF THE UNITED STATES.

Mr. TILLMAN. On yesterday I submitted a resolution (No. 156) providing for the printing of 1,000 additional copies of Senate Document No. 494, Sixty-second Congress, second session, third impression, entitled "Military Policy of the United States," by Bvt. Maj. Gen. Emory Upton, United States Army. I find that there is a later impression, being the fourth one of this document, and I ask that the order of yesterday be rescinded and that there be printed as a Senate document 1,000 additional copies of the fourth impression.

The VICE PRESIDENT. Without objection, it is so ordered.

HOUSE BILL REFERRED.

H. R. 10384. An act to regulate the immigration of aliens to, and the residence of aliens in, the United States was read twice by its title and referred to the Committee on Immigration.

EXECUTIVE SESSION.

Mr. CHAMBERLAIN. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session the doors were reopened, and (at 5 o'clock and 45 minutes p. m., Friday, March 31, 1916) the Senate took a recess until to-morrow, Saturday, April 1, 1916, at 12 o'clock meridian.

CONFIRMATIONS.

Executive nominations confirmed by the Senate March 31 (legislative day of March 30), 1916.

POSTMASTERS.

CONNECTICUT.

John G. St. Ruth, Windsor.

MINNESOTA.

Fred Gay, Moose Lake.

MISSOURI.

J. S. Divelbiss, Braymer.

NEW JERSEY.

William Gerard, Rockaway.

OHIO.

Fred D. Baker, Sunbury.
William E. Haas, Delaware.

HOUSE OF REPRESENTATIVES.

FRIDAY, *March 31, 1916.*

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

Infinite Spirit, through whose eternal energy and all-embracing love we live and move and have our being, open Thou our eyes to the beauty of holiness and ever lead us in the way of truth; impart unto us wisdom and strengthen us for every duty, that we may be the instruments in Thy hands for the promotion of Thy kingdom, that peace and good will may possess every heart; and Thy will be done on earth as it is in heaven, through Jesus Christ our Lord. Amen.

PENSIONS.

Mr. RUSSELL of Missouri. Mr. Speaker, I ask unanimous consent that the House insist upon its amendments to the bill (S. 3984) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors, and agree to the conference asked by the Senate.

The SPEAKER. The gentleman from Missouri asks unanimous consent that the House insist on its amendments to S. 3984, and agree to the conference asked by the Senate. Is there objection?

There was no objection; and the Speaker appointed as conferees on the part of the House Mr. SHERWOOD, Mr. RUSSELL of Missouri, and Mr. LANGLEY.

Mr. RUSSELL of Missouri. I ask for the same order with reference to S. 4399, granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors.

The SPEAKER. Without objection, the same order will be made as on the preceding bill, and with the same conferees.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted to Mr. SLAYDEN until the 8th of April, inclusive, on account of business.

WITHDRAWAL OF PAPERS.

By unanimous consent, leave was granted to Mr. BAILEY to withdraw from the files of the House, without leaving copies, the papers in the case of Mrs. Sara Gates (H. R. 18404, 63d Cong.), no adverse report having been made thereon.

OLEOMARGARINE.

Mr. HAUGEN. Mr. Speaker, I ask unanimous consent for a reprint of House bill 13825, and that the spelling of the word "oleomargarine" and the title of the bill be corrected; also, that in lines 19 and 20, page 14, the words, "that causes it to look like" be stricken out and the words "in imitation or semblance of" be inserted in lieu thereof.

Mr. Speaker, I make this request in order to correct what appear to be some typographical errors in the bill.

Mr. FITZGERALD. That is not a reprint.

Mr. MANN. The way to do is to introduce another bill. We can not have two prints of a bill in two different forms.

The SPEAKER. The best thing for the gentleman to do is to reintroduce the bill as he wants it to appear.

EVENING SESSION ON TUESDAY NEXT.

Mr. STEPHENS of Mississippi. Mr. Speaker, I ask unanimous consent that on Tuesday next at 5 o'clock the House take a recess until 8 o'clock, the evening session to continue for not more than three hours, for the consideration of bills on the Private Calendar.

The SPEAKER. The gentleman from Mississippi [Mr. STEPHENS] asks unanimous consent that on Tuesday next at 5 o'clock the House stand in recess until 8 o'clock, the evening session to be for the purpose of considering bills on the Private Calendar and not to extend beyond 11 o'clock.

Mr. MANN. Unobjected bills?

Mr. STEPHENS of Mississippi. Yes; unobjected bills, to be considered in the House as in Committee of the Whole.

The SPEAKER. And no other business to be transacted at that night session. Is there objection?

There was no objection.

RIVERS AND HARBORS.

Mr. SPARKMAN. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of the river and harbor bill, H. R. 12193; and pending that I would like to see if we can make some arrangement for time for general debate. I will ask the gentleman from Washington [Mr. HUMPHREY] what time he suggests? I myself suggest five hours.

Mr. HUMPHREY of Washington. I have had requests on this side for 4 hours and 15 minutes, and very insistent requests.

Mr. SPARKMAN. We have had requests on this side for nearly as much, but I am sure we can cut it down to two hours and a half.

Mr. HUMPHREY of Washington. I have gone over the requests that have been made, and I think we ought to have four hours on this side. I have another request right now.

Mr. SPARKMAN. How would this suggestion meet the views of the gentleman from Washington, that we consume the balance of the day in general debate and consider the bill under the five-minute rule to-morrow?

Mr. HUMPHREY of Washington. No, I would not do that, because I do not know how much of this day we are going to have for discussion. There may not be very much of it left by the time we get through.

Mr. SPARKMAN. I should think we might stay here until 7 o'clock, if necessary, or even 8 o'clock. So far as I am per-

sonally concerned, I would be willing to have a night session.

Mr. FITZGERALD. Why not have a night session for general debate?

Mr. HUMPHREY of Washington. I would not be willing to have a night session. As long as we have before us the program that has been outlined we may as well take our time, because we will never get through anyway. There is no use in trying to hurry the impossible. I think some gentlemen on that side of the aisle ought to have the courage to go and tell the President the facts about this.

Mr. MANN. I suggest to the gentleman that he make it seven hours, three and a half hours on a side.

Mr. KITCHIN. Why could we not agree to run on until 5 o'clock and then recess until 8 o'clock and finish the general debate to-night?

Mr. MANN. Everybody knows there will be nobody here to-night.

Mr. KITCHIN. How would this do, then: Suppose we consume the balance of this day in general debate, and meet at 11 o'clock to-morrow, and have an hour's general debate to-morrow, and at 12 o'clock begin under the five-minute rule?

Mr. MANN. I am perfectly willing to begin at 11 o'clock to-morrow, as far as I am concerned, but I think we ought to have the seven hours' debate.

The SPEAKER. Has anybody any suggestion to make? The time is running.

Mr. FITZGERALD. Tempus fugit!

Mr. MANN. You had better make it seven hours' debate, with the suggestion that we meet at 11 o'clock to-morrow.

Mr. SPARKMAN. Suppose we run until 6 this evening and then meet to-morrow and finish up the seven hours?

Mr. MANN. As far as I am concerned I have no objection to running until 6 o'clock, but nobody can guarantee that between 5 and 6 o'clock some one will not raise the point of no quorum. There will be very few Members here.

Mr. SPARKMAN. We can have a gentleman's agreement that we will stay until 6 o'clock.

Mr. MANN. The gentleman himself has control of that matter. We can make no agreement as to how long it will run.

Mr. SPARKMAN. I am trying to make a satisfactory agreement. I know how these things go, and I want to make it satisfactory, if I can.

Mr. MANN. Let the gentleman make a request for seven hours' debate and meet at 11 o'clock to-morrow.

Mr. SPARKMAN. Mr. Speaker, I ask unanimous consent that there be seven hours of general debate, one half to be controlled by myself and the other half by the gentleman from Washington [Mr. HUMPHREY], and that we meet at 11 o'clock to-morrow.

The SPEAKER. The gentleman from Florida moves that the House resolve itself into Committee of the Whole House on the state of the Union for the consideration of the river and harbor bill, and pending that he asks unanimous consent that general debate be limited to seven hours, one half to be controlled by himself and the other half by the gentleman from Washington [Mr. HUMPHREY], and that the House meet to-morrow at 11 o'clock. Is there objection?

Mr. LONDON. Mr. Speaker, may I ask the gentleman from Florida whether I will be yielded 10 minutes by each side?

Mr. SPARKMAN. I will yield the gentleman 10 minutes.

Mr. LONDON. Will the gentleman from Washington yield 10 minutes to me?

Mr. HUMPHREY of Washington. Mr. Speaker, I do not like to deny the gentleman from New York, but I do not think the gentleman has a right to talk every time a bill comes up before the House.

Mr. CHIPERFIELD. Mr. Speaker, I object.

The SPEAKER. What does the gentleman from Illinois object to?

Mr. CHIPERFIELD. I object to the request of the gentleman from Florida for seven hours time if this is to be a part of the program.

The SPEAKER. The gentleman from Illinois [Mr. CHIPERFIELD] objects.

Mr. SPARKMAN. Mr. Speaker, I move that the House resolve itself into Committee of the Whole House on the state of the Union.

Mr. CHIPERFIELD. Mr. Speaker, at the suggestion of the gentleman from Illinois, our minority leader, I withdraw the objection.

The SPEAKER. The gentleman from Illinois withdraws his objection. Is there objection to the request of the gentleman from Florida? [After a pause.] The Chair hears none. The question is on the motion of the gentleman from Florida to go into Committee of the Whole House on the state of the Union for the consideration of the river and harbor bill.

Mr. MANN. Mr. Speaker, I make the point of no quorum.

Mr. FITZGERALD. The House is dividing.

The SPEAKER. The Chair will count. [After counting.] the Doorkeeper will close the doors, the Sergeant at Arms will notify the absentees, and the Clerk will call the roll.

The question was taken; and there were—yeas 238, nays 95, answered "present" 3, not voting 97, as follows:

So the motion was agreed to.

The Clerk announced the following pairs:

For the session:

Mr. DEWALT with Mr. MCFADDEN.

Until further notice:

Mr. MCGILLICUDDY with Mr. GUERNSEY.

Mr. DENT with Mr. HULL of Iowa.

Mr. EDWARDS with Mr. KIESS of Pennsylvania.

Mr. GALLIVAN with Mr. JOHNSON of Washington.

Mr. WALKER with Mr. DARROW.

Mr. PATTEN with Mr. FAIRCHILD.

Mr. WINGO with Mr. CARY.

Mr. WM. ELZA WILLIAMS with Mr. GRIEST.

Mr. GALLAGHER with Mr. SNYDER.

Mr. LIEBEL with Mr. ROWLAND.

Mr. AIKEN with Mr. BACHARACH.

Mr. BRUCKNER with Mr. BENNET.

Mr. DALE of New York with Mr. MOONEY.

Mr. DRISCOLL with Mr. COLEMAN.

Mr. EAGAN with Mr. COPLEY.

Mr. GARRETT with Mr. DALLINGER.

Mr. GLASS with Mr. SLEMP.

Mr. HAMILL with Mr. DRUKKER.

Mr. HARDY with Mr. EDMONDS.

Mr. HART with Mr. FOSS.

Mr. HENRY with Mr. LOUD.

Mr. MORRISON with Mr. HUMPHREY of Washington.

Mr. SABATH with Mr. NORTH (ending two weeks after March 30, 1916).

Mr. HILLIARD with Mr. GRAY of New Jersey.

Mr. JONES with Mr. HUTCHINSON.

Mr. DUPRÉ with Mr. KENNEDY of Iowa.

Mr. MAHER with Mr. KREIDER.

Mr. OLDFIELD with Mr. MCCULLOCH.

Mr. OLNEY with Mr. MCKENZIE.

Mr. PAGE of North Carolina with Mr. MEEKER.

Mr. PRICE with Mr. MILLER of Delaware.

Mr. RAUCH with Mr. MORIN.

Mr. RIORDAN with Mr. MUDD.

Mr. SAUNDERS with Mr. PETERS.

Mr. SCULLY with Mr. RODENBERG.

Mr. SHOUSE with Mr. SCOTT of Pennsylvania.

Mr. STEELE of Pennsylvania with Mr. SUTHERLAND.

Mr. WATKINS with Mr. SWIFT.

Mr. BURNETT with Mr. SIEGEL.

Mr. LEWIS with Mr. ANTHONY.

Mr. LOFT with Mr. ROBERTS of Nevada.

Mr. CLARK of Florida with Mr. GRAHAM.

On the vote:

Mr. DOREMUS (for motion) with Mr. KENNEDY of Rhode Island (against).

Mr. YOUNG of Texas (for motion) with Mr. STINESS (against).

Mr. GUERNSEY. Mr. Speaker, I voted "no," but, as I am paired, I desire to withdraw that vote and answer "present."

The name of Mr. GUERNSEY was called, and he answered, "Present."

Mr. HUMPHREY of Washington. Mr. Speaker, I am paired with the gentleman from Indiana [Mr. MORRISON]. I voted "yea" and I desire to vote "present."

The name of Mr. HUMPHREY of Washington was called, and he answered, "Present."

The result of the vote was announced as above recorded.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 12193, the rivers and harbors appropriation bill, with Mr. SHERLEY in the chair.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent to dispense with the first reading of the bill.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. SPARKMAN. Mr. Chairman, the bill totals in cash and authorizations $39,608,410, the latter, however, only amounting to $1,710,000. This aggregate is made up exclusively, with one exception, of items for maintenance, prosecution of work on unfinished projects heretofore adopted, and surveys and contingencies. The exception is that part of the project for the improvement of East River, N. Y., set forth in House Document No. 188, Sixty-third Congress, first session, which provides for a channel 35 feet deep from New York Harbor to the Brooklyn Navy Yard.

The committee, as was the case no doubt with everyone else favorable to river and harbor legislation, deeply regretted the necessity for again leaving new projects out of the bill. The reasons for this were: Treasury conditions growing out of the European war, the necessity for making ample provisions for national preparedness, and the large number of adopted and uncompleted projects demanding attention.

The estimates submitted by the War Department for this bill abount to $44,376,710—$4,585,950 for maintenance, examinations, surveys, and contingencies; the balance, or $39,790,760, for works of improvement. By going over the estimates, however, and considering carefully every item, we were enabled to make a net reduction of $4,768,300, and that, too, in the judgment of the committee, without endangering or stinting the work on any project.

The total reduction was much greater than the net saving, amounting to $7,498,300; but, in addition to the item for the improvement of a part of the East River, it was found necessary, on account of damage to several completed works by storms that visited a number of the Gulf ports last summer, to increase the appropriation for several of the harbors and channels in that section, mainly on the coast of Texas. In addition to these increases, others were found necessary in different parts of the country, but in each case the increase was made after and upon the advice of the engineers. Among these is a $300,000 item for the Delaware River, which, however, is not an actual increase over the estimates, as this apparent increase forms a part of the $600,000 authorization recommended by the chief in his annual report.

Another item is that for the further improvement of Pollock Rip, Nantucket Sound, Mass., appropriating $150,000, but for which there was no original estimate. This work had been going on for some time, and when the estimates were made last June the advisability of an appropriation in this bill was not then apparent, but a later report, called for by resolution of the committee, showed the necessity for the amount we have given. This channel is the northerly passage off the shoals on the eastern entrance of Nantucket Sound connecting the deep water of the sound with that of the ocean and is traversed by an extensive coastwise traffic. It is stated that an average of nearly 50 vessels per day goes through this channel and that the commerce amounts to something like 20,000,000 tons annually. In its present shape it presents unusual dangers of collision, besides it is very difficult of navigation. The committee thought the work was sufficiently urgent to justify increasing the amount estimated to that extent.

Another item of increase is that of $250,000 for Trinity River, Tex. The canalization of a part of this river has been going on since 1902, under a project calling for the construction of 37 locks and dams with incidental dredging and other open-channel work at an estimated cost for a 6-foot navigation of $4,650,000. The main work of canalization, however, has been done on section 1, covering a stretch of the river of about 50 miles below Dallas, Tex. Only two of the locks and dams, 3 and 5, estimated to cost $300,000 each, remain to be completed. But owing partly to the fact that an instrumental survey was pending for the purpose of determining, among other things, the number of locks and dams actually necessary below section 1, no estimate was furnished except one of $50,000 for open-channel work. The report of the Chief of Engineers, however, suggested that while it would be better in case Congress should desire to go ahead with the work on locks and dams 3 and 5 to furnish the entire amount of $600,000, he stated that if it should be decided to make provision for only a year's work, $150,000 for each lock and dam should be appropriated. After the making of this report, however, the people of Dallas, who are very desirous that the work should go on without delay, offered to contribute $100,000 toward the same, being one-sixth of the amount of the estimated cost of the two locks.

But the committee, feeling that it would answer the purposes as well to arrange for only one year's work, concluded to appropriate $250,000 on condition that local interests furnish $50,000 more, the whole making an aggregate of $300,000, it being understood that in a subsequent bill the balance of the $300,000 could be furnished in like proportions by Congress and by local interests. It is proper to say that the people of Dallas have already contributed somewhat liberally to that

improvement, having heretofore furnished $60,000 for the construction of locks and dams in this first section and, in addition, the necessary lands for the same. The first section is not embraced in the provision for a reexamination of the river, and the importance of finishing the work in this section is based upon the belief that it will add very materially to the length of the period each year during which navigation may be carried on, and thus greatly increase the use of the river to the people at and near Dallas and throughout the river valley.

A much larger sum was offered by local interests in case the entire project should be adopted in this bill, but that was impractical, owing partly to the fact that the reexamination has not been completed, but I am informed that the offer will hold good until the survey is before Congress and that body has had time to act upon it. I wish to say further that the offer of local assistance evinced a confidence in the worth of the proposed improvement that appealed very strongly to the committee, for if those on the ground and supposedly to be benefited by the improvement are willing to aid so materially in the work it is evident that they believe it will be valuable and that they are in earnest in their desire to use the river.

One of the largest items in the bill is one of $6,000,000 for the further improvement of the Mississippi River from Head of Passes to the mouth of the Ohio River. This money is to be expended, as the paragraph will show, under the direction of the Secretary of War and in accordance with plans, specifications, and recommendations of the Mississippi River Commission, as approved by the Chief of Engineers, for the general improvement of the river, for the building of levees between Head of Passes and Cape Girardeau, Mo., and for surveys in such manner as in their opinion shall best improve navigation and promote the interests of commerce at all stages of the river.

This work has now been going on actively by the Government in conjunction with levee districts and the States bordering on the Mississippi since about 1879, when the Mississippi River Commission was created, during which time and down to June 30, 1915, the Government expended $32,320,178.07 for levee building alone, and for revetment and other works of improvement $44,737,968.93. The States and levee districts have, however, expended a much larger sum for that purpose, the amount being $81,093,644. This would show that the Government has been paying apparently 40 per cent of the amount of levee construction. Of course this should measure the value of that class of work to navigation, as the money has been furnished on that theory. There is no way to determine this accurately, and in making the allotments the Chief of Engineers has very likely taken a liberal view of the matter, as Congress and the people of the country probably intend he should. There is no doubt, however, but that the levees contribute to some considerable extent toward the stability and integrity of the bed of the river, and in that way benefit commerce and navigation. It is estimated that the amount still needed to complete the levee line is about $45,000,000, which, according to the proportion heretofore furnished by the Government, would leave about $18,000,000 to be furnished by the Federal Government.

Attention, however, should be called to a further provision in connection with the item of $6,000,000 just mentioned, practically extending the jurisdiction of the Mississippi River Commission over levee building from the mouth of the Ohio to Rock Island, Ill.; hence if that provision remains in the bill a part of whatever funds are appropriated will be used on that stretch of the river. The amount of construction between the mouth of the Ohio and Rock Island, I believe, has never been accurately determined, but it is supposed that only a small sum, relatively speaking, will be required for that work.

There are 271 items of appropriation in the bill—180 for maintenance and 91 for works of improvement. The sum necessary to complete unfinished projects heretofore adopted, according to the original estimates, is about $230,000,000. But owing to the abandonment of portions of several projects and the completion of others within the limits of the estimated cost, the entire sum may not be needed; in fact, it may be reduced eventually as much as $10,000,000; but even then there will remain $220,000,000 to be appropriated. It may, hence, be seen that it will require several more bills, unless larger amounts are furnished in those yet to come, before the entire sum needed to finish these works is finally appropriated. But the smaller projects are being rapidly finished, and in two or three years more there will only be left of the older and larger ones, such as the Mississippi River and its principal tributaries, the Ohio and Missouri, requiring now about $150,000,000 to complete. But as the work on these is expected to cover relatively long periods, and only to require money to continue the work from year to year, the appropriations for old projects should not, after the passage of one or two more river and harbor bills, reach the figures in the present measure. I would like also to emphasize the fact that after deducting the $150,000,000 required for the Mississippi River and its two main tributaries from the $220,000,000, the probable net sum to finish old projects, only about $70,000,000 are left to complete all those outside of the three just mentioned, which could easily be covered by two such measures as this.

By reference to the bill it will be noted that there is a considerable falling off in surveys as compared with the number in the bill of 1915, there being 180 in that while there are only 84 in this. This reduction at least suggests that the demand for waterway improvement is being rapidly met and that as soon as the large amounts necessary to complete the projects now under way are furnished subsequent bills should show a marked decrease in the number of projects adopted and, consequently, of the amounts appropriated.

It will also be noted that a few waterways for which appropriations are made, either for maintenance or for continuing improvement, accommodate relatively a very small freight tonnage. This is perhaps traceable in some instances to the fact that the projects have not been completed so as to furnish the facilities intended, or, if completed, a sufficient time has not elapsed to permit of their full utilization. In other cases the small tonnage may be traced to a depression in business or to local causes of a temporary character. But there are not many of such works—only about 27 in number—with amounts appropriated in this bill ranging from $1,000 to $209,000 and aggregating $855,100; the waterways, however, only accommodating a commerce amounting to 223,651 tons, though this commerce is valued at $11,841,296.

All of these waterways, especially the rivers and intracoastal canals, traverse sections of country rich in agricultural, mineral, forestry, or other industrial possibilities, and it is believed they will eventually and at no distant day become useful arteries of commerce. To my mind it is inconceivable they should not do so or that they will not eventually pay to the people of the country at least a fair return upon their cost by furnishing means for cheaper and more convenient transportation. For these reasons the committee has thought best to continue work on them, at least for the coming year, in the hope that increased benefits will follow. I for one believe it would be foolish to abandon them until they have had a fair trial. Then, and after a reasonable time, if adequate results do not follow, further work upon such as are found unsatisfactory may be discontinued.

Now, three minority reports have been filed—one by the gentleman from Washington [Mr. HUMPHREY]; another by the gentleman from Massachusetts [Mr. TREADWAY]; and still a third by the gentleman from Wisconsin [Mr. FREAR]. The first was based upon a single ground, the inclusion in the bill of the item for the opening of that portion of East River, N. Y., from deep water in New York Bay to the Brooklyn or New York Navy Yard, so as to give a 35-foot depth where only 30 feet, perhaps a little less, exists now, and that through a narrow, tortuous, and more or less dangerous channel, the purpose being to furnish a depth of water such that the largest naval vessels can at all times reach the yard. As just stated, the committee decided not to insert new projects in the present measure, but later, and before the preparation of the bill was finished, we received a communication from the President urging, in the interest of national preparedness, an appropriation for the improvement of the East River at the point mentioned. The letter is as follows:

THE WHITE HOUSE,
Washington, February 11, 1916.

MY DEAR MR. SPARKMAN: The President directs me to say to you that he is strongly of the opinion that the pending river and harbor bill should carry an appropriation for the immediate improvement of the East River adjacent to the Brooklyn Navy Yard. He fully appreciates the fact that this would be contrary to the rule of the committee not to recommend appropriations for new projects at this time, but he feels that the importance of the matter in its relation to the question of national preparedness fully justifies an exception to the rule.

The President understands that Secretary Daniels has fully explained this matter to the committee.

Sincerely, yours,

J. P. TUMULTY,
Secretary to the President.

In addition to this request of the President, we had before us representatives both of the Navy and War Departments, Admiral Benson and Capt. Knapp appearing for the former, and Col. Black, of the Engineer Corps, for the latter. In this hearing it appeared that the navy yard, the largest and most commodious in the country, capable of receiving and docking ships with a draft of 32 feet 5½ inches, can only be reached by a channel 30 feet in depth at mean low water. Furthermore, it is the only navy yard on the Atlantic equipped with facilities for building battleships. It was further suggested that a ship which can easily go through the channel now might be so disabled in battle or otherwise as to require a much greater depth than

necessary in her normal condition, and that without the increased depth she might be rendered inactive and useless at a critical period in our national affairs. Now, when to these considerations are added the request of the President, the one who stands at the head of our Military and Naval Establishment, who, by reason of his position, is, or should be, at all times familiar with our foreign relations, and who, under the Constitution, directs our diplomatic activities, it seems to me that an exceptional case is presented and that the needed improvements should be made without delay. I may add that while this emergency work only costs $700,000, the whole East River project, covering the entire river, calls for work to cost about $13,000,000. This work in its entirety should, in the interest of commerce, be adopted in the near future, but the committee did not think it advisable to undertake any more in this bill than is absolutely necessary to furnish an adequate channel to the navy yard.

Mr. MOORE of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. SPARKMAN. Yes.

Mr. MOORE of Pennsylvania. Does the appropriation made in this bill for reaching the navy yard apply only to that particular channel project, or is it the beginning of a movement up the East River?

Mr. SPARKMAN. It applies only to this particular project, but is a part of the East River project, a very small part, however; about one-twentieth.

Mr. MOORE of Pennsylvania. And it pertains only to the approaches to the navy yard?

Mr. SPARKMAN. Only to the approaches.

Mr. MOORE of Pennsylvania. This being the only new project that comes in this bill, were there other worthy projects that might be regarded as this was, a war-project necessity, brought to the attention of the committee?

Mr. SPARKMAN. There were other projects brought to the attention of the committee, but the committee did not consider them as urgent as this.

Mr. MOORE of Pennsylvania. This is the only one on which the President made an urgent request of the committee?

Mr. SPARKMAN. That is correct.

Mr. MOORE of Pennsylvania. And it is confined to the approaches of the navy yard for the purpose of getting vessels in and out?

Mr. SPARKMAN. That is true.

The minority report also says that many other items of equal or greater merit were voted down in the committee. Perhaps there were such viewed from the standpoint of commercial importance, but none that was on a par with the New York item from the viewpoint of national preparedness. If there were such, they were not presented to the committee, nor was its attention call to them by anyone.

The only other item that presents conditions at all similar is the navy yard at Charleston, S. C., the difference between it and the yard at New York being one of degree in the matter of importance. While the Charleston yard has a dry dock that can accommodate vessels drawing more than 30 feet, unlike the Brooklyn Navy Yard it has no shipbuilding plant, its equipment being only for repairs. I believe, however, that a shipbuilding slip is soon to be located there, but when completed it will only accommodate, so I am advised, tugs and possibly torpedo boats.

Like the New York Navy Yard, however, the channel leading to the Charleston yard is of less depth than are the slips or dry docks. While the latter can accommodate vessels of 30 feet draft, the former only has an available depth of 26 feet.

Mr. TREADWAY. Mr. Chairman, will the gentleman yield?

Mr. SPARKMAN. Certainly.

Mr. TREADWAY. The gentleman refers to the Charleston (S. C.) Dry Dock as being the only one where large ships could be constructed?

Mr. SPARKMAN. I said where battleships could be constructed.

Mr. TREADWAY. May I not ask if Boston has not both a dry dock in course of construction and a navy yard already equipped?

Mr. SPARKMAN. I understand the Government has a navy yard there, with a dry dock, but I understand, further, that it can accommodate vessels of only 8,000 tons.

Mr. TREADWAY. May I further interrupt the gentleman to ask as to the probable capacity, or expected capacity, of the dry dock at Boston now under construction?

Mr. SPARKMAN. I understand there is a dry dock to be constructed there by the State—it may be in process of construction—that will accommodate very large vessels. I am not advised as to the size of the vessels it is designed to accommodate, but I understand it is to be a very large dry dock.

Mr. TREADWAY. Is it not in evidence that it will accommodate the largest vessels either constructed or in expectation of construction?

Mr. SPARKMAN. I could not state as to that.

Mr. TREADWAY. I will be glad to inform the committee later in respect to that.

Mr. SPARKMAN. I wish to say here that they have ample water at Boston to reach the Government navy yard there; that any vessel that the dry dock can accommodate can easily reach the yard .

Mr. WHALEY. Mr. Chairman, will the gentleman yield?

Mr. SPARKMAN. Certainly.

Mr. WHALEY. Did not the President communicate with the gentleman respecting the Charleston project?

Mr. SPARKMAN. Yes.

Mr. WHALEY. Did not the Secretary of the Navy and Admiral Benson also write letters urging the adoption of the project?

Mr. SPARKMAN. I will say to the gentleman that the President did have a conversation with me, in which he suggested that I take into consideration this navy yard, together with the advisability of deepening the approaches thereto, and suggested that if, after considering it, the committee thought that it presented an urgent case he would be pleased to have us take care of it in this bill.

Mr. WHALEY. Did he not also ask the gentleman to consult the naval officers about it?

Mr. SPARKMAN. He did.

Mr. WHALEY. And the gentleman received a letter from the Secretary of the Navy and Admiral Benson?

Mr. SPARKMAN. I did at least get a letter from Admiral Benson about it. I may have received one from the Secretary.

Mr. WHALEY. He sent me a copy of the one he sent to the gentleman.

Mr. SPARKMAN. Then, I undoubtedly received it.

Mr. HULBERT. Mr. Chairman, I would like to ask the gentleman whether the dry dock which it is intended to construct at Boston referred to by the gentleman from Massachusetts [Mr. TREADWAY], is to be built by the Federal Government or the State government?

Mr. SPARKMAN. I understand there is one to be constructed there by the State government, and perhaps that is the one to which the gentleman refers. There is also a navy yard with a dry dock owned by the Government there.

Mr. HULBERT. But over the dry dock to which the gentleman from Massachusetts referred the Secretary of the Navy or the Federal authorities would not exercise any jurisdiction. That would be dependent entirely upon whatever courtesy might be extended to them by the State of Massachusetts.

Mr. SPARKMAN. Yes; but I would say to the gentleman that if the State should construct a shipbuilding plant there for large vessels, the Committee on Rivers and Harbors, as would Congress, I think, feel inclined to aid in such channel improvement as would furnish ample water to the dock.

Mr. HULBERT. On the theory that it was for commercial purposes?

Mr. SPARKMAN. Oh, yes; largely on that theory, though not entirely.

Mr. TREADWAY. Mr. Chairman, would I be intruding on the gentleman if at this point I should answer directly the question the gentleman from New York [Mr. HULBERT] has just submitted relative to Federal control over the navy yard or dry-dock?

Mr. SPARKMAN. The gentleman may proceed if it is only a short statement he wishes to make.

Mr. TREADWAY. Just a word. I desire, Mr. Chairman, through the courtesy of the gentleman speaking, to quote from the report of the Secretary of the Navy submitted to Congress December 15, 1915, in which he says:

> This monumental work involving an expenditure by the State of Massachusetts of well over $3,000,000 will afford naval and dry-dock facilities in this important harbor superior in extent and size to that available at any other American port—

And I call the attention of the gentleman from New York especially to this clause—

> and by arrangement give the United States Government control and paramount use of the dock in time of war.

I thank the chairman of the Rivers and Harbors Committee for his courtesy.

Mr. SPARKMAN. With reference to the Government Navy Yard at Boston I wish to say that it can accommodate vessels drawing 29.6 feet.

Mr. MOORE of Pennsylvania. Is that the Government dock or the State dock?

Mr. SPARKMAN. That is the Government dock.

Mr. MOORE of Pennsylvania. The State dock is 1,200 feet long, much longer than the other.

Mr. SPARKMAN. Yes; the State dry dock is to have a much greater capacity.

The minority report submitted by the gentleman from Massachusetts [Mr. TREADWAY], while lacking in clearness as to what is meant by good and bad projects, is quite definite in other respects. For instance, it is clear beyond peradventure, that the bill is not such as he would have framed if he had prepared it all by himself, without being hampered or troubled with the views and voting power of the other 20 members of the committee, and that unless it is changed in this House to suit him it will not have his support. That is to be regretted for several reasons. In the first place, I, for one, would be glad to have him in accord with us. I would like to know that one with the standing the gentleman has attained in this House, even during the short time he has been here, who has shown such an interest in river and harbor matters and such an intelligent grasp of the subject as the gentleman has shown, is with us.

In the next place, we would indeed be pleased to have him vote for the bill whether it is amended to suit him or not. But such things will occasionally happen in and out of legislative bodies, and especially is that true in one like this where the principles of representative government are recognized and where there are 434 other members to be consulted. Nevertheless, it is the gentleman's privilege to give expression to his own views and to vote against the bill if his judgment so dictates. But even though the gentleman leaves us in the dark as to the items which he would condemn and as to some other objections he has to the bill, I may, I think, without doing him any injustice, summarize his views as follows:

That we are appropriating more money than the conditions of the Treasury will justify; that the amount appropriated is greater than necessary to take care of the projects under way; that too much is appropriated for some unnamed projects; that appropriations are made for projects without merit; that the committee has followed the usual procedure in making up the bill; and last, but not least, that we are appropriating money for very shallow streams on which boats can with difficulty run now. Well, it is too bad that the gentleman should find fault with the bill on that account. Why, Mr. Chairman, that is the very purpose of this class of legislation. That is why we have river and harbor bills. If harbors or rivers or even the creeks were deep enough to meet the demands of commerce we would not have to improve them. That is why in earlier days we appropriated money for the Connecticut, Merrimac, Malden, Taunton, and other rivers partly or wholly in the gentleman's own State, some of them in their original condition quite as shallow as those unnamed streams which the gentleman likely had in mind when he was framing his report. That also was the reason for the improvement of the St. Marys River at the falls, which, in its original condition, could float nothing except logs and very small craft, but which now, by reason of the improvement made, carries more than 50,000,000 tons of commerce annually. The same may be said of hundreds of other waterways originally of little value but now of great use to the country. No; Mr. Chairman, it is not the shallowness of the stream that should alone influence us, but the relative cost and advantages to come from the improvement as well.

That we are appropriating too much I deny, if we are going to do the work at all. Our purpose was to furnish no more and no less than is necessary to prosecute the work on each project until another bill can be framed and passed, and that is what I hope and believe we have accomplished. To have done more would have been foolish extravagance; to have done less would have been criminal negligence.

I know something of the way this bill was framed, and I can truthfully say that no river and harbor bill during the past 20 years has received greater care in its preparation than has this measure. Not a recommendation by the engineers but was carefully considered in all its details. This the gentleman knows if he gave the care and attention to the bill and its preparation that each Member should bestow upon such matters, and which the gentleman did bestow on the preparation of this bill, as he was present, I believe, at every important meeting of the committee.

I have called attention to the fact that there are on the books $230,000,000 of old projects; that is, projects heretofore adopted and yet to complete. A little later, if I have time, I will, in view of past and present efforts to inject sectionalism into the consideration of this and the last two river and harbor bills, call attention to the dates these projects were adopted. For the present I will only say we have them on the books, and if they are to be completed the work should go on with a reasonable degree of speed until they are finished; otherwise great waste will be the result. And I want to say further that one object in excluding new projects from this bill was that we might deal more liberally with those we have on hand and push them to completion as rapidly as possible.

Of course the gentleman no doubt thinks that some of them, which, however, he has not mentioned, ought not to receive appropriations at all. It may be that there are some on the books which, in the light of subsequent events, might at the time of adoption have waited and given place to others more urgent. Still, I believe them all meritorious and, when finished, that they will be of great benefit to the commerce of the country, both local and general. The work upon them is well advanced, many nearing completion, and it would be the height of folly to stop their improvement now. That is my own opinion, but when they are reached under the five-minute rule anyone may move to strike them out. Then the House can do as it pleases with them.

Even now, however, I would like to ask the critics of river and harbor legislation, and who may wish to eliminate certain projects from this bill, where they will draw the line between the good and the bad, what would be their standard of excellence, and upon what will they base such standard? Will they base it upon a certain proportion of cost to tonnage, or of cost to freight value, or both? If upon the proportion of cost to commerce, will they consider present commerce alone, or both present and future? If the latter, then a wide field is opened up and many things are to be taken into account, such as the possibilities of agricultural and industrial development, and the furnishing of additional and cheaper means of transportation as a result of a proposed work.

Then again, what will be the proportion of cost to tonnage and value? Should it be 1 to 2, 1 to 5, 1 to 50, or what would we fix as the proportion? I only mention this to show the difficulties in the way of anyone when he essays the task of selecting projects to be improved from those which should not be.

The truth is that no fixed standard can be erected. Each tub must stand upon its own bottom; each project upon its own merits. The Committee on Rivers and Harbors and the House heretofore have acted upon that plan and in doing so have tried to be just and fair. They may have made mistakes now and then, but not many. Indeed my opinion is that mistakes have been less frequent in river and harbor bills than in any other class of legislation.

Mr. FREAR. May I ask the gentleman a question?

Mr. SPARKMAN. I yield to the gentleman.

Mr. FREAR. I desire to ask if the suggestion the gentleman makes is not answered quite fully by Col. Townsend, who in the case of the Mississippi and the other rivers of the Mississippi Valley urges that we leave 58 river projects in statu quo and make completed experiments in two cases, and then when those are successfully completed we are to wait and find whether they will carry any appreciable freight.

Mr. SPARKMAN. I will say to my friend that Col. Townsend neither follows nor suggests any rule, but would do what he proposes arbitrarily.

Mr. FREAR. May I interrupt further to ask, if the chairman pleases, if there is no means by which we can drop any of these projects when once begun?

Mr. SPARKMAN. This House can do it whenever it likes, either with or without the committee's recommendation; but when it acts it must do so arbitrarily, as I know of no fixed standard by which it can be done. I want to say most emphatically that this committee invites the closest scrutiny of any and every item in this bill. If there is anything in it that ought not, in the opinion of the majority of this House, to be there, let it be stricken out. That is what we are here for.

Mr. SLOAN. Will the gentleman yield?

Mr. SPARKMAN. Certainly.

Mr. SLOAN. I desire to make a suggestion to the Chair, that this executive session, apparently, going on down in the pit may be interesting to those who are participating, but really the committee would like to hear what is going on.

Mr. STAFFORD. Mr. Chairman, I suggest that the gentleman come nearer the throne and not remain in the outskirts. Will the gentleman yield for a question?

Mr. SPARKMAN. I will.

Mr. STAFFORD. Will the geneleman advise the committee whether in any instance the committee has refused to appropriate for any project which is of a questionable character, so far as future tonnage is concerned?

Mr. SPARKMAN. In this particular bill?

Mr. STAFFORD. As far as the present bill is concerned.

Mr. SPARKMAN. Oh, we cut several; two or three on that ground, but the most of them because the money recommended was not needed.

Mr. STAFFORD. Does not the gentleman believe that it is a good business principle for the Government to follow that when it launches into a project which, after appropriation and development, is shown to the committee is no longer worthy of exploitation, that it should be abandoned?

Mr. SPARKMAN. Most assuredly.

Mr. STAFFORD. There are many such projects?

Mr. SPARKMAN. I do not think so.

Mr. STAFFORD. I understood, if the gentleman will permit me further, that he stated that as a usual thing the policy followed by the committee was that when once the Government launched into a project it should not be abandoned until fully completed and determined whether it was worthy of indorsement. To that policy the gentleman from Massachusetts [Mr. TREADWAY] as a business proposition takes issue in his report by what I believe is good business policy, namely, to abandon the work when once shown not to be worthy of support by reason of the commerce that might develop in the future.

Mr. SPARKMAN. The gentleman has not expressed my views with entire correctness. I believe that whether a project has been adopted or not it should not receive an appropriation if it is not going to be of sufficient benefit to commerce to justify the appropriation. The difficulty is to determine that question. But if, in the opinion of the committee, when the matter is under consideration there, or of the House when here, it is not worthy, it ought to be left out.

Mr. STAFFORD. At that time?

Mr. SPARKMAN. Yes; at that time.

Mr. MOORE of Pennsylvania. Is there any way of determining the future commerce to which the gentleman refers until the channel is constructed?

Mr. SPARKMAN. I know of no way by which this can be done accurately. We can only guess.

Mr. MOORE of Pennsylvania. Is there any way of determining the tonnage of a railroad until the railroad is completed and operated?

Mr. SPARKMAN. No; and I will say that I have known railroads that had been constructed for years before they began to pay.

Mr. MOORE of Pennsylvania. And there must be some expenditure before we can determine the question?

Mr. SPARKMAN. Yes.

Mr. MOORE of Pennsylvania. I think that answers the gentleman from Wisconsin [Mr. STAFFORD].

Mr. HULBERT. I would like to ask the chairman of the committee if there was not a provision in the last bill calling upon the Chief of Engineers to investigate and report whether there were such projects then in the course of construction that were not worthy of further improvement, and if the investigation pursuant to that act is not now in progress?

Mr. SPARKMAN. Yes; and the engineers are investigating and reporting as fast as they can.

Mr. HULBERT. And have not such projects as have been reported unworthy by the Chief of Engineers been omitted from consideration in this bill?

Mr. SPARKMAN. I would not say that.

Mr. FREAR. May I interrupt just once more?

Mr. SPARKMAN. Let me answer the question a little more fully. We had two under consideration when preparing this bill upon which reports had been made recommending their complete or partial abandonment. One was at Sandy Bay, Mass., and known as the Sandy Bay harbor of refuge; the other was the Arkansas River. The Sandy Bay proposition came before us and was referred back to the board for further consideration, the committee not being satisfied with certain features of the report. The board only recommended a partial abandonment of the Arkansas River project, and after looking into it we found that the Government had within the last two years constructed two very expensive dredge boats for the purpose of making a test of the efficiency of the plan under which work was being done on that river. These dredges had only been recently constructed, and, after consideration, the committee did not think it wise to withhold an appropriation at this time, but that we should keep these boats in operation at least during the next fiscal year and until a thorough or a better test has been made.

Mr. FREAR. May I interrupt?

Mr. SPARKMAN. I yield to the gentleman.

Mr. FREAR. Referring directly to the appropriation for the Arkansas River, which, as I recollect, carries over $300,000, does it not?

Mr. SPARKMAN. I think it is $209,000.

Mr. FREAR. Does not the gentleman think it is a rather expensive experiment to spend $209,000 in order to keep two dredge boats busy, when the Army engineers, after an expenditure of $3,000,000 on that river, have determined and recommended that the project should be abandoned? In the face of that recommendation the committee indorsed it. And in answer to the suggestion of the gentleman from Pennsylvania [Mr. MOORE] as to the importance of completing a project in every case before determination can be had of its usefulness, is it not a fact that the past expenditure of $20,000,000 on a project that only carried 19,377 tons last year of actual commerce is evidence of a questionable policy? This bill appropriates $1,500,000 more for that particular project. Have we not given it a fair test after 20 or 30 years?

Mr. SPARKMAN. To what project does the gentleman refer?

Mr. FREAR. To the project of the gentleman at my right, the gentleman from Missouri [Mr. BORLAND], for the Missouri River.

Mr. BORLAND. The gentleman is mistaken; the project was reported favorably.

Mr. FREAR. This was in reply to the suggestion as to completing a project before you can get the commerce.

Mr. SPARKMAN. I would not like to be led off into a discussion of that project just now. When we reach the five-minute rule I am willing, in so far as I can give the matter direction, to accord gentlemen such time as may be reasonable in which to discuss that and all others the merits of which are questioned.

But to return to the minority report of the gentleman from Massachusetts.

Mr. Chairman, I am not impressed with the criticism that we have pursued the usual methods in framing this bill. The gentleman has not suggested a better plan; and until one is found what should we do but follow the one we have? Besides, what are the usual methods? Why, those, with modifications from time to time, we have been pursuing for nearly a century. These are, first, a survey ordered by Congress, which is made by the district engineer, whose report is reviewed by the division engineer, by the Board of Engineers for Rivers and Harbors, and finally by the Chief of Engineers, whose decision is final. It thus passes under the scrutiny of at least nine engineers, none of whom, except perhaps the district officer, is below the rank of colonel, the chief being a brigadier general.

If all, or even the Chief of Engineers, reports adversely, nothing further is done; but if instead the report is favorable, then the final survey and estimate are made, the report upon which is in turn reviewed by the same officials. Both reports are then sent to Congress in one document. If the finding is unfavorable, nothing more is usually done; but if favorable, then the Committee on Rivers and Harbors considers it, giving it the closest scrutiny, and may or nay not recommend it to the House for adoption. And in this connection I may say that we have before us many projects favorably reported calling for millions of dollars to complete, but which, on account of the fact that we have not considered them urgent or worthy, have not adopted them and are not likely to do so.

Mr. McLAUGHLIN. Mr. Chairman, will the gentleman yield there?

Mr. SPARKMAN. Certainly.

Mr. McLAUGHLIN. The gentleman says if the report is unfavorable, the recommendation is that no action be taken. It, of course, rests with Congress, does it not?

Mr. SPARKMAN. I said, as a rule nothing further is done with it.

Mr. McLAUGHLIN. Does the gentleman mean to say that a committee of this House ties itself up absolutely to follow the report of the engineers?

Mr. SPARKMAN. I was referring to the practice of the River and Harbor Committee, which we have been following for the last 10 or 15 years. Under that practice we do not consider a project that has been turned down by the engineers.

Mr. McLAUGHLIN. You follow them absolutely and do not use your own judgment and discretion at all? Is that the idea?

Mr. SPARKMAN. The gentleman is very nearly correct. We have to have some rule and draw a line somewhere between the good and the bad, and that rule has usually worked well. The House can always correct us when we make a mistake; but the House up to date has followed the committee pretty closely in that particular. Now, all know the course pursued after a bill appropriating for a project or projects reaches this body. I will not go into details, only saying that the items in no appropriation bill, coming from any committee, receive any closer scrutiny than do the items entering into the various river and harbor bills from the time the surveys are ordered to the point where they finally reach the President for his signature, nor is there any around which greater safeguards against mistakes are thrown than those measures.

Mr. Chairman, these are the usual methods, the whole constituting a system founded upon experience and having the ap-

proval of the ablest and the best minds of the country, a system which has been in existence for three-quarters of a century and under which the navigable capacity of more than 25,000 miles of inland waterways and upward of 300 harbors—ocean, gulf, and lake, have been increased from primitive and unsatisfactory conditions until, with few exceptions, they are keeping pace with the demands of a rapidly growing commerce, a commerce amounting to more than 870,000,000 tons annually, and valued, it has been estimated, at more than $22,000,000,000.

These great results have been attained at a cost of only $800,000,000, and the work accomplished has gone on until at least three-quarters of that necessary to place all our rivers and harbors in first-class condition has been completed or is now under way. I hence submit that, after all these great results have been achieved, we should not lightly discard the system that has brought them to us.

Mr. MOORE of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. SPARKMAN. Certainly.

Mr. MOORE of Pennsylvania. Mr. Chairman, I will ask the gentleman to repeat the figures of expenditures for rivers and harbors, as he has them there, from the beginning on up.

Mr. SPARKMAN. About $800,000,000.

Mr. MOORE of Pennsylvania. About $800,000,000 for the work of improving rivers and harbors for the purposes of commerce in the United States?

Mr. SPARKMAN. Yes.

Mr. MOORE of Pennsylvania. Will the gentleman allow me to interject into his remarks right there this very interesting comparison of figures, that during the 40 years up to 1907, while a less amount than he has mentioned was expended for the commercial development of rivers and harbors within the United States, we had spent $8,900,000,000 for the Army and Navy and the pensions of the country, showing that the great plod horse that bears up the interests of the country is the least encouraged agency for material advancement that now occupies the public mind?

Mr. SPARKMAN. The gentleman is correct in that, and I thank him for the interruption.

Now, some gentlemen here and elsewhere are accustomed to point to the treatment of the waterways of Europe, mainly those of Germany, Belgium, and France, as examples worthy of imitation or as furnishing standards of comparison by which it is sought to place our waterways and our treatment of them at a disadvantage, the argument being that we, under our system, have been woefully extravagant, while under theirs the improvements have been made with the minimum of economy resulting in the maximum of efficiency.

Well, let us see. The 25,226 miles of our inland waterways have cost for improvement and maintenance since the beginning of the Government $514,982,612 for the rivers, or $19,807 per mile, while the inland waterways of Prussia have cost, for original work and maintenance, $56,400 per mile. Those of Belgium, $102,397 per mile. Those of France, $63,065, per mile. At the same rate of expenditure as that in Prussia the cost here, instead of $19,807, would have been $1,479,136 per mile. At the same rate as in France, the cost here would have been $1,653,942, while at the same cost as in Belgium it would have been $2,685,000 per mile.

Mr. FREAR. Mr. Chairman, will the gentleman pardon an interruption there?

Mr. SPARKMAN. Yes.

Mr. FREAR. By way of illustration, is it not true that the gentleman has included nearly a thousand miles of the upper Missouri River on which there is not a single steamboat to-day?

Mr. SPARKMAN. It embraces all the navigable portions of that river.

Mr. FREAR. And it is not used for navigation to-day?

Mr. SPARKMAN. Oh, yes; the statistics show that it has some commerce. Just what the amount is I do not recall just now.

Mr. FREAR. It is only slight.

Mr. HUMPHREYS of Mississippi. Mr. Chairman, will the gentleman yield there?

Mr. SPARKMAN. Yes.

Mr. HUMPHREYS of Mississippi. It has had some commerce on it during the period in which this $800,000,000 was expended?

Mr. SPARKMAN. Yes.

Mr. HUMPHREYS of Mississippi. And that commerce has diminished or departed since that time?

Mr. SPARKMAN. Yes; but we are in hopes it will come back again. I believe it will.

Mr. HUMPHREYS of Mississippi. Mr. Chairman, will the gentleman yield further?

Mr. SPARKMAN. Certainly.

Mr. HUMPHREYS of Mississippi. Just to get an explanation. The gentleman says that prior to the time the $800,000,000 was expended the commerce was greater. I understood the $800,000,000 of expenditure was made since the beginning of the Government. What does the gentleman mean?

Mr. FREAR. Those expenditures were $850,000,000, instead of $800,000,000, and they have been made since 1875, have they not? And prior to that time the commerce on the Missouri River was greater by far than it is now.

Mr. HUMPHREYS of Mississippi. The $800,000,000, as I understood it, was expended going clear back to the organization of the Government.

Mr. SPARKMAN. That is right.

Mr. FREAR. The Engineers' reports show that $850,000,000 was appropriated.

Mr. SPARKMAN. We are talking about the expenditures. Eight hundred and fifty million dollars may have been appropriated, but there have been only about $800,000,000 expended.

Mr. BARCHFELD. Mr. Chairman, will my friend yield there?

Mr. SPARKMAN. Yes.

Mr. BARCHFELD. The gentleman refers to that happy day before our Government proceeded to improve rivers and harbors by appropriations. I suppose he refers to the day of the aborigine, when the Indian pursued his happy way in his lovely canoe. That is the commerce that the gentleman from Wisconsin would like to see to-day. [Laughter.]

Mr. FREAR. Pardon me; may I answer there? That is hardly a fair reply, it would seem. Many years ago, before the time of which the gentleman speaks, 1875, there was commerce upon the upper Missouri River, and boats were running there. It had actual navigation. To-day practically none. There is but one boat running, according to the statement furnished to the committee, from Sioux City to Kansas City.

Mr. BORLAND. Between Sioux City and Omaha.

Mr. FREAR. Yes; between Sioux City and Omaha, after all the expenditure, which has been very large, as the chairman well said. I am in favor, I will say in answer to the gentleman from Pennsylvania, of legitimate waterway improvement where it brings results.

Mr. BARCHFELD. Just there, will the gentleman permit me another interrogatory?

Mr. FREAR. With the consent of the Chairman I will, if I can reply.

Mr. BARCHFELD. Does not the gentleman think that when the mighty Missouri is improved there will be a restoration of that commerce which that section of the country so badly needs? I want to say that there is to-day a legitimate commerce between Kansas City and St. Louis.

Mr. BURGESS. Mr. Chairman, will the gentleman yield there?

The CHAIRMAN. Does the gentleman yield, and to whom?

Mr. SPARKMAN. I will yield to the gentleman from Wisconsin [Mr. FREAR].

Mr. FREAR. I desire to answer the gentleman from Pennsylvania [Mr. BARCHFELD], and say this: According to the Deakyne report, from Kansas City to the mouth of the river there was a saving of $10,000 made in freights in 1914 by use of that waterway, irrespective of whether the boats were carrying it at a profit or not. For that saving of $10,000 during 1914 in freight rates, he estimates it will cost the Government $1,100,000 every year for interest and annual maintenance. That is according to his report, is it not?

Mr. BORLAND. Now, let me answer the gentleman in a word.

Mr. SPARKMAN. Yes; I would like to have the gentleman do that, but I wish to proceed with my statement, and, when through, will be glad to answer any questions gentlemen may wish to ask.

Mr. BORLAND. If the gentleman will look back over the history of the Missouri River at the time he speaks of, just prior to and after the Civil War, he will find that the boats were wrecked every few years; and we could restore commerce on the Missouri River to-day on the same terms as existed then if we had no railroad competition, because a boat then had to charge enormous freight rates, sufficient to enable it almost to make its cost in a single season. At that rate you could put commerce on any river, anywhere, at any time, but to-day you must have an improved channel in order to put commerce on it.

Mr. SPARKMAN. The gentleman's statement is, I think, correct.

Mr. EAGLE. If the gentleman will allow me, I think an accurate statement of the figures may be illuminative of the controversy that has arisen between the gentlemen down in the

pit just now. It so happens that since 1875 the exact amount of the appropriations made for rivers and harbors during the 40 years up to June 30 last is $680,552,501.01, according to the report of the Chief of Engineers. The excess above that was spent at a time prior to 1875.

Mr. SPARKMAN. Is the gentleman dealing with expenditures or appropriations?

Mr. EAGLE. Both.

Mr. MOORE of Pennsylvania. I have the figures here, and they come from the Appropriation Committee, and the amount for 40 years from 1875 up to and including 1914 is just what the gentleman from Texas [Mr. EAGLE] states—six hundred and eighty million and odd dollars.

Mr. COOPER of Wisconsin. I should like to ask one question.

Mr. SPARKMAN. Certainly.

Mr. COOPER of Wisconsin. I notice in the speech of the gentleman from Wisconsin [Mr. FREAR] made on January 13 that he made the following statement:

> Mr. Speaker, we have paid out of the Government Treasury over $850,000,000 for waterways.

Now, has $850,000,000 been paid out of the Treasury in actual money?

Mr. SPARKMAN. That is not my understanding, and I have gone over the matter very closely. I think the error of the gentleman from Wisconsin [Mr. FREAR] arose from the fact that he was considering appropriations rather than expenditures.

Mr. FREAR. Unquestionably. Almost anyone would understand that by reading the speech as a whole. That was the intention.

Mr. SPARKMAN. But the gentleman called me to task a while ago and insisted that I was wrong when I used the word "expenditures."

Mr. FREAR. I did not get the distinction the gentleman made at the time.

Mr. SPARKMAN. I think if the gentleman will look over his speech he will find that he did not make that distinction.

Mr. FREAR. No; I presume that was an error in expression. The chairman says the amount is $800,000,000, but it is impossible to say what the exact expenditure has been since the last report.

Mr. COOPER of Wisconsin. Will the gentleman allow me to make one comment right there?

Mr. SPARKMAN. Certainly.

Mr. COOPER of Wisconsin. I do not think a gentleman should be obliged to read 40 or 50 pages of a speech to find out what it means, when a gentleman says that more than $850,000,000 has been paid out of the Treasury. [Applause.]

Mr. FREAR. Mr. Chairman, pardon me just one moment in reply.

Mr. COOPER of Wisconsin. I was entirely misled by that statement of the gentleman.

Mr. FREAR. The gentleman makes a criticism upon his colleague from his own State. Ordinarily I do not resent that, but I will say that the gentleman followed me so closely throughout the last session that he ought to have known what the facts were from an independent investigation.

Mr. SPARKMAN. I do not care to yield any further at this time.

Mr. COOPER of Wisconsin. I want to say just one word more.

Mr. SPARKMAN. Well, I guess I will have to yield to my genial friend from Wisconsin.

Mr. FREAR. Which one?

Mr. SPARKMAN. Both are genial, but I refer to the one who is now speaking, for the time being.

Mr. COOPER of Wisconsin. The gentleman, on the second page of his speech, says:

> We have paid out of the Government Treasury over $850,000,000 for our waterways.

Now, will the gentleman allow me to interject right there this one short statement: Germany is about the size of Texas. It is composed of a number of States, and, of course, as the gentleman knows, includes Prussia, which has the largest appropriation. That State, less than the size of Texas, has expended about $500,000,000 on its rivers and harbors. Is not that so?

Mr. SPARKMAN. Somewhere in that neighborhood; yes.

Mr. COOPER of Wisconsin. And France, which is not as large as Germany, has paid out about $450,000,000 on its rivers and harbors.

Mr. SPARKMAN. Something like that.

Mr. COOPER of Wisconsin. Neither one of them being as large as one State in this great Republic of 48 States.

Mr. SPARKMAN. Mr. Chairman, I do not care to yield any further just now, because I must finish my statement.

Mr. HARDY. I wish the gentleman would yield to me for a suggestion right in this line.

The CHAIRMAN. Does the gentleman from Florida yield?

Mr. SPARKMAN. Yes.

Mr. HARDY. Is it not a fact that a great many rivers amply able to carry commerce have had their commerce destroyed by the competitive methods adopted by the railroads, which we call cutthroat rates, reducing rates from water competitive points until the railroads have absorbed the commerce that naturally and justly ought to be carried on the rivers themselves?

Mr. SPARKMAN. According to the reports which we regard as reliable, I should say that is correct.

Now, Mr. Chairman——

Mr. DAVIS of Texas. Will the gentleman yield?

Mr. SPARKMAN. I hope the gentleman will let me go on a little further, then I will yield.

The CHAIRMAN. The gentleman declines to yield.

Mr. SPARKMAN. I will yield to the gentleman presently. Returning to the question of the comparison which I was making between the waterways of Europe and the waterways of this country, I wish to say the fact is that not only the average but the actual cost of waterway improvement in France, Prussia, and Belgium has been greater than the cost of the same class of improvements in this country. Moreover, there have been about 2,500 miles of waterways, including canals, costing millions of dollars, abandoned in France out of the 10,372 miles constructed and improved from first to last, and about 2,550 miles in Germany out of the 8,750 miles originally constructed there, while of our twenty-five thousand and odd miles of waterways practically none that have been under improvement by the Federal Government have been abandoned, though some State canals, unwisely and improvidently constructed, have gone out of use; but the Government of the United States is keeping up practically all the waterways that it has ever had under improvement, and I think it should with few exceptions continue to do so, at least for a reasonable time.

Certainly, Mr. Chairman, we should not condemn a system that has worked so well without suggesting a better to take its place. This the gentleman from Massachusetts does not undertake to do.

That, too, was the course pursued by the gentleman from Wisconsin [Mr. FREAR] for a time, but after many reminders that he was suggesting nothing for the system he would destroy he has come forward with a substitute plan for the one we have. He proposes a commission of five members to be appointed by the President, not more than three of whom shall belong to any one political party, and who are to hold their offices for seven years. These commissioners he would clothe with all but plenary powers over waterway improvements in the interest of navigation, water-power development, and reclamation.

The chief if not the only power left to Congress under his plan is to furnish the money for the activities of the commission, which is to be done, not through the Committee on Rivers and Harbors, as one might suppose, but through the Committee on Appropriations of the House.

Assuming for the sake of argument that the commission plan for dealing with our rivers and harbors is advisable, the bill submitted is greatly defective in many of its details, but I shall not stop to consider them. The serious objection to that and all similar plans is that it takes from Congress and the Representatives of the people the right to select the projects to be adopted and the work to be done, and turns it over to a board of commissioners to be appointed by the President, by and with the advice of the Senate, without giving the House an opportunity of saying who these commissioners shall be. I do not believe the time has yet come for that, and I doubt if it will come in the very near future.

The present system, I know, has evils as well as virtues, but its evils and its virtues are those of our system of government, which is representative in substance and in form. By reason of that feature it may be cumbersome and, at times, a little more costly than an autocratic government, though that is to be doubted. It might be that the Czar of Russia, with autocratic powers, could have a piece of work done more to his liking and at less cost than can Congress, though even that may be questioned. Every power on continental Europe is more centralized and less responsive to the people than is ours, and all of them have greater advantages, if advantages they are, in the sweep and power of a single will; and yet what true American would exchange our system of government for theirs?

The gentleman cites us to these countries and their methods of dealing with their waterways as models of excellence—something for us to pattern after—and yet I have shown that these waterways, mile for mile, have cost much more than ours. But admitting in some matters of administration the desired end is reached at less cost there than here, we still have our representative form of Government, resting upon the will of the people, and which, in the long run, costs less than those of Europe. Does anyone suppose for a moment that if the question of peace or war had been submitted to the people of Europe's warring nations before war was declared, the conflict raging there, costing perhaps in the end forty or fifty billions of dollars and millions of human lives, would have been started? Better, far better, a representative form of government, with its disadvantages, if any; with its slightly increased cost of administration, if it does really cost more, than one with such tremendous powers for evil.

As I have said, my estimate is that the work of improving our harbors and rivers, including intracoastal waterways, but excluding canals, is about 75 per cent completed. My familiarity with the ports and inland waterways of the country justifies, I think, that conclusion. But I want to say something about the work already done, especially the projects adopted during the past 20 years.

Mr. Chairman, I regret to note a tendency, even though it be by a very few, to inject sectionalism into our river and harbor legislation. I refer more particularly to statements made by the gentleman from Massachusetts [Mr. TREADWAY] and the gentleman from Wisconsin [Mr. FREAR] the one in discussing the bill of last year, the other in a speech delivered a few weeks ago. My colleague on the committee [Mr. TREADWAY] after criticizing several items in the bill of 1915, entirely in the Southern States, and claiming that the committee, which he suggested was organized in the interest of the South, had discriminated in favor of that section, submitted as proof a list of items purporting to give the States lying in the North and those in the South, together with the items in the bill, for projects in each of these States.

Having furnished the statement, he asked, In what way can this situation be explained other than that the control of this House and the greater portion of its vote is favorable to the southern interests? No such deduction as that could have been properly drawn from this statement if even the apportionment of the items by him in the list had been properly made, because I know that neither sectionalism nor politics had anything whatever to do with the framing of the bill. But the apportionment was not properly made.

The total for the North, as contained in this statement, was $15,185,730, while that credited to the South—or, perhaps, I should say "charged," as the gentleman seemed to state it in the shape of a charge—was $16,182,150, but to get this large amount he included in the southern list the entire Mississippi River from St. Paul to the Head of Passes, at a cost of $6,700,000, and the Missouri River from Fort Benton, in Montana, to the mouth, at a cost of $1,365,000, entirely oblivious of the fact that each of the navigated portions of these rivers had to traverse 7 to 10 States of the Union, and should not have been charged to any section of the country.

Now, the gentleman's own party, in its platforms, has declared the Mississippi to be a national stream, and the same could, with equal propriety, have been done with the Missouri, and for like reasons. Eliminating, then, $8,000,000 in that bill for these two streams from the $16,000,000 would leave only about $8,000,000 for the southern group of States and $15,000,000 for the northern.

But, Mr. Chairman, I am almost ashamed to make reference to this matter, because the discussion of a great subject like this should be pitched on a higher plane than sectionalism or partisanship; and I am happy to say that during the 21 years I have been in this House, whether under Democratic or Republican control, I have never seen sectionalism displayed in the slightest degree in the framing of legislation looking to the improvement of our rivers and harbors.

In this connection I may as well call attention to some of the criticisms against this and the bills of 1914 and 1915. One hearing or reading these criticisms would believe that the committee and the House, as at present organized, are responsible for all the projects against which complaint is made or has been made during the past two years. But the facts are that, of the entire amount of $39,608,410 carried in this bill, only $7,359,260 are for works of improvement on projects adopted since the present chairman has had the honor of presiding over the deliberations of the Committee on Rivers and Harbors, while of the $230,000,000 of unfinished projects upon which work is now being prosecuted only $27,563,420 are for projects adopted during that time.

Now, I am not criticizing previous committees of Congress responsible for this larger, much larger, aggregate. They not only did the best they could with the lights before them, but performed, in my judgment, a great work for the country. Yet, while indulging in the pastime of throwing stones at the present committee, do not forget to locate the greater responsibility, if responsibility it is, for the large appropriations in the annual bills or for the character of the projects for which these appropriations are being made. The committee as at present organized is endeavoring in good faith and as best it may to carry on the work cut out for it by its predecessors.

As I said, I am not condemning the policy inaugurated in the bill of 1896 and followed by the committee and Congress in subsequent bills, but which received its most emphatic indorsement in the bills of 1907 and 1910, for the policy was that of the people back of it, and the liberal interpretation given it was but an effort to carry out their will. And, after all, Mr. Chairman, it is the people who initiate projects and it is they who inaugurate policies, and theirs is the responsibility if mstakes occur, but they have been, in my opinion, relatively few in number in so far as river and harbor legislation is concerned.

I have heretofore referred to certain projects which are favorite subjects of criticism. A few of these are in the northern group of States, while the majority are in the southern. But wherever located their adoption was intended to serve a good purpose, and it is my belief the most of these projects will.

True, the commerce accommodated by some of the waterways for which appropriations are made in this bill is not great, but I am confident such conditions are only temporary. The cost of an improvement and the present commerce of a waterway are not the only criteria for our action in the adoption or rejection of a project. Future commerce, the industrial development of a community, the cheapening of transportation, and the increased facilities for the distribution of the products of the country to the consumers at home and abroad are to be considered. Indeed, they are of more importance than present commerce, for such works are supposed to be permanent, and when we improve a stream we do so for the future much more than for the present.

Now, Mr. Chairman, as I have already remarked, it is a matter of regret that it was thought inexpedient not to include new projects in this measure. But it is to be hoped that the bill due at the next session of this Congress may contain all such as are worthy and urgent. I for one shall favor them, and it is the present purpose of the committee to begin hearings on new projects immediately after the House has disposed of this measure, with a view to having the bill practically prepared in so far as new projects are concerned before Congress convenes next December.

While there are many of these that ought to be started at an early day, I want to say to those immediately interested in new projects that from the date when this bill is likely to become a law at the end of the present session, not more than seven or eight months will elapse before the next bill will be due—not a long time to wait, especially when we remember that under the practice existing prior to the adoption of the annual bill feature three years often elapsed between river and harbor bills of any kind, whether containing old or new projects.

Now, this bill, or one substantially like this, should become a law before the end of the fiscal year, otherwise great loss to the Government will occur. I notice the gentleman from Wisconsin [Mr. FREAR] would arbitrarily cut the bill down to $15,000,000, while the gentleman from Massachusetts [Mr. TREADWAY] would postpone the whole matter indefinitely. Both of these recommendations evince a regrettable lack of information on the subject, especially by those clothed with the duty of legislating for our navigable waterways. Why, Mr. Chairman, it has been estimated by those competent to judge that the delay in passing the river and harbor bill of 1914 for a period of about four months, or one-third of a year, caused a direct and definite loss of about $400,000—to be exact, $395,554.23—and what might be called an indirect loss of nearly $500,000 more.

Now, this does not include the loss to the people from the continuation for a longer period of time of unfavorable waterway conditions which the work is intended to remedy, but the direct loss would be sufficient to make the early passage of the bill very desirable. Work of that nature is going on all over the country; plants have been assembled at many places which are being used by the Government; at others work is being done from year to year under contract with parties who, having assembled plants, would also have to tie them up and disband

their forces, making the contract price higher when work by them is again desired.

The Government has on hand to-day an aggregate of dredging plants consisting of 153 dredges, with a complement of auxiliary plants numbering more than a thousand vessels of various kinds, the whole costing originally upward of $15,000,000, with a present value of more than $12,000,000. In addition the Government has in its employ to operate these plants, and to carry on works of improvement, more than 1,700 officers and upward of 14,000 men, the most of whom would be thrown out of employment were this bill to fail of passage. Outside the Government plants the department rents more than a hundred boats of various kinds at a cost of approximately $175,000 per year, all of which would likely have to disband if an adequate amount of money to keep them going is not furnished.

I have presented all this is to give the House an idea of the nature and extent of the preparedness of the Government for the work it is now doing in river and harbor development, and what it would mean to stop this great work even for a few months. But that does not tell the whole story, for it is only a part of the loss the people would sustain. The country is developing rapidly along every line of human activity. Earth and air, forest and stream, are all being invaded by man in his efforts to cheapen the cost of living and add to the comfort and happiness of the people. The output of farm and garden, of factory and mine, is increasing rapidly, all demanding cheaper and more commodious means of transportation and distribution. The railroads, though we have the finest system in the world, can not do all this work; so the people must look, and are looking, to their harbors and navigable streams to supplement the railroads in their efforts to carry our products to the consumer at home and abroad. The people are primarily responsible for the efforts we are making to deepen their harbors and improve their inland waterways. Their wishes should be heeded and the demands of commerce for ample transportation facilities given without unnecessary delay.

Now, Mr. Chairman, after a thorough study and investigation of all projects for which appropriations were or have been recommended for this bill, an investigation covering nearly three months, we have presented this measure. It may not, indeed it is not, perfect, but we have done the best we can, and I trust the bill will meet the approval of this House. [Applause.]

Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Florida asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. SPARKMAN. Mr. Chairman, how much time have I consumed?

The CHAIRMAN. The gentleman has consumed 1 hour and 10 minutes.

Mr. HUMPHREY of Washington. Mr. Chairman, I yield 45 minutes to the gentleman from Ohio [Mr. LONGWORTH].

Mr. LONGWORTH. Mr. Chairman, the question I propose to discuss to-day is of such great and far-reaching importance that I feel justified in occupying more time than I usually do upon a matter not directly concerned with a bill actually before the House. Moreover, I feel justified in asking the close attention of every Member present, because the question is a new one—new, at least, in some of its details—to a large proportion of the membership of this House.

A singularly interesting feature of this question is that it has two distinct sides, a business side and a military side. It is upon the latter phase that I shall spend most of my time, both because it has never been considered to any real extent by Congress, and because the business side was very fully and completely presented in a very able speech by the gentleman from Connecticut [Mr. HILL] in this House on the 14th of last February. I think I can not do better at this time than to invite your attention and the attention of the country to that speech and to the hearings held by the Ways and Means Committee earlier in the year; for to my mind, no individual piece of legislation of greater importance and more far-reaching consequences is before this Congress than House bill No. 702, introduced by the gentleman from Connecticut [Mr. HILL], the object of which is, and the effect of which will be, if passed, to establish and maintain in this country the manufacture of dyestuffs. My object now in addressing this House is to urge with all the force at my command that this bill or some similar bill be taken up and passed as speedily as possible.

There is no partisanship in my appeal. It is addressed equally to each side of this House, as much to Democrats as to Republicans, as much to those who in general oppose the use of the tariff-making power of Congress to establish and maintain an American industry as to those who defend it. A situation confronts us which rises high above partisan politics, a situation before which considerations of purely political expediency ought to vanish into thin air. For myself, as a Republican—and as most of you know a pretty militant one—let me say that I would scorn to seek partisan advantage from any claim of inconsistency that might be urged against Democrats who vote for this legislation. There are times when consistency ought to yield to the force of circumstances. If not, consistency means nothing more than obstinacy.

That such times are upon us no thinking man can doubt. In time of peace we find ourselves practically without a prime necessity in the life of every American citizen. More important still, we are sternly admonished that in time of war we would be practically without or, at least, greatly deficient in an absolute necessity of modern warfare and national defense.

I appeal, then, not merely to your judgment as statesmen but to your patriotism as American citizens, for I assert that bound up in this legislation is not only the prosperity but the safety of the Nation. I realize that this is a pretty strong statement, but permit me to say that I shall make no statement upon this subject which I am not able to back up by ample and competent authority.

Why do I say that not only the prosperity but even the safety of the Nation are bound up in this legislation? It is because the dye industry and the industry of making the modern high explosives go hand in hand. Like the Siamese twins, one could not exist if the other could not. Dyes and explosives are equally products of coal tar. Up to a certain point their process of manufacture is identical. From then on the making of the finished product is a question only of detail. It can be done in the same plant, with the same machinery, and by the same men. In other words, any factory which can make colors, without adding to its buildings, practically without changing its equipment and using the same working force, can equally well manufacture the modern high explosives. For this statement there is abundant authority from the leading chemists of the country, which I shall print fully in the RECORD.

I quote from the statement of Dr. Bernhard C. Hesse, one of the leading chemists of this country and chairman of the New York section of the American Chemical Society, who drafted the report upon which the Hill bill is based:

Dr. HESSE. There is an angle from which you can look at this proposition, and that is the angle of the contribution of this industry to our national equipment. I am not talking preparedness but national equipment. Whether we are in position to-day to manufacture from the materials produced within our own borders—from materials we will always have access to—a sufficient amount of materials with which to defend ourselves, I do not know; but the information I get is that we are now rapidly approaching a position or condition where we are independent of any foreign country, except Chile, for any materials that we may want for defense in the way of explosives. However, if the explosives people are not ready to assume that responsibility, if we did have a complete self-contained coal-tar dye industry in this country—and by that I mean an industry that will produce its crude, intermediates, and its finished dye—we would have an equipment—and by that I mean actual physical plant—we would have an equipment which could, with comparatively little delay, be converted into a device to manufacture explosives, and we would have the nucleus of a trained body of men—workmen, if you please—foremen and superintendents, who could, with very little added time, learn how to make these explosives properly, and they then begin to act as a nucleus for an accretion or growth of the men necessary to do the work.

The following is the statement of Dr. J. Merritt Matthews, a chemist of the highest reputation, and also a member of the same committee:

Dr. MATTHEWS. The raw materials entering into the manufacture of dyestuffs are practically the same raw materials that enter into the manufacture of these high explosives. That is to say, substances like benzol, toluol, and naphthalene form the basis of coal-tar dyes. They also form the basis of these modern high explosives, such as picric acid, trinitrotoluol, and nitronaphthalene. Also, explosive are chiefly the nitrated products. Their manufacture requires very large supplies of nitric acid and strong sulphuric acid. We have the same requirements in the manufacture of dyestuffs; large quantities of nitric acid are required, and large quantities of strong sulphuric acid. Also, I might add other chemicals, such as caustic soda, chlorine, and similar substances. That is, there is a parallel line running through this whole thing, linking at many points of contact the dyestuffs and the explosives.

A factory, for instance, which is capable of turning out dyestuffs can, with very small effort, be changed over to the manufacture of these explosives. The materials are the same, and the processes of manufacture are more or less identical. Furthermore, in the raw materials, if there is no demand in times of peace for benzol, toluol, and naphthalene, if there is no commercial outlet for them for productions of a peaceful nature, such as dyestuffs, it is natural to suppose—and we have seen it—that their recovery will be neglected. Nobody is going to recover benzol, toluol, and naphthalene simply with the idea that if he stores them up there will some day come a war. He must have an immediate commercial outlet for peaceful products, and the only peaceful product that gives him that outlet is dyestuffs.

I want to refer also to a further statement by Dr. Hesse on this subject, contained in a letter written by him on February 18:

The finished explosives are nitration products; nitration products are intermediates of coal-tar dyes; the finished explosives are of a higher degree of nitration than the nitration intermediates of the dye industry; the kind and quality of materials to make finished explosives are the same as for nitrated dye intermediates; the difference in manufacture is almost wholly a difference in proportions of the materials used; the apparatus used is the same, difference in size or capacity of individual pieces of apparatus is about the only difference; the difference in operation is not more than one of temperature and duration of time.

Upon this point I quote from a letter written upon the 19th of February by Dr. W. Beckers, the president of one of the two dye works of any importance now existing in this country:

Regarding the relationship between the dye industry and high-explosives industry, I beg to say that for the explosives the same raw materials—that is, benzol and totuol—are used, together with nitric acid and sulphuric acid, as for dyestuffs. The apparatus for making explosives—that is, the nitrating and sulphonating machinery—is similar to that used here in the manufacture of intermediate products for dyestuffs, so that as long as we have a dyestuff industry this country will keep on producing benzol and toluol, as well as the highly concentrated nitric and sulphuric acids, and in case of war these products can be used for the making of ammunition. While dyestuffs, as well as the intermediates for the manufacturing of same, are not explosive, by a change of the process one can obtain explosives out of the same raw materials and in the same apparatus, so you will see that there is a very close relation between the two.

If we should not get the Hill bill passed and the dyestuff industry should not be established, we will lose positively in this country the benzol and toluol distilling industry, as there would not be any sale for their products in time of peace. Then, if war should come, and the United States should need explosives to be made in this country, these industries would have to take the matter up again, and it would take a year or a year and a half to obtain the necessary raw materials in this country, just the same as it took this country during the present war to build the necessary plants for the raw materials for the explosives made now for the warring countries in Europe.

It also might interest you to know that the experience a dyestuff manufacturer has in the manufacture of intermediates for dyestuffs would be sufficient to enable him to start making explosives without any further experimenting.

Stripped of all technical language, the proposition comes down to this: If we had in this country an industry which in time of peace could supply the American market with all the dyes it needed, we would at the same time have an industry which in time of war could supply the Government with all the high explosives it might need, and that immediately. Without a competent dye industry it is a question whether we could in any event supply ourselves with the explosives necessary for a war of any magnitude—to successfully repel, for instance, an invasion from any first-class power. It is possible that to-day there is being manufactured in this country, mostly for export, a sufficient quantity of the material for high explosives to supply the Government in some ordinary emergency; but you must remember that it is a purely artificial industry, one which has sprung up in response to the foreign demand of the allies for explosives due to the European war, and one which will cease almost entirely and at once when the war is over.

Moreover, it has taken a long time—a year and a half, at the least—for this industry to become established. New plants had to be built and new equipment installed, all of which will go into the scrap heap when peace is declared. It is out of the question to build explosive works and have them lying idle in time of peace. The plants would deteriorate rapidly and the cost of keeping a factory in readiness during time of peace would be so enormous that it would be absolutely impracticable.

There is one very important point that ought to be considered in this connection—whether it would be practicable to manufacture high explosives in advance and store them away for an emergency. On this point the preponderance of authority is all one way, and to this effect: That it would be entirely impracticable, not only because the substances are apt to deteriorate but because most of them are highly dangerous. Dr. J. Merritt Matthews, a chemist of national reputation, summed this up in one sentence during the hearings before the Ways and Means Committee. Speaking of these high explosives, he said:

They will not only degenerate, but are liable to explosion from one cause or another, and consequently there is no great incentive for a man to manufacture large quantities of picric acid, for instance, and keep it on hand. They can be kept for a certain length of time, but the consensus of opinion is that they are rather dangerous things to have lying around.

The following colloquy took place during the hearings before the Ways and Means Committee, which it seems to me very well covers this question:

Mr. CONRY. Will the gentleman permit a question there? Is it possible to create these chemical ingredients to which you have referred and which make up a constituent part of the explosives and store them away without a process of degeneration?

Dr. MATTHEWS. You mean, can explosives be manufactured in advance?

Mr. CONRY. Yes.

Dr. MATTHEWS. To a certain extent, they can.

Mr. CONRY. Will they not degenerate?

Dr. MATTHEWS. The chances are they will; they will not only degenerate, but they are liable to explosion from one cause or another, and consequently there is no great incentive for a man to manufacture large quantities of picric acid, for instance, and keep it on hand.

Mr. CONRY. And in view of the fact that this degeneration does take place he can not manufacture those in sufficient quantities to prepare for a future contingency like a war?

Dr. MATTHEWS. Not to store them up. They can be kept for a certain length of time, but the consensus of opinion is that they are rather dangerous things to have lying around.

Mr. CONRY. Then, if the question of national equipment enters into the manufacture as a material consideration, the establishment which produces the products will have to be of such a character as to be able when the contingency arises to produce a sufficient quantity of explosives and the acids out of which explosives are manufactured to meet the demands as they arise?

Dr. MATTHEWS. You mean the peace demands?

Mr. CONRY. The demands of war.

Dr. MATTHEWS. Yes. But the dyestuff factory can, without very great change in its equipment and routine, make picric acid and trinitrotoluol and in a very short time turn from the manufacture of various dyes to the manufacture of those products. In fact, it is a much simpler proposition than it is to make dyestuffs.

Mr. CONRY. So that in your view of the situation, from the standpoint of the trade, the national equipment for a future war would be simply a secondary consideration?

Dr. MATTHEWS. A secondary consideration to have a manufacture of explosives?

Mr. CONRY. Yes.

Dr. MATTHEWS. I should think it would be a first consideration.

Mr. CONRY. I mean from the standpoint of the trade. The primary consideration is the manufacture for commercial purposes?

Dr. MATTHEWS. Yes.

Mr. MCGILLICUDDY. Do you know, Doctor, whether the dyestuff factories in Germany have shifted over to the manufacture of explosives in this war?

Dr. MATTHEWS. Of course, I have no positive or intimate knowledge of that, but it is reasonable to suppose from the circumstances surrounding those manufacturers that they have turned their attention from the manufacture of dyes to the manufacture of those explosives.

Mr. HILL. I have special information which I will file with the committee exactly on that point, that the German dyestuff manufacturers have been engaged since the beginning of the war almost exclusively in making explosives.

Mr. LONGWORTH. The gentleman questioning the witness before you asked how long it would take for those commercial organizations, assuming that the war was over, to return to the manufacture of dyestuffs with their present organization. Do you believe, from your knowledge of the efficiency of the German chemical industry, that it would take very long?

Dr. MATTHEWS. I think it would take a very short time.

Mr. LONGWORTH. That is to say, practically the moment the war was over they would almost immediately resume the manufacture of dyestuffs and export them into this market?

Dr. MATTHEWS. I should think so. I can see no reason for thinking otherwise.

Mr. LONGWORTH. When you say "a short time" you mean a matter of a few months?

Dr. MATTHEWS. A few months, or even less than that. The processes of making these explosives really do not interfere with the technic, the organization, or the apparatus, to any great extent, of manufacturing dyestuffs.

During Dr. Schoellkopf's testimony the following colloquy occurred:

Mr. LONGWORTH. The statement was made here yesterday that Germany—it being assumed that practically their entire chemical industry is engaged in making explosives—could within 60 days after the war stopped resume the manufacture of dyestuffs on the old scale. Do you think that was an exaggeration?

Mr. SCHOELLKOPF. I think they could resume the manufacture of dyestuffs in a shorter time than that. I am convinced of that.

Mr. HILL. What about the keeping qualities of modern high explosives? Can they be stored and kept in readiness for future use for any particular length of time without deteriorating?

Mr. SCHOELLKOPF. I have no definite knowledge on that point. I feel this way about it: That it would not be possible to store up any quantity of explosives which would be sufficient to run a modern war for any length of time. It would be too dangerous. The quantity of explosives necessary for a good-sized battle would be sufficient to blow up a whole county.

The question, therefore, resolves itself down to this proposition: Is it not the part of wisdom and foresight to establish and encourage an industry which can be used in time of peace for the manufacture of products for which there is a steady and universal home demand, and then convert its factories into explosive factories in time of war? It seems to me that the best answer to that question is the experience of Germany since the war began.

Mr. FESS. Mr. Chairman, will the gentleman yield?

Mr. LONGWORTH. With pleasure.

Mr. FESS. Is it possible to convert the institution or the industrial plant used as a dyestuff manufacturing plant into an explosive factory?

Mr. LONGWORTH. I will reply to the gentleman by saying that it is not necessary even to convert it, for the explosives can be made in precisely the same plant, with the same equipment, with the same force.

Mr. FESS. And how long would it take to do this?

Mr. LONGWORTH. It can be done immediately. One gentleman before the committee when asked that question respecting his dyestuff plant—and there are only two of them in this

country—said that he could supply the Government with modern explosives of the best quality within 10 days.

Mr. FESS. Has the gentleman looked into this question as to how long it takes to establish an explosive plant, if we had no dyestuff establishment already established?

Mr. LONGWORTH. I said that it would take about a year and a half, at least, to get up to our present point of efficiency in the manufacture of high explosives, and that I do not think would be anywhere near what would be necessary for a serious war.

Mr. LEVER. Mr. Chairman, will the gentleman yield?

Mr. LONGWORTH. Yes.

Mr. LEVER. Would not the plant to which the gentleman refers also be usable in the manufacture of fertilizer?

Mr. LONGWORTH. Hardly; because fertilizers are made out of phosphates, and those are not used directly in the manufacture of dyes.

Mr. LEVER. Oh, yes.

Mr. LONGWORTH. Not necessarily.

Mr. LEVER. Nitrogen is.

Mr. LONGWORTH. Nitrogen is used in the manufacture of high explosives; but I am coming to that a little later.

Mr. SWITZER. Will the gentleman inform us whether there is any likelihood that the Ways and Means Committee will report out a bill that would tend to relieve the present dyestuff situation and encourage that industry?

Mr. LONGWORTH. It is for the purpose of inducing the committee to do so that I am making this appeal.

A good many years ago Germany discovered that the chemical industry—and particularly the dyestuff industry—lent itself most readily to the manufacture of high explosives. The German Government therefore started out to encourage and foster this industry in every way possible, and it soon became one of the most profitable industries in the land. But the German Government was not satisfied merely that this industry should yield enormous profits. It deliberately aimed to extend it to such proportions that it might be, in time of need, converted into an explosive industry to take care under any circumstances of any demand that a great war might create. The demand for dyes at home was not sufficient for this purpose, and it was necessary, therefore, to build up an immense foreign trade. For this purpose every possible concession was granted, as, for instance, in freight rates for export; and the Government even went to the extent of remitting taxes in order that the industry might reach the highest possible stage of development. Cooperation was had between the great German universities and the dyestuff industry so that the best education and talent could be made available. Scientific research was encouraged, and the Government went to the extent even of granting special pensions to those who had devoted a certain number of years to research work in chemistry.

The inevitable consequence of this governmental activity was that almost from the beginning and for many years the German dye industry has dominated the world. Was human foresight ever more brilliantly justified than that of the German nation when war broke out? Note what happened: A general order was issued that the production of dyes should cease and that the factories should at once turn all their energies to the manufacture of high explosives. Following the plan preconceived years before, every tank and every kettle was arranged so that explosives could at once be turned out, and it was known almost to a pound what the production of each factory would be. In every one of these factories was an abundance of crude material, such as every large business concern must keep on hand, and almost every ounce of it was capable of being made into some kind of explosive.

At this point was made manifest another instance of Germany's wonderful efficiency and foresight. She had within her own borders every material necessary for the production of high explosives save one, namely, nitrogen. Now nitrogen compounds are the basis of all modern high explosives, and in time of war they must be had in unlimited quantities. Up to a few years ago Chile saltpeter was used as the basis of all nitrogen compounds, and this can be obtained only from Chile. German statesmen had realized that if any nation with which she might ever be at war should obtain control of the sea Germany would be cut off from the Chilean supply of nitrogen and hence, under then existing conditions, practically helpless. And so science set out to evolve some other method of producing nitrogen, and a process was evolved of obtaining it out of the air. It was discovered that to make nitrogen out of the air a cheap electrical energy is essential. On looking over the field German scientists had found that the cheapest source of electrical energy came from waterfalls in Norway, and accordingly large industries were established there to make nitrogen products, and these products were sent to Germany. But even then all future difficulties were not provided for. Germany still faced the question of losing the use of this water power in Norway if some other nation obtained control of the sea, and that was just what happened when England bottled up the German Navy. But in the meantime another method of obtaining the cheap electrical energy necessary for producing nitrogen out of the air had been evolved. Six large plants were established on the Rhine in districts where coal was coked. Now, in the process of coking coal a certain gas is developed which ordinarily went to waste, but under this new process this gas was used in internal explosion engines, and these engines were attached to enormous generators for the production of the necessary electrical energy. Thus in one operation Germany obtained not only her benzol and toluol but her nitric acid as well, which in combination make the modern high explosives.

Now, speaking to the question of the gentleman from South Carolina, I desire to say that while water power is a very good way to produce electrical energy necessary for the obtaining of nitrogen from the air, it is not the only way. Germany herself has proved that nitrogen can be extracted from the air equally well by the use of gas produced in the coking of coal, and therefore it is unnecessary that this Government would have to have an enormous water power in order to produce nitrogen. It may be produced that way, but as a matter of fact nitrogen can be extracted from the air in any large chemical establishment where the coking of coal goes on.

Mr. FESS. Will the gentleman yield there?

Mr. LONGWORTH. Yes; with pleasure.

Mr. FESS. Has the gentleman any estimate of the waste in our present method of coking coal?

Mr. LONGWORTH. I believe it has been something like 75 per cent. I think the gentleman from Connecticut [Mr. HILL] showed that in the ordinary beehive oven at least 75 per cent went into waste.

Mr. FESS. Could that waste be utilized?

Mr. LONGWORTH. That could be utilized in explosion engines, which are attached to generators, in the same way water power produces and stores electrical energy in generators. The whole question is such a new one that it has not yet been determined what is the best and cheapest method, I assume. In this country though we surely have an advantage over Germany, because we have a great deal of water power distributed all over the country and also a large number of coal mines and coke ovens.

Mr. LEVER. I was about to ask the gentleman if he was describing what is known as the "arc process" of extracting nitrogen from the air by this coking of coal?

Mr. LONGWORTH. I can not answer the gentleman's question specifically.

Mr. LEVER. I am inclined to think it is not. I think the process he is describing now is a recent discovery in Germany.

Mr. LONGWORTH. A recent discovery in Germany, since the war began, or at least put in operation since the war began.

Mr. LEVER. It is the newest process of the Government?

Mr. LONGWORTH. It is the newest process of the Government, and the fact is that Germany is to-day producing absolutely unlimited quantities of explosives and producing at the same time unlimited quantities of nitrogen out of the air.

Mr. LEVER. I believe, personally, that it would be unwise for this Government to commit itself to any definite process of extracting nitrogen from the air until we know what the best processes are.

Mr. LONGWORTH. I agree absolutely with the gentleman, and I think the experience of Germany conclusively proves that it would be folly on our part now to go into a great Government enterprise for extracting nitrogen out of the air because there happens to be at any particular place a very large development or possible future development of water power.

Mr. SWITZER. Mr. Chairman——

The CHAIRMAN. Does the gentleman yield?

Mr. LONGWORTH. I will yield.

Mr. SWITZER. Could the gentleman say which is the cheaper method?

Mr. LONGWORTH. I can not say, because this development is of so recent origin that I presume it has never been estimated.

Mr. HULBERT. Has it been brought out in the hearings before the Ways and Means Committee as to how many such plants there are that are capable of developing nitrogen and what the approximate quantity would be?

Mr. LONGWORTH. I think there are unlimited facilities in this country, both by water power and through the process of coking coal.

Mr. HULBERT. I am speaking of those cases where at present the facilities exist.

Mr. LONGWORTH. I think facilities exist practically in every State of the Union where there is any coal or water power.

Mr. MADDEN. I understood the gentleman to say there were only two plants in existence in the United States.

Mr. LONGWORTH. Only two plants of any size that are making dyes. There is a substantial difference.

Mr. HULBERT. There are a large number of plants in existence at this time making coke, where it would be possible, with very few additional facilities, to produce nitrogen?

Mr. LONGWORTH. That is my belief, because that is what Germany is doing.

Mr. HOPWOOD. I would like to state that in my district, in southwestern Pennsylvania, there are 38,000 coke ovens of the beehive type, where all of this is going to waste, and where all of it could be utilized for the purpose the gentleman is speaking of.

Mr. LONGWORTH. I believe it could be made an almost universal industry throughout the country.

Now, gentlemen, where would Germany be to-day if she had not planned for just what happened?

I say to you, gentlemen, that history affords no more brilliant example than this of that foresight and efficiency which make a nation commercially great in time of peace and formidable in time of war. Where would Germany be to-day if she had not planned for just what happened? I repeat: Shut off from Chile, she would have been without an essential ingredient to make explosives. Without the greatest chemical industry in the world she would have been powerless to produce the explosives necessary for her military operations—and that even if she could have imported her nitrogen. To-day, so far as this very bedrock of military efficiency is concerned, she has an absolutely unlimited supply, and other things being equal, could fight forever.

Not long ago the greatest living inventor—Thomas A. Edison—speaking of war, remarked:

> There has got to be a great deal more, and it is going to be more destructive every year. I do not look for electricity to play such an important part in this newer slaughter. It is going to be a struggle of explosives. That will be the all-important element.

In the light of recent events no truer prophecy could have been made. Germany saw it years ago. She fully realized that the production, continuous, and without limit, of high explosives was the very bedrock of preparedness. She realized that under conditions sure to come the chemist would displace the armorer as the underlying genius of modern warfare. She realized, in short, the plain fact that under modern conditions a nation without a great chemical industry might about as well be without an army or a navy. [Applause.]

Shall we remain blind to the plain facts? Shall we continue to ignore a situation which any man may read? What Germany has done in building up her chemical industry America can do. It remains only for our national legislators to see the light and to act accordingly. We have the crude material for making both dyes and explosives in limitless quantities. We lack only the machinery for converting them into the finished article. In one respect we even have a decided advantage over Germany. We have countless water-power sites, where, if necessary, nitrogen out of the air could be developed more cheaply than anywhere else in the world. Fortunately, too, this water power is in the center of the country, far away from either the Atlantic or the Pacific seaboard. The same is true of our resources for generating our electrical power from the by-products of coal. Even if we were cut off from Chile we could thus obtain nitrogen from the air more easily than Germany. To-day almost all of our factories producing the materials for high explosives are grouped on the Atlantic seaboard. From a strategic standpoint this is essentially wrong. If unhappily an invading force landed in this country, it is perfectly obvious that these plants would be the first object of seizure.

In the light of the lesson we have learned, or ought to have learned, from this lamentable war—a lesson which should burn itself into our minds more deeply every day—is it not absolute folly to neglect the golden opportunity, an opportunity which, if we fail to seize, may never come again, an opportunity which comes to a nation perhaps but once in a century, an opportunity not only to make ourselves free from the industrial domination of any other nation in time of peace but to make ourselves secure forever so far as the very foundation of military efficiency is concerned in time of war? [Applause.]

What was the situation with regard to the dye industry before the war broke out? It was about this: Germany had us and the world generally by the throat. Our manufacturers were producing only about 15 per cent of the finished dyes used in the American market. Germany supplied the rest. There were in this country only two dye plants of any magnitude. They were producing only about 15 colors, while Germany was producing 1,800. Even this paltry industry existed practically only on sufferance. If any American manufacturer was so bold as to attempt to produce a new color he was warned at once that this would not be permitted, and if he did not yield, the screws were put on him, and the way of it was this: If he attempted to put some new product on the market a similar product made in Germany was at once offered in the American market at 50 per cent or less of his actual cost of production. Under these circumstances he had to stop producing this color or go broke. Instances of this sort of competition were many. I will give one by way of illustration:

During the hearings before the Ways and Means Committee, Dr. Schoelkopf, one of the two large American dye manufacturers, was testifying, and I asked him this question: "Dr. Schoelkopf, before the war did you have any personal experience with what has been called here unfair methods of competition used by the German dye industry?" He replied: "We did have." I then asked him to describe what these methods were, and Dr. Schoelkopf replied: "One very serious instance was in connection with a certain black we were producing. When we started to manufacture it we put it in for about 35 cents a pound. A little later foreign manufacturers began to sell it here for 14 cents a pound. It was being sold in Germany for about 22 cents a pound. That was the regular price. They were bringing it here, paying 30 per cent duty on it, and selling it for 14 cents a pound."

Of course it is evident that no American manufacturer can live against that sort of competition. Beside it the methods in their palmiest days of some of our so-called trusts and monopolies pale into insignificance.

What happened after the war began? Just what might have been reasonably expected when the source from whence come the dyes that the American people use was, so to speak, dried up. We had persistently refused to make any provision for such a situation. We had continued to rely upon another nation than our own to furnish us with practically all our dyes, and now we were called upon to pay the price. As I said before, Germany at the outbreak of the war had turned all her dye factories over to the manufacture of high explosives. We had no dye industry in this country worthy of the name. Very soon most dyes could not be procured for love or money, and the price of the few that remained went skyward. Instances are recorded, some of which I will publish with my remarks, of advances in the prices of dyes in this country not only in hundreds but in thousands per cent. We had testimony before the Ways and Means Committee, from a manufacturer of women's and children's hats, that a dye absolutely necessary to his business, which, under ordinary circumstances cost about $1,700, he had been glad to procure for more than $52,000, and he has lately written me that this same amount would cost him to-day more than $120,000.

> NEW YORK, *February 23, 1916.*
>
> Mr. NICHOLAS LONGWORTH,
> *Room 319, House Office Building, Washington, D. C.*
>
> MY DEAR CONGRESSMAN: I have just read the copy of Congressman HILL'S speech before Congress on the dyestuff bill, H. R. 702, and on page 11 I read that yourself and Mr. HILL discussed the writer's statement before the Ways and Means Committee regarding our recent dyestuff purchases in China.
>
> In order to have the matter entirely correct in your mind, I would say that you will find, on page 119 of the printed hearing before the Ways and Means Committee on the dyestuff bill that the writer answered your question as to exorbitant cost of dyestuffs, stating that my company had just paid $5.75 a pound for aniline black (made by Badische, in Germany), which we had purchased from China.
>
> These identical goods in normal times would have cost us 20 cents per pound, or a total of $1,748, whereas we are now compelled to pay more than $52,000.
>
> Since that time we have made another purchase of same goods from Shanghai, paying $7.50 per pound instead of $5.75, and on February 14 last we were quoted $12 a pound for exactly the same material from China.
>
> This latest quotation means an advance of 6,000 per cent over the normal before-the-war figure of 20 cents per pound.
>
> Yours, very truly,
>
> R. H. COMEY CO.,
> GEO. W. WILKIE,
> *For the Company.*

I append below a communication from the Treasury Department showing the effect of the present dye famine upon a most important branch of the Government service:

> TREASURY DEPARTMENT,
> OFFICE OF THE SECRETARY,
> *Washington, March 9, 1916.*
>
> SIR: Owing to conditions arising out of the European war, the Bureau of Engraving and Printing, which prepares all Government notes and other securities, national-bank notes and Federal reserve notes, postage and revenue stamps, and currency of the Philippine government, has found it impossible to purchase colors for inks in sufficient quantities in the United States to carry on its work. It has been compelled for over a year to use cheap and unsatisfactory substitutes for some

of the colors, and as time has gone on even these substitutes have become more and more difficult to purchase, and it seems to be only a question of a short time until the supply of them will be exhausted. At present the Bureau of Engraving and Printing has only two weeks' supply of reds and blues, which are the most important colors used by it.

Some time ago an order for 145,000 pounds of blues and reds was placed in Germany, and through the assistance of the State Department permission was granted for the exportation of these colors. The first of several consignments has just reached this country. Under the tariff act some, if not all, of these colors are dutiable, and it seems to me it is proper at this time and under these conditions for Congress by joint resolution to authorize the importation of all of these colors free. It is impossible to buy these colors here. The prices that are now paid for them in Germany are higher than the prices before the war plus the duty. The duty will be approximately $12,000, and it will be necessary to go to Congress for a deficiency appropriation if this duty is paid. There can be no question of this importation injuring in any manner any American industry.

I therefore have the honor to request that a joint resolution authorizing the admission free of duty of approximately 145,000 pounds of dry colors, valued at $40,000 to $50,000 (the exact amount not being determinable at this time owing to the fluctuations of exchange), from Germany for the use of the Bureau of Engraving and Printing, the same having been ordered December 10, 1915, and shipment being made to and in the name of the Secretary of the Treasury, said colors to be exclusively for the use of the Bureau of Engraving and Printing, may be passed by Congress. As part of these colors has already been shipped and some of them are now in this country, I request that immediate action on this resolution may be taken, if possible.

I inclose herewith a suggested form of resolution.

Respectfully,

BYRON R. NEWTON,
Acting Secretary.

Hon. CHAMP CLARK,
Speaker of the House of Representatives.

Below is a homely illustration of the effect of the dye famine on the everyday life of the average American citizen:

IMPORTANT NOTICE.

Careful investigation made by the Laundrymen's National Association of America, both among the selling agents of dyestuffs and the manufacturers of wash goods, shows that there is a shortage of permanent dyestuffs almost amounting to a famine, and that industries depending upon fast colors are in many cases closed down.

That the better quality of shirtings now being worn are perhaps in most cases fast colors, but that this condition can not possibly continue for any great length of time.

That the wash goods in which the colors are most questionable at the present time are: Red tablecloths and napkins and towels with red borders; blacks in cotton ginghams, which are apt to wash lighter and in some cases "crock" when the damp goods are folded. Black stockings will probably "bleed" and turn lighter. Light goods with blue, red, or black trimmings are apt to cause trouble.

Some makers of wash goods are already notifying their patrons that they can not guarantee the permanency of colors.

Under these circumstances, and for the further reasons that there is no known method whereby fugitive colors can be washed so that they will not run, and no way of knowing whether colors will run or not, except by washing, we beg to notify our patrons that while we use every care in the handling of colored goods, we can not be responsible when these goods fade, as some of them surely will.

In view of the situation we strongly urge our customers to use as much white goods as possible until such time as the permanent dyes will again be available.

DICKS LAUNDRY CO.,
Greensboro, N. C.

Under such conditions does it not strike gentlemen who represent the cotton States that the price of cotton is seriously menaced? With the decline in the demand for cotton goods, with the diminished output of all, and the probable closing down of many cotton factories, will anyone contend that this decreased demand will not be reflected in the price the cotton farmer gets for his product?

To show that the women of the country have become awakened to the situation I quote a dispatch which appeared in the Cincinnati Enquirer, one of the leading newspapers of the country, not long ago.

[Special dispatch to the Enquirer.]

WASHINGTON, *February 27.*

A call went out to-night to 100,000 women to wear simple colors as much as possible during the spring and summer months to aid American dye makers and manufacturers. The call was sent out by Mrs. James M. Thompson, daughter of Speaker CHAMP CLARK, chairman of the executive committee of the Woman's National Made in the United States of America League, to the members of the league.

It is with peculiar pleasure that I cite as witness on the side of the case I advocate the highly intelligent and charming daughter of the distinguished statesman who presides over this House [applause], and I welcome the ground thus afforded to appeal to you, my Democratic colleagues, to support this bill on behalf of the women of the United States. You can not, I am convinced, turn a deaf ear to this appeal of your wives and daughters and sweethearts. You will not, I feel assured, condemn them to wear, as soon they will have to, hats and clothes only of dull, insipid gray. [Laughter.]

What possible objection can there be to the passage of legislation which will relieve this situation? Only two objections, so far as I know, have been hinted at. One is that the increase in the duties on intermediates and dyes provided in this bill might raise the cost to the consumer, and the other is that this possible increase might be seized upon by textile manufacturers as a reason for later demanding higher duties upon their products.

The first objection can be disposed of in a very few words. In normal times the cost of dyeing a suit of clothes was variously estimated by manufacturers in their testimony before the Ways and Means Committee at from 1 to 4 cents for an entire suit. At the highest estimate this bill increases the duty somewhere about 35 per cent. Therefore, if the entire duty were added to the price that the consumer would be called upon to pay, it would amount to somewhere about two-thirds of a cent for an entire suit of clothes. The thing is so infinitesimal that it is not worth talking about, and in the face of increases in the price of dyes since this war began, running up to 10,000 per cent, it becomes merely ridiculous.

Now, as to the question whether the large textile and other manufacturers will base later on upon these slightly increased duties an appeal for higher tariff rates on their manufactures. It is true that a number of them did sign a protest at the time of the making of the Payne tariff law against an increased duty on dyes; but these very same men are united in favor of this bill as consumers, and I would be much surprised if they ever resort to their former argument.

But if by chance they should, I pledge myself here and now that if I shall be in some future Congress where a new tariff bill is to be written, and if I shall be in a position where my attitude on such questions may carry any weight, I will resist to the uttermost any effort on the part of textile or other manufacturers who use dyes to obtain higher duties on their products because of the passage of this bill. [Applause.]

Addressing myself particularly to my Democratic friends, I am aware that you are opposed as a general thing to the use of the tariff-making power of Congress to create and maintain American industries. This is not though, I venture to believe, because the Democracy as a party is opposed to the encouragement of American industry, but only because you hold, as I believe wrongly, that American industry can be encouraged in other ways and can permanently exist without reasonably protective duties.

But even so, suppose a condition exists by which an industry, necessary not only to the happiness and prosperity of the American people, but to the safety of the Nation, can only be created and maintained, as concededly in this case, by the use of the tariff-making power: Are you not justified in here making an exception to your general rule? Permit me to commend to you the attitude of a prominent Democrat, Prof. Charles H. Herty, president of the American Chemical Society, of Chapel Hill, N. C. Addressing the Democratic members of the Ways and Means Committee, he said:

Let me say to you, gentlemen on the left side of the House, as a fellow Democrat, that I wrestled with this question a long time before I could bring my mind to the point of advocating a protective tariff, as it was naturally against the convictions which I had acquired earlier in life in a Democratic atmosphere. But I was finally driven to it from whatever line I tried to solve this problem and I am convinced that if we are to have such an industry in this country we must have protection for it in the way of a tariff.

The CHAIRMAN. The time of the gentleman has expired.

Mr. SPARKMAN. I yield to the gentleman five minutes more.

Mr. LONGWORTH. Can the gentleman yield to me 10 minutes? I have been interrupted to some extent.

Mr. SPARKMAN. Mr. Speaker, I can not. I have already parceled out all my time.

Mr. LONGWORTH. Will the gentleman from Washington [Mr. HUMPHREY] give me five minutes?

Mr. HUMPHREY of Washington. I will yield to the gentleman five minutes and take it out of the time of some one else.

The CHAIRMAN. The gentleman is recognized for 10 minutes.

Mr. LONGWORTH. There is one way, and one way only, to permanently establish in this country an industry which in time of peace can supply American citizens with the dyes and chemicals absolutely necessary to their happiness and well-being, and, even more important still, an industry which, if unhappily this Nation should be at war, can furnish to the Government a limitless supply of the high explosives without which we would be entirely impotent to defend ourselves. By a unanimous report a committee of the ablest chemists in this country, a committee composed of men of all shades of political opinion, have officially declared that the Hill bill, substantially as it stands, is the way to accomplish this. It is not the easiest way merely; it is the only way. The moment it is passed we are definitely assured that millions of capital will be at once invested in building up an industry which in a very short time will be able to supply the entire demand of the American market for dyes in time of peace. Furthermore, we are assured by the highest authority that when this industry shall have reached these

proportions it will be equally competent to supply the demand of the American Government for high explosives in time of war.

In the words of a great Democratic President, it is a condition and not a theory that confronts us. We can not avoid admitting the wrong. How then can we, with the remedy at hand, avoid applying it?

The Almighty has blessed this country as He has blessed no other country under the sun. He has endowed us with all the resources necessary to the life, liberty, and pursuit of happiness of our hundred million people and all the additional millions that are to follow. We have but to gather them. True, there are a very few things like tea and coffee and some tropical fruits for which we are dependent upon other countries, but these are lands lying under the Equator and upon them our sturdy competitors in our own and in the world's markets are equally dependent. But outside of these few tropical products there is absolutely nothing in the way of either luxuries or necessities in the daily life of the American Nation which can not, under wise legislation, be produced as well in this country as in any other. Under these circumstances, is it not the height of folly to rely permanently upon some other nation to furnish us with objects of imperative necessity?

It has been said that the Lord has under His protection especially three classes of persons—children, inebriates, and the people of the United States. While in the last analysis this statement is not altogether flattering to us as a people, we must concede that it has elements of truth. If we have one great fault, probably it is this, that we place too much reliance upon Providence and too little on ourselves.

History shows that it usually takes some great disaster to awaken us from our ordinary attitude of more or less smug self-complacency. That disaster is here. The European war has taught us—or ought to have taught us—two lessons by which, if we shall fail to profit, we shall not deserve the continued beneficence of Providence. It has taught us not only that we are not prepared industrially but that we are not prepared defensively. To me it seems so obvious as hardly to call for assertion that the very foundation of military efficiency in modern warfare, whether offensive or defensive, whether by land or sea, is the modern high explosive. No matter how large our Army, no matter how powerful our Navy, no matter how effective our fortifications, if we have not in unlimited quantities the explosives for use in our guns we are equally impotent in attack or defense.

If I have not failed utterly in contributing anything of value in my discussion of these all-important questions, I have shown at least these two facts: First, that this Nation is not equipped to furnish in time of need the explosives necessary for our national defense; and, second, that if we had a chemical industry capable of satisfying the entire demand of the American market for dyes we would then have an industry which, in time need, could turn out daily and almost immediately all the explosives necessary for our national defense. Permit me to reiterate that you can not manufacture explosives to-day and store them up for use in the distant future. You must have the machinery necessary to turn them out day by day, just as Germany is doing. Without that machinery we are merely courting national humiliation, and that, possibly, before many years roll by.

No matter where your sympathies may be in the European war, whether you like Germany or hate her, no man can refuse to admire her marvelous military efficiency. No man can refuse to admire the foresight of her statesmen in preparing years ago for exactly what has happened. No man can afford to ignore the obvious fact that the basis of her preparedness has consisted in her ability to turn out, under any and all contingencies, absolutely unlimited quantities of high explosives. The continuous thunder of her guns about Verdun has depended not so much upon the men that fired them as upon the scientists and workmen in her chemical factories on the Rhine. [Applause.] Were these factories nonexistent, had they been less completely built up, the thunder of her guns would have ceased long ere this. She would have been a beaten nation.

We shall be reckless and foolhardy indeed if we decline to profit by the lesson that Germany has taught us. For myself, I am in favor of every measure looking toward adequate national preparedness that is before Congress. I am ready, and indeed eager, to go further than I believe this Congress intends to go, and I am ready to vote not only for the appropriations but for the revenue measures necessary to pay the price. But I tell you, my colleagues on both sides of this House, that no matter how far you may go in increasing the Army and the Navy, no matter how far you may go in strengthening our fortifications, you will not have approached adequate preparation for the national defense unless at the same time you shall have provided for the continuous and unlimited production of high explosives. [Applause.]

In one respect the proposition I advocate stands upon a different footing from any other preparedness measure. The building of battleships costs money; the increase in the personnel and the equipment of the Army, the enlargement of our fortifications, will cost money. It is this increased cost, which must be paid by additional taxation of some sort, to which gentlemen opposed to any preparedness program object; but to establish and maintain an industry which can in time of need supply an unlimited quantity of high explosives will not cost the taxpayers of this country a single cent. Not only will it cost nothing, but it will prove a great national asset, for it will provide employment for thousands of American citizens, return substantial profit to American capital, and at once reduce the present absurd cost of dyes, and with that the materials in which these dyes are used.

But, to my mind, the question of adequate national defense rises high above a matter of dollars and cents. I would favor this particular proposition if, instead of being a great national asset, instead of costing nothing, it would cost millions. I am willing, and not only willing but eager, to vote for millions to strengthen the military arm of the Government. More than that, I am ready as a legislator to vote for measures to provide for the additional necessary revenue, and I am ready as a taxpayer to diminish my income to the extent necessary to pay the cost. [Applause.]

The world to-day is in tumult. To the south of us a volcano is in eruption which has already cost the property and lives of countless American citizens. We are sending a part of the American Army into the very crater—with what result, who can tell? Europe is in conflagration; and I think it would be a reckless man indeed who would arrogate to himself the power to prophesy what may come out of the bedlam let loose throughout the civilized world. Times are upon us when we are called to deal not with probabilities but with possibilities. The last war in which we were engaged, the War with Spain, was not probable a few weeks before it was in full blast, but it was possible. To-day war is not probable, if you please, but who will deny that it is possible; not alone with Mexico but with one or more of the most powerful of the nations? It will cost money to get ready, but it will cost infinitely more if we are attacked when we are unready. Because we have to pay some advance money down, shall we refuse to insure now against a casualty—presently improbable, if you please, but which if it does come may menace not only our honor as a Nation but our very existence as a Republic?

This is no time to count the cost. This is no time to haggle about dollars and cents. Let us, without regard to party lines, mindful only of our duty as the direct representatives of the American people, so legislate as to be well assured, come what may, that we shall hand down to posterity the Nation bequeathed to us by our fathers with its resources unimpaired and its honor unsullied. [Applause.]

Mr. HUMPHREY of Washington. Mr. Chairman, I yield 15 minutes to the gentleman from Oregon [Mr. McARTHUR].

Mr. McARTHUR. Mr. Chairman, unless all signs fail, this Congress, within a short time, will commit the people of the United States to an unwise, unstatesmanlike, and unpatriotic act. I refer to the pending bill providing for independence for the Philippine Islands. This bill has passed the Senate and is now on the House calendar, and it is currently reported that arrangements are being made to force it through the House at an early date. The Clarke amendment to the original Hitchcock bill provides for withdrawal of American sovereignty from the islands four years after the President's approval of the pending measure, although the President may at that time prolong our sovereignty by proclamation until the end of the Congress then in existence.

Thus will end in shameful abandonment one of the noblest works which an enlightened nation ever undertook on behalf of an inferior people whom it had rescued from ignorance and tyranny. The United States acquired the Philippine Islands by the fortunes of war and drove out the Spaniards as a matter of military necessity, thereby assuming a great national responsibility. We did not annex the islands because of any desire for national aggrandizement or conquest, but because we realized that the people were totally unfit to govern themselves, and if left to work out their own salvation would soon have fallen under the régime of the astute and selfish mestizo politicians—the only Filipinos now clamoring for independence—and the blood-thirsty tribesmen of Mindanao. We annexed the islands with the declared purpose of making the good of the

people our sole guide and the progress which we have made is sufficient proof of the rectitude of our intentions. The arduous task of uplifting the natives of the islands from ignorance and savagery was entered upon by a party of Americans with a zeal which commanded the respect and admiration of the civilized world and great progress was made in material development—in educating the people and in placing government within their hands. This work, begun by William McKinley and continued by Theodore Roosevelt and William Howard Taft, stands forth as one of the splendid chapters of our national history and bears evidence of an altruism that speaks untold praise for our country. [Applause.] When historians of the future shall have spoken a dispassionate and final verdict upon the deeds and achievements of the first decade of our occupancy of the Philippine Islands, no more inspiring chapter of our national history will be found. [Applause.]

A party of political partisans, headed by William Jennings Bryan, who sees no good in any policy advocated by the Republican Party, have from the outset obstructed our great work in the Philippines by branding it as imperialism. They have made common cause with the mestizo politicians, who clamor for the opportunity to exploit the people in the name of independence. The present administration has already practically turned over the government of the islands to the mestizos, and by so doing has driven out many trained and experienced Americans, who had made splendid records in their several positions.

The first question that naturally suggests itself to our mind is: Are the people of the Philippine Islands capable of self-government? It is true we have lifted them from ignorance and savagery and have been schooling them in the ways of peace and industry, but it can not be successfully contended that these people are now capable of self-government and able to protect themselves against conquest by any nation that may see fit to attack them. While many offices are filled by Filipinos in a satisfactory manner at the present time, it must be remembered that the actual governmental responsibility for the islands rests upon the American people, and it is fair to assume that when our sovereignty is removed these small officeholders will aspire to higher places, and the jealousies and ambitions of the various factional leaders will soon breed a political revolution. The natives of the islands are entirely unfit to use the franchise peacefully and intelligently—an absolute essential to self-government. They have no adequate conception of liberty, equality, and constitutional rights, and are wholly unfit to conduct a republican form of government. The prolonged agitation for independence has kept the Filipinos stirred up and dissatisfied and has concentrated their attention upon political conditions rather than upon economic affairs, an influence that has worked great injury.

As there are more than 3,000 islands in the Philippine group, and as tribal and sectional feeling runs high, it is impossible to establish any system of government that would draw these heterogeneous and incongruous people into a national self-governing entity.

The Moros—the inhabitants of the island of Mindanao—number half a million people, with as many more tribesmen who are classified as "head hunters," have for generations been hereditary enemies of the Filipinos. The Moros have been Mohammedans for centuries, while the Filipinos believe in the Christian religion. They distrust the Filipinos, and have only refrained from annihilating them because of the continued presence of Spanish armies and later the troops of our own Army. It is well understood that the Moros and the Igorrotes are not in sympathy with the idea of Philippine independence, and it is fair to assume that they will make trouble as soon as the American flag is lowered from the islands.

Mr. TOWNER. Will the gentleman yield?

Mr. McARTHUR. Yes.

Mr. TOWNER. In that connection is it not true that they have repeatedly said they would never submit to the domination of the Filipinos?

Mr. McARTHUR. I think that is absolutely correct, and I shall touch upon that point a little later.

Philippine independence means revolution—such as we now witness in Mexico—and revolution would mean intervention by the United States or some other power. Our obligations to the Filipinos and other natives of the islands and to our own people who have gone there to reside would not permit us to stand by and witness bloodshed, rapine, murder, and destruction of homes and property. A revolution would necessitate intervention, if not by us then by Japan or some other world power. Indeed, it has been suggested that Japan already has a covetous eye on the islands, and will seize them on the slightest pretext after our sovereignty is withdrawn. Thus it is fair to assume that the inhabitants of the Philippine Islands—the Filipinos, the Moros, the Igorrotes, and other tribes and peoples—are altogether incapable of effecting a strong national sovereignty and of undertaking the exercise of functions of self-government. They may be capable of so doing at the end of 25 or 50 years, but they are incapable at the present time, and to turn this race over to their own chaos would be to invite revolution and seizure, with its attendant international complications. A political party that would commit the American people to a shameful surrender of this character undertakes a grave responsibility.

The next question that suggests itself is, Do the people of the Philippine Islands want self-government? To begin with, the laboring classes, who comprise the greater part of the population, are entirely satisfied with existing conditions under American rule. Most of them have no conception of independence. These are the tillers of soil and the men who labor on the sugar plantations and other agricultural properties. They are contented with assured wages and just treatment. They know that by appealing to American officials they can obtain advice and secure justice. All they ask is to be let alone.

Another class of native people who are content with the American administration are the Moros. They do not hesitate to declare that they will not tolerate Filipino domination. Since the American occupation, these people have come to realize that they are infinitely better off under American rule than ever before in their history. They distrust the Filipinos, however, and will never submit to their domination.

Mr. FESS. Will the gentleman yield?

Mr. McARTHUR. I will.

Mr. FESS. I understand the gentleman makes a distinction between independence and self-government. Mexico has independence, but what about self-government?

Mr. McARTHUR. I do make a distinction between independence and self-government. I believe the Jones bill, considered by the Committee on Insular Affairs of this House, gives the Filipinos self-government under which they would prosper, but the Hitchcock bill with the Clarke amendment, which means abandonment and scuttle, is not what the Filipino people want, or what the people of the United States want. [Applause.]

Mr. MADDEN. And is it not the opinion of the gentleman that there would be a wide difference between independence and liberty?

Mr. McARTHUR. Absolutely.

Mr. MADDEN. You might grant them independence, but it would by no means give them liberty.

Mr. McARTHUR. The Clarke amendment will not give them liberty over there, but revolution.

Mr. MADDEN. The gentleman believes that when independence is granted it should be at a time when independence will be likely to carry liberty with it. [Applause.]

Mr. McARTHUR. That is my belief. The Filipinos enjoy liberty now—much more than they would enjoy under the rule of the mestizo politicians. They enjoy more rights and liberties than many of the so-called Republics of the world. They have more liberty than did the people of the Territories of the United States before their admission to the Union. When these people show that they are capable of self-government, it will be time to consider the question of independence, but in the meantime we must protect them and insure them in their rights of life, liberty, and property under our flag.

Mr. O'SHAUNESSY. If the gentleman will allow me, since the passage of the Clarke amendment, I have been curious to know how much of a Filipino student the Senator has been. Has he ever been in the Philippine Islands?

Mr. McARTHUR. I can not answer the gentleman's question.

Mr. REAVIS. Is there anything in his amendment that would indicate that he had ever been in the islands?

Mr. McARTHUR. There is nothing to indicate that he has a true conception of what the people in the Philippine Islands want.

In this connection it is interesting to note the International News Service reports from Manila, under date of March 28. These reports indicate that the plans of the present administration, with reference to the pending bill, have caused great excitement in the islands and have created conditions almost resembling a panic among the more intelligent and substantial native residents, who see in such action nothing but political chaos and commercial ruin. Numerously signed petitions are pouring into Manila from the southern Provinces, earnestly protesting against the whole measure and urging a postponement of independence for at least 20 years.

The only advocates of Philippine independence among the native people are the politicians, whose designs have been encouraged by the present administration. This class is in a decided minority, but is sufficiently organized to exert a marked influence, especially when aided and abetted by the representatives of the present administration. Under the operation of an independent government the opportunity for political activity would be most inviting to the mestizo, and it is safe to predict that he would not long delay the exploitation of the masses of the people to his own political advantage.

The commercial value of the Philippine Islands to the people of the United States is apparent when one stops to consider that they are using annually upward of $27,000,000 worth of our products; but I must pass from the consideration of this interesting phase of the general question in order to discuss more important features which are directly concerned with our national honor and responsibility.

During the years of American occupancy of the Philippines our Government has invited settlement and investment on the part of our people. Many Americans have gone to Manila and elsewhere on the Islands and established homes. Others have invested their earnings and their capital. On top of this, $17,250,000 worth of Philippine bonds have been sold in the United States above par and have been widely distributed among savings banks and other depositories of the people's money. When the pending bill shall have become a law these investments will not be worth 10 cents on the dollar, and Americans who are now residing in the islands will either leave or submit to the blackmail and tyranny of the mestizos. No American capital would have been invested in the islands had there been any notion of the passage of such legislation as that before us.

If the liberty of an oppressed people were at stake, if some great principle of government or some right of humanity were in the balance, there might be some justification for confiscatory legislation, for human rights should prevail over property rights; but when no great crisis is at hand, when none but the politicians of the islands are crying for independence, why pass a law that will mean financial ruin to large numbers of American citizens? There is no adequate provision in the Clarke amendment for ascertaining the damage that the pending bill will inflict upon American enterprise and industry. The vague suggestion that the President may negotiate with the Philippine government on the subject is illusory and meaningless.

The treaty of Paris was between the United States and Spain, but it also indirectly obligated us to all powers of the world with which we have treaty relations. We agreed, among other things, to protect the property rights of the people of the islands, regardless of their nationality. We agreed that they should be secured in the free exercise of their religion Does any thoughtful person imagine that the rights of foreigners will be protected under the rule of the mestizo? Does anyone imagine that the Christian Filipinos will be free in the exercise of their religion when the knives of the "head-hunters" are again whetted for blood? In view of the solemn terms of our treaty, can the party in power now justify its policy of scuttle? Are we not under lasting obligations to the Philippines, to Spain, to our own people, and to the world to carry out, both in letter and in spirit, the express and implied terms of the treaty? Are we not bound by our supreme obligations to humanity itself to continue our policy of enlightenment, progress, and education toward a people born in ignorance and darkness and to endow them further with the blessings of liberty and happiness? [Applause.]

The Spanish-American War sounded the death knell to secluded statehood and proclaimed to the world that this Nation was its brother's keeper and would no longer view with toleration the oppression of a weaker race. That war has passed into history and this is the record: A war for humanity, justified by direct outrage, resulting in national responsibility in the sight of God. The hills of San Juan and the plains of Malabon, crimson with the blood of the best young manhood of our Republic, should remind us of our solemn duty to the world and of our responsibility to God. We have placed ourselves on record for truth and justice—truth for eternity; justice for man, not men. Mighty nations of antiquity stood for less and are slumbering in their own collosal ruins. Can we at this juncture of the world's affairs, with the fate of nations trembling in the balance, with the eyes of mankind turned toward our shores and our republican institutions, afford to proclaim to the world that we have abandoned the responsibility which we so courageously assumed and that we have failed to keep the faith? It is inconceivable that a great nation should so sin against its duty, against its historic traditions, against its conceptions of honor and service, as to write upon its statute books an act which the world will view in astonishment and which will cause future generations to blush with shame. [Applause.]

Mr. HUMPHREY of Washington. Mr. Chairman, I yield 30 minutes to the gentleman from Wisconsin [Mr. FREAR].

Mr. FREAR. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. FREAR. Mr. Chairman, the chairman of the Rivers and Harbors Committee said to me a few moments ago that he was glad I took part in the discussion because it lends enlightenment to the proceedings, and also brings out some information. I am very glad if I am able to add to any information on this occasion. It is a very important question, and a very important bill we have here. A few minutes ago the chairman of the committee and others present questioned the assertion made in my speech because I used the term "$850,000,000 expenditure" from the Treasury instead of "appropriation." No man in the House can say exactly what is expended to-day, a week ago, or a month ago. The only thing we keep in mind is the appropriation, and we have appropriated $850,000,000 as stated. And because I use the term "expenditure" instead of the term "appropriation" it does not seem a fair criticism. Those who pursue my speech for the purpose of getting some subject for criticism I invite to take hold of this question in the same spirit in which I desire to discuss it, for the purpose of doing what is right and avoiding needless waste. The discussion in regard to 1875 was that the rivers at that time had not been improved, and not a fair comparison with European rivers. I still insist that is so, and I do not think anyone can reasonably draw any further deduction.

Mr. MAPES. Mr. Chairman, will the gentleman yield?

Mr. FREAR. No; I can not yield at this time.

Mr. MAPES. I would like to insert a question for information.

Mr. FREAR. I will be glad to yield to any gentleman under the five-minute discussion at all times.

Mr. MAPES. The question I desire to ask relates to the particular point which the gentleman is now discussing.

Mr. FREAR. Very well; go ahead.

Mr. MAPES. I was curious to know over what period of time the appropriations mentioned were made by the countries of Europe—Germany and France.

Mr. FREAR. I could not give the gentleman the information here, although I have in my report given some information on the appropriations there.

Mr. MAPES. Not on the time.

Mr. FREAR. No; just the total appropriations as shown by the Government itself.

Mr. Chairman, when this bill is reached, under the five-minute rule I expect to offer some amendments proposing to strike out some especially bad items and to reduce extravagant appropriations in a number of instances. At this time I desire to briefly state reasons why, in my judgment, the bill should be defeated.

Last week, by a vote of 224 to 179, the House struck section 82 out of the military bill. The section concealed a $24,000,000 appropriation for the Alabama Power Co.'s Muscle Shoals project. Practically the same proposition was stricken out of the 1915 river and harbor bill last year, and it may bob up again, because it is being strenuously urged upon different committees at both ends of the Capitol. That $24,000,000 temporary saving to the Federal Treasury could not have been effectively reached, excepting for the fight made against last sessions' two river and harbor bills. Coming with a unanimous report of the Military Committee, the Alabama company's water-power project had official indorsement, but notwithstanding that approval it was driven from the bill. If no other result is achieved this session, the "fixation-of-nitrogen" proposition with its many millions subsidy for a private power company has again been defeated, and that in itself justifies the fight against waterway waste.

Over $42,000,000 was saved to the Federal Treasury by the defeat of two vicious river and harbor bills last session. The bill before us carrying $39,600,000 is worse than the 1915 bill which we defeated. It is a bold attempt to continue the same wasteful policy and illustrates the pardonable weakness of those who defend the present system. The cause is not far to find—that policy can not be defended.

Under the provisions of the wasteful 1916 river and harbor bill before us, in order to get $200,000 for Diamond Reef in New York Harbor we give $1,750,000 for the trafficless Missouri River $20,000,000 project.

Mr. HULBERT. Mr. Chairman, will the gentleman yield?

Mr. FREAR. I can not yield. I have not the time.

Mr. HULBERT. I would like to have the gentleman state the facts; that is all. The amount provided for Diamond Reef is $700,000.

Mr. FREAR. There was a $500,000 authorization proposed, of course; but if it was a million dollars, and we are going to throw away one million and a half on the Missouri River, there is no justification. I am leaving it for the gentleman to determine for himself.

In order to get $100,000 for Boston Harbor or $140,000 for Buffalo, contained in the bill, we must give $944,000 for an insignificant actual traffic on the Tennessee River and $710,000 for the Cumberland River joke, which was three times rejected by Army engineers. In order to get $75,000 for Los Angeles and $15,000 for San Francisco, the bill carries $2,765,000 for the Delaware River. The Delaware has active, vigilant, aggressive forces behind its demands. From the former head of the War Department, Army engineers, and numerous other local influences, pressure comes for over two and three-quarters millions which goes into the Delaware this year, notwithstanding the largest vessels in the Navy can reach the Philadelphia yard. Approaches to navy yards at Boston, New York, and Charleston are in bad shape, but League Island gets more than all other navy yards combined, and, according to naval officers, needs it least of all.

Again, the notorious Trinity River gets $300,000 in this bill, although it has no commerce and needs artesian wells to furnish moisture. The equally famous Brazos gets $390,000 in this bill, yet only 1,080 tons of actual commerce was floated in 1913. Texas is a large State and has many Congressmen, so over $2,300,000 is given to Texas. Its projects, with rare exceptions, are of little commercial value.

In order to get sufficient influence to navigate this bill past snags in another part of the Capitol nearly $800,000 is given to the traffickless Red, Arkansas, and Ouichita Rivers, in Arkansas. These three streams combined can not boast of 50,000 tons of actual commerce nor average 50 miles' haul, whereas New York Harbor, which receives about the same amount under the bill, has a commerce reaching over 100,000,000 tons annually, or several thousand times as great as the Red, Ouichita, and Arkansas combined.

To get $43,000 for the Superior-Duluth Harbor, that carried 46,000,000 tons of freight in 1913, it becomes necessary to give $6,000,000 for the lower Mississippi. Salaries, clerical, office, traveling, and miscellaneous expenses of the Mississippi River Commission come high, but we are asked to give unquestioningly. The traffic on the lower Mississippi, excluding soft coal, is now estimated at only 200,000 tons annually. The Superior-Duluth traffic costs the Government about $1 per 1,000 tons under this bill. The Mississippi River traffic costs $30 per ton, and in 1916 the Mississippi item reaches practically the entire amount appropriated by the Government for the Superior-Duluth Harbor since 1896. Thus far the Mississippi has received about $150,000,000 from the Federal Treasury and has lost 90 per cent of its commerce, while we were squandering all these millions.

Cleveland gets $65,000 in this bill for a harbor that handles over 16,000,000 tons of waterway freight annually, while the Ohio River gets $5,509,000 in this bill for a commerce that is rapidly dwindling. Fifty million dollars has been dumped into that stream for an insignificant commerce, apart from soft coal, that likewise is less in quantity than before the so-called improvement was begun.

Scores of questionable streams and estuaries, including the Coosa, Alabama, Warrior, Cape Fear, and Cold Spring Harbor, are well provided for. The never-to-be-forgotten and indefensible Norfolk-Beaufort Canal farce also carries $1,000,000 in this bill.

That is the character of the $39,600,000 waterway bill now before us.

Investigation and rejection by this House is urged on items that are so drunk with public funds they fall down from their own gluttony. Over half of the $39,600,000 contained in the bill ought to be stricken out and reduced appropriations made all along the line. Properly distributed, $15,000,000 would meet all necessities, and probably that amount could be reduced if the interests of a war-tax-ridden people are to be considered.

In House Report 254, part 2, this session, I have set forth definite objections to this bill and recent waterway expenditures which deserve careful consideration.

During the past 40 years we have appropriated $850,000,000 for waterways.

WHERE THE MONEY GOES.

In order to present the destination of waterway appropriations in concrete form, it may be stated that two substitute bills reaching $20,000,000 and $30,000,000 were passed during the Sixty-third Congress in lieu of two bills aggregating $92,000,000 which were defeated.

The $50,000,000 was by law turned over to Army engineers for allotment, and out of 240 projects given specific amounts there was awarded to an even dozen waterway projects out of that fund, and proposed in the bill before us, the following enormous amounts:

Engineers' allotment, 1914 and 1915, of $47,586,000, and 1916 bill.

Rivers.	1914, twenty million.	1915, thirty million.	Total Sixty-fourth Congress.	1916, proposed bill, $39,608,410.
Mississippi	$5,250,000	$5,815,000	$11,065,000	$8,320,000
Missouri	950,000	1,100,000	2,050,000	1,750,000
Ohio[1]	1,769,000	3,915,000	5,684,000	5,509,000
Tennessee	223,000	501,000	724,000	944,000
Cumberland	210,000	378,000	588,000	710,000
Ouachita	300,000	136,000	436,000	429,000
Aransas Pass	470,000	180,000	650,000	100,000
Sabine Pass	240,000	100,000	340,000	593,000
Brazos	230,000	240,000	470,000	390,000
Black Warrior	68,000	48,000	816,000	.....
Cape Fear	185,000	323,000	508,000	218,500
Beaufort Canal	.....	400,000	400,000	1,000,000
Total	10,595,000	13,136,000	23,731,000	20,030,500

[1] The Ohio River was also given $3,200,000 in the 1915 sundry civil bill.

Of two hundred and twenty-odd projects given the remaining 50 per cent from the 1914 and 1915 allotments about one-half were trafficless rivers which have a combined actual commerce less than the waterway tonnage of Buffalo or Boston or Cleveland or Philadelphia, or several other lake and ocean harbors. The 12 rivers that received $23,731,000 in 1914 and 1915, or 50 per cent of the total during the Sixty-third Congress, are well recognized by the committee in the 1916 bill with an aggregate of $20,030,500 out of $39,358,410 contained in the bill after deducting $250,000 for surveys.

The 1916 bill from which the minority dissents gives these same 12 river projects nearly as much as was alloted for the two years 1914 and 1915. More striking, one-half of the entire proposed 1916 appropriation goes to these 12 river projects. Deducting $20,030,500 for them as above provided and $250,000 for new surveys leaves $19,327,910, which is divided among the remaining 270 items. Of these last items, approximately 170 are canals, bayous, and rivers all of which do not handle as much actual commerce as any one of several harbors that can be named.

Over $250,000,000 has been spent on the 12 river and canal projects by the Government in an effort to resuscitate a lost commerce. Deducting floatable timber and sand that was floated a half century ago, before these extravagant expenditures occurred and in larger quantities than to-day and which does not require expensive waterways, several of these projects are reported to have floated in 1913 approximately as follows:

	Tons.
Upper Mississippi (average upper Mississippi haul less than 50 miles, or less than 30,000 tons average continuous haul)	170,000
Lower Mississippi	200,000
Ohio (95 per cent coal) under	2,000,000
Tennessee (includes on Tennessee 78,000 tons coal hauled 16 miles)	200,000
Tombigee and Warrior (includes on Warrior 32,000 tons coal, distance not stated), average	56,000
Beaufort Canal	65,000
Cumberland	53,000
Missouri	24,000
Hennepin Canal	11,850
Muscle Shoals Canal	5,887
Red River	1,694

Aside from soft coal, as near as can be estimated, the average haul was from 30 to 100 miles on the various rivers.

During 1914, 1915, and 1916 nearly one-half of the entire amount given to all waterways will be for these 10 river and canal projects. The balance is divided among about 270 or more projects, of which 20 genuine waterways disclosed 1913 traffic as follows:

10 ocean harbors.	Tons.	10 lake harbors.	Tons.
New York (estimated)	100,000,000	Superior-Duluth	46,875,000
Philadelphia	26,267,335	Chicago-Calumet	13,275,000
Boston (estimated)	20,000,000	Milwaukee	8,647,000
Baltimore	14,781,942	Ashland	5,623,309
Norfolk	17,349,942	Ashtabula	15,713,375
Savannah	3,154,089	Cleveland	16,488,083
New Orleans	6,442,932	Buffalo	18,923,854
Galveston	4,445,088	Erie	3,340,071
San Francisco	9,353,530	Marquette	1,852,229
Portland, Oreg	7,923,902	Soo Canal	79,714,344

Approximately 200,000,000 tons of waterway commerce was handled at the 10 ocean ports, and, allowing for duplications, one-half that amount at the 10 lake ports. Presumably the commerce was carried on the average 200 to 500 miles, counting ocean and lake traffic, but, like some other waterway statistics, no definite figures are available.

The significance of the comparisons will not be overlooked. Ten ocean ports handled fifty times the actual commerce carried on 10 river projects that annually receive about half of the average waterway bill, and these same rivers floated only about 4 per cent of the commerce counted at 10 lake ports.

The cost to the Government for furnishing a waterway for inland commerce, per ton, is not definitely settled as to method of computation and only approximate results can be reached, because the amount properly chargeable to investment interest is variously estimated, although annual maintenance is sure and certain. Excluding floatable timber and sand usually hauled short distances, the following estimates have been made on the several rivers and canals noted:

	Per ton.
Ohio River (excluding coal, $40 per ton)	$3.00
Ouachita	8.00
Warrior and Tombigbee	12.00
Upper Mississippi	12.00
Lower Mississippi	35.00
Arkansas	20.00
Hennepin	36.75
Missouri	40.00
Muscle Shoals (Tennessee)	40.00
Aransas Pass Canal	80.00
Brazos	80.00
Red	100.00
Muscle Shoals (proposed)	150.00
Big Sandy, Ky	350.00

As the relatively small commerce consists largely of cheap, heavy freight, like coal, fertilizer, rock, ore, and a small amount of merchandise, and the haul is for short distances on the average, the significance of Senator Burton's advice will not be lost when he said the Government could save money on its inland waterways by buying the freight and burning it.

Mr. SPARKMAN. Mr. Chairman, will the gentleman yield?

Mr. FREAR. Will the gentleman give me more time? I will be very glad to yield to him if I can get the time.

Mr. SPARKMAN. I desire to ask the gentleman what is meant by floatable timber?

Mr. FREAR. That which can be floated in 2 or 3 feet of water, and does not need an 8 or 10 foot channel, as is repeatedly urged upon the committee. We will reach that in the five-minute discussion when instances will be presented.

WATERWAYS COST PER MILE.

Students of transportation in determining the economic value of railways or waterways first ascertain the cost per mile of the system. It is interesting to note that in round numbers the following estimate of expenditures per mile by the Government on these three waterways have been made:

	Per mile.
Lower Mississippi, 1,000 miles, at	$100,000
Ohio River to Missouri River, 200 miles, at	86,000
Upper Mississippi, 600 miles, at	40,000
Ohio River, 1,000 miles, at	60,000
Lower Missouri, 400 miles, at	40,000

Government and State canal investments are proportionately wasteful.

	Per mile.
Hennepin, 60 miles, at	$126,000
Muscle shoals, 26 miles, at	175,000
Muscle shoals, proposed, 26 miles, at	560,000
Chesapeake & Delaware Canal, proposed, 13 miles, at	1,530,000

The above river and canal projects are from waterways that float an insignificant commerce compared with the investment. Can any condemnation of our wasteful purposeless waterway policy compare with a brief statement of expenditures past, present, and prospective?

EXPERT TESTIMONY ON USELESS CANALS.

Waterways and Commerce, the leading waterway journal of the country, says in its March, 1916, issue:

The Erie Canal, costing the State of New York alone to-day $150,000,000 plus $90,000,000 expended in the past, or $240,000,000 in all, has a 12-foot draft. * * * Why spend enormous sums of money on building useless canals? When the Welland Canal is in operation all of our lake traffic will go by way of Montreal because the 25-foot Canadian ships can not use the 7 or 8 or 12 foot American waterway.

What a startling commentary on enormous waste when $150,000,000 is being thrown away on a deserted canal. Twelve-foot channels are valueless and lake canals to be of use must accommodate lake vessels. Where is the limit to waterway waste? The 1916 bill carries $1,250,000 for the Hudson River 12-foot project to connect with the canal. If the canal proves useless, the new $7,530,000 river project will be equally useless.

What further facts need be added to indicate our entire waterway lack of system, the indefensible character of a $39,608,410 proposal which enriches dredgers, contractors, and other private interests at the expense of a patient, overburdened people?

EMINENT WATERWAY AUTHORITIES AGREE.

Students of the subject and eminent authorities believe that European waterways, with one or two notable exceptions, are vastly disappointing in commercial returns for expenditures made upon them. This opinion may be open to controversy, depending upon the viewpoint of Government activities and basis of estimating profitable expenditures. However, it is difficult to understand why any unbiased mind will fail to admit the existence of enormous waste in our inland river and canal waterway development compared with tangible returns.

Apart from the effervescence of waterway convention enthusiasts, what can withstand the conclusions of eminent authorities on the subject, from several of whom I briefly quote:

WE CAN NOT TURN THE CLOCK BACK.

We have found from our study that everywhere in Europe no less than in the United States there has occurred with the development of the railways a rapid decline in the amount of traffic carried on inland waterways. * * * To attempt now to return to the antiquated system of transportation of a half century ago * * * is to attempt to turn backward the clock of time. (Prof. Moulton in Waterways against Railways.)

EXPENSIVE RIVER EXPERIMENTS VALUELESS.

Our river traffic has rapidly declined. European Governments prevent railways from maintaining direct competition and foreign bargemen are content with a few cents a day for their service. Conditions here are far more difficult to overcome, and a return to practical inland river transportation is possible only with radically changed conditions not effected by expensive river improvements. (Ex-Waterway Commissioner Reid.)

WATERWAY GUESSWORK A FAILURE.

If we are to avoid in the future the painful necessity of continued explanations of why waterway transportation is a failure, it is necessary for us to begin now to supersede guesswork and generalized assumptions by impartial and comprehensive analysis and by providing in advance for those physical and financial cooperative relations between waterway and railway that are absolutely essential to real success in water transportation. (Walter L. Fisher, Journal Political Economy, July, 1915.)

STOP WASTE ON 58 RIVERS NOW.

Specifically the writer would not abandon any navigable stream in the Mississippi Valley that has been partially improved, but would leave 58 of them in their status quo, confining operations to snagging and maintenance of existing works. * * * If facilities afforded by the Government are utilized (greater improvement of the Ohio and lower Mississippi) the upper Mississippi and the Missouri should then receive attention. (Col. C. McD. Townsend, chairman Mississippi River Commission.)

PLENTY OF WATER, BUT NO TRAFFIC.

To-day the Mississippi from St. Louis to its mouth affords a channel which is the best to be found in any stream in the world * * * and see its emptiness. An 8-foot channel is all that the most efficient service requires. The Government works unremittingly to develop waterways only to see the water-borne traffic grow less as the years go by. (J. H. Bernhard, Asso. M. Am. Soc. C. E., proceedings A. S. of C. E., Aug., 1915.)

Discussing the Missouri River project ex-Senator Burton, a man who has accomplished more for American waterways than anyone else and is acknowledged to be our greatest waterway expert, said of such projects less than a year ago:

PURE, BALD, UNMITIGATED WASTE.

You may spend $20,000,000—yes, $30,000,000—on this project, and in spite of that enormous amount the traffic will diminish, because you are facing a condition that no policy of river improvement can reverse—the loss of that class of river traffic and the utilization of other agencies for the carrying of freight. I wish it were not so * * * but I am tired of rainbow chasing, and that is what this is. It is much worse than rainbow chasing. It is pure, bald, unmitigated waste.

IMPARTIAL OPINIONS.

No reputable waterway authority, so far as known, has controverted these unprejudiced opinions of thorough students of the subject and recognized experts. Officials of interested waterway lobbies have suggested that railways may seek to warp the judgment of men who protest against "bald, unmitigated waste" of public funds on useless rainbow-chasing projects.

House resolution No. 98 was introduced January 19, 1916, to inquire into any activities of railways, and also into well-known activities of certain waterway lobbies. It is significant that the resolution has received no support from those who assail the purposes of men now trying to stop enormous waterway waste. An investigation would speedily determine the motives of those who support or oppose the present system of waterway expenditures.

In this connection it may be of interest to quote briefly a word of advice from a secretary of the Rivers and Harbors Congress, who in his address, according to the 1911 official waterway proceedings of that waterway lobby, said as follows:

A CONGRESSMAN MUST GET ALL HE CAN "FOR US."

I want to repeat and to emphasize that in supporting the National Rivers and Harbors Congress you are supporting your own cause. Another thing, be big and broad enough to demand that the improvements which are well under way, whether or not they happen to be

your own particular projects, shall be put under the continuing-contract system and taken off the appropriation map. The sooner that is done the sooner your own will receive its just recognition. The continuing-contract system is the only wise and businesslike method and one that we all have talked and written much about, but if there has been any wise and businesslike method of improving a single river in this country I am not advised of its name or where it is located. Mark you, it is not my intention to criticize either Congress or Congressmen for lack of business methods, for I truly believe that the average man who comes to Washington as a Congressman is just as good a business man as the average man he has left at home. It is not his fault, as I see it, but our fault, and I use the word "our" in a nation-wide sense. We send him here to legislate for the Nation, theoretically, but actually to get all he can for us, and if he does not get our share and then some, we do our best to replace him with some other man who will take better care of our particular congressional district.

I have given his entire statement because the present secretary of that same organization has publicly declared the last four lines quoted in the minority report state "a half truth." I do not desire to misstate any proposition and Ellison's pernicious advice speaks for itself. The more we get, the worse it sounds, and it fitly represents sentiments preached at the average waterway lobby jollification.

Distinguished from this principle of legislative conduct are the words of a man whose rugged character, great ability, and high purposes marked Robert Toombs as a legislator of different type. He said on February 27, 1857:

Whenever the system shall be firmly established that the States are to enter into a miserable scramble for the most money for their local appropriations, and that Senator is to be regarded the ablest representative of his State who can get for it the largest slice of the Treasury, from that day public honor and property are gone and all the States are disgraced and degraded.

What holds this bill together? Why does not the present administration condemn the "miserable-scramble" proposition as it is termed by Senator Toombs?

Why not reach down and save $20,000,000 for "preparedness"?

Why is not this a good time to practice an economy that has been preached in party platforms? Why are we confronted with a river and harbor bill before the regular defense bills are passed, and why are we engaged in securing the "largest slice of the Treasury" for our constituents according to the expressive words of the same high authority?

This should not be a partisan question. I believe it ought to be kept out of politics, but the only way to keep it out is for those who desire economy and honest legislation to combine and defeat this bill.

OBJECTIONABLE ITEMS SHOULD BE EXPOSED.

Mr. Chairman, I prefer to refrain from unnecessary discussion of this bill. I desire others to show up its iniquities, and will be glad to withhold criticisms on any project if other Members will give the facts to the House, but I am not inclined to remain silent over vicious items and thereafter have defenders of the bill urge it as above reproach because of that silence. My disinclination to trespass on the time of the House has been evidenced, for I have purposelessly refrained from debating other questions and have not wasted time in useless discussion since the session began.

Last session we sat for 13 hours continuously in one day and held long sessions on several other days before the 1915 bill was finally jammed through the House to its final defeat. I hope every Member who believes in stopping wasteful expenditures under the cloak of "navigation" will take part in pointing out defects in this bill and help to secure fair and open discussion. Only by that means can we hope to gain permanent and beneficial waterway legislation.

Mr. Chairman, it has been suggested that a committee member ought to present his objections specifically before the committee and not to the House. I do not think that objection will be seriously urged, but if so, I am frank to say that few members of the committee are competent to discuss a majority of the 270 or more items contained in the bill, and the average member finds it difficult to keep informed on one-quarter of the items.

I have no apologies to make for lack of definite knowledge on items not specifically objected to at the time they were passed upon by the committee. The present system expects every Member to be primarily interested in his own particular project. Beyond that he may or may not find time or inclination to concern himself. If need be I am ready to discuss that part of the system which practically throws the burden upon the shoulders of the chairman and expects him to stand sponsor for and defend the bill. However, such discussion will not be profitable nor strengthen the character of this measure.

TWO PROPOSITIONS ARE OFFERED.

Two propositions for your consideration have been offered in my minority report, one a substitute bill with restrictions as to allotments which places $15,000,000 in the hands of Army engineers for distribution. I am frank to say the record made by Army engineers in previous allotments has been indefensible. That is a grievous fault of the present system, but no other method can be devised here for carrying on necessary projects with a reasonable appropriation.

It may be opposed by those who have persuaded the committee to make liberal allotments for their particular projects, such as the Delaware River, the Mississippi, the Ohio, the Missouri, the Tennessee, the Cumberland, and others. In like manner it will be opposed by those who realize that even with their accustomed liberality Army engineers will hesitate to fritter away much money on wasteful projects contained in this bill.

These engineers have proven to be broken reeds on which to cling, but until we change the system and make them, in fact, responsible subordinates, there seems no better plan to offer. If adopted, it will bring a saving of nearly $25,000,000, and when the fund is properly administered no legitimate waterway need suffer.

Another proposal is offered in my report. In order to avoid the blundering, illogical method now in vogue that recognizes neither scientific, commercial, nor business principles, a tentative bill is offered in the back of my minority report to this bill. If imperfect, it nevertheless is a step toward intelligent business methods.

I have been unable to get action by the committee on that measure. Necessarily, a bill that would put the committee out of business, as my bill proposes to do, will not be acceptable to the committee. However, the interests of actual waterways of the country, the necessity of avoiding scandalous waste, the spectacle of a depleted Treasury waiting the assault of an old-fashioned, wasteful bill; the willingness of its defenders to ignore needs of the Army and Navy and other governmental appropriations, in order to get local aid from the Federal Treasury; all these arguments ought to bring about a defeat of the river and harbor bill and substitution of a better system. Let us keep in mind the weakness of this present bill and the occasion for that weakness, and then proceed to permanently improve conditions and work toward a national budget system, as proposed. I do not question the personal high character of any Member when I say we are bound tight to a bad system.

Mr. Chairman, riotous waste in river appropriations has been fully disclosed during recent sessions. Remarks in the RECORD of January 13 give testimony piled on testimony, tending to show that the present system is antiquated, vicious, and ought to be abandoned. In the minority report on this bill, part 2, abundant proof is offered that as a moral and business proposition this bill ought to be defeated.

THIS BILL SHOULD BE DEFEATED.

Not one project in five would get past the House if proposed in a separate bill. Not one project in five would have been presented to the House originally if equal contribution had been required from the locality especially interested. By brushing aside contributions and combining 300 projects scattered over the country, but now all comfortably resting in one barrel, the bill stands or falls in its entirety. Not one project can be defeated.

I have not enlarged upon the fundamentally evil features of the present system, nor have I time nor inclination to do so. It is improper to waste public funds, even in times of peace, in order to secure some local aid from the Treasury. If public office is a public trust for the benefit of the public, we have much to answer for, even in times of governmental opulence; but what shall we say of ourselves, and what will the country say of us, when we now face a great Treasury deficit with which to meet a national-defense program. What will it say upon finding we have again passed the same old bill that for years has confronted us? What apology have we to offer for lavish expenditures and waste at this time?

Will we prefer extravagance to public economy? Will we demand what Senator Toombs terms "our slice from the Treasury," before we pass public-defense measures? Last session we defeated both river and harbor bills, but we have before us a measure worse, if anything, than the last one we defeated.

Let us not deceive ourselves with any mistaken belief that House bill 12193 can be passed by Congress without bringing censure that will not down. If we would meet the present emergency patriotically, we must not be content to talk of love of country and profess pride in an intelligent democracy, the hope of our fathers. Such sentiments go with high ideals. The kind of patriotism the country demands to-day is that which rings true, and is not of lip service alone; which puts aside selfish interests to join hands for the common good and places national honor and national interests above local or personal greed, by whatever name it may be called.

If we meet the issue patriotically and defeat the wasteful measure, no man need ever apologize over his action. Our duty has never been more clearly defined than it is to-day on this bill.

Then there is the Erie Canal, on which $150,000,000 has been spent by New York State. An unprejudiced waterway journal, among the first in this country, Waterways and Commerce, says that it is practically money thrown away. I have referred to it in my report, taken from that paper. The same has been stated by gentlemen from New York, who seemed to be conversant with the facts, and it simply goes to show we are spending money without ascertaining what results we are to get from the expenditure or what commerce results will be obtained.

Mr. MADDEN. Will the gentleman yield?

Mr. FREAR. Yes; I will yield.

Mr. MADDEN. Has the gentleman thought out what effect the expenditure of $150,000,000 on the Mississippi will ultimately be?

Mr. FREAR. I can not go into that at this time, as I have so many matters to which I desire to refer. I will be glad to enter into that under the five-minute discussion. In my report I have presented the judgment of Dr. Moulton, who has studied and traveled abroad, and who is a very excellent authority on the subject of waterways. He has traveled throughout Europe and this country and he sustains the present inland waterway waste in substance. The same is true of Waterway Commissioner Reid, of Wisconsin, a man who has given study to waterways in Europe and in this country, and the same is true of Walter L. Fisher, who has traveled throughout Europe and made a study of inland waterways. The same is practically true of Col. Townsend, who says we ought to stop work on 58 of the streams—in his speech made in Washington recently—and asks us to pick out one or two projects and ascertain whether any commerce will flow from the expenditure we are making. The same thing is true of Mr. Bernhard, when he says of the Mississippi River, to-day we have a far better channel than is found on the Rhine River, notwithstanding the commerce reaches something like 40,000,000 tons on the Rhine compared to 200,000 tons annually on the Mississippi River. Of course, Germany, as we know, has Government control of the railways as well as the waterways. Senator Burton, who is an authority, has agreed substantially, both by voice and act, in the wasteful methods now pursued. Criticism has been made that some of these projects were reported while he was chairman of the committee. Mistakes may have been made in judgment. That being so, when the error is disclosed we should cease wasting money. The gentlemen whom I have quoted, who are good authorities—I have heard of no higher recognized in the country—not one takes the position of the committee, that once you have started you must continue an appropriation, irrespective of what the result may be.

Mr. Chairman, how much time have I remaining?

The CHAIRMAN. The gentleman has five minutes.

Mr. FREAR. Mr. Chairman, I did not know I would get through this in time, and I now shall be glad to yield.

Mr. SMALL. In the gentleman's report filed, top of page 5, are certain improvements, together with the tonnage carried in 1913. I suppose the gentleman meant 1914?

Mr. FREAR. No; 1913, as a rule, because those estimates were made before the 1915 report was received.

Mr. SMALL. I would like to ask the gentleman the source from which he obtained the tonnage?

Mr. FREAR. From the Engineer's reports—the 1913 report, according to my recollection, unless otherwise stated—and I deducted the floatable timber or other freight as stated, which was carried.

Mr. SMALL. I am not asking about deductions.

Mr. FREAR. I speak of that and make that qualification in my report.

Mr. SMALL. What is the source from which the gentleman has made the deduction to which he refers?

Mr. FREAR. From the itemized statements that appear in the Engineer's reports, second volume, in each case.

Mr. SMALL. Then all the information has been taken from the engineer's reports?

Mr. FREAR. I think so, in every case; possibly I took something from the remarks of the Senator from Ohio when he addressed himself to that subject. I do not remember.

Mr. SMALL. From the 1913 reports?

Mr. FREAR. From the 1913 reports, as a rule, unless it specifies 1914.

Mr. SMALL. Why did not the gentleman take the 1914 report?

Mr. FREAR. Because the 1915 report was not in my hands at the time the estimate was made.

Mr. SMALL. These are for the calendar year 1913?

Mr. FREAR. They are for the years given by the Engineer's reports.

I desire to answer the gentleman from Missouri [Mr. BORLAND] or anyone else who may care to question me. I could not do so before. I am sorry to say that it takes more time than at my disposal to answer these matters as fully as I would like to answer them.

Mr. HULBERT. Will the gentleman yield for one question?

Mr. FREAR. I yield.

Mr. HULBERT. When the gentleman stated that the people from New York had voted for other provisions in the committee in order to secure the inclusion of one item of $200,000 for the improvement of the East River, did the gentleman take into consideration the other items included in the bill, of benefit to the harbor of New York?

Mr. FREAR. No. I said that in order to get the appropriation for his harbor the gentleman is obliged to accept the bill that contains these other items.

Mr. BORLAND. I wanted to ask the gentleman whether he is not aware that the total amount he has charged against the Missouri River represents the amount that was spent by the Missouri River Commission prior to 1902?

Mr. FREAR. It includes——

Mr. BORLAND. As well as the amount of the present projects?

Mr. FREAR. I so understand.

Mr. BORLAND. Does not the gentleman realize the amount spent by the Missouri River Commission between 1880 and 1902 was spent under a system of isolated local appropriation, and was practically lost, and therefore the only project before the House relating to the Missouri River is the present existing project upon which only $6,000,000 have been spent?

Mr. FREAR. I will answer the gentleman by saying that I concede that was practically lost. I believe that practically all the money that is now going into the Missouri River according to the report of Col. Townsend and Col. Deakyn is lost. And the only actual gain reported coming to the Missouri River is 500,000 acres now being reclaimed at the present time.

Mr. PARKER of New York. In your report, on page 18, you criticize the digging of the Erie Canal and the present barge canal in the State of New York as useless.

Mr. FREAR. I gave the statement and authority on which based.

Mr. PARKER of New York. This last fall there was submitted a referendum bond issue of $37,000,000 to the people of the State of New York, which was passed. Do you recognize the people of the State of New York as authority?

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

Mr. PARKER of New York. Will the gentleman yield for one more question?

Mr. FREAR. I can not yield. My time has expired.

Mr. EAGLE. Mr. Chairman: It is my purpose, by the invitation of the chairman of the Committee on Rivers and Harbors, to discuss the history and policy of waterway improvements throughout the country and, by your indulgence, also to discuss in greater particularity the projects within my own district in the State of Texas—notably the Houston Ship Channel and the Brazos River; but the remarkable tone assumed and statements and insinuations made against the entire membership of the Congress and its policy of waterway improvements by the gentleman from Wisconsin [Mr. FREAR] who has just taken his seat seem to me urgently to compel a digression in order briefly to reply to him.

Mr. Chairman, it is said that there was once a good old Quaker who said to his wife, "All persons are insane but thee and me, and thou art a little queer." And so the gentleman from Wisconsin [Mr. FREAR] practically asserts that this Congress is an aggregation of incompetents, an assemblage of "pork-barrel grafters," and that the only truly wise, learned, disinterested, patriotic statesman in all the land hails from Hudson, Wis., on the classic banks of the upper reaches of the noble St. Croix.

Mr. Chairman: If the gentleman from Wisconsin entertains the low estimate of the House of Representatives which, as a new and presumptuous Member, he has expressed in his rambling remarks concerning it and the motives which govern its conduct, he might well resign his seat in disgust and refuse to serve here with so contemptible a congress of dishonorable public men.

He said one moment ago, as plainly as the English language can convey an impression that the great Rivers and Harbors Committee—at whose head the respected gentleman and learned statesman from Florida [Mr. SPARKMAN] presides with distinction, upon which my honorable and beloved colleague from Texas [Mr. BURGESS] serves with wisdom and fidelity as ranking member, and upon which are loyally associated with them

men of character and integrity from 21 States of this Union—have made up a bill upon the basis of bribing different State delegations to vote for the whole bill because their several State items were embodied in it, and that this Congress is so base as to be subject to such dishonor.

Mr. Chairman: I have heard about the sort of bird that befouls its own nest. I have read with contempt in the "yellow journals" and the muckraking magazines, which are a disgrace to American civilization—those ghouls of human character which slander and belittle every noble and unselfish effort of human life in its public activities—such statements as these, but I have been able to attribute with charity their vile slanders of public men as much to ignorance as to mendacity; but this is the first time I have seen the American Congress put in disgrace by one of its own Members by an accusation that the membership itself, in order severally for their districts and collectively for their States to obtain appropriations necessary to provide adequate facilities for water-borne commerce, were subject to the degrading charge of being thus bribed into voting for a "pork-barrel bill" which would be a dishonest loot of the Public Treasury.

His performance is unworthy of a place in these proceedings. [Applause.]

There are some more things I want later to say concerning the gentleman from Wisconsin and his State of Wisconsin, and concerning that other great "antipork-barrel" statesman whom he praises as the greatest waterway expert in the United States, Mr. Theodore E. Burton, who served in this House as chairman of the Committee on Rivers and Harbors for 10 years and who during that time carried to his State of Ohio a one twenty-second portion of the entire annual rivers and harbors appropriations and to his own city of Cleveland about 50 per cent of that amount, and who, later, in the Senate, when he became a presidential possibility, or imagined himself as such, chose to reverse his attitude of a lifetime on waterway appropriations and improvements by twice filibustering to death rivers and harbors bills which were reasonable, just and necessary, in order that he might appear before a certain portion of the admiring public as a matchless "watchdog of the Treasury." [Applause and laughter.]

If I have time I shall also show the House and the country what appropriations in times past the State of Wisconsin has received, until every harbor, inlet, river, bay, creek, and mud pond capable of accommodating a mud turtle was duly improved, before she sent here the noble statesman, Mr. FREAR, to question the integrity of Congress and to belittle statesmen who are with conspicuous devotion and painstaking care faithfully doing their duty by the entire country. [Laughter and applause.]

The Father of his Country, Gen. George Washington, inaugurated our waterway policy by calling a convention for the purpose, in 1787, to improve the navigation facilities of the Potomac River. He represented Virginia at that convention; then the State of Maryland was induced to send delegates; then Delaware and Pennsylvania, and later all of the thirteen original States. That policy is very worthy of its very respectable beginning and its lineage, and it has since been pursued, sometimes by private subscription but generally by public appropriations, as an enormous blessing to the commerce and prosperity of the entire country. Gen. Washington who presided over the constitutional convention, James Madison who did more than any other man to write the Constitution of the United States, and Alexander Hamilton who did as much as any other man except James Madison in writing it and more perhaps than any other man to secure its adoption, believed and stated that the Constitution gives the Congress the power to appropriate money for the improvement of rivers and harbors. Congress has always acted on that theory.

But a new school of statesmanship has arisen in the last few years, made up of men limited in their vision of national needs, who assert that such public expenditures are reckless and wasteful extravagance, wholly forgetting that the entire bulk of our exports is water borne and that navigation of our rivers, lakes, and harbors is an absolute necessity of that commerce. Captious criticism of each item in each bill may prove to a few gentlemen an entertaining diversion and does delay the bill to passage, but it little satisfies the country which knows that its prosperity depends upon commerce and its rapid and economical movement.

It has always been the theory upon which Congress has acted that the object and justification of appropriating money out of the Federal Treasury for rivers and harbors was to induce, increase, and accommodate commerce. In my judgment, there are two additional objects which appropriations for rivers and harbors indirectly accomplish, which are of almost equally great importance, and ought to be taken into consideration by Congress in providing for commerce on our waterways. One of them is to reduce the exorbitant charges laid against commerce for the transportation of freight, and the other is to prevent the overflow of rivers upon farms and towns and the consequent destruction of life and the wrecking of property of hundreds of millions value each year.

I shall digress from what I had in mind to say by making an illustration of the Mississippi River. It has been determined by the study of soil and climatic conditions and a consideration of the requisite amount of fertility to support an individual life, that, but for the overflows of the Mississippi River and its tributaries, 500,000,000 human beings can be supported in that basin alone. There are less than 100,000,000 inhabitants of the United States at the present time. During the course of a few centuries, when our population shall have increased to several hundred millions, students when considering the conditions of the country then, with reference to its population and the necessities of its entire areas being conserved for the blessings of mankind and for an opportunity for the full development of its matchless civilization, will read with wonder how men in the year 1916 ever doubted the expediency and the plain duty by adequate appropriations to keep the Mississippi within its banks, so that life, property, wealth, civilization, and happiness may be secure in its fertile valleys on each bank for a thousand miles as it moves on its majestic way southward toward the sea. [Applause.]

The flood waters of 31 States contribute to form the Mississippi River that empties at New Orleans into the Gulf of Mexico. And yet at most times in the year, as we all know, the Mississippi stays within its alluvial banks; but at other times, when the high waters even of the State of Pennsylvania, and, lower down, of the States of West Virginia and Kentucky to the south, and Indiana, Illinois and Ohio to the north, add their flux of water to the vast stream, it absolutely inundates and devastates for hundreds of miles on both sides.

The Congress, instead of accepting the advice of men who want to build political reputations for themselves at home by advocating here a pusillanimous doctrine that would make themselves heroes as "watchdogs of the Treasury," ought, upon the other hand, to make one continuing contract for the full amount necessary to make that noble river what it ought to be—the carrier of vast commerce at cheap rates—and to make the Mississippi Valley one of the grand garden spots of the world and the home of one of the most prosperous and glorious civilizations that man has known since the beginning of time. [Applause.]

The money that has been spent in improving navigation on the Mississippi River has resulted in a saving to the producers and shippers in its valleys on both sides of that river, from its upper reaches to the Gulf, of far more than the total about $150,000,000 that has been spent for the improvement of navigation on that river.

As an illustration of an incidental object and benefit of improving navigation primarily for purposes of commerce upon the rivers and lakes of the country, take the case of the Mississippi at Memphis, Tenn. The gentleman from Wisconsin has stated that, despite the sums expended upon the Mississippi, commerce has largely left that river and is using the railroads which parallel the river. Even granting his premise, his conclusion does not hold true, for the incidental benefit to the public of cheapening transportation by the competing lines of railroads remains permanently as a blessing. From Memphis it is some 500 miles to the Gulf at New Orleans. The freight on the railroad is 75 cents per bale of cotton. But from Waco, Tex., the same distance from the Gulf at Freeport, the charge by rail for the same service is $2.25 per bale.

If the Brazos River improvements from Waco to the Gulf were completed, as the Mississippi River improvements from Memphis to the Gulf are completed, the freight charge on a bale of cotton from Waco to the Gulf would be 75 cents instead of $2.25 as at present. Those two cities are about the same distance from a Gulf port, over exactly the same character of country. Why should the producers and shippers in the Brazos River Valley be penalized for all time to come in freight charges on their cotton and other products seeking an outlet to the sea, when the completion of the present Brazos River project will free them from such extortion? It is entirely safe to assume, and it is so clear as to be self-evident, that if snags and sand bars yet existed in the bed of the Mississippi River from Memphis to New Orleans, so that water transportation would be impossible, the railroads which run alongside the Mississippi would be charging the producers $2.25 per bale freight instead of 75 cents per bale as at present. Water competition produces freight miracles. [Applause.]

Mr. Chairman, there are four items that have absorbed the bulk of the national revenues during the last 40 years. During those 40 years the Army has received $1,973,825,531.68,

the Navy has received $2,120,214,833.29, pensions have received $4,568,251,057.52, while rivers and harbors have received only $680,552,501.01. That is, the average per year during the last 40 years has been about $49,000,000 for the Army, about $53,000,000 for the Navy, about $114,000,000 for pensions, and about $17,000,000 for rivers and harbors. Or, to state it in another way, for every $1 appropriated for rivers and harbors, by which our national commerce everywhere may move, by which the annual increment of wealth to this Nation may be doubled and trebled and quadrupled over what it would be except for our rivers and harbors, about $3 have been spent for the Army; for every $1 spent for rivers and harbors $3 have been spent for a Navy; and for every $1 spent for rivers and harbors, about $7 have been spent for pensions. In all, the Congress has appropriated about $13 each year during the past 40 years for these nonproductive purposes for each dollar that has been appropriated for rivers and harbors without which the Government would not have received the other $13 with which to pay those other items. [Applause.] This has been true notwithstanding the fact that all of our exports are water borne, and that the net profits on our exports, made possible by our lake, river and harbor improvements, over what they would be without such improved facilities, are probably enough in a single year to pay the entire bill of waterway improvements for the last 40 years; and, as stated, the entire amount of such foreign commerce is made possible only because of the river, lake and harbor improvements throughout the country.

And yet, at places throughout the country, and in portions of the public press—notably that portion of it influenced by those railroads that seek to monopolize all of the carrying trade along their lines—and by a few Members of Congress who appear to be anxious to make reputations at home as economists here, who rant and prate and belittle and question the political integrity of all Representatives who contend for appropriations for the waterway projects in their several districts to which such projects are fairly entitled by virtue of present and prospective tonnage and the normal movements of trade and commerce, the good faith as well as the wisdom of Congress is constantly called in question, and ignominy is heaped upon the heads of the people's faithful Representatives. For one I am heartily tired of such narrow vision, such poor logic and such brazen effrontery. [Applause.]

As I have sat here for three years in succession and heard a certain gentleman speak hour after hour, as long as he could secure time upon his own side, and exhaust the five-minute rule and move to strike out everything from the last word to the tenth word and the eighteenth word, until he drove Congress into the cloakroom in sheer desperation [laughter] there was at least some amusement in contemplating the spectacle of the gentleman from Wisconsin [Mr. FREAR], three years in congressional service, setting up his opinion on engineering problems against the expert opinions of the engineers of the War Department who are the honor men of West Point, the men of the highest technical knowledge in the United States and perhaps the equal of any in the world, engineers with life positions, with their reputation at stake, with a technical knowledge of engineering problems such as none of us could acquire if we began now and worked until the end of our days, and with a process of legislation directing them in reporting a project which makes it almost inevitable that they do not err. Great respect should be paid to the standing of any waterway project finally taken on and appropriated for by Congress, when the process is fairly considered by which it is taken on. First, a bill is introduced providing for a survey. Second, the Rivers and Harbors Committee, if it thinks a prima facie case is made, inserts in the next appropriation bill an item authorizing a survey. Third, the Chief of Engineers then directs the district engineer to make a preliminary examination and report, showing prospective cost, benefit and feasibility. Fourth, this examination being made, the report thereof goes from the district engineer to the colonel of the division, then with his condemnation or approval to the Board of Engineers for Rivers and Harbors for its examination, and then to the Chief of Engineers. Fifth, if the project have enough merit to pass these several tests and criticisms, it is then referred back for exhaustive examination and complete report thereon, then again to the board when complete and exhaustive hearings are held as to cost, as to present and prospective tonnage, and as to the necessities of commerce and all relevant issues. Upon the full facts thus revealed the Board of Engineers prepares its final report. Sixth, thereupon the Rivers and Harbors Committee of the House of Representatives sometimes—as in the case of the Brazos River in Texas—visit and inspect the proposed project. Seventh, as the result of such systematic, painstaking and exhaustive study, surveys and examinations, it is thereafter appropriated for until completed. It is greatly to be doubted if the expenditure of public money in any other department of Government is so thoroughly considered and minutely scrutinized as in the appropriations for waterways. Then to have some gentleman persistently belittle those who have investigated the facts, and who know the splendid people who work for waterway improvements and their exalted motives, who know of the enormous commerce that will move, and who know of the excessive freight charges collected from producers and shippers every year at the hands of those who have a monopoly upon transportation, is enough to justify language in reply that might not be parliamentary. [Applause.]

Some illustrations may be briefly made of the effect of waterways improvements upon commerce and development—each of which suffered in their incipiency from the same character of criticism now directed against present appropriations. Many years ago when De Witt Clinton was governor of the State of New York, he conceived the Erie Canal. He was ridiculed and failed of reelection because the short-sighted citizens failed to catch his splendid vision of a greater New York. He was what muckrakers would nowadays call a "pork-barrel" statesman. But later, when the people came to understand it, they reinstated him in office, and he carried through that noble work, and all men now agree that the thing that established the supremacy and the preeminence of New York over Philadelphia and other Atlantic cities was the Erie Canal, opening the vast commerce of the Northwest over the lakes and rivers through the Erie Canal and emptying its wealth into the lap of New York City. [Applause.]

On this floor, in almost the identical spot where I stand, J. Proctor Knott, of Kentucky, built his fame, as enduring as man's appreciation of genius and oratory, upon his famous speech on Duluth. At that time, Duluth was a mere name on the map of the far frontier, and had an item in the river and harbor bill. It was struck at by Mr. Knott with real wit and humor instead of the stereotyped variety that we repeatedly hear concerning the Trinity River having an artesian well bored in its bed in order to get water into it. I hear that brilliant sarcasm every time the House considers a waterways bill. And yet Duluth has become a splendid city and its great port bears annually an enormous commerce, to the blessing of the people of all that vast northwestern country.

Now I will give you another concrete illustration. Take the great port of Galveston. When I was a young man, I acted as clerk for Col. Walter Gresham, a venerable and respected citizen of Galveston, who even yet looks after Galveston's port interests with conspicuous ability, Gov. H. Bradford Prince of New Mexico and others in the draft of a resolution calling upon Congress to make Galveston a port for the accommodation of the overseas commerce of the trans-Mississippi country. Later, in 1891, at the meeting of the Trans-Mississippi Commercial Congress, at Denver—where I first had the pleasure and the honor that has lasted all these years of forming the friendship of the beloved Speaker of this House [applause], where he was also a delegate—a resolution was adopted which was transmitted to each Member of Congress asking for an appropriation sufficient to make the port of Galveston a complete success. The records of the sessions of Congress which followed show that the Galveston item was vigorously condemned as "pork" in the interest of the West and particularly of Texas.

As late as 1898 Texas with her 400 miles of coast line was compelled, in order to have the complete project for the port of Galveston finally adopted by Congress, to unite on Galveston to the utter exclusion of all other Texas rivers and harbors projects. In 1891 there were 9 feet of water over the Galveston inner bar and 12 feet over the outer bar; now there are 119,000 acres in the harbor, roads and port of Galveston having 30 feet of water. In 1891, there was only $636,000 in value of commerce imported into the port of Galveston, and that by lighter over the bar, while during the year 1914—only 23 years later—there was $12,000,000 in value of her imports. [Applause.] During 1891, the total value of exports from Galveston was $10,000,000, whereas in the year 1914 the value of exports from Galveston had climbed to the enormous total of $256,000,000. [Applause.] It is now the second port of the United States in point of exports, the matchless port of New York standing first. More than 4,000,000 bales of cotton left the port of Galveston during the year 1915, and 50,000,000 bushels of wheat coming from Texas, Kansas, Nebraska, Oklahoma and the vast central West left the port of Galveston.

And yet that splendid result has been accomplished by the expenditure of less than $11,500,000 for the harbor and less than $2,000,000 for the channel—in all, less than $13,500,000 for the development of the great port of Galveston—second in the United States in importance, at least as to exports, and cer-

tainly second only in affording the Nation an annual trade balance with the world, and which has already, even in its infancy, enabled the farmers and shippers of Texas and the great Southwest to save many times over the total amount it has cost. [Applause.]

HOUSTON SHIP CHANNEL.

I would like now to tell the House something about my home port, Houston. I think it will gratify the House to know what the splendid citizens have done down there, and what they are going to do, what they have done themselves and what the Congress helped them to do, at a place on a waterway 50 miles inland from the port of Galveston. For half a century it was a dream of the citizens of Houston that it become a deep-water port. As early as 1871 the Congress appropriated a pittance and authorized an investigation. Further appropriations were made in 1877, in 1881, in 1892 and in 1899—as the needs of commerce and the use of that waterway required; but on June 25, 1910, Congress passed a bill appropriating $1,250,000 conditioned upon the raising of a like amount by the city of Houston as she had proposed to do. Even before the Houston Ship Channel was completed, tonnage of the amounts now stated for the years named of the value following moved over the channel:

Year.	Short tons.	Value.
1905	104,907	$12,544,323
1906	132,103	15,000,000
1907	452,463	24,466,733
1908	602,731	28,318,621
1909	1,214,904	36,097,563
1910	1,371,653	39,155,357
1911	1,354,397	34,721,533
1912	1,365,050	35,938,800
1913	1,860,452	38,738,464

And yet, at the last session of Congress, when we were asking for an item of maintenance only, opponents of waterway improvements and candidates for publicity as exalted types of political morality assured the House this this tonnage of this enormous value was sand and shell! The courageous people of the city of Houston and the county of Harris, at that time knowing that about $2,000,000 had already been expended by private enterprise and Government appropriations, and that no deep water existed at Houston sufficient to accommodate ocean-borne commerce, raised $1,250,000 and in effect tendered it to Congress conditioned upon an appropriation for a like sum, so as to make the $2,500,000 necessary to complete the Houston Ship Channel. Congress accepted that proposition, because all good men admire a proud, courageous and self-confident people. [Applause.] The Houston Ship Channel was finished during the summer of 1915, and now it has a uniform depth of 25 feet of water all the way from the Gulf of Mexico to the turning basin in the city of Houston. The navigation district, meaning the city of Houston and the county of Harris, has expended about $1,000,000 of its own money in acquiring land and digging a commodious turning basin. It has raised $3,000,000 with which it has built and is building free wharfage, docks, terminals and warehouses, in order to have at least one spot on earth where monopoly shall not have a foothold. [Applause.] There were two barges built to keep that channel open, costing $200,000 each, and Houston matched dollars with Congress—Houston paying for one and the United States paying for the other. [Applause.] The Houston Ship Channel was completed during the summer of 1915, and within four months after it was completed 40,000 tons of freight—enough to load 40 trains of 50 cars each, or 1 train 16 miles long—went over the wharves at the port of Houston. The tonnage is developing rapidly. Lines of steamships, laden to the guards incoming and outgoing, ply between Houston and New York regularly, between Houston and Havana, and between Houston and Mexican ports.

Already great industrial plants line its shores—vast cotton warehouses and compresses, fertilizer works, packing plants, oil refineries and various other industries which require deep water for the conduct of their large business—noble forecasts of Houston's greatness; and the mind thrills with the noble vision of the Houston of the future, when the enterprise of our people shall have had time to develop its vast possibilities. Houston is 500 miles nearer than New York to the Panama Canal; already 17 railroads come to Houston "to meet the sea"; already she is the richest, largest and most splendid city in the vast State of Texas where 5,000,000 people dwell with pride in her past, with joy in her present and with firm assurance of her limitless future; [applause] and when, as is inevitable, the Gulf of Mexico shall have become the Mediterranean of our Western Hemisphere, Houston will be its chief city and port, sitting as an uncrowned queen upon its shore and extending her blessings to all the world. [Applause.] The bill now under consideration provides two items for the Houston Ship Channel—one for its annual maintenance and another for an investigation and report upon the necessity, feasibility and cost of deepening that channel. We have faith that Houston is destined to be the Manchester of America and the citizens of Houston are not going to wait for a later generation to do that splendid work [applause].

During the year 1915, 1,070,700 tons of freight passed over the channel, worth $32,143,500, notwithstanding that the European war smashed southern prosperity and demoralized shipping. It is apparently developing during the first year since its completion at least $50,000,000 in value of tonnage moved. Two million bales of cotton moved from Houston over that channel alone in the last year. [Applause.] That is not all: 183,000 tons of lumber and shingles worth $3,760,000, 23,000 tons of hardware and machinery worth $2,300,000, 37,000 tons of groceries valued at $2,000,000, and 42,000 tons of rice valued at $1,680,000, and much miscellaneous freight, besides 2,000,000 bales of cotton, moved over the Houston Ship Channel into and out of the port of Houston last year. The people of Houston achieved this splendid result by a total expenditure of less than $5,000,000, and the people of Texas have already saved, by virtue of the Houston Ship Channel, more than enough in freight rates to make up the whole cost of the entire enterprise.

BRAZOS RIVER.

Another Texas project, which must run the gamut at each session of Congress and overcome the jeers of the uninformed and the supercilious but which is one of the very best projects taken on and appropriated for by Congress, is the Brazos River from the Gulf of Mexico at Freeport to Waco—a distance of 425 miles. Gentlemen complain that there is little tonnage at present moved on the Brazos and offer that as a reason why the project should be abandoned after $1,700,000 have been expended upon the project. They seem to forget that not a pound of freight could move through even the Panama Canal until it was completed; but the probability that tonnage would move through the Panama Canal caused several hundred million dollars to be expended upon that project. No man lives in comfort in his house until it has been finished. As to the port called formerly Velasco and more recently Freeport, it may prove useful for the House to know that private capital constructed it by the expenditure of more than $1,000,000 and then turned the enterprise over to the United States without cost to it. Upon the banks of the Brazos River and only 3 or 4 miles above where it empties into the Gulf, there has been recently discovered and developed, at an outlay of millions of money, the greatest sulphur mine in all the world. It is estimated to contain a total of 17,000,000 tons of sulphur worth about $20 a ton. At this hour a bin of sulphur 99 per cent pure and worth $1,000,000 lies on top of the ground at Freeport on the banks of the Brazos River, and only the surface of the vast wealth deposited there has been touched. Great ships of the sea come from all over the world through the port of Velasco, or Freeport, to take that sulphur away, and thus to add to the comfort of the world and the commerce and wealth of Texas and the United States. And yet I have heard each session for the last three years some gentlemen belittle the Brazos River and the port of Freeport as being unworthy of national recognition. [Applause.]

The Brazos River project was not taken on for political reasons—because, at that time, Mr. Burton, a Republican, was chairman of the Rivers and Harbors Committee in the House, the Congress was overwhelmingly Republican, and Texas was overwhelmingly of the Democratic Party; but the Brazos River project was undertaken only because sound and compelling logic demanded it be done. Nor was the project taken on hastily or without due consideration. There have been three official and several unofficial surveys of that stream and reports accompanying. As early as 1874 Maj. C. W. Howell, in 1889 Maj. C. J. Allen, and in 1894 Maj. A. M. Miller made official examinations and reports. All of those reports agree that the improvement of the Brazos River for commerce is feasible, requiring only money to carry the enterprise to success, and that the tonnage exists to use the river when improved. In 1900 the able engineer, Col. C. S. Riché—an ornament to his profession and his Nation—made his official report concerning the Brazos after thorough examination, in which he said, among other things:

For all the foregoing reasons, therefore, I have the honor to report that, in my opinion, the Brazos River from its mouth to the city of Waco is worthy of improvement for a light-craft navigation, even if the cost of the work should be as great as $6,000,000.

His superior officer, Col. H. M. Roberts, concurred in the report of Col. Riché, and added:

I think the survey should be made, as, from all the data I have seen, I am forced to concur with Col. Riché in the opinion that the Brazos

River from its mouth to the city of Waco is worthy of improvement for a light-draft navigation, even if the cost of the work should be as great as $6,000,000.

This same Col. Roberts, who later became Chief of Engineers, again officially reported in its favor, in 1901. Later, Maj. Judwin officially reported:

The Brazos River is the best river in the State of Texas. There is sufficient water, if properly conserved, to provide navigation even beyond Waco.

These reports were approved by the Chief and Board of Engineers, and the Secretary of War, Hon. William H. Taft, approved the report and transmitted it to Congress. Thereupon, the Rivers and Harbors Committee, with its chairman, Hon. Theodore E. Burton in person at its head, then visited Waco and inspected the Brazos River and unanimously approved the project for its improvement notwithstanding it should entail a total expenditure of $6,000,000; and thereafter Congress appropriated for it, the work has steadily progressed, and about $1,700,000 have already been expended upon it. And then later, in 1915, when he was a Senator, this same Mr. Burton filibustered to death an item for the Brazos River upon the ground that the river is not worthy of improvement and that the appropriation is "pork." [Laughter and applause.]

It is 425 miles by river from the Gulf to Waco. The Brazos River traverses for a thousand miles a region more fertile than the valley of the Nile. The vast and fertile area over which freight rates will be affected by making the Brazos navigable from the Gulf to Waco amounts to probably 32,000 square miles—an area larger than such large States as South Carolina, West Virginia or probably Indiana, and contains one-third of the population of 5,000,000 people in Texas, and produces one-third of her annual great cotton crop. From the Gulf to old Washington, a distance of 254 miles from its mouth, the reports of the engineers agree that 6 feet of water for eight months in the year could be secured by removing the snags and bars and the construction of training walls and spur dykes; but that from old Washington to Waco such uniform depth could be secured only by a system of locks and dams. The first part of this work has been done, and some of the locks and dams have been completed, others are in process of completion and some few others are yet to be built. To illustrate the character of country and its state of development through which the Brazos flows from Waco to the Gulf, I cite the House to the production in bales of cotton in each of these counties in the year 1914: McLennan, 99,622; Falls, 70,767; Milam, 64,323; Robertson, 42,438; Brazos, 22,147; Grimes, 22,657; Burleson, 25,891; Austin, 25,449; Washington, 34,200; Waller, 10,203; Fort Bend, 19,923; Brazoria, 5,043; a total of 442,663 bales, worth $60 to $75 per bale. The second tier counties in that same year produced: Bastrop, 33,913; Bosque, 26,254; Coryell, 29,767; Colorado, 16,853; Fayette, 40,667; Hill, 94,127; Lee, 12,488; Leon, 16,893; Limestone, 70,794; Madison, 11,072; Matagorda, 3,682; Montgomery, 8,937; Wharton, 15,665; Williamson, 112,791; a total of 503,903 bales; a grand total for those first and second tier of counties on the Brazos River, only from Waco to the Gulf, of 946,566 bales. And yet gentlemen argue that the Congress should provide no facilities for the improvement of the Brazos River on whose banks such wealth and commerce are provided by that thrifty and splendid people. [Applause.]

As an incidental benefit flowing from the improvement of the Brazos River for the purpose of commerce, I will mention not only the inevitable reduction in freight rates in competition with water rates, but the other enormous benefit of preventing overflows from floods. There are probably more than 750,000 acres of rich alluvial soil on both banks of the Brazos from Waco to the Gulf subject to overflow, which will be largely or altogether redeemed from that annual calamity by the completion of the Brazos River project. Those lands are of nominal value now, but will be worth $100 per acre then; and that will increase population and add vastly to the wealth, production and commerce of the country. It would be no less than inexcusable and almost criminal folly to abandon the Brazos River project; but its completion as speedily and economically as possible will give hope and courage to a splendid citizenship, insure immense tonnage to move at living rates, cause new centers and enterprises to spring up along that stream, add largely to the wealth and population, and bring unending blessings to that territory, to our whole country and to the world. [Applause.]

But I have promised the House that, before I concluded, I would furnish a statement, not alone of appropriations received by the great State of Ohio and the thriving city of Cleveland for rivers and harbors improvement during the 10 years Mr. Burton presided as chairman over the Rivers and Harbors Committee of the House, but also by the State of Wisconsin, and I shall discharge that promise. In passing, it may be proper to remark that the same chairman, Mr. Burton, once caused to be passed a $55,000,000 rivers and harbors bill through the House under suspension of the rules—before, in the Senate, he had arisen to filibuster to death smaller but similar bills as reckless waste of public funds. [Laughter.]

Hon. Theodore E. Burton was for 13 years a Member and for 10 years chairman of the Rivers and Harbors Committee of the House of Representatives. His service as a Member of the House terminated March 3, 1909, when he entered the Senate. He was, therefore, chairman of the Rivers and Harbors Committee of the House for five Congresses, viz, Fifty-sixth, Fifty-seventh, Fifty-eighth, Fifty-ninth, and Sixtieth Congresses, and was a member of the committee during a part of the Fifty-fourth and all of the Fifty-fifth Congresses. His official career as chairman began in December 1899 and terminated March 3, 1909.

During these 10 years the appropriations and authorizations were as follows:

Year.	Appropriations.	Authorizations.	Total.
1900	$560,000		$560,000
1902	26,771,442	$38,586,160	65,357,692
1904	3,000,000		3,000,000
1905	18,181,875	17,184,657	35,366,532
1907	37,108,083	49,954,349	87,062,432
Total	85,621,397	105,725,166	191,346,654

Following are the appropriations and authorizations by Congress made to the several rivers and harbors of the States of Ohio and Wisconsin during the years in which Mr. Burton was chairman of the River and Harbor Committee.

Act approved June 12, 1902 (Stat. L., vol. 32, pp. 32 et seq.):

For Ohio.	Appropriations.	Authorizations.
HARBORS.		
Conneaut	$200,000	$250,000
Ashtabula	200,000	
Fairport	200,000	
Cleveland	625,000	2,300,000
Black River	6,000	
Huron	40,000	
Sandusky	125,000	
Port Clinton	5,000	
Toledo	15,000	
Muskingum (river)	10,300	
Total	1,426,300	2,550,000
RIVERS.		
Ohio, Locks 2, 3, 4, 5, and 6	275,000	300,000
Lock 37	100,000	950,000
Lock 8	50,000	250,000
Lock 11	50,000	250,000
Lock at Marietta	25,000	
Open channel	400,000	
Total	900,000	1,750,000

Omitting the Ohio River, the total appropriations for rivers and harbors were	$1,426,300
Authorizations	2,550,000
Total for Ohio	3,976,300

Or about one-sixteenth of the amount appropriated for the whole country in this act.

It is not fair to charge all of the Ohio River appropriation to the State of Ohio. Mr. Burton, however, was very generous to this river.

Appropriations	$900,000
Authorizations	1,750,000
Total	2,650,000

This river primarily benefits Ohio, Pennsylvania, West Virginia, Kentucky, Illinois and Indiana. The river touches Ohio soil for a longer distance than it touches Illinois and Indiana combined. It touches West Virginia and Kentucky for a distance about equal to that of Ohio, Illinois and Indiana combined, and is formed in Pennsylvania. The Government improvement extends over a length but little short of 1,000 miles, upon which the Government expended up to June 30, 1913—

On open-channel work	$7,206,621
And on locks and dams	21,134,888
With an unappropriated authorization of	7,376,000
Making a total of	35,717,409

The present project contemplates 54 locks and dams, worked up during Mr. Burton's chairmanship, but actually adopted in 1910 after he had gone to the Senate. The estimate in 1906 was $63,731,488 in addition to the appropriations already made. The State of Ohio is directly benefited by a contact touch of 500 miles; Illinois and Indiana combined 500 miles; Kentucky and West Virginia 1,000 miles. In other words, the direct benefit to Ohio is far more than one-fourth of the distance, but in this estimate I shall charge Ohio with one-fourth of the appropriation for 1902, or $662,500 which added to the $3,976,000 appropriated, of a purely Ohio nature, makes a grand total for Ohio of about $4,638,500, or about one-fourteenth of the entire appropriations of the act.

Act approved March 3, 1905, Statutes at Large, volume 33, pages 117 et seq.:

Harbor.	Appropriations.	Authorization.
Port Clinton	$2,000	
Toledo	20,000	
Sandusky	125,000	$480,000
Huron	68,500	
Vermilion	15,000	
Lorain	85,000	
Cleveland	200,000	
Fairport	130,000	
Ashtabula	20,000	
Conneaut	60,000	
Muskingum (river)	118,000	
Total	843,500	480,000

Or a total of $1,323,500 for Ohio.

The Ohio River received, $355,000.

One-fourth of this, or $88,750, added to the above gives a grand total for Ohio in this act of $1,412,250.

Act of March 2, 1907, Revised Statutes, volume 34, pages 1073 et seq.:

Harbors.	Appropriations.	Authorization.
Port Clinton	$3,000	
Sandusky	125,000	
Huron	16,000	
Vermilion	15,000	
Lorain	30,000	
Cleveland	223,000	$800,000
Fairport	100,000	
Ashtabula	20,000	
Conneaut	20,000	
Muskingum (River)	48,000	
Total	600,000	900,000

Or a total of $1,500,000.

Ohio River.	Appropriations.	Authorizations.
Dam No. 8	$250,845	$500,000
Dam No. 11	198,343	500,000
Dam Nos. 13 and 18	174,078	400,000
Dam No. 26	100,000	965,000
Dam No. 19	200,000	100,000
Dam No. 37, at Louisville	271,000	
Dam at Great Miami	20,000	
Open channel	450,000	
Total	1,664,266	2,465,000

Grand total	$4,129,266
One-fourth	1,032,316
Which added to	1,500,000
Makes for Ohio in 1907	2,532,316

Act of March 3, 1909, Statutes at Large, volume 35, page 815:

This act made a lump sum appropriation of $8,185,750 in cash and an authorization for the Ohio River of $100,000.

Out of this lump sum Ohio got the following allotments:

Toledo Harbor	$45,000
Port Clinton	2,500
Vermilion Harbor	2,000
Fairport Harbor	5,000
Total	54,500

And the Ohio River got $150,000 which, with the $100,000 in the bill, made $250,000. Charging Ohio with one-fourth of this, or $62,500, the State got a total in this act of $117,000.

Recapitulation.

Acts of—	The State got—	Cleveland got—
June 12, 1902	$4,638,500	$2,925,000
Mar. 3, 1905	1,412,250	200,000
Mar. 2, 1907	2,532,316	1,123,000
Mar. 3, 1909	117,000	
Total	8,700,066	4,248,000

Ohio received during Mr. Burton's chairmanship one twenty-second of all that was given to all the States, and Cleveland, his home city, received very nearly one-half of what was appropriated for Ohio.

HOW WISCONSIN FARED.

Act of June 12, 1902:

Harbor.	Appropriations.	Authorization.
Racine	$20,000	
Kenosha	5,000	
Milwaukee	232,000	
Ahnapee	10,000	
Port Washington	6,000	
Oronto	3,000	
Sheboygan	90,000	
Manitowoc	45,000	
Two Rivers	20,000	
Kewaunee	11,000	
Green Bay	105,600	
Sturgeon Bay	44,000	$178,000
Ashland	40,000	
Port Wing	25,000	
Superior	200,000	
Fox River	70,000	
St. Croix River	2,000	
Total	928,600	178,000

Or $1,106,600 in all.

Act of March 3, 1905:

Harbor.	Appropriations	Authorization.
Kenosha	$5,000	
Racine	30,000	
Milwaukee	250,000	$218,000
Sheboygan	18,000	
Manitowoc	110,000	
Two Rivers	6,600	
Kewaunee	3,000	
Sturgeon Bay	50,000	
Green Bay	10,000	
Ashland	60,000	
Port Wing	19,992	
Fox River	35,000	
St. Croix River	4,000	
Total	601,592	218,000

Or $819,592 in all.

Act of March 2, 1907:

Harbor.	Appropriations.	Authorizations.
Kenosha	$22,000	
Racine	50,000	
Milwaukee	200,000	$392,000
Sheboygan	40,000	
Manitowoc	100,000	276,000
Two Rivers	20,000	
Kewaunee	5,000	
Algona	43,000	100,000
Sturgeon Bay	20,000	
Green Bay	5,000	
Ashland	10,000	
Port Wing	2,000	
Fox River	35,000	
St. Croix River	4,000	
Total	706,000	768,000

Or $1,474,000 in all.

Act of March 3, 1909, made appropriations as follows:

Menominee Harbor	$4,000
Green Bay Harbor	12,000
Kewaunee Harbor	5,000
Sheboygan Harbor	5,000
Port Washington Harbor	4,000
Racine Harbor	5,000
Kenosha Harbor	10,000
Fox River	20,000
Total	65,000

Or a total, in 10 years of $3,465,192.

The Mississippi River from St. Paul to the mouth of the Missouri received $3,000,000 in all. This river in this stretch touches Wisconsin approximately one-half the distance from St. Paul to the mouth of the Missouri River, and Wisconsin should be charged approximately one-fourth of this appropriation, or $750,000, which added to the amount directly charged to her makes a total of $4,215,192.

And, when all of the harbors, lakes and rivers in those splendid States are improved to completion for purposes of their great commerce, these enlightened and disinterested statesmen are loudest in denunciation of worthy and approved projects in other sections of our common country which contributed willingly their full share to the prosperity and happiness of Ohio and Wisconsin.

True statesmanship is not narrow; true patriotism is not circumscribed by sectional limitations. This is one mighty Nation with a destiny based on fraternity. Those policies and sentiments which injure some portions injure the whole; and those policies and sentiments which bless the whole aid and ennoble all sections of our beloved country.

Irrespective of section or faction or party or local interest, it is ennobling to serve well in our day, and thus to help guide this mighty Nation in its onward march toward that noble destiny of freedom, prosperity, and happiness which has always been the vision and the dream of patriots. [Long continued applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. HUMPHREY of Washington. Mr. Chairman, I yield two minutes to the gentleman from Illinois [Mr. MANN].

Mr. MANN. Mr. Chairman, I ask the Clerk to read in my time the matter which I send to the Clerk's desk.

The Clerk read as follows:

[Statement for the press.]

WAR DEPARTMENT, *March 31, 1916.*

Following telegram received to-day:

"SAN GERONIMO, *March 30.*

"Dodd struck Villa's command, consisting of 500, 6 o'clock, March 29, at Guerrero. Villa, who is suffering from a broken leg and lame hip, was not present. Number of Villa's dead known to be 30, probably others carried away dead. Dodd captured two machine guns, large number of horses, saddles, and arms. Our casualties, four enlisted men wounded. None serious. Attack was surprise, the Villa troops being driven in a 10-mile running fight and retreated to mountains northwest of railroad, where they separated into small bands. Large number of Carranzista prisoners, who were being held for execution, were liberated during the fight. In order to reach Guerrero Dodd marched 55 miles in 17 hours and carried on fight for 5 hours. * * * Elisio Hernandez, who commanded Villa's troop, was killed in fight. With Villa permanently disabled, Lopez wounded, and Hernandez dead, the blow administered is a serious one to Villa's band.

"PERSHING."

[Loud applause.]

Mr. TREADWAY. Mr. Chairman, I am so thoroughly interested in endeavoring to secure at this time the adoption of the project for deepening Boston Harbor that I desire to use most of my time under general debate to call the attention of the House to the merits of the Boston project. In view of the fact that the Committee on Rivers and Harbors, early in its deliberations, decided not to include new projects in the present bill, no move was made by the friends of Boston Harbor for a hearing or an opportunity to present its claims. We accepted this action on the part of the committee in good faith and with as good grace as we could in view of our great interest in its adoption.

We have a standing before the House now from the fact that the Committee on Rivers and Harbors, after hearings were closed and the bill practically made up, included in the bill the East River project, found on page 4, lines 23 to 25, and page 5, lines 1 to 12, inclusive. The East River project comes before the House in a very peculiar, I might say unprecedented, manner. The vote of the committee in reference to new projects placed the East River item in exactly the same position as the Boston item. In other words, both projects had been favorably reported upon by the Board of Engineers, but were excluded from consideration by the general vote. Were it not that the East River project finally got into the bill, I should not, at this time, be asking for consideration for Boston Harbor.

I wish to state my thorough disapproval of the manner in which the inclusion of this item was secured. The previous action of the committee was overruled on a strictly partisan basis as a result of the request of the President to insert the East River project. The facts are that the Democratic Members from New York, under the lead of the Member from New York on the committee [Mr. HULBERT], assisted by the chairman of the Committee on Appropriations, Mr. FITZGERALD, a man whose ability to foresee political advantage is well recognized, placed the matter before the President in such a way that he, under the guise of preparedness, could well cater to the Democratic politicians of New York and Brooklyn. The letter Secretary Tumulty sent to Mr. SPARKMAN was inspired by the letters of Mr. HULBERT and Mr. FITZGERALD, the latter stating that—

The Representatives from New York would be placed in an impossible position if they supported revenue measures which largely increased the burdens of their constituents, while failing to obtain legislation deemed essential for the security of the metropolis of the Nation.

The gentleman from New York [Mr. FITZGERALD] has an extremely pleasing style of expression, but the real thought back of it all is "the support of their constituents," which means votes for both Congressmen and for President.

The only emergency existing is, before another river and harbor bill is prepared there is to be a national election. The hearing does not contain any evidence whatsoever going to show that this appropriation need be made at the present time. The facts are an appropriation of $200,000 was made last year to remove Coenties Reef. Work has begun on that and will be continued for nearly a year. The distance between Governors Island and the Battery is so narrow that it is not practical, according to Col. Black's own testimony, to work on Coenties Reef and Diamond Rock at the same time, as the channel would be blocked for navigation. All that it would be possible to do before the completion of Coenties Reef project would be to make borings in preparation for future work. It can readily be seen that this feature does not constitute an emergency.

I am heartily in favor of any improvement in New York Harbor that will be beneficial either to preparedness or to the commerce entering that port. New York is the greatest commercial center in this country and is entitled to every possible consideration commensurate with the interest of others that Congress can afford to give it.

It is on such projects as New York that Government money is wisely expended. I should be in favor of adopting in the very near future, if not at the present time, the entire project recommended for New York, which included the removal of the serious obstruction to navigation at Hell Gate and the entrance into Long Island Sound. Money properly expended on such projects as these benefits the entire country and can in no sense be regarded as open to the criticism being heard against river and harbor work.

New York lacks facilities for the enormous commerce of the port; it lacks sufficient opportunity for entrance; all large vessels must now enter at one end. The day is not far distant when vessels coming from the north at least can enter through Long Island Sound, by the removal of Hell Gate, and secure dockage in upper New York with much more convenience than they can to-day go around and enter by Ambrose Channel. The amount required to bring about this great improvement seems large, but I submit that it is small in comparison to the national benefit that would result both to commerce and to defense.

It will thus be seen that my opposition to the New York project is not one of opposition to its intrinsic merits, but, rather, to the method under which it comes before the House in the present bill. Political partiality has been shown this project by the administration. I appeal to the House to show by its action that we are sincere in our intention of bettering our national defense. Personally I would forego every possible river and harbor appropriation called for in this bill which did not have to do with national defense and vote to substitute such items as combine the commercial interest with national defense. New York Harbor is one of these; Boston Harbor is another, and they should stand or fall together. The fact that one has a positive presidential indorsement does not detract from the merits of the other. If the Boston project is adopted I will gladly vote for the New York item and other such items that can come into the bill on their own merits in behalf of national defense.

There are two courses open to this House. Either exclude the New York item from the bill or include the items for other harbors needing improvement exactly as much as New York on the ground of preparedness. One of these harbors is situated in the State I have in part the honor to represent, the port of Boston. At the proper time I intend to offer an amendment for the adoption of the project deepening Boston Harbor recommended by the Board of Engineers in their report to the Secretary of War dated April 25, 1914, Document No. 931, Sixty-third Congress, second session.

This amendment will ask for an appropriation of $400,000, with an additional authorization of $1,145,000, which is the amount of the item recommended by Gen. Kingman, then Chief of Engineers, revising the district officer's report, which called for $3,845,000. The project was divided into two sections; one in the inner harbor, extending from Presidents Road to the navy

yard, and the other in the outer harbor, from Presidents Road to the ocean. It is this latter section of the project for which we will ask for an appropriation.

I have such an abundance of material at hand in favor of the Boston item that I can but briefly refer to it at this time and will incorporate in my remarks resolutions adopted by the Board of Harbor and Land Commissioners of the Commonwealth of Massachusetts, letters from the Boston Chamber of Commerce, from the directors of the port of Boston, and the president of the Massachusetts Real Estate Exchange:

BOSTON CHAMBER OF COMMERCE,
Boston, March 2, 1916.

Hon. ALLEN T. TREADWAY,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN TREADWAY: We are very glad to know that you are planning to ask for an amendment to the river and harbor bill when it is reported in the House to include an appropriation for deepening the channels in Boston Harbor. We certainly agree with you that if an appropriation is to be made in the case of New York Harbor on the ground of preparedness and in order that there may be an adequate depth of water for vessels to reach the Brooklyn Navy Yard, Boston is fully justified in claiming recognition for the same reason.

The Charlestown Navy Yard, as you are well aware, is one of the most important in the country. As pointed out by the Board of Engineers in their report to the Secretary of War (Doc. No. 931), "the strategic conditions are such that in the event of a war with almost any European power of importance a naval battle may be expected off the New England coast. In such an event, however the battle might result, there would probably be a number of crippled ships of the first class coming into the yard for repairs, and some of these, on account of their condition, drawing more than their normal draft."

The Secretary of the Navy, in a letter to the Secretary of War, dated October 6, 1912, stated that there was urgent naval need for a 40-foot channel up to the Charlestown Navy Yard. As pointed out by these experts, it is extremely doubtful if the present depth of water in the channel approaches to the harbor would be adequate for naval emergencies.

There is a movement on foot at the present time to make the Charlestown Navy Yard available as a Government shipbuilding plant, and it appears not unlikely that it may be used in the near future for the construction and repair of battleships, so that its importance as a naval base would be greatly enhanced, and the need for adequate channel depth would thereby become of great importance to the Government. At the present time Boston has one of the largest shipbuilding plants in the country, the Fore River Shipbuilding Co., engaged in the construction of both naval and commercial vessels. The U. S. S. *Nevada*, one of the largest ships in the Navy, was recently completed at this plant, and in the rapid development in naval construction it is not unlikely that larger ships will be laid down in the not distant future. Reasonable preparedness for national defense, we believe, should certainly include provision for improved channels at the principal ports which are likely to be used by the Navy Department in time of war, and as it usually takes years to complete the deepening of a channel, it would seem urgent that the present Congress should make provision for future requirements.

Commercially the importance of the port of Boston is such as to demand recognition by the Federal Government. In that branch of foreign trade from which the United States Government derives a revenue, namely, the import trade, Boston exceeds all other ports by a wide margin, with the exception of New York. A comparison of the imports of merchandise by customs districts for the year ending November 30, 1915, shows that the total value of imports for the following districts is as follows:

For the Massachusetts district (for which Boston is the principal port)	$159,917,216
For the New Orleans district (next in value to Massachusetts on the Atlantic and Gulf coasts)	79,925,716
For the Philadelphia district	67,913,141
For the Baltimore district	22,716,759
For the Galveston district	8,537,348

Of all the customs districts in the country Massachusetts was one of the few which showed an increase in imports for 1915 over 1914.

It is interesting to note the growth of import traffic at Boston over a series of years.

Imports of merchandise at Boston at intervals of 5 years since 1900.

1900	$68,630,557
1905	106,072,780
1910	121,448,107
1915 (year ending Nov. 30)	159,917,216

Total amount of imports and exports during the same years.

1900	$192,488,718
1905	199,869,674
1910	190,930,966
1915 (year ending Nov. 30)	278,916,363

The port of Boston is 190 miles nearer Europe than any of the large ports in the United States. Outside of New York, this is the only port frequented by the great passenger liners carrying first-class passengers.

Trans-Atlantic passengers handled in and out of eastern United States ports for the year ending June 30, 1913.

Boston	114,000
Philadelphia	87,000
Baltimore	38,000

Boston has exceptional attractions as a port for large combination passenger and freight steamers of the type requiring the greatest depth of water. Arrivals of foreign steamships at the port of Boston for 1915 were 1,434, with a gross tonnage of 2,270,059. Many of these ships have a draft in excess of 30 feet, and the present 35-foot channel is inadequate for the ships which, previous to the present European war, frequented this port. The channel depth of 35 feet is sufficient to take care of ships drawing up to 30 feet, but is not considered adequate for ships drawing more than 30 feet. The Cunard Steamship Line at Boston claims that the present channel depth does not permit of their ships sailing at fixed hours, as they are required to accommodate themselves to the tides. The company states that the formation of the channel in Boston Harbor is largely rock, a condition that does not exist at other ports, so that in the event of a steamer going aground she is liable to be seriously damaged.

The State is now about to award a contract for the construction at Boston of a dry dock large enough to take care of any ship yet built or proposed at a cost of approximately $3,000,000. The proposed site is adjacent to, and leading directly from, the main ship channel. The existence of this much-needed facility on the Atlantic seaboard is likely to attract to this port in case of accident the largest ships afloat. The ships having a draft in excess of 30 feet, particularly in a crippled condition, would have considerable difficulty in operating in the channel at its present depth, except at high water. If this facility is to be of value to the larger liners, it is essential that the channel should be deepened. The fact that the State has expended, and is still expending, large sums of money to provide improved docking and terminal facilities suitable for larger ships, should elicit the hearty cooperation of the Federal Government.

I presume that the directors of the port of Boston have furnished you with the full details with reference to the work which is being constructed under their supervision, and for that reason it will be unnecessary for me to cover that matter.

You can be assured that the business men of Boston and the State and local authorities are in hearty accord with you in the matter of the proposed deepening of the harbor channels. I sincerely hope that you will be able to prevail upon Congress to make the necessary appropriation for the work. I know that you will not hesitate to call upon us for any assistance you may require in promoting this important project for Boston.

Very truly, yours, JAMES A. MCKIBBEN, *Secretary.*

THE COMMONWEALTH OF MASSACHUSETTS,
DIRECTORS OF THE PORT OF BOSTON,
Boston, February 24, 1916.

Hon. ALLEN T. TREADWAY,
House Office Building, Washington, D. C.

MY DEAR CONGRESSMAN TREADWAY: I beg to acknowledge your communication of February 21 relative to the rivers and harbors bill now pending in Congress, and in compliance with your request beg to supply the following pertinent information or remarks:

The foreign commerce of the port of Boston for 1915 was $290,516,803, a gain of $57,047,284, or 24.4 per cent over 1914; imports for the year amounting to $171,353,793 and exports $119,163,010. These figures do not include Canadian in-transit trade or merchandise going through Boston to other interior customs districts for appraisal and duties, which should swell the total by at least $50,000,000 more.

Twelve thousand and forty-nine ships of 15,155,568 tonnage entered the port of Boston during the past year.

Comparative figures of the tonnage of shipping entering the ports of the world in 1913—a normal year—show that Boston, when its foreign and domestic tonnage is considered, is the fifth port of the world, following New York, London, Hamburg, and Rotterdam, and outranking such ports as Antwerp and Liverpool. The figures are taken from the report of the Rotterdam Chamber of Commerce for that year, so far as continental European and other ports are concerned, and from the Port of London Authority for figures pertaining to British ports. (See p. 3 of The Port of Boston, United States of America, copy of which is inclosed.)

In normal times the port of Boston has 56 steamship lines to and from all parts of the world, 40 in the foreign trade and 16 coastwise. (See pp. 8 and 9 of The Port of Boston, United States of America.)

New England manufactures one-seventh of the manufactured goods made in the United States, the value of the product, according to the United States Census of 1910, having been $2,670,065,000. (See p. 6 of The Port of Boston, United States of America.)

The United States has expended on Boston Harbor and its tributary rivers, etc., from 1825 to 1915, a period of 90 years, the sum of $12,668,474.99, an average of $140,760.83 per year.

The State of Massachusetts has expended and actually entered into contract to expend on Boston Harbor and its tributary rivers, etc., from 1870 to 1915, a period of 45 years, the sum of $15,477,360.62, of which amount all but $2,784,152.94 has actually been expended, making an average of $343,719.03 per year by the State. In other words, while the Federal Government has spent approximately $12,500,000 on Boston Harbor in 90 years, the State of Massachusetts has spent 24 per cent more in half the time (45 years)—$15,500,000, an average per year of $343,719.03 against that of the Federal Government of $140,760.83, the State's average per year being 144 per cent greater than that of the United States.

Ten million dollars customs duties and $4,400,000 income tax was collected in the Massachusetts district last year, a total contribution of $14,400,000 to the total expenses of the Federal Government and for use in just such projects as rivers and harbors work. The customs duties collected by the Federal Government at the port of Boston for the past eight years reaches a total of $172,887,022.70, an average of $21,610,877.83 per year.

These figures show that Massachusetts does not ask that the Federal Government lavish its funds on Boston Harbor, but merely asks cooperation in a work of which she is doing the greater share herself.

The largest passenger and freight pier in the world was completed at Boston just over a year ago (November, 1914), 1,200 feet long and 400 feet wide, with 40 feet of water dredged alongside and leading to the main ship channel at low-water mark.

This terminal can accommodate any vessel afloat or projected, and with its construction and assignment of its berths for use the Hamburg-American and White Star Lines agreed in written contracts to put on their largest steamers, of greater draft and carrying capacity than the port had known heretofore.

The present 35-foot channel was started in 1902 and substantially completed in 1914, a matter of 12 years, showing that an initial appropriation for a new or improved channel does not necessarily mean that it is such a project as can be built in a single year.

It took 12 years to build the present 35-foot channel, and undoubtedly would take as long to deepen it to 40 feet at low-water mark.

That the commerce and industry of the country demand such improvements is our experience in the case of the 35-foot channel, the growth of steamships, commerce, and shipping during the 12-year progress of that project showing that "between 1902 and 1914—the commencement and completion of the 35-foot channel—the steamships using this port (Boston) increased in carrying capacity from 4,500 to 6,000 tons dead-weight capacity to 8,000 to 12,000 tons dead-weight capacity, and drawing from 29 to 33 feet fully loaded; the foreign commerce from $168,000,000, in round numbers, to $235,000,000, in round numbers; and the tonnage of shipping, foreign and coastwise, from 9,906,748 net tons to 15,285,992 net tons." (See p. 95, Annual Report of the Chief of Engineers, U. S. Army, for 1915.)

A 40-foot channel started in 1916 would not be completed, judging from past experience at this port, until 1928 or 1930, and it is fair to assume that commerce and shipping will also increase proportionately in size and volume as it has in the past, so that the new 40-foot channel even then will hardly be adequate to accommodate the business which will use it. In other words, a 40-foot channel for Boston is a necessity, not a luxury.

The State of Massachusetts is building on the flats belonging to the Commonwealth in Boston Harbor the largest dry dock on the Western Hemisphere, located just off the main ship channel. It will be 1,200 feet long, 125 feet wide, and able to accommodate any vessel afloat or projected.

Five hundred thousand dollars has been expended to date to prepare the site for the dry dock. A $1,800,000 contract was awarded by the Commonwealth last fall for the actual construction of the dock, work on which was immediately commenced and is now rapidly progressing. Contract plans and specifications for pumping machinery, steel gate, and other appurtenances to finish this dry dock, amounting to $1,000,000 more, are being prepared.

The dry dock will be completed in about three years, and its immediate proximity and availability to the Boston Navy Yard, the Fore River shipyards, at Quincy, and to the Rockland trial courses for naval vessels make it most advisable for strategic purposes that the United States Government provide Boston with a 40-foot channel, so that the largest battleships and boats of the present and future may be able to reach this dry dock when completed for its utilization in case of accident or emergency, military or commercial.

It would be a sad commentary to build the largest dry dock in the country here at Boston and then have the Federal Government fail to provide the necessary channel to allow the big vessels of the present and future to approach and use it.

The Commonwealth of Massachusetts is patriotically going ahead in the improvement of Boston Harbor, and it is up to the Federal Government to assist in every possible way, for the benefits are mutual.

The additional fact that Boston Harbor has a ledge or rock bottom and a 10-foot tide is also added reason, as a matter of present safe navigation for greater depth, and the further fact that as a gateway it serves the whole country demands that cooperation of the Federal Government be forthcoming.

The State of Massachusetts is assuming a public work and service to the entire country in developing the port of Boston, and it is the duty of the Federal Government to aid and cooperate in this public development by every means in its power.

Massachusetts does not ask a lavish expenditure of Federal Government funds on Boston Harbor. It asks for cooperation in serving the commerce of the country and nothing more. The records of its own expenditures surely prove its right to ask for that assistance.

I trust the foregoing will be of value and that you will call on us whenever we can be of service.

Very truly, yours,

EDW. F. MCSWEENEY, *Chairman.*

THE COMMONWEALTH OF MASSACHUSETTS,
DIRECTORS OF THE PORT OF BOSTON,
Boston, March 6, 1916.

Hon. ALLEN T. TREADWAY,
House Office Building, Washington, D. C.

DEAR CONGRESSMAN TREADWAY: I beg to acknowledge your letter of February 25 asking for more detail on the issue of a 40-foot channel for Boston Harbor in its relation to national preparedness.

Europe is northeast of North America instead of due east, thus bringing Boston 200 miles nearer therefrom than New York, 400 miles nearer than Philadelphia, 500 miles nearer than Baltimore, 1,700 miles nearer than New Orleans, and 1,900 miles nearer than Galveston. (See p. IV of The Port of Boston, U. S. A.)

Many of the important munition, firearm, and armament plants, as well as other adjustable industries that can and are being utilized for manufacturing implements of warfare, are located in New England. (See p. 265 of The World Almanac, 1916.)

It is the woolen, worsted, cotton, and boot and shoe manufacturing center of the country.

It contains extensive meat-packing plants and grain elevators of millions of bushels capacity.

It had $1,571,917,283.53 deposits in its savings banks in 1915. (See p. 335 of The World Almanac, 1916.)

The exchanges of the Boston Clearing House last year reached a total of $7,481,341,000. (See p. 333 of The World Almanac, 1916.)

The first movement to expect of an enemy will naturally be against just such a district as New England.

The first clash will of necessity be a naval one. Boston Harbor is fairly well defended by Coast Artillery, but there are many vulnerable landing points along the coast to the north and to the south. Only an efficient naval force of this country can keep it clear. Once New England is taken, New York is endangered from the rear attack thus made possible.

Upon the port of Boston will depend the repair and refitting of naval vessels "coming (as the Secretary of the Navy says) from the initial clash of battle, with all its resulting disruption, and which might be enabled by near and convenient dockyard facilities to rapidly refit and repair and then return to action and overwhelm the enemy's similarly damaged fleet which had ventured to make an attack on our seacoast. The importance of such dry docks can not be overestimated." (See extract of Report of the Secretary of the Navy for 1915 appended hereto.)

The navy yard at Boston is less than an hour from the open sea. The $3,000,000 dry dock being built by the Commonwealth of Massachusetts at Boston is still nearer.

New York is several hours from the upper harbor to Sandy Hook.

Boston is the only port along the Atlantic coast building a dry dock large enough to accommodate the big ships of the future. Hence, the port of Boston should be given first consideration in any scheme of naval preparedness. (See extract of Report of the Secretary of the Navy for 1915 appended hereto.)

The New York dry dock is merely prospective.

At Boston over $500,000 has been paid out in preparing the site, and on October 15 last a $1,800,000 contract was further awarded by the Commonwealth for the construction of the dry dock proper. Work was begun the very next day, and has been progressing rapidly ever since.

Contract plans and specifications for its equipment with steel gate, pumping machinery, and other appurtenances, at an estimated amount of $1,000,000 more, are now under preparation and will be opened for bids in a comparatively short time.

This provides for a total expenditure of about $3,300,000 on the Boston dry dock by the Commonwealth of Massachusetts. It is expected to be completed in three years.

The proposed 40-foot project to the navy yard at New York is based on military or naval preparedness, with New York doing nothing itself in the shape of cooperation or local assistance in the matter.

New York now has a 40-foot channel. Boston's is 35 feet deep at mean low water.

Time is the essence of preparedness.

Massachusetts has taken time by the forelock. The United States Government has done nothing in this all-important matter of preparedness but discuss it. On the other hand, Massachusetts has gone into action, and, with its $3,000,000 dry dock under construction at the port of Boston, both points and makes ready the way for Federal cooperation.

The United States Army Engineer in 1914 recommended the 40-foot project for Boston Harbor, at an estimated cost of $3,845,000, complete, which, over an estimated term of 12 years, as in the case of the present 35-foot channel at Boston, would average about $325,000 per year.

The division engineer at New York approved the same.

The Board of Engineers for Rivers and Harbors cut the estimate more than 100 per cent, to $1,545,000, and recommended that that amount be appropriated by Congress.

The Chief of Engineers, United States Army, requested that this amount be allowed and that the project be authorized.

With the reports and recommendations of the Navy and War Departments both favorable, Congress should give full faith and credit to the matter of a 40-foot channel for Boston Harbor, which is a necessity—not a luxury.

A large vessel under way draws at least 3 feet more than when lying at anchor or when tied to her berth, for it then sets lower in the water, and, in addition to this allowance, is entitled to at least 3 or 4 feet more as a matter of safe navigation, particularly in a harbor with a ledge rock bottom like Boston.

This means that 6 or 7 feet must be added to the given draft of a vessel to find out how much water she really needs to make her navigation into or out of port possible.

Take the dreadnaught *Pennsylvania*, the newest battleship launched, and now undergoing its tests on the Rockland trial course just outside of Boston, which will draw 34 to 35 feet when fully loaded, armed, and equipped.

With 6 or 7 feet more allowance when under way, as a matter of safe navigation, she would require about 41 or 42 feet of water at least, and to-day could not get into or out of Boston Harbor except at high tide.

Such a ship, under these circumstances, might thus find it necessary to wait a very important 11 or 12 hours to get into or out of port to save herself or the fleet.

In case of injury, it is easily possible for a ship to settle 5 feet farther in the water, thus adding still more to its draft and bringing it to a minimum of 46 or 47 feet.

With the present 35-foot channel at Boston, it would be impossible for such a ship, under conditions now existing, to reach the new dry dock at Boston, which alone on the Atlantic seaboard, when built, will be able to accommodate the largest ships afloat.

A ship like the *Pennsylvania* is to cost $7,260,000 for hull and machinery alone; it is estimated that her armament and equipment will bring her full value up to $12,000,000.

There are four other such ships of similar value now under construction, and many more of different classes and varied costs in commission and contracted for.

A dry dock at Boston might on occasion easily save to the National Government the value of such a ship.

A 40-foot channel at Boston may also save to the National Government the value of such a ship many times over by allowing her to reach such a dry dock as is now under construction.

For these reasons it appears that a 40-foot channel for Boston Harbor should be immediately authorized by Congress.

Very truly, yours,

EDW. F. MCSWEENEY, *Chairman.*

COMMONWEALTH OF MASSACHUSETTS,
BOARD OF HARBOR AND LAND COMMISSIONERS,
Boston, February 24, 1916.

The harbor and land commissioners of Massachusetts respectfully petition the National House of Representatives for the inclusion in the pending river and harbor bill of an appropriation for the improvement project in Boston Harbor recommended by the Board of Engineers in Document No. 931.

The port of Boston is not only one of the greatest commercial ports of this country but it is also one of the greatest ports of the world. It contains at Charlestown one of our largest navy yards and one of our best naval dry docks. The Commonwealth of Massachusetts is now engaged in building a great commercial and naval dry dock, 1,200 feet long, at an estimated cost of over $3,000,000, and with approaches and accessories the cost will probably be over $4,000,000. The United States is not requested to pay a dollar of this cost, although it might reasonably be asked to pay one-half, as the preference will be given to naval vessels.

The Boston project should be included in the pending bill, because the fact that it is the nearest great American port and harbor to Europe and the first point of naval offense and defense on the Atlantic coast, and therefore should be as speedily as possible fully developed and equipped.

For the board.

WM. S. MCNARY, *Chairman.*

MASSACHUSETTS REAL ESTATE EXCHANGE,
Boston, Mass., February 17, 1916.

Hon. ALLEN T. TREADWAY,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN TREADWAY: It was most gratifying to read in the newspapers your announcement of a determination to carry to the floor of the House your efforts to secure justice for Boston Harbor in the appropriation bill, and I hasten to let you know that Massachusetts is behind you.

I was not at all surprised at the action of the committee in deciding to exclude from the appropriation bill the project for Boston's 40-foot channel.

It was altogether to be expected, and we shall get nowhere unless we take a stand in support of the Congressman who has the courage of his convictions, and knows what ought to be done for Boston.

In the light of the facts, it is utterly ridiculous that Boston should be treated after the fashion in which the House Committee on Rivers and Harbors contemplates. Massachusetts has spent millions of dollars in improving the port of Boston, and we are now expending more millions in building a great dry dock. Massachusetts has always proclaimed her willingness to meet with Massachusetts money dollar for dollar any appropriation by the Federal Government.

As a matter of fact, Massachusetts has done far more than that. And yet, here we are, the nearest great port to Europe, the second port in this country in the matter of imports and revenues to the Federal Government, sidetracked by Congress in favor of projects with not one tithe of the merit of Boston's claims.

We can not conceive of the frame of mind of a congressional body, committed as this Congress is to a policy of preparedness, which will permit to remain neglected a port of the importance of Boston and exposed to attack as is Boston.

Yours, sincerely, JOHN J. MARTIN.

The basis of the claim in behalf of this appropriation is a letter from the Acting Secretary of the Navy to the honorable Secretary of War, dated October 16, 1912, which I will also insert:

NAVY DEPARTMENT,
Washington, October 16, 1912.

From: Acting Secretary of the Navy.
To: The honorable the Secretary of War.
Subject: Dredging of channels to the principal navy yards.

1. I have the honor to quote for your consideration the following recommendation of the General Board, which has been approved by this department:

"The General Board recommends that channels leading to all the first-class docking, repair, and supply yards be dredged to a depth of 40 feet at mean low water and to a least width of 750 feet, and greater if practicable."

2. Careful consideration of this problem leads this department to believe that steps should be taken at once to dredge the channels to our principal navy yards and stations in order to accommodate ships that will undoubtedly be constructed in the near future. The battleship *Pennsylvania*, now being designed, practically reaches the limit of dimensions that can be assigned without an increase in draft; and the condition will become acute when battle cruisers already projected are authorized. Supplementing this is the possibility that battleships of our present fleet may have an increased draft due to injury in battle or otherwise.

3. In view of the above, I have the honor earnestly to request the consideration of your department upon the advisability of asking Congress for appropriation for dredging the channels to our first-class yards, including those at New York, Norfolk, Philadelphia, Boston, Puget Sound, and Pearl Harbor. If this meets with your approval, this department will endeavor to cooperate in every possible way toward securing the necessary appropriation for dredging the channels to these yards until an ultimate depth of 40 feet and least width of 750 feet has been attained.

BEEKMAN WINTHROP.

This letter calls for appropriation for dredging the channels to all first-class yards, including those at New York, Norfolk, Philadelphia, Boston, Puget Sound, and Pearl Harbor, to an ultimate depth of 40 feet.

I call attention to the fact that this recommendation was made nearly two years before the European war broke out, when this country considered itself secure in anticipation of continued peace throughout the world, and before the American people had become aroused to the degree of preparedness we find on every hand to-day. If this recommendation represented the view of the two great departments at that period, how much more applicable it is to the conditions as they exist to-day. The direct application to Boston Harbor is thoroughly covered in the report of the Secretary of the Navy, Mr. Daniels, submitted to Congress December 15, 1915, which I also insert as a part of my remarks:

[Extract of report of the Secretary of the Navy submitted to Congress Dec. 15, 1915.]

The necessity for sufficient dry docks large enough to receive the largest superdreadnaughts is obvious. In times of peace they are needed for the overhaul periods and repairs. In time of war they may turn the tide. It is easily conceivable that a $20,000,000 dreadnaught of the future might be an entire loss if there were not at hand, close to the scene of the damage or disaster, a dry dock to which that vessel could be sent for repair and refitting. More important still, a large fleet of such vessels coming from the initial clash of battle with all its resulting disruption, might be enabled, by near and convenient dockyard facilities, to rapidly refit and repair and then return to action and overwhelm the enemy's similarly damaged fleet, which had ventured to make an attack on our seacoast. The importance of such dry docks can not be overestimated.

He then continues:

The contract made by the Commonwealth of Massachusetts on the 15th day of October, 1915, insures the construction of a dry dock at Boston capable of taking the largest merchant or naval ships afloat, which will add to the all too few dry-dock facilities on the Atlantic. Naval experts were detailed to aid by their advice and experience in this large enterprise, which means so much to the Navy as well as the commerce of New England. It will be the greatest graving dock in the world. When completed it will readily dock the largest war vessels built or contemplated to be built for the future, sufficient in size to receive commercial vessels considerably larger than the giants in the trans-Atlantic Ocean trade.

This monumental work, involving an expenditure by the State of Massachusetts of well over $3,000,000, while being constructed primarily for the commercial purposes of the port of Boston, will afford the Navy of dry-dock facilities in this most important harbor superior in extent and size to that available at any other American port, and by arrangement give the United States Government prior and paramount use of the dock in time of war.

The city of New York has had under consideration the construction of a dry dock as a municipal enterprise in its port, of somewhat similar dimensions to those of the dry dock now being built at Boston, and has made, under the direction of the commissioner of docks, preliminary plans and studies for this enterprise. An officer of the Corps of Civil Engineers of the Navy has been assisting and advising the city in the enterprise.

Officers of the naval Civil Engineer Corps also assisted and advised the governor of Massachusetts and the directors of the port of Boston in the studies and negotiations which resulted in the starting of the Boston work. With the increase of merchant ships of large tonnage, dry docks of the character building in Boston must be multiplied.

I wish, however, to call the especial attention of the House to one extract from the Secretary's report to Congress, referring to the possible dry dock. He writes as follows:

It will be the greatest graving dock in the world. When completed it will readily dock the largest war vessels built or contemplated to be built for the future, sufficient in size to receive commercial vessels considerably larger than the giants in the trans-Atlantic Ocean trade.

This monumental work, involving an expenditure by the State of Massachusetts of well over $3,000,000, while being constructed primarily for the commercial purposes of the port of Boston, will afford the Navy of dry-dock facilities in this most important harbor superior in extent and size to that available at any other American port, and by arrangement give the United States Government prior and paramount use of the dock in time of war.

We ask for no better indorsement of our project than the Secretary himself has given. He states what the facilities will be for the use of that dry dock. It is perfectly apparent that he expects there will be sufficient water in the harbor for our greatest ships to reach the dry dock.

This report represents the careful survey of naval conditions and his personal opinion in his official communication to Congress. It is not the result of personal pressure from any source whatsoever, but the voluntary expression of the Secretary's judgment. I submit to the House its value is much greater coming in this way than when persistent and influential Members individually secure special prepared statements. What do these words mean? Are they written simply to fill space or do they mean that the Secretary actually considered that dry dock as of great value to the Government for the purpose of docking the largest war vessel built or contemplated to be built in the future? Does he mean that these facilities which "are superior in extent and size to those available at any other American port" are simply to be ornamental and a monument of the liberality of the State of Massachusetts toward the Federal Government or are to be a most useful adjunct to the Nation's preparedness? The question is, of course, absurd, and the answer too apparent to need expression.

In this connection I desire to quote from the report of the district engineer, found on page 24, Document No. 931, Sixty-third Congress, second session:

The navy yard located at Charlestown is one of the most important in the country. The strategic conditions are such that in the event of a war with almost any European power of importance a naval battle may be expected off the New England coast. In such an event, however the battle might result, there would probably be a number of crippled ships of the first class coming into the yard for repairs, and some of these, on account of their condition, drawing more than their normal draft.

We therefore have in Boston Harbor two most essential features for the scheme of preparedness. We have the Charlestown Navy Yard, where the repairs and construction work can be carried on, and we have in process of construction the largest dry dock in the Western Hemisphere.

I wish to call attention at this time to the contribution the State of Massachusetts itself has made toward the development of Boston Harbor. From 1870 to 1915 the State has expended, or entered into contracts to expend, the sum of $15,477,360. It has actually expended all but $2,784,000 of this amount. The State has expended in 45 years $3,000,000 more than the Federal Government has expended in 90 years on this harbor. All we ask is Federal cooperation, the State itself having more than met dollar for dollar of Federal appropriation.

The Federal project now completed was commenced in 1902, covering a period of 12 years. I submit that we can not begin the deepening recommended by the department a day too soon, as the dry dock is under contract to be completed within two years. Over $500,000 was expended in preparing a site. A contract for $1,800,000 was awarded on October 15, 1915. Work has progressed rapidly ever since. Within a comparatively short time contracts will be let for the equipment with steel gate, pumping machinery, and other appurtenances at an estimated cost of about $1,000,000. This dry dock, to be first at the call of the United States Navy, will cost the State of Massachusetts $3,300,000, and will be ready for use in less than three years from the time it was started last October.

This work of the State of Massachusetts is being carried on by a State board known as the "Directors of the port of Boston." Their authority was established by an act of the legislature in 1911, which carried with it an appropriation of $9,000,000. I may be pardoned for saying that it was with some feeling of personal satisfaction that, as president of the Massachusetts senate, I signed this bill upon its passage previous to its submission to our then governor, Eugene N. Foss, a brother of our distinguished and highly esteemed colleague from Illinois.

Every statement contained in the letters and resolutions I ask to have printed as part of my remarks are absolutely applicable as arguments for the adoption of this project, and before the amendment is acted upon which I propose to offer I ask the Members of the House to give careful consideration to the statements they contain.

Boston is 190 miles nearer Europe than New York, and correspondingly nearer to ports farther south. It is a most natural assumption that in case of war with a European nation, our Navy would have its first conflict off the New England coast on the trans-Atlantic route. As loyal Americans we would hope that our fighting forces would be as successful as our vessels were at the Battle of Santiago, but it would be foolhardy of us to rely upon this result. The facilities at Boston, both at the navy yard and dry dock, are within one hour of the open sea, and they might be the means of saving one or more of our most expensive ships.

I have said nothing of the commercial needs of this appropriation, as my argument to-day is not based on that feature. Boston has 40 steamship lines in the foreign trade, and 16 lines in the coastwise trade, to and from all ports of the world, practically all of them regular lines with fixed or determined sailings. These sailings in the foreign trade amounted during 1914 to 1,098 vessels, and in the coastwise trade to 2,542 vessels, or by ports between Boston and foreign ports 1,148, and coastwise 2,769.

It has three railroad lines connecting with all sections of the United States and Canada. It is the second largest international port in North or South America and is the fifth largest in the world, being surpassed only by New York, London, Hamburg, and Rotterdam. Boston has the greatest passenger and freight pier in the world, 1,200 feet long and 400 feet wide, providing over one-half mile of berthing space at which five large ocean-going steamships can be docked at one time. Boston is the center and distributing point in New England, which produces one-seventh of the manufactured goods made in the United States. These statistics are taken from a pamphlet published by the directors of the port of Boston in 1915. Under the five-minute rule, when the amendment I shall offer is before the House, I shall hope to speak further, briefly, of the reasons why we should at this time adopt the project for Boston Harbor, which has the approval of the Board of Engineers, and is so earnestly advocated by the eminent citizens to whom I have referred.

I wish at this time to thank the distinguished chairman of our committee for the courtesy which he showed me in his remarks this morning. Realizing as he does that we frequently differ about the committee table, he nevertheless was kind enough to express a personal regard toward me and which I am more than glad to reciprocate toward him. It has been a great privilege and pleasure for me during my brief service in Congress to feel that I was serving on a committee having a chairman so eminently fair, always so kind, and every ready to assist any member of the committee whether favorable or unfavorable to the personal attitude which he might be taking. [Applause.] Congress is honored by the service of such a man as Chairman Sparkman. [Applause.] I for one hope that many years are still before him as a distinguished Representative from the State of Florida, to serve not only its interests but those of the Nation as well. [Applause.]

I will now turn very briefly in my remaining time to some general features which have already been referred to. It is not necessary to go into details in reference to the report submitted by the gentleman from Wisconsin. He has spoken for himself and certainly needs no assistance from me.

I would add that I do not agree with the bill he submits. It seems to me that the fault in the present system is not so much with the engineers as with us and our predecessors. The engineers are the servants of Congress, and when Congress votes appropriations the engineers conceive it to be their duty to carry out those votes as instructions. This is one of the principal objections to the so-called lump-sum method of appropriations made in the last two river and harbor bills. Any project having been once adopted by Congress is regarded by the engineers as worthy of an allotment, as the engineers rightly regard Congress as the body having the authority of passing upon the actual merits of the project. The possible addition of civilians to the Board of Engineers might leaven the loaf, but the first step toward revision of river-and-harbor work is a realization on our part that money injudiciously appropriated in the past should not be used as a reason for future appropriations for the same project. There is not a man on this floor to-day but what in using his individual judgment and good sense would realize that the money expended on this class of items to date has been wasted, and a continuation of the same appropriation means an additional waste.

The river and harbor bill for 1916 carries an appropriation of cash and authorizations of $39,608,410. It is understood that this is the first rivers and harbors bill, certainly the first in many years, wherein any minority reports have been filed. Possibly we may be making up for a little lost time, in that this year there are three separate reports filed by minority members. One of these reports is signed by six members of the committee; another by the gentleman from Wisconsin [Mr. FREAR]; another by myself; and the gentleman from Iowa [Mr. KENNEDY] agrees to this one. I purpose to deal briefly with the reports of the chairman and the three minority reports.

The chairman states that the one item for a new project was placed in the bill at the request of the President. We entirely agree with his statement that this was the method wherein the East River project was included in this bill. He further states that the reductions from the engineers' estimates made in the draft of the bill was through careful investigation and review by the committee, assisted by the Corps of Engineers. It is fair to state in this connection that estimates made up for the committee's use by the engineers are very apt to be extremely liberal, and they frequently recommend reductions in the items not actually needing the money they themselves have asked for but a few months previously.

The chairman states that meritorius new projects are excluded from the bill owing to the probable increase in appropriations for national defense and "Treasury conditions growing out of the European war." With the first suggestion I heartily agree, but we can find a very much better explanation of the depleted Treasury than the European war. This excuse is covering a multitude of sins, both of omission and commission, on the part of the Democratic majority, and it will be but a short time before these fallacies will be so thoroughly shown up before the American people and the real reason explained to them for the depleted Treasury, namely, Democratic extravagance and the failure of the Democratic tariff law, that the lease of life of the Democrats as a majority in this House is now reduced to less than one year.

When it is so clearly demonstrated, as the statistics of the Democrats themselves do, that the value of imports is greater than under the Republican tariff, but that the receipts to the Government are very much less, and that the cost of the necessaries of life has in no particular been reduced, the good sense of the American people will cause them to reach but one conclusion, namely, that the Democratic Party, as the party in control of the affairs of the Government, is a very successful failure. How successful this failure has been in the minds of the people will be clearly demonstrated in the results of the election next fall.

The liberality of the people on the Trinity River at Dallas is thoroughly appreciated, but the extravagance of the committee in allowing a $50,000 bait to cause us to appropriate now $250,000, and expect to appropriate that much more, can not be justified.

I greatly enjoyed the splendid address of the gentleman from Texas [Mr. EAGLE], which he has just delivered, and congratulate him upon his eloquence. He spoke of "drifting." I am confident that he is the only gentleman in Congress who can "drift" in the amount of water in the Brazos River, which he so gloriously defended.

I am not in favor of including in this bill the item to which the chairman next refers, namely, $6,000,000 for the Mississippi River. The friends of the Mississippi River have caused a new committee to be established in this House, and the burden of carrying an appropriation for that river should at the present time be borne by the Flood Committee. We have masqueraded long enough under the guise of providing for navigation and appropriating money for the construction of levees and flood control on the Mississippi.

Mr. HUMPHREYS of Mississippi. Will the gentleman yield?

Mr. TREADWAY. I have but a minute more and I would like to use it.

Mr. HUMPHREYS of Mississippi. The gentleman understands that under the rules of the House the Flood Committee has no power to appropriate?

Mr. TREADWAY. Certainly; but the Appropriation Committee can take care of its needs.

If we are to give credence to an item in yesterday's Washington Post, from which I quote, this new committee will bear out the old adage, "A new broom sweeps clean." Within a few weeks after its appointment it announces the perfection of plans which Congress will be urged to adopt. I will quote:

The plan calls for Federal Government expenditure of $45,000,000 in five years. It provides that States benefited must aid in the work and pay part of the cost. Mr. HUMPHREYS estimated the States would have to spend approximately $20,000,000. Work on the Mississippi River, under the bill, would be continued under the present Mississippi River Commission.

Under these circumstances we can well afford to take the Mississippi River item from the present bill.

The last paragraph of the chairman's report is an encouraging symptom. We have too long been carrying items in the bill based on conditions no longer existing. They should be sifted out and dropped from this as well as future bills. He has given a very pleasing description of what has grown to be a household word in reference to numerous appropriations. He does not use the word the public considers as applicable, but in writing the paragraph surely had in mind the thought of "pork."

We never have had a better time nor a better reason for withdrawing support from unmeritorious projects. The time is ripe, because the people are aroused and demand either the elimination of items of this character or the defeat of river and harbor legislation. We will never have a better reason because every dollar that can be secured for the National Treasury can be wisely and beneficially expended for national defense. The people demand the removal of "pork" from the rivers and harbors bill just as loudly, if not as effectively, as they demand the expenditure of large sums for the subject now uppermost in the minds of over 100,000,000 of people in our country. [Applause.]

Mr. HUMPHREY of Washington. Mr. Chairman, I yield 10 minutes to the gentleman from Connecticut [Mr. FREEMAN]. [Applause.]

Mr. FREEMAN. Mr. Chairman, the improvement of all commerce-bearing rivers and harbors to their full navigable capacity as rapidly as Treasury conditions will permit has been and is, I understand, the policy of Congress.

I wish in the course of this general debate to place in the RECORD certain facts that you may have an opportunity to give them careful consideration, so that when the proper time comes I may offer an amendment, which, in the exercise of your sound discretion, you may support or oppose, as you deem best.

Thirty years ago New London Harbor was described in the annual reports of the Chief of Engineers as one of the best in the United States and as accessible for all classes of vessels at all seasons of the year. Since that time there has been a great increase in the length and draft of commercial vessels.

There is now a demand for piers of a thousand feet in length by vessels requiring over 30 feet of water at mean low tide. The State of Connecticut recognized this demand and appreciated the natural advantages of New London Harbor, with the result that in 1911 the State made an appropriation of $1,000,000 for public steamship piers and terminals at New London, as shown in the following bill, approved July 25, 1911. I will place in the RECORD the full text of the bill:

Joint resolution No. 216 of Connecticut State Senate, concerning steamship terminals at New London.

Resolved by this assembly, That the commissioners of rivers, harbors, and bridges, hereinafter called the commissioners, shall have power, on behalf of the State, to acquire, own, construct, maintain, and operate docks, wharves, piers, quays, and dikes, canals, slips, and basins, or any other appropriate harbor facilities, sheds, warehouses of all kinds, vaults, railroad tracks, yards, terminals, and equipment, and all other lands and water-transportation facilities in the city of New London and the towns of Waterford and Groton necessary to expedite the interchange of rail and water traffic; and for the purpose of carrying out the provisions of this resolution the governor and the mayor of the city of New London shall be ex officio members of the commission of rivers, harbors, and bridges.

SEC. 2. Said commissioners may, in behalf of the State, acquire, by purchase, condemnation, or otherwise, the title of private or public owners, if any there be (the United States Government being excepted, unless agreement be made with the proper Federal authorities), to land lying beneath the public waters of that part of the Atlantic Ocean known as New London Harbor and of the Thames River, and to any lands penetrating into, abutting on, or situated in such waters and riparian or other rights, if any there be, of such owners to, over, or under such public waters the submerged lands under, and any artificial or made lands in said waters. In case said commissioners can not agree with the owner or owners of property, franchises, or rights taken under the provisions of this resolution as to the amount of compensation or damages to be paid therefor, they may, through the attorney general, condemn the same in the name and on behalf of the State. The attorney general may, after 10 days written notice to the adverse party, apply to the superior court in the county in which the real estate or other property so taken or injured is situated, and thereupon said superior court shall appoint three disinterested freeholders as a committee to fix or assess the amount of such compensation or damage; and said committee shall give notice to the parties of the time and place of its meeting, at which time and place said committee shall proceed to hear the parties and inquire into the value of the property to be taken or the etxent of the damages; and said committee shall assess just compensation or damages to the person whose real estate or other property has been taken or injured, which assessment shall be in writing under the hands of said committee and shall be returned to the clerk of the superior court, who shall record it. Said real estate or other property which is the subject of such assessment may be taken and used by said commissioners when the compensation or damage assessed shall have been paid to the person entitled thereto or deposited to his use with the treasurer of the county wherein said property is situated. If any person required by this section to be notified shall be unknown, or a nonresident, or absent from the State, or non compos mentis, or a minor, such notice of the proceedings intended by said commissioners to be instituted shall be given as shall be prescribed by a judge of the superior court, and such judge may grant any order of notice as in cases demanding equitable relief.

SEC. 3. Said commissioners shall also have power to acquire or condemn, as provided in section 2, any construction or other contract, any property, real, personal, or mixed, and all property rights, easements, and privileges, including all wharves, docks, piers, slips, and other harbor structures and facilities, improvements, or utilities constructed or operated in connection therewith, which said commissioners are authorized to acquire, own, construct, maintain, or operate under the provisions of this resolution, and which are owned by persons, firms, or private corporations, and all rights, terms, easements, and privileges pertaining thereto, and including also property, property rights, easements, and privileges now or hereafter devoted to public recreation or park or other public uses.

SEC. 4. Said commissioners shall have power on behalf of the State to fix and regulate rate and charges for the use of all such facilities, improvements, lands, and utilities, or any of them, to any person, firm, town, or municipal or private corporation for the purpose of using and operating the same for a period, except as to vacant land, of 10 years, and as to vacant land upon such terms and conditions as shall be fixed by said commissioners.

SEC. 5. Before said commissioners shall commence any of the docks, canals, channels, basins, or improvements authorized by this resolution they shall secure from the Secretary of War or other authorized officer of the Federal Government all necessary permits, licenses, or authority for the construction of said docks, canals, basins, channels, or improvements, and said commissioners may convey to the United States the fee simple title to the land over which said canals, basins, or channels may be or have been constructed, and may enter into agreements with authorized representatives of the Federal Government relative to sharing in or the apportionment between said Federal Government and said commissioners of the cost of constructing said canals, basins, channels, or other harbor facilities hereby authorized.

SEC. 6. Except as herein otherwise provided, all property acquired under the provisions of this resolution, and all income derived therefrom, shall belong to the State.

SEC. 7. The comptroller is hereby authorized, as funds may be necessary for the purpose of carrying out the provisions of this resolution, to draw his orders, from time to time, on the treasurer to an amount not exceeding, in the aggregate, $1,000,000.

SEC. 8. Said commissioners shall keep books and accounts of all transactions pertaining to constructing, maintaining, and operating the improvements and utilities authorized under the provisions of this resolution, including the cost of all land acquired for rights of way and all legal, clerical, engineering, and other necessary expenses, including a per diem charge of $10 for each day actually spent by the commissioners upon said work, in connection with such acquisition, improvement, maintenance, and operation, which books and accounts shall be open to the inspection of the auditors of public accounts; also all contracts, agreements, and leases pertaining to or made under the powers granted by this resolution.

SEC. 9. Said commissioners shall not carry into effect the provisions of the preceding sections until, after proper investigation, they shall have found that said improvements will, in their judgment, be for the commercial advantage of the State.

Approved, July 25, 1911.

This act shows, first of all, that nothing was to be done until the commissioners should be satisfied that the expenditure of this money would be for the commercial advantage of the State of Connecticut; and, secondly, that agreements were clearly contemplated with the Federal Government relative to the sharing in and apportionment between said Federal Government and said commissioners of the cost of constructing channels and other harbor facilities.

Therefore they awaited action by the Federal Government, and accordingly nothing was done until Congress convened the following December, when, on December 14, the Hon. Edwin W. Higgins introduced the following bill:

Be it enacted, etc., That the Secretary of War is hereby authorized and directed to cause examinations and surveys to provide a uniform depth in the harbor at New London, Conn., of 45 feet, and make such surveys, examinations, and reports as will insure the full cooperation of the United States with the State of Connecticut in the improvement of the New London (Conn.) Harbor and its approaches.

On July 25, 1912, this bill passed the House and became a law. In accordance with this law the matter was referred to the district engineer officer. On November 22, 1912, this officer made the following report, of which I quote sections 7 and 8:

In view of the appropriation of the State for the creation of improved transfer and terminal facilities, of the natural advantages of the harbor, and of its existing rail connections, I am of the opinion that New London Harbor is worthy of improvement by the United States, with a view to securing increased depth of channel, and recommend that a survey be authorized to determine the extent and cost of such improvement.

SEC. 8. I am informed by the State rivers, harbors, and bridges commission that they are not prepared at the present time, pending the result of the surveys in progress, to take up the question of the

cooperation on the part of the State of Connecticut in the improvement of the harbor and its approaches. I am led to believe, however, that this cooperation will consist in connecting the entrance channel with the docks provided by the commission.

And I now add, for the purpose of showing that the question of cooperation on the part of the State was the chief concern of the Government, the following indorsements:

OFFICE OF DIVISION ENGINEER, NORTHEAST DIVISION,
New York, November 25, 1912.

To the CHIEF OF ENGINEERS:

Concurring in the recommendations of the district engineer, a survey is necessary to furnish information on which to base a recommendation as to further improvement. The nature of such recommendation should depend on the projects of the State of Connecticut and the cost of additional work by the United States which would be justifiable.

W. M. BLACK,
Colonel, Corps of Engineers.

BOARD OF ENGINEERS FOR RIVERS AND HARBORS,
December 5, 1912.

To the CHIEF OF ENGINEERS, UNITED STATES ARMY:

For reasons stated herein the board concurs with the district officer and the division engineer in recommending a survey in order to determine the extent and advisability of the improvement and the amount and character of cooperation that may be expected.

For the board.

WM. T. ROSSELL,
Colonel, Corps of Engineers,
Senior Member of the Board.

Mr. MADDEN. Will the gentleman yield for a question?

Mr. FREEMAN. I can not yield just now; I have only a moment left.

Up to this time the State commissioners had not incurred a single obligation, and they had $1,000,000 still in their possession.

During the summer of 1913 the district engineer officer made the survey called for and reported as follows:

SURVEY OF NEW LONDON HARBOR, CONN.

UNITED STATES ENGINEER OFFICE,
New London, Conn., December 10, 1913.

From: The district engineer officer.

To: The Chief of Engineers, United States Army (through the division engineer).

Subject: Report of survey of New London Harbor, Conn.

1. In compliance with the provisions of the rivers and harbors act of July 25, 1912, and with departmental letter of December 12, 1912, I submit the following report on the survey of New London Harbor, Conn., with a view to securing increased depth of channel and for report upon the question of cooperation on the part of the State of Connecticut in the improvement of said harbor and its approaches.

2. The survey was made during the past summer. It embraced a complete hydrographical survey of the harbor and a topographical survey of the shores. The nature of the bottom, along the line of the proposed channel, was investigated by forcing down by hand a suitably pointed pipe. A map of the harbor, in three sheets, is submitted with this report.

3. The improvement of New London Harbor now desired is an entrance channel of size sufficient to accommodate ocean-going steamships, the natural depth available, 26 feet at mean low water, not being sufficient for vessels of that class. The harbor is, in many respects admirably adapted to development as an ocean port. It is approached by deep water over a route that does not offer any grave dangers to navigation, its waters are sheltered, and it is rarely, if ever, closed by ice. The small tidal range is advantageous from the standpoint of terminal construction and operation. The harbor bottom is of soft material, and the cost of securing an entrance channel of sufficient dimensions for the present purposes, and of enlarging it to meet future needs, will be very small in comparison with that necessary for the development of other harbors of the United States. The railroad connections with tributary territory are ample. Its disadvantages lie in its limited area of natural deep water and in the topography of its shores. While the hills bordering the harbor are of no great elevation, the amount of lowland easily and cheaply adaptable for commercial and manufacturing enterprises is somewhat limited.

4. The present commerce of the harbor is practically entirely coastwise. It amounted to 907,990 short tons, valued at $107,688,345.90 during the calendar year of 1912. The proposed improvement will not appreciably benefit the greater part of this commerce, as the existing depths are ample for vessels engaged therein. A small portion of the amount, amounting to certainly not over 15 per cent, but probably less, is received in New York Harbor from over-sea ports, and thence shipped to New London for consumption and railroad distribution. It is possible that this portion might be shipped direct to New London were the harbor an ocean port.

5. The commerce to be benefited by the proposed improvement is, except for the small amount just mentioned, entirely prospective. Its volume will depend upon a number of factors, among which the activity of the mercantile interests who may identify themselves with the port is perhaps the most important. The attached letter from the rivers, harbors, and bridges commission of the State sets forth the view of those interested in the commercial possibilities of the harbor.

6. In anticipation of such commerce the State of Connecticut has purchased lands, prepared the designs, and is about to enter into the first contract for the construction of a pier and terminal in the harbor, at the location shown on the accompanying map. The pier is to be of most modern construction, is to be 1,000 feet long, and the slips alongside will be excavated to 35 feet at mean low water. It is to be provided with cargo-handling facilities, and there are to be constructed in conjunction therewith terminal railroad yards and warehouses. The appropriation made by the State for the purpose is $1,000,000, and it appears likely that the actual cost will approach that figure. The expenditure of this large sum by the State for this purpose was not without opposition, and during the past session of the legislature a somewhat vigorously supported but unsuccessful proposal was made to withdraw the appropriation.

7. It is believed that the commerce anticipated will be carried in vessels not exceeding 30 feet in draft. A channel depth of 33 feet at mean low water has, therefore, been selected as that appropriate to the expected needs. As the harbor admits of a straight channel a width of 600 feet is believed to be ample. The alignment follows the east side, leaving undisturbed the anchorage area now largely used by coastwise vessels which have occasion to seek refuge in the harbor.

8. The estimated cost of the proposed channel is as follows:

Dredging, 2,487,000 cubic yards, at 12 cents	$298,440
Administration, inspection, and contingencies	31,560
Total	330,000

The estimate includes 745,000 cubic yards as allowance for overdepth dredging of 2 feet.

9. The channel excavated under the existing project for the improvement of the harbor front of New London, excavated in similar material, shows little deterioration in the eight years which have elapsed since its completion. While the outer portion of the proposed channel is exposed to the cross currents of Long Island Sound, the bottom appears stable, and it is believed that the cost of maintenance will be small. The estimated cost of maintenance is, therefore, placed at $2,000 per annum.

10. The cooperation proposed by the State of Connecticut in the improvement of the harbor and its approaches, as set forth in the attached letter, to which reference has previously been made, consists in the construction of the pier and terminal and in the dredging necessary to connect this pier with the channel. It appears that the State authorities have never contemplated any contribution toward the cost of improving the main channel of the harbor as a part of this cooperation.

In view of the relatively small cost of the improvement of this channel and of the long-established policy of the General Government in the improvement of waters for the use of commerce, it is believed that the State should not be called upon to contribute toward the cost of such improvement and that no cooperation other than that proposed should be required.

11. While the commerce which is expected to follow the proposed improvement can not be forecast with certainty, yet it is highly improbable that such a large and well-appointed terminal as that which the State proposes to provide will go unused, and a considerable commerce may be expected to follow the improvement. In view of the natural advantages of the harbor and the relatively small cost of improvement, I am of the opinion that New London Harbor is worthy of improvement by the General Government to the extent of providing a channel 33 feet deep at mean low water from the natural deep water in the upper harbor to Long Island Sound, at a cost of $330,000 for original and an amount estimated at $2,000 per annum for maintenance. The work should be prosecuted at such a rate as to secure its completion in two years. If the project is adopted by Congress, the amount of $170,000 should be provided as an initial appropriation and a continuing contract authorized to include the remaining amount of $160,000.

12. In compliance with the provisions of the act I further report that the cooperation by the State of Connecticut in the improvement of New London Harbor and its approaches should consist in the construction of a pier and terminal of the character proposed by the rivers, harbors, and bridges commission of the State and in the excavation of the channel to connect this pier with the main channel, and I recommend that the entering into contracts covering the essential portions of this work by the proper agencies of the State of Connecticut should be a condition precedent to the expenditure of the funds that may be appropriated by Congress for the excavation of the main channel.

G. B. PILLSBURY,
Major, Corps of Engineers.

[First indorsement.]

THE DIVISON ENGINEER, NORTHEAST DIVISION,
New York City, December 13, 1913.

To the CHIEF OF ENGINEERS, UNITED STATES ARMY:

Forwarded, concurring in the views and recommendations of the district engineer officer.

FREDERIC V. ABBOT,
Colonel, Corps of Engineers.

[Third indorsement.]

BOARD OF ENGINEERS FOR RIVERS AND HARBORS,
December 30, 1913.

To the CHIEF OF ENGINEERS, UNITED STATES ARMY:

1. This report of New London Harbor is called for with a view to securing increased depth of channel and for report upon the question of cooperation on the part of the State of Connecticut in the improvement of said harbor and its approaches. New London Harbor comprises the lower 3 miles of the Thames River. It has a main channel of approach with a depth of 26 feet or more. The existing project provides for a ship channel 400 feet or more in width, 23 feet deep, and about 6,000 feet long in the main harbor, skirting the water front of the city, and for a depth of 15 feet in Shaws Cove. This project has been completed, the amount expended to June 30, 1913, being $153,230.55.

2. The present commerce of the harbor is practically all coastwise and amounts to about 900,000 tons, having a value of about $107,000,000. It consists principally of steamboat freight, coal, and lumber. Some foreign commerce is carried on, it being reported that 3 foreign vessels entered and 15 cleared from the port, and 2 American vessels entered from and 4 cleared for foreign ports.

3. The district officer states that the harbor is in many respects admirably adapted for development as an ocean port. It is approached by easily navigated deep water, is in a sheltered position, has a small tidal range, which is advantageous from a standpoint of terminal construction and operation, is rarely, if ever, closed by ice, and is used extensively as a harbor of refuge. The improvement now desired is an entrance channel of sufficient size to accommodate ocean-going steamships. The natural depth of 26 feet now available is not deemed sufficient for vessels of that class.

4. It is stated that in anticipation of a foreign commerce the State of Connecticut has purchased lands and is about to enter upon the construction of a commodious and modern pier 1,000 feet long, with suitable connections, and to excavate to a depth of 35 feet at mean low water slips alongside and connecting with the main channel, this work to be done under a State appropriation of $1,000,000. The furnishing of this modern terminal and its connection with the main entrance channel is the cooperation offered by the State in the development of this port. The district officer states that the commerce will be carried

in vessels not exceeding 30 feet in draft, and for their accommodation he proposes a channel depth of 33 feet at mean low water and a width of 600 feet. The estimated cost of securing such a channel is $330,000 and $2,000 annually for maintenance.

5. While the commerce expected to follow the improvement now desired is prospective, the district officer believes that it is highly probable that such a large and well-appointed terminal as that proposed by the State will result in a considerable development of commerce, and he reports the locality worthy of improvement to the extent outlined above, contingent, however, upon contracts covering the essential portions of the work proposed by the State of Connecticut being entered into as a condition precedent to the expenditure by the United States of funds upon the proposed project. In this view the division engineer concurs.

6. As stated by the district officer, this harbor is well adapted for development as an ocean port, possessing a number of advantages enumerated above. It has at present a large and growing commerce, and the expenditures for navigation facilities by the United States have been comparatively small. With the terminal proposed by the State, connected with adequate railroad facilities, it would seem reasonable to believe that a commerce of considerable size may develop, and it is believed that the United States would be justified in providing the entrance channel if it is assured that the plans of the State will be carried out.

7. The board therefore concurs with the district officer and the division engineer in reporting that in its opinion it is advisable for the United States to undertake the further improvement of New London Harbor by the construction of a channel 33 feet deep at mean low water and 600 feet wide, as proposed by the district officer, at an estimated cost of $330,000 for first construction and $2,000 annually for maintenance, the work to be begun only after assurance satisfactory to the Secretary of War has been given that the State will carry out its project practically as now proposed and described herein. The first appropriation should be $170,000 and the second $160,000, so as to complete the work in two years.

8. In compliance with law, the board reports that, except as contemplated by the above recommendations, there are no questions of terminal facilities, water power, or other subjects so related to the project proposed that they may be coordinated therewith to lessen the cost and compensate the Government for expenditures made in the interest of navigation.

For the board.

W. M. BLACK,
Colonel, Corps of Engineers, Senior Member of the Board.

—

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, January 16, 1914.

From: The Chief of Engineers, United States Army.
To: The Secretary of War.
Subject: Preliminary examination and survey of the New London Harbor, Conn.

1. There are submitted herewith, for transmission to Congress, reports dated November 22, 1912, and December 10, 1913, with maps, by Maj. G. B. Pillsbury, Corps of Engineers, on preliminary examination and survey, respectively, authorized by the following item contained in the river and harbor act approved July 25, 1912:

"New London Harbor, Conn., with a view to securing increased depth of channel and for report upon the question of cooperation on the part of the State of Connecticut in the improvement of said harbor and its approaches."

2. The existing project for the improvement of New London Harbor provides for a ship channel 400 feet or more in width, 23 feet deep, and about 6,000 feet long in the main harbor, skirting the water front of the city, and for a depth of 15 feet in Shaws Cove. The district officer reports that the least depth in the main channel is 26 feet at mean low water. The commerce of this locality is large and important, but, being mainly coastwise, has not in the past required great depth. In anticipation of the development of a substantial foreign commerce, it appears that the State of Connecticut has purchased lands, prepared designs, and is about to enter into the first contract for the construction of a pier and terminal in the harbor, at a cost of about $1,000,000. The pier is to be 1,000 feet long and of most modern construction, and the slips alongside will be excavated to a depth of 35 feet at mean low water. The district officer is of the opinion that these facilities will be taken advantage of by commerce, and to afford the necessary means of approach he believes that it is advisable for the United States to provide a straight channel 600 feet wide and 33 feet deep at mean low water, located as shown on the accompanying maps, at an estimated cost of $330,000. He recommends, however, that the entering into contracts by the proper agencies of the State of Connecticut, covering the essential portions of the proposed terminal construction, be made a condition precedent to the expenditure of funds by the General Government for the channel improvement. The division engineer concurs with the views of the district officer.

3. These reports have been referred, as required by law, to the Board of Engineers for Rivers and Harbors, and attention is invited to its accompanying report, dated December 30, 1913, concurring with the views of the district officer and the division engineer.

4. After due consideration of the above-mentioned reports, I concur with the views of the district officer, the division engineer, and the Board of Engineers for Rivers and Harbors, and therefore report that the further improvement by the United States of New London Harbor, Conn., is deemed advisable so far as to provide a channel 33 feet deep at mean low water and 600 feet wide, at an estimated first cost of $330,000 and $2,000 annually for maintenance, the work to be begun only after assurance, satisfactory to the Secretary of War, has been given that the State will carry out its project of terminal development practically as now proposed and described in the report of the district officer. The first appropriation should be $170,000 and the second $160,000, so as to complete the work in two years.

EDW. BURR,
Colonel, Corps of Engineers,
Acting Chief of Engineers.

—

WAR DEPARTMENT,
Washington, January 17, 1914.

The SPEAKER OF THE HOUSE OF REPRESENTATIVES.

SIR: I have the honor to transmit herewith a letter from the Acting Chief of Engineers, dated 16th instant, together with copies of reports from Maj. G. B. Pillsbury, Corps of Engineers, dated November 22, 1912, and December 10, 1913, with maps, on preliminary examination and survey, respectively, of New London Harbor, Conn., made by him in compliance with the provisions of the river and harbor act approved July 25, 1912.

Very respectfully, LINDLEY M. GARRISON,
Secretary of War.

Mr. TILSON. Will my colleague yield?

Mr. FREEMAN. I ought not to do so, but I will.

Mr. TILSON. Will you put into the RECORD the part that Connecticut has done?

Mr. FREEMAN. I may get it in the RECORD in order that the House may consider it before this amendment is offered.

There is, of course, considerable repetition in these reports, but I call attention to each one of them because I want every one here to know that from the district engineer, to the division engineer, to the Board of Engineers, to the Chief of Engineers, to the Secretary of War, and into the hands of the Speaker of the House for reference to the committee, there is an implied promise of cooperation if the proposed plans of the State are carried out as a condition precedent. These various reports make up House Document 613. In addition to all this, the Rivers and Harbors Committee of the House favorably reported in the bill of 1914 this item, with this condition:

Improving harbor at New London, Conn., in accordance with the report submitted in House Document No. 613, Sixty-third Congress, second session, and subject to the conditions set forth in said document, $170,000.

And the bill with this item and this condition passed the House.

The Connecticut State commission was headed by Gov. Simeon E. Baldwin and was composed of the best civil engineers and keenest business men of Connecticut.

They realized that the best way to do a thing was to do it; that the proper way to fulfill a condition precedent was to fulfill it. They started in to assure the Secretary of War of their good faith by the purchase and condemnation of real estate, by the awarding of contracts for the construction of a pier 1,000 feet long with modern, up-to-date equipment, by awarding a contract for the excavating of the slips and of a new channel of 35 feet depth out to meet a Government channel of only 26 feet depth. You reply that they should have awaited the action of the Senate. Perhaps; in view of subsequent events. But I submit their action in no way reflects upon their sound judgment or their business sagacity. After a long and careful investigation they were thoroughly convinced that it was a good business commercial proposition for the benefit of the whole State. They knew that the declared policy of Congress had been to develop our harbors to their full navigable capacity as rapidly as Treasury conditions would permit. They knew that there were annual rivers and harbors bills for twenty, thirty, and forty millions, and they knew that, owing to the natural advantages of the harbor, it required only an initial appropriation of $170,000, with a total of $330,000, and they had the strongest possible assurances from the Government officials. The Senate committee reported the New London item favorably, but an amendment struck out all the items in the bill and substituted the lump sum of $20,000,000, to be expended under the direction of the Secretary of War and the supervision of the Chief of Engineers. Nevertheless the committee, with faith in the implied promise of the Government officials and with confidence in the judgment of Congress, proceeded with the work. To be sure, they had to. They were already involved to the extent of several hundred thousand dollars in awarded contracts, and they continued the work awaiting the third session of the Sixty-third Congress. The committee in that session ruled that no new projects would be considered. The same amendment that I shall hereafter offer was presented, and after considerable debate, in which there was from all Members much praise and commendation of the project, it was voted down because it was then considered not to be within a strict construction of the rule regarding new projects.

Even the chairman of the committee, the gentleman from Florida, then said:

I am not going to say anything about the merits of this proposition. We passed upon it last winter, when we were dealing with new projects. When we were preparing the bill of 1914 this matter was presented to us. We went over it and regarded it then as a good project, as one that should receive the favorable consideration of our committee and of the Congress. We passed the 1914 bill with this in it, subject to the conditions imposed.

And again, in reply to the gentleman from New York [Mr. CONRY], who asked:

Does not the gentleman think that under all the circumstances of this case there is an implied obligation on the part of the Government to make this improvement?

The gentleman from Florida said:

I am not sure, but I could answer that either way and tell the truth. It depends altogether on the way a man looks at it, whether he thinks it an obligation or not.

And when the gentleman from Connecticut [Mr. REILLY] said:

The gentleman spoke about a question that he could answer either way. If an authorized agent of the Government, charged with certain work, should recommend that before the Government does this particular work the State of Connecticut shall do a certain thing, and the State of Connecticut goes ahead and does that thing, is there not an implied obligation on the part of the National Government?

To which the gentleman from Florida replied:

I do not go that far with this particular project, though it is commendable in them to undertake that. They have anticipated the action of Congress. They assumed that Congress would act favorably, and I think they were justified in that assumption, for whenever we reach new projects I, for one, shall favor this particular project.

And again, a moment later when he was reminded that the State of Connecticut would lose the interest on $1,000,000, he said:

I do not believe the failure to adopt this project is going to keep the State of Connecticut from doing whatever work it can do there, and I do not think the failure of Congress to adopt the project at this time, provided we do adopt it in the next bill and have a bill at the next session of Congress, is going to delay the State of Connecticut one minute.

This is the next session of Congress; we are about to adopt a bill; this bill contains at least one new project. I have a telegram showing the exact progress of the work to date in New London:

NEW LONDON, CONN., *March 27, 1916.*

Hon. R. P. FREEMAN,
House of Representatives, Washington, D. C.:

Yours received. State pier contract total $1,000,000; nearly $800,000 contracted for and expended to date. Work practically finished except for asphalt floor and superstructure on pier and railroad terminal track layout back of pier. Probable date of completion, early next fall. Thirty-five feet of water on both sides of pier. United States engineers have already recommended 33-foot channel, but Congress has taken no action, although the State has already dredged its part of the 33-foot channel which runs from the pier to the proposed Government channel. This entire State project can not develop its greates value until the Government completes the work as projected.

F. V. CHAPPELL,
Chairman Committee Rivers, Harbors, and Bridges.

At the proper time I shall offer an amendment appropriating $170,000 for New London Harbor. Its adoption will obviate all questions of good faith and implied obligations. Considering the amount required and the commerce affected I believe there is no project in the bill of greate merit, and I trust it will receive the favorable consideration of the committee.

[Mr. HARDY addressed the committee. See Appendix.]

Mr. SPARKMAN. I yield 15 minutes to the gentleman from Missouri [Mr. BORLAND].

Mr. BORLAND. Mr. Chairman, in the few minutes assigned to me I had intended to answer some of the statements and calculations of the gentleman from Wisconsin [Mr. FREAR], who has been the most persistent opponent of river improvement; but I found that his estimates and calculations had been so thoroughly discredited by the questions interjected into his own speech that I concluded that work had been pretty thoroughly done. His estimates of the amount expended upon the Missouri River are so far out of the way that it would not be difficult to disprove them; but it will be more profitable to us, in the few minutes that I have to speak to you, to investigate some of the problems which are now being solved on the Missouri River, and successfully solved, looking to the future of river navigation in this country.

In the first place, I want to say that I believe, from experience, observation, and study, that the solution of river improvement in this country is vital to the commercial development of the whole interior section of our country. We must solve successfully the problem of river improvement in order to put this country upon a basis of natural competition with the great manufacturing and producing countries of the world. [Applause.] If we are to compete with Germany, Belgium, France, England, and the other great producing countries in the world markets, we must have transportation from the producing regions of our country to the seaboard and to the foreign market. [Applause.] That great problem is before us for solution, and no hit or miss, superficial criticism will suppress that problem until it is properly solved.

I wish every Member of this House could get and would have before him House Document 463, just issued by the Public Printer. It is the report of the hearings of the Board of Army Engineers at Kansas City last October upon the Kansas City Missouri River project. It contains all the facts up to date on the subject of successful river navigation. In it you will find pictures of the successful barge fleet on the Missouri River. I want to say to you that that barge fleet is scarcely three years old.

In 1910, when we first got our appropriation for the improvement of the banks of the Missouri River, there was nothing on the Misosuri River available for river transportation, except the old frail Texas deck, inflammable boat of ante bellum days. We put a German technical engineer into the field because we had promised Congress that if it gave use the improvement of the Missouri River we would restore river navigation upon a successful and commercial basis. Mr. Von Pagenhardt reviewed every form of river craft in the country, and he evolved the steel hull barges that are now used on our river. We now have a fleet of 3 towboats and 12 steel-hull barges. These steel-hull barges run from 1,400 tons down to 300 tons. The power boat does not lose any time. It drops the empty barge at the wharf, picks up a loaded barge and goes on down the stream. The gentleman says that prior to 1875 there was navigation on the upper Missouri River. He does not know a thing about river transportation. If he did, he would know that those old boats that ran in those days into a country that had no railroad service charged rates which would pay the cost of a boat in a single season, and the boat often lasted only a single season. The average life of those boats was only three years. Under those conditions you could not transport freight to-day to save your life. I know, because I was born on the Missouri River and saw those boats when I was a boy. You could not run such boats under commercial conditions to-day. Could we use those old boats that the gentleman has in mind, which carried a deckload on a frail and inflammable wooden structure; that had to be loaded and unloaded by hand? Not at all. We must have a modern steel craft and a modern wharf. In this report you will find pictures of the modern wharf at Kansas City, with the electric conveyors by which the goods out of the hull of the steel barge are transferred to the cars. Why, your negro stevedore, whistling and singing at his work, has disappeared with Mark Twain's last account of him. He has gone and is known only to poetry and song.

We have to move freight for 30 cents a ton or less or we can not move it at all. Talk about $1.50 or $2 a day for negro labor, and casual or uncertain at that, is out of the question.

Now, take another question. We have to be able to absorb the switching charges and the marine insurance in order to haul freight on a river. That is not all. After we got the boats the railroads refused to interchange business with us and we had to force them. We came to Congress and got the act of August, 1912, passed amending the interstate-commerce law, which says that if a railroad reduces its charges to meet water competition it can not afterwards raise the charges without showing changes other than water competition. Thus we have taken away from the railroads the greatest weapon they had to drive the boats out of business.

Not only that, but Congress put into the law a provision that the railroads must give through rates and through routes with water carriers. What has been the result? The Missouri River Transportation Co. is the only one that ever made a successful fight under that law. It wanted a share of the business, but the railroads would not interchange business with it because the boats would charge 80 per cent of the route, while the railroads were charging 100 per cent, and the 20 per cent difference between Kansas and St. Louis would have gone into the pockets of the mill owners and the farmers of the West. So the roads resisted the demand of the boat line for through tariff, and we took the case to the Interstate Commerce Commission, and the commission decided that we were entitled to a through rate and through route. Now we are shipping flour, grain, and mill stuff to the seaboard at a saving of 20 per cent on a 400-mile river route. [Applause.] Every dollar of that saved goes into the pockets of the producer of the West.

Here is another point that I want to touch on. Gentlemen talk about freight rates. For the freight rate between Chicago and New York, 812 miles, by rail is 18 cents on wheat. By rail and lake it is 14 cents; by lake and canal 8 cents. Between Minneapolis and Chicago, which is only 420 miles, the rate is 10 cents for wheat. Kansas City to Chicago, 451 miles, the rate is 12 cents for wheat. Now, mark you, they will haul wheat in competition with lake and rail or lake and canal route for 18 cents a hundred 812 miles, while from Newton, Kans., 644 miles to Chicago, they charge 24½ cents for the same wheat. From Smith Center, Kans, 617 miles to Chicago, they charge 25 cents for the same wheat. The rail route is higher between Chicago and New York than the water rate—18 cents by rail, 8½ cents by water; but the rail rate of 18 cents is kept down by the water rate, because they charge 25 cents from Smith Center to Chicago for the same wheat.

Now, gentlemen, it will cost $50,000 a mile to put 400 miles of the Missouri River in perfect condition to carry freight, and if put in that condition it will haul as much as 100 single-track railroads. It will cost to-day $55,000 a mile to build one single-track railroad from Kansas City to St. Louis. It will cost $5,000 a mile more to build one single-track railroad from Kansas City

to St. Louis than it would cost to improve the entire Missouri River.

They say the railroads are in bad shape anyway. The gentleman from Wisconsin [Mr. FREAR] referred to the cost of the waterways improvement in this country. Does he know how much we are paying for the improvement of the railroads? Does he assume that the shipper does not pay the cost of the increased rail facilities? Let him look at the Five Per Cent case that went before the Interstate Commerce Commission, where the railroads got an increase of 5 cents on freight rates. What did they prove in the 5-cent increase case? They proved that the Baltimore & Ohio system cost $129,000 a mile; that the Pennsylvania system cost $113,000 a mile, while this waterway system will cost $50,000 a mile at the highest estimate and have a higher carrying power than any railroad, no matter where it is.

What are these railroads doing? I will tell you. The honest, capable, well-managed railroads in the West are making money, and the looted railroads are showing a loss. Listen to what the Interstate Commerce Commission told me the day before yesterday. The Chicago, Milwaukee & St. Paul, a good railroad, made $12,108,000 in 1915. The Missouri Pacific lost $1,318,000 in the same territory. That is the difference between railroad management, and the public pays the bill of bad railroad management and the looting of railroad companies. The Chicago, Burlington & Quincy, a fine railroad, made $19,000,000; the Atchison, Topeka & Santa Fe cleared $24,000,000; the Chicago, Rock Island & Pacific lost $745,000; the Wabash lost $2,057,000, while the Chicago & Alton went down $1,690,000. Yet the public is asked to pay 5 per cent increase on freight rates in order to pay for that kind of railroad management!

The waterway is a destroyer of monopoly; it is a destroyer of looted railroads. It is the only thing that the public can and will control, and which it can make live up to its promises to the public. Every railroad now is reaching out to seize the terminals. We in Kansas City have seized the water front and built our municipal terminal, and every boat that comes up the Missouri River is free to land at the municipal terminal by obeying the municipal regulations. The whole waterway movement is a destroyer of monopoly.

We have now gotten to the point where we are forcing railroads to meet the cut rate between Kansas City and St. Louis, and they come to you gentlemen and say, "These men have been building up a business there under the sanction of Congress, they have invested money in boat lines, capitalized by the public and the shippers, and now is the time to stop these fellows by throwing a monkey wrench in the machinery, refusing them their appropriations for one year. If we can knock them out for a single year the railroads will get back every shipper that has gone to the boat line in the last five years. Just one year is all we ask you to kill the river and harbor bill for, and by that time we will have the whip cracking over the head of every shipper in the Southwest, and he will come back to the railroads as the only safe way to get his goods to market, and he will know what happens to men who invest their capital in attempting to establish a public enterprise in opposition to the monopolies of this country." You are asked now to kill the river transportation; you are asked to put a penalty upon the men who have invested their money, their time, and capital in building up the interior navigation of the country. You are asked to say that these men shall not have the same opportunities that the railroads have had to build up a paying business. The great trans-Pacific railroads, every railroad in my part of the country, was capitalized and paid for by subsidies and grants from the public, and not one of them paid in the first nine years of its operation, not one.

The CHAIRMAN. The time of the gentleman from Missouri has expired.

Mr. SPARKMAN. Mr. Chairman, I yield 10 minutes to the gentleman from New York [Mr. LONDON].

Mr. HUMPHREY of Washington. Mr. Chairman, does the gentleman desire me to yield him five minutes now?

Mr. LONDON. Yes.

Mr. HUMPHREY of Washington. Very well; I yield five minutes to the gentleman.

The CHAIRMAN. The gentleman from New York is recognized for 15 minutes.

Mr. LONDON. Mr. Chairman, the Commission on Industrial Relations has concluded its labors. This House some time ago adopted a resolution authorizing the publication of 100,000 copies of the report. No provision was made for the publication of the testimony.

There is a universal demand for copies of the report.

Students of society, social workers, editors, men and women interested in the labor problem, are anxious to obtain access to the report and to the testimony in the hope of finding a source of information and suggestions for future constructive action. In spite of it all, there is a sneer in certain quarters when the Commission on Industrial Relations is mentioned.

A studied effort is being made to discredit its work. It is urged that the work of the commission has no value, because the report is not unanimous. That there are, in fact, several reports, and that the lack of agreement among the members of the commission is in itself sufficient to destroy the probative value of its findings as well as the conclusiveness of its recommendations. The report could not have been unanimous, because there is no unanimity, because there can be no harmony in modern society. Naive people perhaps believed that if a group of employers, employees, and professors would get together around a table and "talk it over," the causes of industrial dissatisfaction would be ascertained and that a brotherly way would be found of allaying it. But the actualities of life disappointed these good people. It turned out that not only could not the members of the commission agree on conclusions and recommendations but that each group interpreted the facts that had been presented in accordance with its class bias and class understanding of things. The representatives of capital on the commission could not under any circumstances get themselves to indorse the view that the principal cause of unrest was the fact that the wealth of the Nation had been concentrated into the hands of a small number, and that this was the cause of the restlessness of the many.

It would have been just as reasonable to assume that a commission consisting of a Republican, a Democrat, and a Socialist would agree on a program of political action. These parties represent distinct class or group interests, and the program of each necessarily corresponds with the needs of the group it represents.

One recalls the significant statement made by one of the fathers of this Republic during the Constitutional Convention to the effect that two persons born of different nations but belonging to the same class of society will more easily understand each other than two persons of the same nation but belonging to different classes of society.

It is in the very fact that the report is not unanimous that I find the greatest significance.

The commission came into being as the result of a general demand that the cause of industrial unrest be investigated. For a long time there had been talk that violence was being resorted to in industrial disputes both by labor and capital.

Then came the climax. For many years a bitter struggle had been raging between the National Erectors' Association (employers) and the International Association of Bridge and Structural Iron Workers (employees). The erectors' association was one of the most powerful bodies of employers in the country. The contest assumed a violent character, with its finale in the McNamara case at Los Angeles, at which labor men confessed to having been guilty of a number of acts of violence against property committed in the course of union activity.

A shout went up from the enemies of organized labor all over the country that a change of labor's leadership was imperative; that labor had been proven guilty of violence; that it had been defying all law, and that its activity had been criminal. It looked as if a reign of reaction of which the working people were to be the victims was about to set in.

There were, however, silent forces in American life which made such a result impossible.

The Socialist movement had succeeded in awakening the minds of the thinking men and women of the country to the need of a study of society and of its problems. To the thinker a series of acts of violence committed by a union appeared to be something more than a mere mistake of a union leader. The student of society asked himself the question, "How did it come that a union organized primarily for the improvement of the condition of the workers was compelled to resort to violence? And how did it happen that millions of men, without knowing the merits of the case, took sides and determined in advance of the trial the guilt or the innocence of the accused as their sympathies lay with labor or against labor?"

Immediately after the conviction of these labor leaders a symposium of opinion was gathered in a journal called "The Survey." This question was propounded to the contributors of opinions: "What constructive suggestion can we make now to study or to allay the industrial unrest of which the McNamara case was such a serious manifestation?"

In an opinion which I contributed I said in part:

What a good thing it would be, now that two labor leaders have confessed, for capital to come forward and confess; and how horrifying its confession would be, and how shocking would be the revelation of crimes of omission and commission, of the crushing of the weak and the helpless; of the bribing of voter, legislator, and judge; of the sub-

sidizing of a venal press; of thousands upon thousands crippled, mutilated, and murdered through negligence and indifference, through avarice and greed! But capital will not confess. Capital stands for "law and order."

The American people must awake to the fact that a bitter, merciless class war divides society. It is a war between those who have and those who have not, between property and its interests on one hand and life and its interests on the other. It is a war with all war's fury, with all its injustice, with all its crime-breeding hatreds.

Where are the seers and prophets of America? Where are the teachers and guides? Where are her intellectual and moral forces? Can the contending classes be compelled to adopt civilized methods of warfare?

A petition signed by a number of prominent men and women asking for the appointment of a commission on industrial relations to examine and investigate into the causes of industrial dissatisfaction was presented to the President. We have before us the report of the commission.

Here are some of the essential facts that the commission has disclosed:

In spite of the fact that this country is so young, that its population is 100,000,000, while Europe has 450,000,000, in spite of great strides in the application of science to industry, in spite of the fact that the total wealth of the United States has more than doubled during the last 20 years, that the wealth per capita has tremendously increased, there is in these United States a distressing and almost incomprehensible amount of poverty.

Occupational diseases, low wages, excessive hours of toil, insanitary conditions, improper and adulterated food are sapping the vitality of the industrial workers.

One-fifth of the women workers employed in factories, stores, and laundries earn less than $4 per week and half earn less than $6 per week. At least one-third, and possibly one-half, of the families of wage earners employed in manufacturing and mining earn less than is required for a comfortable or a decent living; that between one-third and one-fourth of the male workers earn less than $10 per week.

In the principal industries the workers are unemployed, on the average, one-fifth of the year.

Only one-third of all children in the United States complete the grammar-school course, and this in a Republic whose very existence depends upon an intelligent electorate.

The personal relation between employer and employee has disappeared. Thus, in transportation, approximately 100 per cent of the wage earners are employed by corporations; in mining, 90 per cent; in manufacturing, 75 per cent. The man, the employer, has ceased to be responsible to his fellow man, the worker.

New and ingenious methods of exploitation, calculated to extract the last ounce of energy from the living machine, were being devised, with total disregard for the permanent well-being of the man. The relationship has become one between the man and the cost sheet. It is the worker, throbbing with life, against the soulless corporation. A man is hired for a week, for a day, for an hour, by the piece, and no one cares what becomes of him when he is separated from his job.

With the increase of a propertyless and incomeless industrial proletariat, there is an alarming increase of the number of farmless farmers. Out of every 100 farms in the United States 37 per cent are operated by tenants. Here is what the commission has to say about the tenant farmers in one of our largest States:

Badly housed, ill nourished, uneducated, and hopeless, these tenants continue year after year to eke out a bare living, moving frequently from one farm to another in the hope that something will turn up.

The tenant farmer in the Southwest is not much better off. This is how his condition is described by Basil M. Manly, who wrote the main report of the commission:

The prevailing system of tenancy in the Southwest is share tenancy, under which the tenant furnishes his own seeds, tools, and teams, and pays to the landlord one-third of the grain and one-fourth of the cotton. There is, however, a constant tendency to increase the landlord's share through the payment either of cash bonuses or of a higher percentage of the product. Under this system tenants as a class earn only a bare living through the work of themselves and of their entire families.

Few of the tenants ever succeed in laying by a surplus. On the contrary, their experiences are so discouraging that they seldom remain on the same farm for more than a year, and they move from one farm to the next in the constant hope of being able to better their condition. Without the labor of the entire family the tenant farmer is helpless. As a result not only his wife is prematurely broken down, but the children remain uneducated and without the hope of any condition better than that of their parents. The tenants having no interest in the results beyond the crops of a single year, the soil is being rapidly exhausted, and the conditions therefore tend to become steadily worse. Even at present a very large proportion of the tenants' families are insufficiently clothed, badly housed, and underfed. Practically all of the white tenants are native born. As a result of these conditions, however, they are deteriorating rapidly, each generation being less efficient and more hopeless than the one preceding.

As to the agricultural laborer, his state approaches that of a slave.

Absentee landlordism is on the increase.

More than four-fifths of the large land holdings are being kept out of use; land unoccupied and held for speculative purposes is being withheld from men who could earn their livelihood as freemen by tilling the soil.

A financial and industrial oligarchy wields a power of which no potentate has ever dared dream. Two per cent of the people own 60 per cent of the wealth of the nation and 65 per cent of the people own only 5 per cent of the Nation's wealth; 6 financial groups employ 28 per cent of all industrial workers. It is within the power of the few to give or refuse the means of life to the many.

The commission registers a growing distrust for the law among the masses. It shows how laws for the elimination of child labor, for the protection of women against exploitation, for the compensation of workers injured in industrial accidents, for the promotion of safety in factory and mine, for the emancipation of the seaman, were fought at every step by capital and its minions in the legislatures and in the courts, and that—

after wholesome and necessary laws are passed they are in large part nullified by the courts, either upon technicalities of a character which would not be held to invalidate legislation favorable to the interests of manufacturers, merchants, bankers, and other property owners, or thrown out on the broad ground of unconstitutionality, through strained or illogical construction of constitutional provisions.

That the supposed guaranties by the Constitution of the rights of citizens to trial by jury, security from unwarranted arrest, freedom of speech, free assembly, writ of habeas corpus, the bearing of arms, and similar elementary rights were found to be of no avail in many jurisdictions when invoked by labor.

It may be worth while to give an extract from the testimony of Prof. Henry R. Seager, of Columbia University, on the attitude of the courts toward the workers:

I don't see how any fair-minded person can question but what our judges have shown a decided bias in favor of the employers. I would not be inclined to ascribe this so much to a class bias, although I think this is a factor, as to the antecedent training of judges. Under our legal system the principal task of the lawyer is to protect property rights, and the property rights have come to be concentrated more and more into the hands of corporations, so that the successful lawyer today, in the great majority of cases, is the corporation lawyer. His business is to protect the rights of employers and corporations. It is from the ranks of successful lawyers, for the most part, that our judges are selected, and from that results inevitably a certain angle on the part of a majority of our judges.

Not only has the growing power of corporate capital exercised a baneful influence upon the course of legislation, but by assuming the right to maintain private guards, private police, and private arsenals capital has usurped a power which belongs to the State, to the people in their collective capacity. Strike-breaking agencies, consisting of the very scum of the earth, are being clothed with authority of the law, and in many an industrial dispute have gangs of hoodlums in the pay of capital, fortified by a sheriff's badge or turned into improvised militiamen, stained the sacred flag of the Republic with the blood of helpless strikers. Each such corporation is a little feudal state in itself.

The story of the Colorado strike reads like a story of the days of piracy, except that the industrial pirate lacks the charm of chivalry and bravery which surrounded the pirate of old.

Organized capital has diffused its poison in the realm of thought. Not satisfied with the possession of the lion's share of the Nation's wealth, it has made a bold attempt to control the very world of ideas. Under the guise of promoting science capital has been endowing colleges and universities and has been establishing funds for pensioning professors. One can not expect to find independent thought in a dependent professor.

By generous contributions to private charity the princes of the purse are teaching the people to look to them for relief when the hour of need comes, and under present conditions it comes often. In the words of the commission:

The domination of the men in whose hands the final control of a large part of American industry rests is not limited to their employees, but is being rapidly extended to control the education and "social service" of the Nation.

These are some of the findings of the commission. No wonder there is hesitancy in some quarters to spread these findings before the people. No wonder there is anxiety to discredit in advance the work of the commission. It has established the truth of the prohpecy made by James Madison during the Constitutional Convention of 1787 that—

In future times a great majority of the people will be not only without landed but any other sort of property.

I shall not undertake at this time to discuss the recommendations of the commission and of its members.

The commission has proven the contention of the Socialist that political democracy and industrial absolutism can not go hand in hand.

Our progress lies in the direction of extending the principles of democracy to industry.

The report as well as the testimony should be made accessible to the great masses.

Let the American people know the facts.

Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN (Mr. PARK). The gentleman from New York asks unanimous consent to extend his remarks in the RECORD. Is there objection? [After a pause.] The Chair hears none.

Mr. COOPER of Wisconsin. Will the gentleman permit an interruption?

Mr. LONDON. Yes.

Mr. COOPER of Wisconsin. To leave the gentleman's speech as he has just left it, would convey the impression to the reader that the House had not approved the resolution providing for the printing of the report. The House has passed it.

Mr. LONDON. You provided for a limited number of copies.

Mr. COOPER of Wisconsin. It is held up in the Senate.

Mr. LONDON. One hundred thousand copies will not, by any means, be sufficient. I myself have received requests for almost a thousand copies. It is perhaps true that the most intelligent people write to me.

Mr. COOPER of Wisconsin. But 100,000 copies is better than none.

Mr. LONDON. Yes.

Mr. COOPER of Wisconsin. But the impression would have been, if the gentleman had not changed it, that he wanted the House to hurry up with its distribution of this report, as if the House had been careless in the premises.

Mr. LONDON. The House passed a resolution for the printing of 100,000 copies.

Mr. COOPER of Wisconsin. And you want a much larger number.

Mr. BORLAND. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN (Mr. HARRISON). Is there objection? [After a pause.] The Chair hears none.

Mr. SPARKMAN. Mr. Chairman, I yield to the gentleman from Georgia [Mr. CRISP].

Mr. CRISP. Mr. Chairman, I desire to ask leave to extend my remarks by having printed in the RECORD some resolutions adopted by a patriotic society in my home city, urging preparedness.

The CHAIRMAN. The gentleman from Georgia asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. SPARKMAN. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the Chair, Mr. HARRISON, Chairman of the Committee of the Whole House on the state of the Union, reported that the committee had had under consideration the bill H. R. 12193, the river and harbor appropriation bill, and had come to no resolution thereon.

Mr. SPARKMAN. Mr. Speaker, is it understood that when the House adjourns to-day it adjourns to meet to-morrow at 11 o'clock a. m.?

The SPEAKER. That was agreed to this morning.

JOINT RESOLUTION AND ENROLLED BILLS PRESENTED TO THE PRESIDENT FOR HIS APPROVAL.

Mr. LAZARO, from the Committee on Enrolled Bills, reported that this day they had presented to the President of the United States for his approval the following joint resolution and bills:

H. J. Res. 68. Joint resolution to cede to the State of Maryland temporary jurisdiction over certain lands in the Fort McHenry Military Reservation;

H. R. 10037. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent children of soldiers and sailors of said war; and

H. R. 11078. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent children of soldiers and sailors of said war.

ADJOURNMENT.

Mr. KITCHIN. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 43 minutes p. m.) the House, under its previous order, adjourned until to-morrow, Saturday, April 1, 1916, at 11 o'clock a. m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the Acting Secretary of the Treasury, submitting a clause of legislation heretofore suggested, extending the limitations as to the number of delivered sheets of customs stamps and of checks, drafts, and miscellaneous work to be executed by the Bureau of Engraving and Printing, and urging immediate action by Congress (H. Doc. No. 969); to the Committee on Appropriations and ordered to be printed.

2. A letter from the Secretary of War, transmitting with a letter from the Chief of Engineers, reports on preliminary examination and survey of Housatonic River, Conn. (H. Doc. No. 970); to the Committee on Rivers and Harbors and ordered to be printed, with illustrations.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. McCRACKEN, from the Committee on Irrigation of Arid Lands, to which was referred the bill (H. R. 12365) to promote the reclamation of arid lands, reported the same with amendments, accompanied by a report (No. 458), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. NORTON, from the Committee on Indian Affairs, to which was referred the bill (H. R. 11720) to provide for per capita payments to be made to Indians of the Fort Berthold Reservation, N. Dak., reported the same without amendment, accompanied by a report (No. 459), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, committees were discharged from the consideration of the following bills, which were referred as follows:

A bill (H. R. 8263) granting a pension to Francis A. Grennen; Committee on Invalid Pensions discharged, and referred to Committee on Pensions.

A bill (H. R. 13953) to pension soldiers' widows who were married after 1890 act was passed; Committee on Pensions discharged, and referred to Committee on Invalid Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. HAYDEN: A bill (H. R. 14029) to provide for the establishment of bonded warehouses where imported grains and seeds may be stored and cleaned for exportation; to the Committee on Ways and Means.

By Mr. GALLIVAN: A bill (H. R. 14030) to erect a monument at Gainesville, Tex.; to the Committee on the Library.

By Mr. RAKER: A bill (H. R. 14031) to amend the act entitled "An act to prohibit the importation and use of opium for other than medicinal purposes," approved February 9, 1909, as amended by an act approved January 17, 1914; to the Committee on Ways and Means.

By Mr. BURGESS: A bill (H. R. 14032) to provide for the erection of a public building in the city of Alvin, Tex.; to the Committee on Public Buildings and Grounds.

By Mr. CARTER of Massachusetts: Memorial of the Massachusetts Legislature, favoring action by Congress toward securing the moral support of the United States for the oppressed Jews in Europe; to the Committee on Foreign Affairs.

Also, memorial by the Massachusetts Legislature, relative to the conditions of destitution in Poland and to the entry of food therein; to the Committee on Foreign Affairs.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills were introduced and severally referred as follows:

By Mr. ADAIR: A bill (H. R. 14033) granting an increase of pension to John H. Lewis; to the Committee on Invalid Pensions.

By Mr. ASHBROOK: A bill (H. R. 14034) granting a pension to Lodemia Eduards; to the Committee on Invalid Pensions.

By Mr. CLARK of Missouri: A bill (H. R. 14035) granting a pension to Jackson St. John; to the Committee on Pensions.

By Mr. DOWELL: A bill (H. R. 14036) granting an increase of pension to Oscar W. Lowery; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14037) granting an increase of pension to James W. Pace; to the Committee on Invalid Pensions.

By Mr. FESS: A bill (H. R. 14038) granting an increase of pension to Joseph W. Smith; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14039) granting an increase of pension to John G. Dalie; to the Committee on Invalid Pensions.

By Mr. FITZGERALD: A bill (H. R. 14040) for the relief of Henry Metz; to the Committee on Military Affairs.

By Mr. HASKELL: A bill (H. R. 14041) granting an increase of pension to Edward Dubey; to the Committee on Invalid Pensions.

By Mr. HAYES: A bill (H. R. 14042) for the relief of Joel Henry Mansfield; to the Committee on Naval Affairs.

By Mr. IGOE: A bill (H. R. 14043) granting a pension to Julia M. Anderson and minor child, Wilbert T. Anderson; to the Committee on Pensions.

By Mr. KAHN: A bill (H. R. 14044) granting a pension to David Mann; to the Committee on Pensions.

Also, a bill (H. R. 14045) granting an increase of pension to Louis Gottlieb; to the Committee on Pensions.

Also, a bill (H. R. 14046) for the relief of Mrs. Francesca G. Montell; to the Committee on Claims.

By Mr. KEY of Ohio: A bill (H. R. 14047) granting an increase of pension to Jacob H. Wolf; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14048) granting an increase of pension to George Lloyd; to the Committee on Invalid Pensions.

By Mr. LAFEAN: A bill (H. R. 14049) granting an increase of pension to Henry Schaeffer; to the Committee on Invalid Pensions.

By Mr. LENROOT: A bill (H. R. 14050) for the relief of Philip S. Everest; to the Committee on Claims.

By Mr. LESHER: A bill (H. R. 14051) granting a pension to John M. Koons; to the Committee on Pensions.

By Mr. LITTLEPAGE: A bill (H. R. 14052) to reimburse Tennie A. Anderson, postmaster at Maplewood, Fayette County, W. Va., for money, money orders, and postage stamps stolen; to the Committee on Claims.

By Mr. LONGWORTH: A bill (H. R. 14053) granting a pension to Omar Boggs; to the Committee on Invalid Pensions.

By Mr. MATTHEWS: A bill (H. R. 14054) granting an increase of pension to Spencer H. Lighthill; to the Committee on Invalid Pensions.

By Mr. O'SHAUNESSY: A bill (H. R. 14055) granting an increase of pension to Sarah E. McCann; to the Committee on Invalid Pensions.

By Mr. PADGETT: A bill (H. R. 14056) granting an increase of pension to Julia E. Jones; to the Committee on Pensions.

By Mr. PARK: A bill (H. R. 14057) granting a pension to Daniel H. Gerald; to the Committee on Pensions.

By Mr. RAKER: A bill (H. R. 14058) granting a pension to Mary A. Blair; to the Committee on Invalid Pensions.

By Mr. RUSSELL of Missouri: A bill (H. R. 14059) granting an increase of pension to Sarah J. Clary; to the Committee on Invalid Pensions.

By Mr. SCHALL: A bill (H. R. 14060) granting an increase of pension to Edward F. Ziebarth; to the Committee on Invalid Pensions.

By Mr. THOMAS: A bill (H. R. 14061) granting an increase of pension to James W. Barton; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14062) granting an increase of pension to Thomas H. Boyd; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. ASHBROOK: Memorial of Woman's Relief Corps, of London, Uhrichsville, Yellow Springs, and Chagrin Falls, all in the State of Ohio, favoring House bill 11707, the widows' pension bill; to the Committee on Invalid Pensions.

Also, memorial of Radnor (Ohio) Grange, No. 1917, against the proposal to revolutionize our present mail service; to the Committee on the Post Office and Post Roads.

Also, petition of G. W. James and 6 others, of Mount Vernon, Ohio, against House bill 652, Sunday-observance bill for the District of Columbia; to the Committee on the District of Columbia.

Also, memorial of Hebron (Ohio) Grange, No. 2038, against Madden rider to Post Office appropriation bill; to the Committee on the Post Office and Post Roads.

By Mr. BAILEY: Petitions of sundry citizens and church organizations of the State of Pennsylvania, favoring national prohibition; to the Committee on the Judiciary.

Also petition of Millard Closson, C. L. Wright, Clarence May, J. F. Mugridge, George E. Burkitt, William T. Hale, J. B. Custer, Joseph Stroud, C. B. Gilpatrick, Charles R. Clark, Joseph Childers, Oliver Makin, John Chappell, George W. Mullen, Albert N. Fink, Cloyd Gochnour, Cyrus Ling, Edwin Walls, John Closson, C. H. Bottischer, Ray Miller, Foster Custer, Albert Fry, Howard C. Fry, and Albert N. Fink, all of South Fork, Pa., against bills denying the use of the mails to certain publications; to the Committee on the Post Office and Post Roads.

By Mr. DALE of New York: Petition of H. M. Bickford Co., of New York, relative to appropriation for construction of Norfolk-Beaufort Inlet waterway; to the Committee on Rivers and Harbors.

By Mr. DENISON: Petition of First Baptist Church, of Sisser, Ill., for national woman's suffrage; to the Committee on the Judiciary.

Also, petition of First Baptist Church of Sesser, Ill., against laws abridging free speech and free press; to the Committee on the Post Office and Post Roads.

Also, petition of First Baptist Church of Sesser, Ill., favoring Burnett immigration bill; to the Committee on Immigration and Naturalization.

Also, petition of First Baptist Church of Sesser, Ill., favoring national prohibition; to the Committee on the Judiciary.

By Mr. DILLON: Petitions of sundry citizens of Mitchell, S. Dak, favoring resolution for investigation of dairy products; to the Committee on Rules.

By Mr. ELSTON: Petition of E. R. Oti and other citizens of Alameda County, Cal., protesting against the passage of House bills 491 and 6468; to the Committee on the Post Office and Post Roads.

Also, petition of L. H. Anderson and other citizens of Alameda County, Cal., protesting against the passage of House bill 652; to the Committee on the District of Columbia.

Also, petition of Karl W. Adler and 70 other citizens of Oakland, Cal., for passage of the Emerson resolution; to the Committee on Foreign Affairs.

By Mr. FESS: Petition of members of the Lewis Relief Corps, of Xenia, Ohio, asking Congress to pass the Ashbrook bill; to the Committee on Invalid Pensions.

By Mr. FITZGERALD: Memorial of board of directors of the Knights of Columbus Institute, stating that they join with the Sons of the American Revolution and other patriotic bodies to show their belief in preparedness by displaying the American flag on April 19, 1916; to the Committee on Military Affairs.

By Mr. FULLER: Petition of Uriah Painter and 56 other Civil War veterans, favoring additional pensions for ex-soldiers of the Civil War who were prisoners of war; to the Committee on Invalid Pensions.

By Mr. GALLIVAN: Memorial of Eastern States Industrial and Agricultural Exposition, relative to appropriation for boys and girls' exhibit in National Dairy Show exhibit; to the Committee on Agriculture.

By Mr. GUERNSEY: Petition of sundry citizens of Amity and Cary, Me., favoring national prohibition; to the Committee on the Judiciary.

By Mr. HAMILTON of Michigan: Petitions of residents of Benton Harbor, Decatur, Wayland, Cass County, and Three Rivers, all in the State of Michigan, favoring the Susan B. Anthony amendment; to the Committee on the Judiciary.

By Mr. HOLLINGSWORTH: Memorial of Henry S. Wells and 58 ex-Union soldiers who were prisoners of war, asking for pension for time held as prisoners, at rate of $2 per day; to the Committee on Invalid Pensions.

By Mr. HOPWOOD: Petitions of sundry citizens and church organizations of Pennsylvania, favoring national prohibition; to the Committee on the Judiciary.

By Mr. KAHN: Papers to accompany House bill 14045, for relief of Louis Gottlieb; to the Committee on Pensions.

Also, papers to accompany House bill 7160, for relief of John Blueford; to the Committee on Pensions.

Also, papers to accompany House bill 13498, for relief of Susan E. Cline; to the Committee on Pensions.

By Mr. KELLEY: Memorial of 50 citizens of Cohoctah and 53 citizens of Pontiac, Birmingham, and Royal Oak, all in the State of Michigan, favoring Susan B. Anthony amendment to the Constitution; to the Committee on the Judiciary.

Also, petition of 14 citizens of Leslie, Mich., against passage of bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

By Mr. KENNEDY of Rhode Island: Petition of Dr. Arthur T. Jones, of Providence, R. I., favoring preserving and strengthening the Medical Reserve Corps of the United States Army; to the Committee on Military Affairs.

By Mr. LESHER: Petitions of Woman's Christian Temperance Union of 277 people of Berwick; Woman's Christian Temperance Union of 506 people of Orangeville; Lutheran Sunday School of 956 people of Milton; 100 people of Milton; United Brethren Church of Milton; Methodist Episcopal Church of Milton; 60 men of Milton; Woman's Christian Temperance Union of 245 people of Milton; 504 people of Milton; and Methodist Episcopal Church of 500 people of Milton, all in the State of Pennsylvania, favoring national prohibition; to the Committee on the Judiciary.

By Mr. LEWIS: Memorial of 457 members of labor unions and citizens of Rio Grande, P. R., asking for an investigation of conditions of the island; to the Committee on the Territories.

By Mr. LOUD: Petition of S. M. Pourie, secretary, Bangor Grange, No. 1089, Bay City, Mich., opposing the Madden rider in the Post Office appropriation bill; to the Committee on the Post Office and Post Roads.

By Mr. McKINLEY: Petitions of sundry business men of the State of Illinois, favoring tax on mail-order houses; to the Committee on Ways and Means.

By Mr. MAPES: Petitions of citizens of Grandville, Holland, Cedar Springs, and Sparta, Mich., favoring passage of the Susan B. Anthony amendment, enfranchising the women of the United States; to the Committee on the Judiciary.

By Mr. MORGAN of Oklahoma: Petition from the First Baptist Church Sunday School, Cherokee, Okla., asking for the speedy passage of the Webb-Smith national prohibition resolution, House joint resolutions 84 and 85; to the Committee on the Judiciary.

Also, petition from the Sunday School of the Methodist Episcopal Church, Byron, Alfalfa County, Okla., earnestly petitioning for the speedy passage of the Webb-Smith national prohibition resolution, House joint resolutions 84 and 85; to the Committee on the Judiciary.

Also, petition signed by 13 citizens of Cherokee, Okla., asking for the speedy passage of the Webb-Smith national prohibition resolution, House joint resolutions 84 and 85; to the Committee on the Judiciary.

By Mr. PRATT: Petition of Julian A. Morris, Edward H. Perkins, and 29 other citizens of Wayland, N. Y., favoring national prohibition; to the Committee on the Judiciary.

By Mr. RAKER: Petitions of 8 firms of Orland and Red Bluff; 12 firms of Yreka; 13 firms of Redding; 3 merchants of Plymouth; 9 firms of Dunsmuir; 10 firms of Corning; Campini & Garibaldi, of Drytown; 12 firms of Grass Valley; 4 firms of Amador City; 12 firms of Nevada City; 12 firms of East Auburn; 8 firms of Lincoln; 6 firms of Sisson; 4 firms of Weed; and 11 firms of Red Bluff, all in the State of California, favoring House bills 270 and 712; to the Committee on Ways and Means.

By Mr. ROGERS: Petition of citizens of Lowell, Mass., opposing House bills 491 and 6468; to the Committee on the Post Office and Post Roads.

By Mr. ROWE: Petition of the United States Steel Corporation of New York, against House bill 9411, the tag bill, relative to number painted on motor boats; to the Committee on the Merchant Marine and Fisheries.

Also, petitions of Real Estate Board of New York and New York Building Managers' Association, favoring appointment of commission to make investigation of the coal situation; to the Committee on Rules.

Also, memorial of the Chamber of Commerce of the State of New York, relative to national defense; to the Committee on Military Affairs.

Also, petition of Abraham Goldfaden Lodge, No. 505, I. O. B. A., against passage of the Burnett immigration bill; to the Committee on Immigration and Naturalization.

Also, petition of the General Federation of Women's Clubs, favoring House bill 8668, to establish a national park service; to the Committee on the Public Lands.

By Mr. SHOUSE: Petition of sundry citizens of Larned, Kans., protesting against passage of House bills 6468 and 491 and similar legislation; to the Committee on the Post Office and Post Roads.

By Mr. STINESS: Papers to accompany House bill 13964, granting an increase of pension to Emeline L. Bennett; to the Committee on Invalid Pensions.

Also, petition of Master Printers' Association of Rhode Island, favoring House bill 11621, providing for mailing of catalogues, circulars, etc., at the pound rate of 8 cents; to the Committee on the Post Office and Post Roads.

Also, petition of Providence Branch, No. 35, National Association of Bureau of Animal Industry Employees, favoring the Lobeck bill for the classification of the employees of the Bureau of Animal Industry; to the Committee on Agriculture.

Also, petition of William B. Kimball and others, of Providence, R. I., protesting against House bills 491 and 6468, to amend the postal laws; to the Committee on the Post Office and Post Roads.

Also, petition of Dr. Arthur T. Jones, of Providence, R. I., advocating the strengthening of the Medical Reserve Corps of the Army; to the Committee on Military Affairs.

Also, petition of Rhode Island Equal Suffrage Association, favoring Susan B. Anthony Federal amendment for woman suffrage; to the Committee on the Judiciary.

Also, petition of Brown Bros. Co., of Providence, R. I., against the passage of Senate bill 3598; to the Committee on Military Affairs.

By Mr. SUTHERLAND: Memorial of 500 citizens of Clarksburg, W. Va., favoring Federal motion picture commission for censorship of motion-picture films; to the Committee on Education.

By Mr. TILSON: Petition of Pastors' Union of New Haven, Conn., urging Congress to prohibit sale of liquor in the District of Columbia; to the Committee on the District of Columbia.

Also, petition of Pastors' Union of New Haven, Conn., urging Congress to establish a Federal motion picture commission; to the Committee on Education.

By Mr. WARD: Petition signed by Mrs. Alice E. Stevens, Tillson; Mrs. Helen A. Palmer, Gardiner, James B. Palmer, Plattekill; Elliot F. Soule, jr., Plattekill; J. E. Jenkins, Plattekill; and Joseph Millett, Tillson, all in the State of New York, representing the several churches, in reference to national constitutional prohibition amendment; to the Committee on the Judiciary.

SENATE.

SATURDAY, *April 1, 1916.*

(Legislative day of Thursday, March 30, 1916.)

The Senate reassembled at 12 o'clock meridian, on the expiration of the recess.

DEATH OF SENATOR SHIVELY.

The VICE PRESIDENT. The Chair lays before the Senate a note of thanks from Mrs. Shively addressed to the Senate of the United States, which will be read.

The Secretary read the note, as follows:

To the Senate of the United States:

Mrs. Shively and the members of her family desire to express their deep appreciation of your sympathy and extend to you their most grateful thanks for a beautiful floral wreath.

PUBLIC BUILDING AT PARIS, TEX.

Mr. CULBERSON. Mr. President, I ask unanimous consent to report back from the Committee on Public Buildings and Grounds, favorably with amendments, the bill (S. 5270) for a public building or buildings at Paris, Tex., and I submit a report (No. 321) thereon. I desire its present consideration.

Mr. CHAMBERLAIN. If it does not lead to any discussion, I shall not make any objection.

The VICE PRESIDENT. Is there objection to the present consideration of the bill?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The bill was reported from the Committee on Public Buildings and Grounds with amendments, in line 4, to strike out the words "appropriated, out of any money in the Treasury not otherwise appropriated" and to insert "authorized to be expended by the Secretary of the Treasury," in line 6 to strike out the words "or buildings," and in line 8, after "Paris," to insert "Texas," so as to make the bill read:

Be it enacted, etc., That the sum of $200,000, or so much thereof as may be necessary, be, and the same is hereby, authorized to be expended by the Secretary of the Treasury, for the purpose of supplying the necessary building for the Federal court, post office, and other Government offices at Paris, Tex.

The amendments were agreed to.

The bill was reported to the Senate as amended, and the amendments were concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

On motion of Mr. CULBERSON, the title was amended so as to read: "A bill for a public building at Paris, Tex."

RECLAMATION PROJECTS.

Mr. WORKS. Will the Senator from Oregon yield to me just a moment to offer a resolution of inquiry?

Mr. CHAMBERLAIN. I have no objection if it does not lead to discussion.

Mr. WORKS submitted the following resolution (S. Res. 157), which was read, considered by unanimous consent, and agreed to:

Resolved, That the Secretary of the Interior is directed to furnish the Senate with the following information:

First. The number of reclamation projects completed and under way, giving the name and the location of each of them.

Second. The number of acres being irrigated by each, and separately, the number of acres susceptible of irrigation from the system.

Third. How much of the land that is, or may be irrigated from each of the projects, is public lands and how much held in private ownership.

Fourth. The total number of acres of private lands now being irrigated by each of the projects, and how much of such lands is susceptible of irrigation by each.

NATIONAL DEFENSE.

Mr. CHAMBERLAIN. I ask to have the unfinished business laid before the Senate.

The VICE PRESIDENT. It is before the Senate now.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States.

Mr. POMERENE. Mr. President, I desire to speak briefly this morning to the amendment proposed by the Senator from Iowa [Mr. CUMMINS]. On the same day that he gave notice he would offer this amendment I also gave notice that I would offer the amendment, and later I learned that the junior Senator from New York [Mr. WADSWORTH], who likewise had been interested in the subject, had presented substantially the same amendment.

I recognize the fact that there has been a good deal of very learned discussion as to how far the Government may federalize the National Guard. I do not intend to go fully into that question this morning, but suffice it to say that, so far as the pending amendment is concerned, it is not, in my judgment, relevant. Under the Constitution Congress is given this power, among others:

To provide for organizing, arming, and disciplining the militia, and for governing such part of them as may be employed in the service of the United States, reserving to the States, respectively, the appointment of the officers and the authority of training the militia according to the discipline prescribed by Congress.

Of course no question can arise after the National Guard has been mustered into the Federal service as to the authority of the Commander in Chief over the National Guard. If the service of the National Guard is desired, and if there be any question as to the authority of the Federal Government to take over the National Guard under the present law, there is no doubt in my mind, first, that the National Guard would have the right to volunteer their services just as they did during the Spanish-American War, and, secondly, if they did not desire to volunteer their services, there is, in my judgment, no question about the authority of Congress to provide for the drafting of the National Guard into that service.

The Senator from Connecticut [Mr. BRANDEGEE] on yesterday introduced into the RECORD several very learned articles by the former Secretary of War, Mr. Stimson.

Mr. CLAPP. Will the Senator pardon an interruption?

Mr. POMERENE. Certainly.

Mr. CLAPP. Does the Senator mean by his expression "drafting the National Guard" that they could be drafted otherwise than as a part of the citizenship of the country subject to draft?

Mr. POMERENE. Oh, no; I do not.

Mr. CLAPP. I supposed not, but I thought the Senator expressed a little doubt.

Mr. POMERENE. I simply mean that Congress could adopt regulations by the terms of which the National Guard could be drafted into the service of the Federal Union.

Mr. CLAPP. Simply because they would be subject to the draft, like everybody else.

Mr. POMERENE. Most assuredly.

Mr. Stimson refers in a very learned way to the difficulties which arose between the militia and the Federal Government during the War of 1812. In brief, the authorities in Massachusetts and Connecticut insisted that the Federal Government did not have the power to call them; that they were subject more immediately to the control of the States than to the Federal Government, and the Supreme Court of Massachusetts sustained that contention. But later on the Supreme Court of the United States, according to the article written by Mr. Stimson, overruled—and, I think, rightly—the position taken by the Supreme Court of the State of Massachusetts.

I think we can agree in this proposition, that while the Federal Government is given the power to organize, arm, and discipline the National Guard, if the Federal Government should refuse to exercise that power the State could exercise it or the State and the Federal authorities could exercise this power concurrently. But in the event that there should be any conflict as between the two authorities, then it must follow that the Federal authorities would have supremacy.

Mr. CUMMINS. Mr. President——

The VICE PRESIDENT. Does the Senator from Ohio yield to the Senator from Iowa?

Mr. POMERENE. I yield.

Mr. CUMMINS. I think the Senator from Ohio must have misunderstood the question propounded by the Senator from Minnesota. I desire to call the attention of the Senator from Ohio to the House provision with regard to the authority of the President to draft the National Guard in time of war. It is in section 77. The House provision is:

SEC. 77. That when Congress shall have authorized the use of the armed land forces of the United States in the emergency of actual or imminent war, requiring the use of troops in excess of those of the Regular Army, the President may, under such regulations as he shall prescribe, draft into the military service of the United States, to serve therein for the period of the war unless sooner discharged, any or all members of the National Guard.

I think it probable that the Senator from Ohio did not intend to say that the House provision in that respect is not valid or not constitutional.

Mr. POMERENE. I did not have in mind the House provision at all. I was simply discussing the general proposition, and I simply wanted to make myself clear as saying that the Federal Government would have the right to draft the National Guard just the same as it would the individual citizen. I do not intend to say, however, that it may not go further, and I do not intend this morning to discuss that question.

Mr. CUMMINS. I did not want any misunderstanding to arise. I express no opinion about it myself, but the House bill has definitely provided that the National Guard can in the event of war be drafted as such.

Mr. CLAPP. The Senator from Ohio and myself understood one another. He used the expression "draft the National Guard" and I supposed he meant that the members of the National Guard, as he was discussing the subject, would be subject to draft like any other citizen.

Mr. POMERENE. Most assuredly; the members of the National Guard are citizens of the State and citizens of the United States, and the mere fact that they may be members of the National Guard of a State does not deprive them of their character as citizens of the Federal Government and therefore subject to the rules and regulations which may be prescribed by the Federal Government.

Mr. BRANDEGEE. Mr. President——

The VICE PRESIDENT. Does the Senator from Ohio yield to the Senator from Connecticut?

Mr. POMERENE. I yield.

Mr. BRANDEGEE. Let me ask the Senator from Iowa, if I may, did I understand him to claim that the President could draft into the service of the United States the National Guard organizations as such?

Mr. CUMMINS. I said that the House bill so provides, but I did not express an opinion with regard either to the wisdom or the legality of the provision.

Mr. BRANDEGEE. If the Senator will pardon me, I do not read the House bill as he does. As I read the language which he himself read a minute ago in section 77, page 97, it provides that "the President may, under such regulations as he shall prescribe, draft into the military service of the United States, to serve therein for the period of the war unless sooner discharged, any or all members of the National Guard," but not the National Guard organization as such.

Mr. CUMMINS. I read it precisely as the Senator has now read it.

Mr. BRANDEGEE. I say the Senator did read it that way, and reading it that way I do not see how he finds authority there to draft the organizations entire as organizations as such but only the members of the organizations.

Mr. CUMMINS. What I said was that the House bill provided that the National Guard could be segregated from other citizens of the country and be subjected to a draft in time of war, because they are or would be members of the National Guard, and I so understand the House provision.

Mr. BRANDEGEE. Whether that is a segregation of the members of the National Guard from the other individuals of the country who are liable to do military service and be drafted therefor is a different proposition.

Mr. POMERENE. Mr. President, the matter which is now being discussed by Senators does not affect the important question which I have in mind and that is the wisdom or the unwisdom of the amendment which has been offered by the Senator from Iowa.

I take it that whatever system may be devised by the Federal Congress it is in part going to be composed of the National Guard, and that being so, necessarily the question arises as to how we should treat the National Guard. The militia existed in this country long before the Federal Army existed. The militia had done service, and valiant service. We have had them in time of peace and in time of war.

I recognize the fact that many who seem to think that we should have one centralized Federal Army are disposed to criticize, and criticize severely, the National Guard; but I dare say that if we were to look with a critical eye into the history of the military power of this country, for every criticism that can be advanced against the National Guard an equal criticism can be made against the manner in which the Regular Army itself has been organized and controlled.

It is not necessary to take the time of the Senate to refer to the splendid service which was rendered by the militia in many of the battles during the Revolutionary War. I grant you there have been mistakes made by it; but if we are to speak of mistakes we can not lose sight of the fact that during the Spanish-American War the Regular Army of this country was not itself perfect. For every mistake that was made by the militia which was mustered into the service during that war, a like mistake can be found to have been made on the part of those who had control of the Regular Army.

Under the provisions of this bill we have the Regular Army, the Volunteer Army, so-called, and the militia. No one differs, I take it, in the thought that the militia is to form a goodly part of whatever force we may have after this legislation has been completed. That being so, it seems to me that the one matter which should be given very careful consideration by the Senate and the House of Representatives is, How shall we treat the militia?

Reference was made yesterday to the incompetence of the militia as it existed in the early history of the country; some reference was made to it as it has existed since the civil war; but I want to remind those who are criticizing the militia of the country that, if there is any fault in the regulations which have controlled them in their organization, in their discipline, the fault does not lie any more at the door of the militia or the National Guard than it lies at the door of the War Department of this country, or at the very doors of Congress itself.

It is said the militia were not properly organized; that they were not properly disciplined. Well, what of it? Congress has the power to regulate the organization and the discipline; and it does that through the administrative power of the War Department itself. So, if they have not been properly disciplined, it is not because the Congress did not have the power to regulate it, for the Constitution itself provides that the Congress has the authority to organize, to arm, and to discipline the militia.

I take it that, if the militia in past years have not measured up to the proper standard, we can go a little further and inquire why. What encouragement has the Congress given to the militia? What attention has been paid to the militia by the War Department of this country? I assert that if no more attention had been paid to the Army itself by the Congress and by the War Department, if they had been given no more encouragement than the militia has been given by the Federal Government, they would not be able to surpass even the militia, if the standard of the militia were no higher than that which is charged against it by the critics of the National Guard.

But, Mr. President, whatever may be said of the militia and of its discipline as it existed before the Civil War or as it existed prior to the Spanish-American War, the same criticism can not with justice be directed toward that branch of the service now or since the Spanish-American War. I know something of the service which has been rendered by the National Guard in my own State; and when I speak of the National Guard I include both officers and men. They come from every locality in the State. The members of the National Guard are taken from the very best of our citizenry. If any criticism can be made of the officers of the National Guard of Ohio, it is that they have given so much attention to the development of the National Guard that they have been compelled to neglect their own private affairs. They have taken upon their shoulders the organization, the training, the discipline of the men under their command because of their love of the service and of the State and of their country. Very little, if any, encouragement has been given to them by the Federal Government, and when they have come to the Capital at Washington asking favors often they have been received with scant courtesy. I want to submit that, taken man for man, the National Guard of the State of Ohio and of many of the other States of which I have some knowledge will measure up fairly well with the men in the Regular service.

Mr. Stimson, in one of his articles, refers to the fact that the attendance upon the drills by the National Guard has perhaps not been in excess of 60 per cent. It is a just criticism, which can be made; but it seems to me that if they are to be given the proper encouragement the failure to attend will be reduced to a minimum.

If we are going to criticize the militia, let us refer for a moment to conditions as they prevail in the Federal Army. According to a statement which is placed upon our desks this morning, we find that there are 67,765 men now alive who left the Regular Army during the last 10 years, and that of this number 6,893 "went into civil life" without terminating their services honorably. They either deserted and did not return to the service or were discharged by sentence of a general court-martial.

Now, if we are looking for mistakes which we want to correct, if we are looking for matters of criticism, let us be fair to both branches of the service; but it seems to me, instead of our dealing in crimination and recrimination against one branch or the other of this service, we should bend ourselves to the duty of ameliorating the condition of the service as affecting both the militia and the Regular Army.

Mr. President, we do not need to go very far to find that most of the criticism of the National Guard has emanated from the forces in the Regular Army. I take it that the War Department wants full and complete knowledge both as to the condition of the Federal forces and as to the condition of the National Guard; and if there is this prejudice or bias existing on the part of the one arm of the service against the other, it is impossible that right information can be taken to the Secretary of War or to the Commander in Chief of the Army, if he is to get all of his information through one branch of the service. Necessarily, if the Regular Army is not in sympathy with the National Guard, they will look, perhaps unconsciously, with some degree of prejudice upon that branch of the service; and if there is the defect in the discipline of the National Guard, as is contended by those who are criticizing them, is it not in part due to the fact that there has not been that close, intimate relationship existing between the National Guard and the Federal forces which ought to exist? This being so, what objection can there be to having on the General Staff a certain number of officers of the National Guard, who may be able to keep the War Department advised as to what is doing among the National Guard of the several States? Will not the War Department be benefited by this information? If any irregularities exist, can they not the better be corrected in this way?

The former Secretary of War suggested that in the National Guard there were 48 little armies, one for each State, under different degrees of discipline; that it was an inharmonious whole; and that to the extent the National Guard was composed of these different elements it was lacking in efficiency. Assuming that that criticism is just, who is to blame? Under the Federal Constitution the Federal Government has the power to legislate for the regulation and discipline of the National Guard, and if there are 48 armies in 48 States, differing in discipline, it seems to me that the Congress and the War Department are more to blame than are the National Guardsmen themselves.

Mr. LODGE. Mr. President, may I ask the Senator a question?

The PRESIDING OFFICER (Mr. PITTMAN in the chair). Does the Senator from Ohio yield to the Senator from Massachusetts?

Mr. POMERENE. Yes.

Mr. LODGE. Is it the intention that the officers of the National Guard whom it is proposed to add to the General Staff shall take part in the management of the Regular Army?

Mr. POMERENE. I assume that they would be there in an advisory capacity.

Mr. BRANDEGEE. As experts.

Mr. LODGE. Well, as experts, of course; but are they to take part in the management and direction of the Regular Army?

Mr. POMERENE. They are to constitute a part of the General Staff of the Army.

Mr. LODGE. The officers and men of the Regular Army, then, are to be pro tanto subordinate to these officers of the National Guard?

Mr. POMERENE. I do not imagine that they would be controlled by the members on the staff taken from the National Guard. They would participate in the management. There certainly would not be a majority of National Guardsmen on the General Staff by any means.

Mr. CHAMBERLAIN. Mr. President, if I may interrupt the Senator, I will say that it is proposed that the officers detailed to the General Staff from the National Guard shall have the same status as members of the General Staff from the Regular Army.

Mr. LODGE. That is, they would have part in the direction of the Regular Army of the United States?

Mr. CLAPP. No, Mr. President; they would act only as advisers.

Mr. LODGE. There is nothing of that sort in the amendment.

Mr. WARREN. The chairman of the committee is right; they would be the same as the other members of the staff.

Mr. CHAMBERLAIN. Exactly the same.

Mr. WARREN. As I have suggested in an aside to the Senator from Minnesota, the officers of the General Staff do not direct, except through the head of the department. Of course, they are advisers to the department.

Mr. CLAPP. That is all the officers of the National Guard will do.

Mr. LODGE. Are they to advise concerning and to have power over the Regular Army, or are they to be confined to National Guard matters?

Mr. CHAMBERLAIN. Mr. President, I think there is a misapprehension as to the powers and duties of the General Staff. They do not govern the Army——

Mr. LODGE. I understand that.

Mr. CHAMBERLAIN. And the National Guard officers, whom it is proposed to place on the General Staff, will have exactly the same functions to perform as the General Staff of the Army.

Mr. LODGE. Precisely; that is, they will advise not only in regard to the National Guard, but they will advise also as to the management and control of the Regular Army, of which the President is Commander in Chief.

Mr. WARREN. The same as the other officers of the General Staff, and the General Staff would still have to act through the Secretary of War.

Mr. LODGE. I understand that.

Mr. SMITH of Georgia. There would be only 5 members of the National Guard on the General Staff containing 92 officers of the Regular Army.

Mr. CUMMINS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Ohio yield to the Senator from Iowa?

Mr. POMERENE. I yield to the Senator from Iowa.

Mr. CUMMINS. Mr. President, I simply desire to suggest to the Senator from Massachusetts that the General Staff under this bill is composed of 92 officers of the Regular Army. This amendment proposes to admit to that body 5 officers of the National Guard, and, inasmuch as the duties of the General Staff are entirely advisory, it seems to me that the presence of 5 members of the National Guard, as compared with 92 members of the Regular Army, ought not to create any great apprehension with respect to the advice that will be given from time to time by the General Staff.

Mr. LEE of Maryland. Mr. President, will the Senator from Ohio allow me to make a suggestion?

Mr. POMERENE. I yield to the Senator.

Mr. LEE of Maryland. Perhaps the Senator from Massachusetts was not here yesterday afternoon when the Senator from New York [Mr. WADSWORTH] gave a concrete and very apt example of the manner in which there could be cooperation between the National Guard officers of the General Staff as advisers and collaborators and the Regular Army officers on that staff. He illustrated a case where a militia officer had been requested to come here and collaborate with the General Staff as to the details of a proposed mobilization, and he showed how much use that officer had been to the General Staff in the suggestions he was able to give because of his knowledge of the details of the militia situation.

Mr. LODGE. If the Senator from Maryland has concluded——

Mr. LEE of Maryland. I have been trespassing on the time of the Senator from Ohio. I have concluded.

The PRESIDING OFFICER. Does the Senator from Ohio yield to the Senator from Massachusetts?

Mr. POMERENE. I yield to the Senator from Massachusetts.

Mr. LODGE. I was aware of the duties of the General Staff, and I gathered from reading the amendment that only five officers were to be added from the National Guard; but what I want to find out is whether they are to have the same advisory powers in regard to the Regular Army as other members of the General Staff, because that I think is an important point. I also want to know—and the Senator from Maryland has been kindly enlightening me in regard to the matter—whether a National Guard officer from New York is to advise the Government what to do with the militia from Massachusetts?

Mr. POMERENE. Mr. President, the time may come, if there should be war, when it will be very necessary for the War Department to have all the information it can get from all sources. That being so, it occurs to me that it is not going to militate against the efficiency of the War Department if they can have some information and some advice from some national guardsman, particularly with reference to the efficiency of the organization and the qualifications of the National Guard, and they may be able to aid with their advice in the direction even of the Federal troops themselves. As the Senator from Iowa [Mr. CUMMINS] has suggested, the number would be so small that they could not dominate and control the operations of the Army if they would, and the members of the General Staff all act in an advisory capacity.

Let me give just a little incident which was brought to my notice by one of the officers of the National Guard of Ohio a few weeks ago in discussing this subject. At Camp Perry the National Guard meet once a year for their field practices. The entire guard are there. They go through the usual field maneuvers. Some of the officers of the Federal Army were out there to inspect the Ohio National Guard, and several of these officers stated to the officers of the National Guard that they themselves had been particularly benefited personally by witnessing these maneuvers, and further stated that never in their careers as officers of the Federal Army had they seen so many soldiers at one time on one field.

Mr. THOMPSON. Mr. President——

The PRESIDING OFFICER. Does the Senator from Ohio yield to the Senator from Kansas?

Mr. POMERENE. I do.

Mr. THOMPSON. Is it not true that the National Guard usually go to the military posts of the Regular Army for their maneuvers and drills, and that they use the same discipline as the Regular Army?

Mr. POMERENE. I know that they do attend. Whether it is a general rule or not, I can not say.

Mr. THOMPSON. The discipline is practically the same for one as it is for the other; is it not?

Mr. POMERENE. It should be the same.

Mr. President, I felt at the time this matter was called to my attention that no system was going to be adopted here which would not be in part composed of the National Guard. That being true, I see no reason why a limited number of the officers of the National Guard—who no doubt will be selected because of their efficiency and familiarity with military affairs, and particularly with the affairs of the National Guard—will not be a very great aid to the Government, not only in time of war but in time of peace, when it comes to the proper disciplining of the forces of the country.

For these reasons, very briefly stated, I indulge the hope that this amendment, or something akin to it, may be adopted.

Mr. BORAH. Mr. President, I desire to make some observations on those features of this bill which relate particularly to the so-called National Guard. I would not presume to discuss what may be called the expert features of this bill or of any bill providing for a military system, because I am not qualified to do so; but I am disposed to offer some observations as to that portion of the bill which has to do with law and government and politics.

Mr. President, the fathers nowhere disclosed greater wisdom than in those provisions of the Constitution wherein they equipped this country for self-defense. In no part of that instrument were more courage and foresight disclosed than in that part which has to do with the method and means by which the Republic can take care of itself in case of danger. With singular aloofness from those prejudices and sentiments which so often embarrassed the framers of free institutions in former times, they dared to lodge in one place that capacity for action and that unity of purpose so indispensable to governments in time of war. They were not afraid to trust the President with power sufficient to save the Republic for fear they might trust him with sufficient power to destroy the Republic. Their vision, their reasoning in this respect, amounted to the highest possible conception of statesmanship; and to do in the face of bitter denunciation what their judgment told them it was essential to do was an exhibition of moral courage ennobling to all who contemplate even again and again their work.

It was natural they should give care to this part of their work, because they had just come from the battle field. Washington and Hamilton, who had gone through the Revolution, sat in the convention. It was, therefore, quite logical for them to seek to avoid some of the mistakes which had been made by so-called republics in former times, wherein sufficient and efficient

power had not been given to the Government to protect itself in times of danger. To that end they set about to concentrate the powers of the Government so that those powers could be used effectively and efficiently and successfully in all military matters.

They had no illusions about a republic remaining at all times in a state of peace because of the fact that it was a republic. They understood thoroughly that, regardless of the form of government and of the purposes of the Government, or of the people, and of their devotion to peace, nevertheless there would be times when all the powers of the people must be concentrated in an effective means for the protection of the Government and of the people. They were perfectly familiar with the weakness of former republican governments wherein there was divided authority and divided responsibility with reference to military affairs. So, Mr. President, the builders of this Government centralized tremendous powers in the President of the United States in times of danger. The late Civil War revealed how much we owe to them for having done so.

Preliminary to the discussion of the real question before us, I call attention to the language of the Federalist upon some of these matters.

Mr. Hamilton, in the opening article of the Federalist, says:

On the other hand, it will be equally forgotten that the vigor of government is essential to the security of liberty; that in the contemplation of a sound and well-informed judgment their interests can never be separated; and that a dangerous ambition more often lurks behind the specious mask of zeal for the rights of the people than under the forbidding appearance of zeal for the firmness and efficiency of government. History will teach us that the former has been found a much more certain road to the introduction of despotism than the latter, and that of those men who have overturned the liberties of republics the greatest number have begun their career by paying an obsequious court to the people, commencing demagogues and ending tyrants.

In this opening article we find their lofty purpose indicated and a true revelation of their minds. They were not hesitant to leave the commanding of the entire Army and Navy of the United States to one man, the chosen Chief Magistrate of the country. They centralized, as no other Republic had even been willing to do, this power to command the fighting forces. While guarding the raising of the armies by certain provisions elsewhere found, in the matter of commanding the forces there was to be that individual responsibility which all their experiences warned them to be essential.

In No. 6 of the Federalist it is said:

But, notwithstanding the concurring testimony of experience in this particular, there are still to be found visionary or designing men, who stand ready to advocate the paradox of perpetual peace between the States, though dismembered and alienated from each other. The genius of Republics, say they, is pacific; the spirit of commerce has a tendency to soften the manners of men, and to extinguish those inflammable humors which have so often kindled into wars. Commercial Republics, like ours, never will be disposed to waste themselves in ruinous contentions with each other. They will be governed by mutual interest, and will cultivate a spirit of mutual amity and concord.

But, says the writer:

Have republics in practice been less addicted to war than monarchies? Are not the former administered by men as well as the latter? Are not there aversions, predilections, rivalships, and desires of unjust acquisitions that affect nations as well as kings? Are not popular assemblies frequently subject to the impulses of rage, resentment, jealousy, avarice, and of other irregular and violent propensities? Is it not well known that their determinations are often governed by a few individuals in whom they place confidence, and that they are, of course, liable to be tinctured by the passions and views of those individuals. Has commerce hitherto done anything more than change the objects of war?

This is particularly interesting at this time; for, after all, one of the controlling influences which led to the great conflict now raging in Europe was that of a desire for commercial supremacy.

Is not the love of wealth as domineering and enterprising a passion as that of love of power or glory? Have there not been as many wars founded upon commercial motives, since that has become the prevailing system of nations, as were before occasioned by the cupidity of territory or dominion? Has not the spirit of commerce, in many instances, administered new incentives to the appetite, both for the one and for the other? Let experience, the least fallible guide of human opinion, be appealed to for an answer to these inquiries.

Citing a number of historical illustrations, he further says:

Have we not already seen enough of the fallacy and extravagance of those idle theories which have amused us with promises of an exemption from the imperfections, the weaknesses, and the evils incident to society in every shape? Is it not time to awake from the deceitful dream of a golden age and to adopt as a practical maxim for the direction of our political conduct that we, as well as the other inhabitants of the globe, are yet remote from the happy empire of perfect wisdom and perfect virtue?

So, Mr. President, entertaining the view that a republic could not be considered as exempt from war, however devoted the people of that republic might be to peace, and entertaining the view that in hours of danger there must be a centralization of power, so far as military action is concerned, the framers of the Constitution did not hesitate to centralize that power in the Chief Magistrate, and made him the Commander in Chief of the Army and Navy of the United States. The right to command belongs to him, and can not be taken from him by any act of Congress. Next, they gave to Congress, acting for all the States, the power to raise and support armies, to provide a national force as distinguished from the local force known as the State militia. They said that—

The President shall be Commander in Chief of the Army and Navy of the United States, and of the militia of the several States when called into the actual service of the United States.

It has been said in this debate that the Constitution of the United States nowhere recognizes the State militia; that there is no recognition, as it were, of a national force and of a local force; but we have that clear and unmistakable recognition in part of section 2, Article II, of the Constitution, where they refer to "the militia of the several States when called into the actual service of the United States."

The framers of the Constitution, entertaining the views that they entertained with reference to the necessity of an undivided power and undivided responsibility in the hour of danger, would scarcely have done other than recognize as a local force that over which they permitted the local authorities to have any control whatever, and to provide another and a distinct force for the National Government as contradistinguished from the local force. If they had not regarded the militia as essentially a State force and always to remain such, except in the limited instances prescribed, they would not have consented to their being officered and trained by 13, now 48, separate authorities. They would never have regarded such divided authority in military affairs as other than fatal. But regarding the militia as a State force, and having provided an undivided authority for the national force, they consented to leaving the training of the militia to the States.

Mr. WILLIAMS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Idaho yield to the Senator from Mississippi?

Mr. BORAH. I yield.

Mr. WILLIAMS. In that connection, if the Senator will pardon me, does it not seem evident that inductively and historically, as well as deductively, his argument is sound, because this force, which is called by the Constitution not the militia of the United States but the militia of the several States, so as to exclude the idea of its being the militia of the joint States, was already historically a preexisting force, and existed long before the Federal Government was formed at all, as the militia of the several Colonies? So that, historically as well as deductively, the Senator must be right about that.

Mr. BORAH. I think the Senator is entirely correct in that respect.

Mr. WILLIAMS. In other words, the framers of the Constitution merely recognized an existing thing and connected it with the Federal Government for times of war.

Mr. BORAH. Precisely. The fathers found a State militia in each State. They left a State militia in each State, and they left with the States such vital and controlling power as will, in my judgment, always make it, for the purposes of war, ineffective except in a most limited way as a national force. On the other hand, they provided for a national force without permitting any limitation whatever to be placed upon it by the States, giving to Congress authority to raise and support armies and making the Commander in Chief the President of the United States.

What I desire to do to-day—and that is all I desire to do at this time—is to show that according to the Constitution there is a distinct, vital limitation upon the power of Congress with reference to the State militia, and that by reason of that limitation, which is vital and essential, the State militia never can be made an effective force in war or an effective force as a national organization. I want to show that the power of Congress over the militia is a limited power, and that by reason of that limitation the National Government can not do that which is indispensable in fitting the militia for service in times of national danger. I want to show that the powers left with the States are, from a military standpoint, preponderating and dominant, and that to spend vast sums of money on the State militia in view of these insuperable obstacles is to waste effort—to waste our funds so sorely needed for real effective preparedness.

I am not going, Mr. President, to-day at least to review historically the effect of this division of power with reference to the State militia as it has been demonstrated from the beginning of the Government until now. I do want to say, however, in passing that in presenting this question with reference to the ineffectiveness of the State militia to serve the National Government men should not be charged with assailing the personnel or the character of the men who constitute the militia.

It is no reflection upon them as men or citizens. It is a question of power, a question of constitutional authority which we ought to have the courage to heed. The position which I take in regard to it is that by reason of these provisions of the Constitution it never can be made an effective force in Federal affairs as a military proposition, and that being true it devolves upon us to account to the people for putting them in touch with the National Treasury. We should have a reason, a most vital reason, for spending fifty or sixty millions of dollars a year when already every form of taxation is harassing and annoying the citizen.

Looking at the provisions of the Constitution with reference to the State militia we find them entirely different in every respect with reference to power from those which relates to the national force. Among other things in Article I, part of section 8, it says:

The Congress shall have power * * * to provide for calling forth the militia

For what purpose? Not for all purposes. Not as Congress may raise and support an army, not as it may put in action the national force, but for three specific and well-defined, well-known, and recognized purposes only.

First, to execute the laws of the Union; second, to suppress insurrection; and, third, to repel invasion.

To provide for organizing, arming, and disciplining the militia, and for governing such part of them as may be employed in the service of the United States, reserving to the States, respectively, the appointment of the officers, and the authority of training the militia according to the discipline prescribed by Congress.

It has been said that the power of Congress over the State militia is the same as the power of Congress over the Army with the exception of the authority to appoint the officers and training the militia. We need not discuss many of the closer questions, what might be called the hair-splitting question with reference to the authority of Congress over the State militia. Let us deal alone with the vital and controlling constitutional powers. We have here the clear and unmistakable provision reserving to the States exclusively the naming of the officers and the training of the militia. These duties devolve upon and belong exclusively to the State. You can not purchase these reservations away from the State by putting the militia upon the pay roll. You can not go into the market and barter in constitutional power. You must get it from the Constitution without money and without price or you must forego its enjoyment.

Mr. BRANDEGEE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Idaho yield to the Senator from Connecticut?

Mr. BORAH. I yield.

Mr. BRANDEGEE. Will the Senator be kind enough to repeat the language about the militia organization which he has just read?

Mr. BORAH (reading)—

To provide for organizing, arming, and disciplining the militia, and for governing such part of them as may be employed in the service of the United States, reserving to the States, respectively, the appointment of the officers and the authority of training the militia according to the discipline prescribed by Congress.

Mr. BRANDEGEE. Will the Senator let me ask him this question: The militia to which the Senator has just referred means the unorganized militia of the country, does it not—all persons liable to military service between the years of age as fixed by law? So when it speaks about governing such portion of them as may be put into the service of the United States it does not in anyway authorize the United States to summon the State militia to serve the United States Government. Is it the unorganized militia that Congress is directed to organize? Of course, there would be no sense in organizing the Organized Militia. It must refer to those subject to military service, does it not?

Mr. BORAH. I rather think not.

Mr. STERLING. If the Senator will permit an interruption, I should like to ask him if he thinks that that question is quite so broad? Does the Senator think that the constitutionally Organized Militia of the States may not, under this expression, be ordered into the service of the United States, although organized?

Mr. BORAH. I have no doubt about that.

Mr. BRANDEGEE. Can they be ordered into the service of the United States in time of peace simply for training?

Mr. BORAH. No, sir; they can not be ordered into the service of the United States except when the President of the United States decides it is necessary to have them there for the purpose of executing the laws of the Union, to suppress insurrection, or repel invasion. They remain as a State force at all other times, and the State alone can train them. Congress can not train them. If the State declines to train them, Congress is powerless.

Mr. STERLING. Then, I should like to make this inquiry: If they may be ordered into the service of the United States for service in war, will not that solve some of our difficulties in considering that part of the bill relating to the National Guard? Will there need to be any new enlistment, for example? Will there need to be any contract with the General Government for service in the Regular Army? May they not as Organized Militia of the States be ordered into the service of the United States in time of war?

Mr. BORAH. I think so, if it is a war of invasion. However, I think that if we are going to put $50,000,000 a year into the National Guard there ought to be something besides the mere right to order them in. They ought to be equipped and prepared to fight when they get in; and the point is that as long as the State appoints the officers and does the training that never can be true. Why it can not be I am going to discuss at another time. I am interested now as to legal questions only.

Mr. President, with reference to this clause appointing the officers and training the men, and as to the limitation of the authority of Congress over the subject, I read again from the Federalist, No. 29:

What reasonable cause of apprehension can be inferred from a power in the Union to prescribe regulations for the militia and to command its services when necessary, while the particular States are to have the sole and exclusive appointment of the officers? If it were possible seriously to indulge a jealousy of the militia upon any conceivable establishment under the Federal Government, the circumstance of the officers being in the appointment of the States ought at once to extinguish it. There can be no doubt that this circumstance will always secure to them a preponderating influence over the militia.

That number of the Federalist was written by Alexander Hamilton, who had pronounced ideas with reference to the rights of the National Government. He states, however, that so long as the officers are appointed by the States the State must necessarily at all times be the preponderating influence with reference to the State militia; and I shall undertake to show later by historic facts that that has always been true, and that in spite of any contract which you insert in this bill in the hour of crisis it always will be true. You can not change the Constitution of the United States by a contract between individuals or between the National Government and an individual. You can not change it by putting into this bill an oath to support the Constitution and laws of the United States and leaving out the oath to support the State law, from which the officer receives his commission. It is simply an attempt, futile, inexpedient in the end, to get around a plain provision of the Constitution. The fathers fully intended that there should always rest with the State the preponderous influence over this local force. The only way you can change it is to change the Constitution. It is idle to assume you can change all this by contracts or oaths or compensation.

Mr. CUMMINS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Idaho yield to the Senator from Iowa?

Mr. BORAH. I yield.

Mr. CUMMINS. I am not sure that I understood the Senator from Idaho a few moments ago with respect to that clause of the Constitution which provides substantially as follows:

And for governing such part of them as may be employed in the service of the United States.

Assume that Congress has provided for the organization of the militia, I care not what you call it, State militia or otherwise, does the Senator say that the Federal Government does not employ the militia when it prescribes the arming, the equipment, and the training? I rather understood him to say that they were not then employed by the Government of the United States.

Mr. BORAH. That is my view of it.

Mr. CUMMINS. When they are employed?

Mr. BORAH. When the President for these three reasons, or either of them, under the Constitution calls them into the service of the United States.

Mr. CUMMINS. So that if the Senator——

Mr. NELSON. If the Senator will allow me——

Mr. CUMMINS. I had not concluded my question.

Mr. NELSON. I simply wanted to supplement what the Senator said by stating that when they are called into the United States service they are mustered into the service.

Mr. CUMMINS. "Mustered" simply means account, as I understand it, in military phraseology. We do not advance very far by using the word "muster." I want to know if I clearly understand the Senator as saying that there is no Federal relation with the militia or the National Guard until the President calls them into active service for the purpose of enforcing the law, suppressing insurrection, or repelling invasion.

Mr. BORAH. The Senator says, "relation." That is a term of infinite scope. There is this relation, that Congress may previously prescribe the method of organizing, arming, and disciplining it. It may lay down the rule by which the officers appointed by the State shall train them, and if the National Government does not see fit to lay down the rule the State may lay down the rule. But I concede that in training the National Guard the discipline may be prescribed by the National Government before they are actually called into the service of the United States.

Mr. CUMMINS. What office, then, does the clause to which I referred play in the matter, "and for governing such part of them as may be employed in the service of the United States"? Does the Senator understand that when they are employed in the service of the United States the latter provision in the same section reserving to the States the power to appoint officers disappears?

Mr. BORAH. No; I do not so understand.

Mr. CUMMINS. Then when are they employed by the United States and governed by the United States?

Mr. BORAH. They may be governed in a limited sense by the United States without the United States appointing the officers. After the officers are appointed the President may call them into the service of the United States. They pass then under the direction and control of the United States, and the United States governs them and governs the officers who have been appointed by the State. In other words, after they are called into the service they pass under the control of the National Government and are a part of the national force.

Mr. CUMMINS. But the Senator understands they are not in anywise governed by the United States until they are called into the service for one of the three purposes named in the preceding paragraph of the Constitution.

Mr. BORAH. I do not know what the Senator means by "governed." You might say they are being governed in a sense because the Government had prescribed the organization and the method of disciplining them and arming them, but in the sense of controlling troops, directing troops, or using troops as they are called in, they are not under the direction of the United States until the President calls them in for one of these three reasons.

Mr. CUMMINS. One more question, and I shall not detain the Senator further. Then, after Congress has organized or provided for organizing them and for arming them and for disciplining them, as I gather, it is the view of the Senator from Idaho that Congress could not prescribe the length, for instance, of the service during any year or any period, nor the character of the camp service which might be required of the militia?

Mr. BORAH. Before they are called into the service of the United States?

Mr. CUMMINS. Before any effort is made to bring them in for the purpose of enforcing the law or suppressing insurrection or repelling invasion.

Mr. BORAH. That would depend entirely upon what it would be regarded. I think that that might come under the question of discipline.

Mr. NELSON. Will the Senator from Idaho allow me?

Mr. BORAH. I yield.

Mr. NELSON. I want to state that the term "muster into the service of the United States" received a practical construction in the days of the Civil War. We had our State regiments. I myself enlisted in a State company. Eight companies of the State militia were brought into camp together. We were there a month and by-and-by the United States mustering officer came there and made us take the oath over again, and we were mustered into the United States service. From that time on we were under the control of the Federal Government. Now, that is the way it operated during the Civil War with every militia regiment that appeared in the service. They were mustered into the United States service by a United States Regular Army mustering officer swearing them in, and then they became a part of the United States Army.

Mr. CUMMINS. If the Senator from Idaho will allow me——

Mr. BORAH. I yield.

Mr. CUMMINS. I defer to the broader knowledge of the Senator from Minnesota with regard to the meaning of the word "muster." I have a little knowledge respecting it from an Army officer. The Senator from Minnesota, however, describes an enlistment. Of course, when the Senator from Minnesota enlisted in the service of the United States he was mustered in as well, but at that time Congress had not exercised the authority given to it in the Constitution, and the company of which he was a member was not in the service of the United States. I assume it is hardly fair, however, to test what is here proposed by what was done 50 years ago when Congress had not thought it necessary to employ the full power, as I view it, which it has under the Constitution.

Mr. BORAH. I want to support what I have said by calling attention to a few paragraphs from the case of Houston versus Moore.

This case was in part a construction of the act of 1792 and the act of 1795. I do not know about the act of 1792; but the act of 1795 was drawn under the direction of Mr. Hamilton, in contemplation of using the State militia in the riots which were at that time disturbing western Pennsylvania. I want Senators to bear in mind, not only the fact that it was drawn by one who had a pretty settled view as to the powers of the States and of the National Government with reference to the militia, but that the act of 1795 has been held by the Supreme Court to have exhausted the power of Congress under these clauses of the Constitution. Justice Washington, rendering the opinion of the court, said:

> The Constitution declares that Congress shall have power to provide for calling forth the militia in three specified cases: For organizing, arming, and disciplining them; and for governing such part of them as may be employed in the service of the United States, reserving to the States, respectively, the appointment of the officers and the authority of training the militia according to the discipline prescribed by Congress. * * *
>
> The laws which I have referred to—

Referring to the acts of 1792 and 1795—

> The laws which I have referred to amount to a full execution of the powers conferred upon Congress by the Constitution. They provide for calling forth the militia to execute the laws of the Union, suppress insurrection, and repel invasion. They also provide for organizing, arming, and disciplining the militia, and for governing such part of them as may be employed in the service of the United States, leaving to the States, respectively, the appointment of the officers and the authority of training them according to the discipline prescribed by Congress.
>
> This system may not be formed with as much wisdom as, in the opinion of some, it might have been, or as time and experience may hereafter suggest. But, to my apprehension, the whole ground of congressional legislation is covered by the laws referred to.

On page 23 it is said:

> Upon the subject of the militia Congress has exercised the powers conferred on that body by the Constitution as fully as was thought right, and has thus excluded the power of legislation by the States on these subjects.

Justice Johnson, who rendered a separate opinion, says, as will be found on page 36:

> Indeed, extensive as their power over the militia is, the United States is obviously intended to be made in some measure dependent upon the States for the aid of this species of force. For if the States will not officer or train their men, there is no power given to Congress to supply the deficiency.

Mr. President, there is no occasion to search for closer questions or for more difficult problems, because if the officering and the training of the militia are left with the States, and Congress can not intrude itself upon that power, then there is to my mind an insuperable difficulty in doing what we are undertaking to do, to wit, make the many State forces a unified efficient force such as we would require in any contest with a powerful foe. To say that a force which is officered by 48 different appointing powers and trained by the State at its will, or no, and that no influence of power can intrude upon that—to say that, is to establish once and for all the inefficiency of the State militia as a national force. Who would lead such a force into battle against the trained armies of Europe or Japan. It would be like the militia from the many States of Greece, meeting the troops of Philip which had been trained and disciplined under one eye—another Chæronea would tell the tale.

Mr. LEWIS. Mr. President——

The PRESIDING OFFICER (Mr. CHILTON in the chair). Does the Senator from Idaho yield to the Senator from Illinois?

Mr. BORAH. I yield.

Mr. LEWIS. I only want to call the attention of the able Senator to the fact that he will discover in that case a separate opinion of Mr. Justice Story, and in the opinion of Mr. Justice Story, the Senator will find a very interesting elaboration of the concurrent powers between the States and the Federal Government touching that very service, pointing out, I think, an answer to many of the opinions urged by the able Senator in his lucid argument. I did not know whether the Senator had time to notice that separate opinion; I might say the reversion to that particular subject, as it seems not to have been alluded to by either of the other justices rendering their opinions, or the justice rendering the opinion of the full court.

Mr. BORAH. I thank the Senator from Illinois. Justice Story renders an interesting dissenting opinion, and discusses, as the Senator says, the question of concurrent power; but the concurrent power which Justice Story discusses relates alone to the question of organizing, arming, and disciplining the

militia. He does not intimate that there is any concurrent power in the Congress and in the States with reference to appointing the officers or training the men. He does say, however, that if Congress should fail to provide a system of organization or of arming and disciplining the State could exercise that power, and do it itself; and in this respect the States and the Congress have concurrent power. But upon the other question, upon which I lay stress, with reference to the appointing of the officers of the militia, Justice Story concurs with the main opinion.

Mr. WILLIAMS. And as to the training of the men.

Mr. BORAH. And as to the training of the men.

Now, I want to read a paragraph from Justice Story, and this paragraph is not out of harmony with the main decision, but, even if it were a dissenting opinion, I think an opinion of Justice Story would be persuasive upon any question:

It is almost too plain for argument that the power here given to Congress over the militia is of a limited nature and confined to the objects specified in these clauses, and that in all other respects, and for all other purposes, the militia are subject to the control and government of the State authorities. Nor can the reservation to the States of the appointment of the officers and authority of the training the militia, according to the discipline prescribed by Congress, be justly considered as weakening this conclusion. That reservation constitutes an exception merely from the power given to Congress "to provide for organizing, arming, and disciplining the militia," and is a limitation upon the authority which would otherwise have devolved upon it as to the appointment of officers. But the exception from a given power can not, upon any fair reasoning, be considered as an enumeration of all the powers which belong to the State over the militia. What those powers are must depend upon their own constitutions—

That is the constitutions of the States—

And what is not taken away by the Constitution of the United States must be considered as retained by the States or the people. The exception, then, ascertains only that Congress have not and that the States have the power to appoint the officers of the militia and to train them according to the discipline prescribed by Congress. Nor does it seem necessary to contend that the power "to provide for organizing, arming, and disciplining the militia" is exclusively vested in Congress. It is merley an affirmative power, and if not in its own nature incompatible with the existence of a like power in the States it may well leave the concurrent power in the latter.

But when Congress has once carried this power into effect it is taken away from the States—that is, with reference to organizing, arming, and disciplining the militia. Farther on Justice Story says:

In considering this question it is always to be kept in view that the case is not of a new power granted to Congress where no similar power already existed in the States.

As was said by the Senator from Mississippi [Mr. WILLIAMS] awhile ago:

On the contrary, the States, in virtue of their sovereignty, possessed general authority over their own militia, and the Constitution carved out of that a specific power in certain enumerated cases.

And that is all that Congress undertook to do. The power over the militia, in the first place, belonged, of course, exclusively to the States to arm, organize, prescribe the discipline, appoint the officers, and to train them, but the Constitution sought to carve out of this general power the limited power of organizing, arming, and disciplining, which it may exercise concurrently with the States. Congress has that power, that limited and circumscribed power, carried out, and no more. With reference to the appointing of the officers and the training of the militia, in all other respects, except that of organizing or prescribing the organization and of arming and equipping, the power over the militia rests exclusively in the States. It is a State institution, but over this State institution certain limited authority is given; but it remains and must remain a State institution.

Let us see what the Supreme Court of Illinois said in a case dealing with this question. I will not read it all, because the Senator from Connecticut [Mr. BRANDEGEE] yesterday put it in the RECORD, but I want to read a paragraph or two.

Mr. LEWIS. Will the Senator kindly give the citation?

Mr. BORAH. It is the case of Peter J. Dunne against The People, Ninty-fourth Illinois. I read from the syllabus, but the body of the opinion will be found to support fully, in my judgment, the syllabus:

3. The Federal Constitution does not confer on Congress unlimited power over the militia of the several States, but it is restricted to specific objects enumerated, and for all other purposes the militia of the States remains subject to State legislation. The power of a State over its militia is not derived from the Constitution of the United States. It is a power the States had before the adoption of that instrument, and its exercise by the States not being prohibited by it, it still remains with the States, subject only to the paramount authority of acts of Congress enacted in pursuance of the Constitution.

* * * * * * *

5. There is no question of the power of a State to organize such portion of its militia as may be deemed necessary in the execution of its laws and to aid in maintaining domestic tranquillity within its borders. The power given to the chief executive of the State to call out the militia to execute the laws, etc., by implication recognizes the right to organize a State militia.

* * * * * * *

9. It is for the legislature to determine of what number the active militia of the State shall consist, depending on the exigency that makes such organization necessary.

* * * * * * *

13. The organization of a State militia, when not in actual service, but for the purpose of training under the act of Congress, into divisions, brigades, regiments, battalions, and companies, shall be done as the State legislature may direct. When called into the national service, it is made the duty of the executive to organize the militia as the act of Congress directs.

Mr. SUTHERLAND. Mr. President——

The PRESIDING OFFICER. Does the Senator from Idaho yield to the Senator from Utah?

Mr. BORAH. I yield.

Mr. SUTHERLAND. Has the Senator from Idaho any doubt that, if Congress should not act upon the matter at all and should not make any provision such as it is authorized to make under the Constitution, each State in the Union would have absolute power to provide for a militia, to organize it, and to provide the rules by which it should be governed? I ask the Senator from Idaho whether he does not think that the only purpose of the provision of the Constitution which authorizes Congress to provide for these things is that a uniform rule may be established by Congress?

Mr. BORAH. That is my opinion.

Mr. SUTHERLAND. It was deemed advisable that, so far as possible, the militia of the several States should be organized and disciplined in pursuance of a uniform rule. The power of Congress is simply to prescribe the rule, and then the States carry the rule into execution.

Mr. BORAH. I think that is the correct rule. Something has been said here with reference to the fact that that provision of the Constitution which forbids the States to keep troops in time of war might have some reference to this provision, but both the Supreme Court of the United States and the Illinois Supreme Court have decided that that has no reference to the militia at all.

Mr. SUTHERLAND. The very case to which the Senator has referred, the Illinois case, does that.

Mr. BORAH. That is true. Undoubtedly a State could proceed to organize, arm, and equip its own militia, and discipline it if the Congress of the United States did not provide for its doing so. It could do so upon its own motion, upon its own theory of organization and discipline, and the prohibition of the Congress with reference to maintaining troops would not at all militate against the right or authority of the State to do so.

Mr. CUMMINS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Idaho yield to the Senator from Iowa?

Mr. BORAH. I yield.

Mr. CUMMINS. What is the difference between a regiment called "militia" in service throughout the year and equipped in every way for war and "troops"?

Mr. BORAH. Well, Mr. President, in popular parlance there would be no difference at all; but there is a clear line of distinction between "troops" and "State militia" so far as the Constitution is concerned. The State militia are not troops under that provision of the Constitution.

Mr. CUMMINS. That is simply one decision, and probably it would not be accepted as absolutely conclusive of the question. I think there is in the popular mind a difference. I take it that in the word "militia" there inheres the thought of occasional service.

Mr. BORAH. That is generally the way the service is rendered.

Mr. CUMMINS. If a State has the power to organize militia—and that it would have the power to organize militia if nothing had been said in the Constitution I have no doubt whatever, and I think no one has ever doubted it—but suppose the State of Iowa came to the conclusion that it wanted a standing army and would call out its militia, organize its militia, arm the men who were organized, and keep them in the service precisely as the National Government now keeps the regular force in the service, does not the Senator from Idaho think that they would be "troops"?

Mr. BORAH. No; I do not.

Mr. CUMMINS. Then, how could we get troops in the State of Iowa?

Mr. BORAH. Well, the State of Iowa can not have troops in time of peace. It can have its citizen or civilian force; or, in other words, its militia.

Mr. SUTHERLAND. Mr. President, I suggest to the Senator that the distinction between "troops" and "militia" is that

the troops are soldiers, while the militia are citizens still in civil life.

Mr. CUMMINS. How long must citizens be soldiers in order to make them "troops"?

Mr. SUTHERLAND. I have not finished—when a man becomes a member of the State militia, he does not leave his occupation in civil life; he is still a doctor or a lawyer or a clerk. Those things constitute the usual occupations of the militia. A citizen simply becomes a member of the militia in order that he may take training and be ready to respond to the call of his State or, in a larger aspect, to the call of the Nation, and he does not become a soldier.

Mr. WILLIAMS. A professional soldier.

Mr. SUTHERLAND. He at no time becomes a regular soldier.

Mr. CUMMINS. Then we have no "troops" in the United States.

Mr. SUTHERLAND. He is still a citizen in civil life.

Mr. LODGE. We have none except in the Regular Army.

Mr. CUMMINS. They are not troops. A man enlists in the Regular Army for three years, and then comes out of the service, and is still a doctor or a mason in civil life.

Mr. WILLIAMS. But he has no other occupation while he is in the Army.

Mr. LODGE. While he is there he has no other occupation.

Mr. CUMMINS. Certainly not. If the Senator from Idaho will permit me, if a State were to organize a regiment of militia, enlist the militia for three years, and keep them in the service for nine months in each of the years, would not that regiment be troops?

Mr. SUTHERLAND. If the Senator will add to it that they are put into the military business in such a way that they become professional soldiers and abandon their civil occupations, I would say yes.

Mr. CUMMINS. We have no professional soldiers in the United States save the officers who enter the service for life. All others are volunteers, who enter for a specified time. This bill provides that any soldier of the Regular Army can leave it at the end of two years and enter a reserve force. To me the distinction that is made by the Senator from Massachusetts and the Senator from Utah is not understandable at all.

Mr. LODGE. But there is no power in the world where the men enlist for an indefinite period.

Mr. CUMMINS. Oh, I know that.

Mr. LODGE. And they are professional armies.

Mr. CUMMINS. They may be professional armies, but there can be a professional militiaman just as well as a professional soldier.

Mr. LODGE. Professional militiamen, as far as my experience goes, all have some other object. On an average, in the three years of their enlistment, they drill 90 hours.

Mr. CUMMINS. Very well.

Mr. LODGE. And the regular soldier is more occupied in his profession than that.

Mr. CUMMINS. Suppose a State should call in a regiment. It has the power to organize a regiment of militia. All the members of society are unorganized parts of the militia. From the time of attaining fighting age until the man dies he is a militiaman; he is a member of the unorganized militia. But when he enters the service I am trying to find out whether the distinction between the militiaman and the trooper is one of the length of service or one of the character of service, or just how, with a regiment of fighting men who have agreed to remain in the service for a year or two years, you can tell whether they are militiamen or troops.

Mr. SUTHERLAND and Mr. LEE of Maryland addressed the Chair.

The PRESIDING OFFICER. To whom is the Senator yielding? There are several Senators on the floor at the same time.

Mr. BORAH. I yield to the Senator from Utah.

Mr. SUTHERLAND. The distinction is, if the Senator will permit me to answer the question, in the character of the service which is rendered. A man may become a professional soldier if he has enlisted for a year or for three years. The length of time does not make any difference. While he is engaged in that occupation, that is his profession, and it is none the less a profession because he has voluntarily entered it. In other words, in order to be engaged in a profession a man does not have to be compelled to enter it.

Mr. CUMMINS. Mr. President, the difference is, as I understand it, that while he is fighting he is a trooper, but while he is preparing he is a militiaman.

Mr. SUTHERLAND. Not at all. He is a soldier while he is preparing.

Mr. BORAH. Mr. President, the Senator from Iowa would not contend, I presume, that a State could not maintain a militia in time of peace.

Mr. CUMMINS. No, Mr. President; I do not so contend.

Mr. BORAH. The Constitution forbids a State from keeping troops in time of peace.

Mr. CUMMINS. I was trying to find out, however, whether there is any conflict between the various phrases used in the Constitution. We all know that they are not always reconcilable. The clause of the Constitution to which the Senator has just referred says that a State may keep troops without the consent of Congress in the event of war. In the event the State goes to war, in the event of an invasion of the State, the State can keep an army; and I do not know how it could organize the army except under its power to call out all of its citizens to defend it.

Mr. BORAH. Does the Senator contend that a State in time of peace may not maintain a militia?

Mr. CUMMINS. No; I do not.

Mr. BORAH. Then, what will he do with the provision of the Constitution which forbids a State to keep troops in time of peace?

Mr. CUMMINS. I say, I was asking the Senator to reconcile those statements, to explain the difference between the troops.

Mr. BORAH. There is a difference, evidently. The Constitution recognizes a difference, because it provides for the States maintaining a militia, or concedes their right to maintain a militia, and yet it prohibits them from maintaining troops in time of peace.

Mr. CUMMINS. The Constitution does not say anything about the States maintaining a militia. It is simply silent on that question; and I assume that unless the States granted the whole power——

Mr. BORAH. Being silent, it is just the same as if it authorized it, so far as practice is concerned, because, being silent, the States may maintain a militia. It was an original power, and the Constitution does not prohibit its use.

Mr. CUMMINS. No; the States had the power to do so, and I assume, with some little doubt upon my own part, that the States did not part with the power to organize a militia; although it could be very well argued, as the Senator knows it has been argued, that the grant of power to the Congress of the United States to organize the militia was exclusive, I do not think so, and I do not contend so. Nor is it material to any question that we are considering here to determine that delicate point.

Mr. BORAH. The Constitution says the President shall be Commander in Chief of the Army and Navy of the United States and of the militia of the several States. Not only do we have the fact that the power originally belonged to the States, but we have here written into the Constitution the recognition of the fact that there shall be State militias there to be called into action, and that a State may maintain a militia in time of peace. But afterwards the Constitution says that the States are prohibited from maintaining troops in time of peace. So the Constitution clearly recognizes that there is a clear distinction between troops and the State militia.

Mr. CUMMINS. I do not deny that. I was trying to find out what the difference is and when the militiaman might become a professional soldier.

Mr. BORAH. I will read a paragraph from the case of Dunne against The People upon that point, so that it may go in the RECORD:

> The States are forbidden to keep "troops" in time of peace; and of what avail is the militia to maintain order and to enforce the laws in the States unless it is organized? "A well-regulated militia" is declared to be "necessary to the security of a free State." The militia is the dormant force upon which both the National and State Governments rely "to execute the laws, * * * suppress insurrections, and repel invasions." It would seem to be indispensable there should be concurrent control over the militia in both governments within the limitations imposed by the Constitution. Accordingly it is laid down by text writers and courts that the power given to Congress to provide for organizing, arming, and disciplining the militia is not exclusive. It is defined to be merely an affirmative power and not incompatible with the existence of a like power in the States, and hence the conclusion is the power of concurrent legislation over the militia exists in the several States with the National Government.

Mr. CUMMINS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Idaho further yield to the Senator from Iowa?

Mr. BORAH. Yes.

Mr. CUMMINS. I should like to reduce this argument, if I can, to the real issue, for I recognize the justice and the soundness of a large part of the argument of the Senator from Idaho. Standing as I do for the provisions of this bill in favor of the National Guard, I do not want it assumed that we are on our side disputing a large part of the argument which has just been

submitted by the Senator from Idaho. I return to one question which I propounded a short while ago.

First, let me say that we do not question or doubt that in time of peace the State has the absolute power to appoint the officers of the militia or the National Guard, and that inasmuch as men can be trained only by officers, they must be trained by the officers appointed by the State. I agree, at any rate—I do not want to bind anyone else by the admission—that we can not affect that power on the part of the States; and I agree further that if a State should refuse to appoint or make provision for the appointment or selection of officers of the militia during a time of peace, the Federal Government could not supply that omission on the part of the States.

So far, I agree with the Senator from Idaho. But, as I understand the Senator from Idaho, he goes further and says that in time of war, when the President, under the authority of Congress, calls the National Guard into the fighting service of the United States, then the State still has the power to appoint the officers of the organization so called in; and that if, in such an event, the State were not to appoint or select, the organization would be without officers, and that the Federal Government could not appoint officers in that contingency.

That is the point that is interesting, because, if that is true, then the conclusions that have been stated by the Senator from Idaho have great force; but I have never believed, and do not now understand, that that is the proper interpretation of the Constitution.

Mr. BORAH. Mr. President, I have not gone to the extent which the Senator seems to think I have with reference to the power of the National Government to govern the force after they are called into the service, because I do not think that is a vital question here. What I maintain is that if the National Government can not appoint the officers and can not enforce the training by the officers, as a military proposition it is a totally defective organization for the purpose of national defense; that it will be too late after they are called into service to do that which it was essential to have done before they were called into the service in order to make them efficient. Unless Congress can go further than is conceded by the Senator in the way of controlling the officers or initiating the training, the troops will never be fitted for the service which they will be called on to perform. They will be just the same as volunteers. If the training is not proper or is not made at all, it would be just the same as if we called so many volunteers. So, as to whether or not they shall be fitted at all is the conceded proposition here, with the statement——

Mr. CUMMINS. That, of course, is a question of fact and not of law, and can be determined only by looking over the situation and observing what the National Guard is, what its officers are—I mean their competency—and whether they are actually training men so that they will be fit for the Federal service.

Mr. BORAH. Exactly; but suppose the National Government looks over the situation and finds that the officers are not fitted and that they are not training, what is the Congress going to do about it? It can not do anything. So you fall back upon the proposition that on the vital question of fitting these men for service the Congress is powerless, and, in the view of all the authorities that I have been able to examine upon military tactics or military questions, that is a vital proposition.

The very object of putting these men in touch with the National Government is to have them properly trained, and to have them advance beyond the condition of the ordinary citizen in military capacity; and if Congress has not the power to enforce it, why should we undertake to legislate to that end? If this can not be done effectively, completely, how dare we rely on the militia? In these times, sir, we want no broken reed in the hour of peril. Above all, we do not want to spend millions upon any system that can not be relied on, and relied on with safety when the ordeal of battle comes. Our expense for preparedness will be burdensome, and in the name of justice, in all fairness to the overburdened taxpayers, let us not put any burden on them that is not essential and worth to them every dollar it costs.

Mr. LEE of Maryland. Mr. President——

The PRESIDING OFFICER. Does the Senator from Idaho yield to the Senator from Maryland?

Mr. BORAH. I yield.

Mr. LEE of Maryland. The Senator has been so amiable in submitting to interruptions that I should like to note, for information, an exception to his constitutional argument on the ground that in case of absolute failure of the States to regulate the militia according to the discipline prescribed by Congress, Congress would be helpless. I am under the impression that the power to enforce that discipline is clearly one of the implied powers of Congress, and absolutely covered by McCullough against Maryland. I will read that to the Senate at a later time; but before going on with this suggestion, I should like to ask the Senator a question in respect to this provision in section 8 of Article I of our Constitution, "reserving to the States, respectively, the appointment of the officers and the authority of training the militia according to the discipline prescribed by Congress." Do I understand the Senator to maintain that the words "according to the discipline prescribed by Congress" do not apply equally to the appointment of the officers and the authority of training?

Mr. BORAH. Unquestionably they do not. If they had, there would have been no reason in the world for the Constitution making that exception. But I am interested that a southern Democrat should go further than a northern Republican on the question of implied power. I have never understood that the implied power under the Constitution went so far as to abrogate a specific provision of the Constitution to the contrary. Here the Constitution expressly reserves to the States the power to appoint officers and to train the militia. Now, the Senator would render that specific provision nugatory under the doctrine of implied power. "Verily the old order changeth."

Mr. LEE of Maryland. I do not concede that there is any specific provision to the contrary. The obligation imposed on Congress is to provide a discipline, and it should see to the enforcement of the discipline that it has the right to provide. Otherwise, the providing of the discipline would be an absolute nullity, a mere idle waste of words.

Mr. BORAH. It is, in practical effect, if the State does not see fit to train.

Mr. LEE of Maryland. So the Senator would render it.

Mr. BORAH. This provision of the Constitution is to the effect that the power to appoint the officers and to train the men is expressly reserved to the several States. Now, certainly no implied authority could in any way affect that authority or that right.

Mr. LEE of Maryland. That right or reservation is all qualified by the following words: "according to the discipline prescribed by Congress," and that is what the Senator wants to get rid of.

Mr. BORAH. Exactly; "according to the discipline prescribed by Congress." But if the Senator were correct in the proposition, all the Constitution would have said would have been that the Congress had power to organize, arm, and discipline the militia. If it had been intended by the fathers, as the Senator contends, that the discipline should also cover the officers, they would not have specifically carved out and excepted from the matter of governing an army and disciplining it the matter of appointment and of training. So they took that out of the matter of discipline. That feature of discipline can not be exercised by Congress. That feature of organization can not be exercised by Congress. That part is reserved to the States specifically. Otherwise it would belong to Congress by reason of the authority to discipline the Organized Militia.

Mr. LEE of Maryland. The Senator's argument, then, in that connection simply cancels that provision, "according to the discipline prescribed by Congress."

Mr. BORAH. No; it does not.

Mr. LEE of Maryland. It simply cancels those words.

Mr. WILLIAMS. It depends on what the word "discipline" means.

Mr. BORAH. Exactly. They appoint the officers and do the training. They do the training according to the discipline. But suppose the State does not want to train at all—what are you going to do about it?

Mr. LEE of Maryland. I think the Congress can enforce its discipline by appropriate legislation, and I think that power to enforce is clearly an implied power under McCullough versus Maryland.

Mr. HUGHES. Where are you going to get it?

Mr. BORAH. Let me read, in that connection——

Mr. CUMMINS. Before the Senator goes into that subject——

The PRESIDING OFFICER. Does the Senator from Idaho yield to the Senator from Iowa?

Mr. BORAH. Just let me read this, first:

> Indeed, extensive as their power over the militia is, the United States are obviously intended to be made, in some measure, dependent upon the States for the aid of this species of force. For if the States will not officer or train their men there is no power given to Congress to supply the deficiency.

Mr. HUGHES. What is that from?

Mr. BORAH. That is from the case of Houston against Moore.

Mr. CUMMINS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Idaho yield to the Senator from Iowa?

Mr. BORAH. I do.

Mr. CUMMINS. The Senator from Idaho has referred very often to the views of Alexander Hamilton. Has he examined the message to Congress delivered by George Washington in 1795? I assume that it reflects Hamilton's views.

Mr. BORAH. I have no idea whose views it reflects other than its author's, but I have examined it.

Mr. CUMMINS. I beg to read a sentence from it:

> In my opinion Congress has the power, by the proper organization, disciplining, equipment, and development of the militia to make it a national force, capable of meeting every military exigency of the United States.

If Hamilton had as much influence in this message as he had ordinarily over the public utterances of the first President of the United States, I suggest that the fathers, at least, believed that the militia could be made a national force. When Patrick Henry, who was rather a great man in his time, was opposing the ratification of the Constitution in the Virginia convention, he said this about the militia:

> As your militia is given up to Congress, all power will be in their own possession.

He then quotes another paragraph of the Constitution, and says:

> By this, sir, you see that their control over our last and best defense is unlimited.

So our constitutional literature is not without some reference to the efficiency of a National Guard.

Mr. BORAH. The best authority just now against Patrick Henry is the Senator from Iowa, in his statement a few moments ago, in which he showed that Mr. Henry was thoroughly mistaken in the admission of the fact that we have the absolute power to appoint officers and do the training, and if we do not train them nobody can. Certainly, if that be true, the great orator was in error in supposing that the control of Congress was unlimited. We owe much to Patrick Henry for his eloquence and his patriotism; but time has shown his fears to have been ungrounded, and the Supreme Court of the United States has shown his view of the Constitution to have been unsound.

Mr. CUMMINS. I rarely quote Patrick Henry unless he is on my side.

Mr. BORAH. But the difficulty here seems to be that he is not on the side of the Senator. The position the Senator takes is that there is no power in Congress to name the officers and train the militia.

Mr. WILLIAMS. If the Senator from Idaho will pardon me, a good deal of this argument has grown up out of a difference of opinion as to what the word "discipline" means.

Mr. BORAH. It seems so.

Mr. WILLIAMS. The word "discipline" is defined as instruction; training. It is defined as drilling. That is what it means. The State prescribes the tactics, whether it is Hardee's or Upton's. That is what is meant by discipline.

Mr. BORAH. In addition to that, Congress has put a construction on that clause of the Constitution in accordance with that definition.

Mr. CUMMINS. The Senator from Idaho imputed to me an opinion a moment ago that I think I have not expressed. I believe that the States have the power, and the exclusive power, to appoint the officers of the militia until the militia enters the employment of the United States. I might not agree with the Senator from Idaho as to just what constitutes employment by the United States. He is of the opinion—and I have not disputed it up to this time—that the militia enter the employment of the United States only when they are called into service to accomplish one of the things mentioned in the preceding paragraph of the Constitution, while I think it may be fairly contended that they can be called into the employment of the United States for the purpose of preparing them to do the things which the Constitution names in the preceding paragraph.

Mr. BORAH. Let me ask the Senator a question in order that we may get down to the real issue. The Senator concedes that the States have exclusive power to appoint the officers. Suppose the State does not see fit to train the militia, has Congress power to train the militia?

Mr. CUMMINS. I do not want to answer that question. It is an exceedingly doubtful one, and I do not think it inheres or is material to any proposition I have made or shall make with regard to the bill, and especially the pending amendment.

Mr. BORAH. Mr. President, I am just about to conclude, and I will conclude by saying that it seems clear that under the Constitution, and according to the authorities which have undertaken to construe the Constitution, this at least may be regarded as well established: First, that the appointment of the officers is exclusively under the control of the States; and, secondly, that the training of the militia is exclusively within the authority and under the control of the States; that if the State does not see fit to appoint officers the Congress of the United States can not compel the State to do so; that if the State does not see fit to train the militia the Congress of the United States can not compel the State to do so. There have been historic illustrations, but of those I am not going to speak now. There is another feature of this National Guard matter which I want to discuss later. But those two propositions as legal propositions under the Constitution seem to me beyond peradventure well established. But just a word with reference to the quotation from Washington's message to Congress, upon which the Senator justly lays stress. No doubt both Washington and Hamilton entertained a hope that the act of 1795 would work out successfully. But the Father of his Country did not live to see his hopes dashed to earth in the War of 1812. But that does not relate to the legal proposition, and I propose to take this and other more serious questions up in a later discussion.

Mr. LEWIS. Mr. President, unless I am taking up time that some other Senator would like at this particular time to occupy, as I am not anxious to proceed at any particular hour, I would like permission to say a few words touching this proposed amendment and what I regard to be the attitude of this bill toward the States' guard militia.

There seems to have been in this country something of a general fear addressed against the organization of the Army and also against the State guards. There is very generally, Mr. President, through the country, I think, a mistaken idea as to the offices to be performed by both the Army and the guards. They are not enemies of our country or opposed to the freedom of our people.

I heard the distinguished Senator from Minnesota [Mr. NELSON] expressing in commendable terms his condemnation of that general spirit pervading in different parts, indeed, I may say the whole, of the Republic, opposing any form of force or defense as militarism. Just now that spirit seems rampant and to pervade sections of the country where least we were to expect it and where the reputation for intelligence, it is assumed, would have long avoided it.

In the casual writings of Heine there is a very interesting observation produced by him to point a moral. He speaks about an oriental country where there was a judge of a court who was called upon to pass a judicial decision between two conflicting contenders for some interest, and, not liking the looks of the individuals, he committed the decision to his daughter. She heard the full case and she went to her father to report. Heine relates that the old judge asked her, "Well, what do you think of the justice of their case and which do you think is right?" She responded, "I do not know which is right; I only know that both stink." In the general estimation of a class of people throughout this country there is an assumption that the very organization of any form of military protection is a stink in the nostrils of democracy and is obnoxious to the whole spirit of justice in a republic.

For myself I can not take either of these views. What this country needs just now can be put in a single phrase. It is an army that is a sufficient army. Its States need a complete and efficient organization under the privileges of its National Guard or militia.

The danger we have is that under the general excitation prevailing in certain quarters we may go to such an extreme of militarism as to arouse the fear and aversion of a certain class of people who lack a complete understanding of what our objects are and defeat through misapprehension the very purpose of our undertaking. Or, on the other hand, we may go to the other extreme and, yielding to these fears and this aversion, fail to do anything that is necessary to the demand of the hour upon the country.

I occupy rather a difficult situation, measured by my estimate of my own position. I am not able to agree with any measure in toto which has been presented to either body. I have studied both bills, that from the House, designated the Hay bill, and that coming from the Military Committee of the Senate, designated the Chamberlain bill.

Mr. President, at the outset let me confess a prejudice, well to be understood in order that my fellow Senators may measure properly my hostility—at least keep in view what it is that influences me.

I am strongly prejudiced in favor of the National Guard. I am strongly an advocate of a State force to be kept and equipped for the purposes of local welfare as well as national defense. I have been a member of the Guards, in some form or other,

since I left my schooling. I have been an officer of the Guard, in some form or other, all my manhood life. I am now and have retained this position, and it may be that those affectionate associations, inspired by the endearing experiences that a man has year in and year out, cause me to see these agencies in a more flattering light than others far removed from personal association may view them. I have observed a tendency in this Government at every opportunity that could arise to minimize the value of the State National Guard, and in some instances to macerate them out of existence.

This bill, to my thinking, works a great injustice to every State in the Union, and, to my opinion, robs the States to a great extent of that force essential to our Government, a force within a State for the purpose of repelling invasion against that State as well as to protect that State from those disorders which may suddenly arise within a State due to its local situation. This is a condition so seldom understood and never wholly appreciated by other States many miles removed.

I have been interested in the argument of the Senator from Idaho [Mr. BORAH]—and I have been attracted by the different suggestions made to him by other Senators as the argument has proceeded—upon the distinction between the power of the Federal Government over the Army and the power of the National Government over the militia.

Mr. President, there are two things it is well to clear up in the beginning. There is a distinct difference between militia and the National Guard. The militia, under the wording of the Constitution, merely means that which is meant under the English definition. Having used governmental words in those days, which were the words of the common law or English statutes—words defining things and status which had existed in England previous to our coming into existence, it must be assumed that we used them in the same sense they were employed by those from whom we adopted them. So the word "militia" in the Constitution means that body of men from whom may be organized a distinctive force, but who, not being so organized, are "the militia," as distinguished from the organized force called "the Army."

Under the laws of England before our coming into existence, as is well remembered by the able lawyers representing their different States here in the Senate, as long ago as King Athelstane in Kent, they organized each locally a form of militia. This was adopted, it is very interesting to remark, from the ancient governments of which they had some reading and not much knowledge. It came from a series of institutions prevailing in Rome. The Gauls landing in England brought with them some such form of the government of the land from whence they came. Part of England, not desiring to accept the imperial form of Rome, rather reverted, as did the Southern States of the United States, together with New England, to the Grecian theory. They declined to accept a form of organization that extended from border to border, and they adopted the Grecian theory of organizing in each locality some form for its own separate protection in the event that one of its neighbors, for offenses real or imaginary, should attempt to invade it or to make war upon it.

The word "militis" passing, of course, from the Latin into the English, took its shape rather into the word "militia," which had no other object than merely defining those who could do military service.

Therefore I say to my eminent friend from Idaho [Mr. BORAH] that I think the distinguished Senator from Iowa [Mr. CUMMINS] and himself did not pause to reflect upon that, which reflection would so readily have restored them to the real definition of the word as used in the Constitution. The right of a State to keep a militia was intended to mean the privilege of a State to recognize that class of individuals who may bear arms, and thus it added the other words reading, "a well-organized militia." Consequently, when the provision is against the State keeping troops, that meant that it should not organize an army as an army within itself that might be used as an army opposed to the National Sovereignty, but "organized militia" meant that it should always keep itself, if it chose, in such a condition that its militia could be organized at any time for the purposes of national defense, but never to be kept as a separate army under the State sovereignty as distinguished from the General Army under the Nationality.

Therefore, while it does appear on the face of the Constitution an interesting inconsistency, difficult for the most eminent lawyers to reconcile, yet upon reading something of the history of our country we will readily see there is no real inconsistency, if we will divorce the word "militia" and the application of it from what is generally termed the National Guard. Therefore, the Organized Militia becomes a National Guard or the Organized Militia may become the Army.

Now, Mr. President, I wish to call attention to the fact that it is not at all inconsistent with the provisions of the Constitution that the Federal Government should exercise or should assume to exercise a control over the National Guard. In so far as the national defense is concerned the assumption on the part of our learned and excellent friend from Idaho, voicing the view, I dare say, held by many able Senators, that we have no control over the officering or the disciplining of the National Guard fails in this point. That particular provision of the Constitution cited by him is limited to the officering and the discipline of the National Guard while they remain a distinct State force, but the very moment any condition arises that calls for this force to be exercised in behalf of the national welfare the right then of discipline or officering is promptly vested in the very power that is authorized to call them into existence for national uses.

So we see that there is no inconsistency there, because if there were left in the power of the President of the United States the right to officer the guard of the State of Michigan, the State of Pennsylvania, the State of Illinois, or the States of Iowa or Idaho while in time of peace contemplate what would follow. That officering of their force could come from any source in the world, there being no law to compel the officer to come from the State of North Carolina if it is the guard of North Carolina, from South Carolina if it is a South Carolina guard, or from Michigan or from Idaho, we would soon have a condition which our fathers inveighed against when in the Declaration of Independence, a general expression of their grievances, they spoke of the "foreign soldier" who had been quartered upon the soil and at their doors.

If the President of the United States in time of peace could officer the guards, it would be quite apparent that he could officer them from any source whatever; that he could send men to take charge of them who bore not the slightest relation of kindliness to them, who knew neither their families, nor their needs, nor their geography, nor their environment, and would use them upon any state of circumstances according to his whim or profit or which served his particular object, though that object might be indeed removed far apart from the just needs of the hour.

So you can see, I am sure, Mr. President, that there is a great deal of wisdom in that provision of the Constitution which limits the officering and the discipline of the guard in time of peace to the State wherein it is organized.

The able Senator from Idaho called attention to the opinion in the Fifth Wheaton, a case well reasoned out, and, as the able Senator from Idaho pointed out, rather replete with separate opinions, and to that extent indicating a very great interest in the question involved. The question involved at that time was, of course, the limit of the Federal Government over the National Guards in time of peace and the limitation of the State government over a Federal force in time of war. One of the observations of that opinion impresses me as of vast interest. It is the individual opinion of Mr. Justice Story. My learned friend, the able Senator from Idaho, in using the words "dissenting opinion," I am sure happened not at that particular time to realize that it was not dissenting, he, no doubt, meaning individual; but the opinion is not dissenting. It is a separate opinion, and Mr. Justice Story has an observation that is interesting. He says of the general policy:

> But the exception from a given power can not, upon any fair reasoning, be considered as an enumeration of all the powers which belong to the States over the militia. What those powers are must depend upon their own constitutions, and what is not taken away by the Constitution of the United States must be considered as retained by the States or the people. * * *
>
> If Congress should not have exercised its own power, how, upon any other construction than that of concurrent power, could the States sufficiently provide for their own safety against domestic insurrections or the sudden invasion of a foreign enemy? They are expressly prohibited from keeping troops or ships of war in time of peace, and this, undoubtedly, upon the supposition that in such cases the militia would be their natural and sufficient defense.

Showing to my eminent friend from Idaho that distinction between troops and militia is clearly recognized by the courts along the line I assumed to point out a moment ago in my argument on this question.

Mr. BORAH. Mr. President——

Mr. LEWIS. I yield to the Senator.

Mr. BORAH. I think the Senator from Illinois is in error as to its not being a dissenting opinion.

Mr. LEWIS. If the Senator from Idaho, having the volume before him, says it is a dissenting opinion I have then forgotten that it is dissenting, being under the idea that it was an individual opinion.

Mr. BORAH. Justice Johnson rendered an individual opinion; but Justice Story rendered a dissenting opinion, holding

that the act of the Legislature of Pennsylvania was void while the court held that it was valid.

Mr. LEWIS. It may be, Mr. President, but what I wish to call the Senator's attention to is this particular phase of reasoning. Mr. Justice Story, however, is not combated, as I recall it, by any other of the writers of opinions.

Mr. BORAH. I agree with that proposition.

Mr. LEWIS. Therefore I wish to say to my able friends my judgment is this: The only judicial declaration we have in construing that act seems to be this: The concurrent jurisdiction of the State with the Federal Government over the militia gives to the Federal Government the organization and discipline of the militia in any manner touching the national defense concurrently with the State. That being therefore established, as I see it, I am unable to see that there is that barrier which Senators have heretofore apprehended against the National Government federalizing the State guards to the full extent necessary for national defense, without, however, abrogating or repealing the National Guards in their complete and sovereign existence for the welfare of the State and its State defense.

Now, Mr. President, we get some idea from a later opinion, to which I invite my learned friend's attention. I invite the Senator's attention to the case that came up growing out of a court-martial. I read also from Mr. Justice Story in Twelfth Wheaton, following the Fifth. I invite attention to some observations in this opinion as indicating to my mind that the court in this case finally yields to Mr. Justice Story's conclusions in the Fifth Wheaton, and it seems to yield to his line of reasoning. If I were before a court, I would assume to argue as follows: That in the former case, the opinion being dissenting, as my able friend says, but in the matter to which I allude separately, to which there was no dissent, subsequently, upon further consideration, this same justice had his views adopted in so far as these particular matters to which I am alluding were concerned, and then such became the full opinion of the court on that subject. I shall read.

This is a military case. The militia of New York is called out for some uses. The militia declines in the State of New York to obey the court. They are proceeded against and these particular officers in disobedience court-martialed. They make the point that they are not subject to the Federal Government, seeking to take favor under Fifth Wheaton. They contend that they were not a national force and are not the subject of a court-martial by the National Government. That they are distinctly a State force, and as there was no insurrection, no national war, it was not in the power of the United States Government to court-martial them because these particular officers assumed in their judgment to differ from the President of the United States, who had decided there was some war imminent, and in that respect thought to call the militia into action. I read but one or two paragraphs for the purpose of accentuating the position which I feel free to take. I ask my able friend from Idaho, who is an excellent lawyer, as well as an eminent Senator, as to his construction of the case in Fifth Wheaton, drawn from these observations to be found now in the subsequent opinion of Twelfth Wheaton. In this opinion Mr. Justice Story says:

> For the more clear and exact consideration of the subject, it may be necessary to refer to the Constitution of the United States and some of the provisions of the act of 1795. The Constitution declares that Congress shall have power "to provide for calling forth the militia, to execute the laws of the Union, suppress insurrections, and repel invasions"; and also "to provide for organizing, arming, and disciplining the militia, and for governing such part of them as may be employed in the service of the United States." In pursuance of this authority, the act of 1795 has provided, "That whenever the United States shall be invaded, or be in imminent danger of invasion from any foreign nation or Indian tribe, it shall be lawful for the President of the United States to call forth such number of the militia of the State or States most convenient to the place of danger or scene of action as he may judge necessary to repel such invasion, and to issue his order for that purpose to such officer or officers of the militia as he shall think proper." And like provisions are made for the other cases stated in the Constitution.

Then comes some matter which is unnecessary for the purpose of my point. The court, proceeding, says:

> It has not been denied here that the act of 1795 is within the constitutional authority of Congress or that Congress may not lawfully provide for cases of imminent danger of invasion, as well as for cases where an invasion has actually taken place. In our opinion there is no ground for a doubt on this point, even if it had been relied on, for the power to provide for repelling invasions includes the power to provide against the attempt and danger of invasion, as the necessary and proper means to effectuate the object. One of the best means to repel invasion is to provide the requisite force for action before the invader himself has reached the soil.

Carrying out the idea that in the States these forces were intended to be disciplined and equipped for the purpose of repelling invasion. Then the court, proceeding, says:

> If the power of regulating the militia and of commanding its services in times of insurrection and invasion, are—as it has been emphatically said they are—natural incidents to the duties of superintending the common defense and of watching over the internal peace of the Confederacy—

This is a quotation from the Federalist, which, I assume, the able Senator had before him. Then, the court continues:

> These powers must be so construed as to the modes of their exercise as not to defeat the great end in view. If a superior officer has a right to contest the orders of the President upon his own doubts as to the exigency having arisen, it must be equally the right of every inferior officer and soldier; and any act done by any person in furtherance of such orders would subject him to responsibility in a civil suit in which his defense must finally rest upon his ability to establish the facts by competent proofs. Such a course would be subversive of all discipline and expose the best disposed officers to the chance of ruinous litigation. Besides, in many instances the evidence upon which the President might decide that there is imminent danger of invasion might be of a nature not constituting strict technical proof, or the disclosure of the evidence might reveal important secrets of state, which the public interest, and even safety, might imperiously demand to be kept in concealment.

I conclude with a single paragraph:

> The act of 1795 is not confined in its operation to cases of refusal to obey the orders of the President in time of public war.

Yet I am sure the Senator will agree with me that that expression seems exceedingly foreign to all the views the court had uttered in the case in Fifth Wheaton, and directly contrary to all views we have been educated to in this body as matter of law—that is, that the President of the United States has no power over an officer of the State militia in time of peace, and yet this observation from Justice Story, speaking now for the full court, apparently, along the line of his observation when he rendered his dissenting opinion in the same case and his separate opinion on another branch—we now find him asserting the same doctrine, apparently, with the concurrence of the court that had previously differed from him. I read as follows:

> The act of 1795 is not confined in its operation to cases of refusal to obey the orders of the President in times of public war. On the contrary, the act authorized the President to call forth the militia to suppress insurrections and to enforce the laws of the United States in times of peace.

Mr. President, I think I have indicated sufficiently, at least for the point I wish to make, that there is a power in the President of the United States over the militia in time of peace, which does authorize him concurrently with the States to supervise the organization, the officering, and the disciplining, and that the observations in the former case, read by the able Senator from Idaho, seem to be at variance with what seems to be the spirit of the later decision and what seems to have been since then something of the practice.

Mr. President, having made that assertion, I now wish to make manifest my object. The time has come when this Government must recognize that the militia or the National Guard organized in different States, to become effective for any purposes whatever, must have the concurrent cooperation of the Federal Government. This cooperation must be by the furnishing them with implements, accouterments, supplies, and opportunities. Without these the guard, however patriotic in their individual character, would be useless to the National Government. Why? The eminent Senator from New York [Mr. WADSWORTH] called attention to the general position of this bill touching such of its features of organization and to the situation of the National Guard of New York.

In a State such as New York, where the guard is brought up to a very high degree of efficiency, supported by the State—and I might add Pennsylvania, Illinois, and other States, but I am now speaking only in illustration—in such a State you could expect from the guard cooperation with the Federal Government of its own volition, because it is able to do so; but in States where the income from taxation has been limited and the amount committed to the treasury has been curtailed, so that expenditures in behalf of the guard have been most limited indeed, and where unjust prejudice has prevented their growth, there would be no money for their existence; and unless the National Government should go into such States and render them aid, that there may be uniform provisions, there would be no guard within such States kept up to such efficiency as would be of any value or service to the National Government in the hour of insurrection or of war.

Therefore it must be seen clearly that the power of concurrent jurisdiction is justified by the courts; it must be seen clearly that it is justified by the Constitution; and it must seem to be a very natural power, in order that we should have a uniform defense and a uniform force to accomplish that purpose.

Mr. President, what I wish to speak of particularly is that this bill, as I see it, fails to recognize that the National Guard should be a separate force for its State uses; it fails to recognize the great fact that the guard is a State body which exists; but, to the contrary, I am forced to the conclusion that there is not a due regard for either the uses of the guard in the past or their needs for the future, but that this bill, out of some spirit mysterious to me, conscious as I am of the patriotism of the

men who constitute this committee, has visited an affront upon that force that has remained the force of defense and sustenance of this Government in times of its greatest peril, and which at other times, sir, has been forced to endure hardships that could not be described, miseries beyond the tongue's depiction, and insults and affronts from conditions around them that ought never to have been visited upon the meanest citizen of our country, and far less upon one who tenders his life for the liberty of his country.

Now, in an hour when we have weaned many away from the prejudice of the National Guard and brought closer relation to the National Government, with the consent at least of the majority of our countrymen, by which that concurrent power of supervision and control may be exercised, there is disclosed on the part of the committee a spirit that seeks to ignore the National Guard. I think I shall be able to point out in a few words, at least to those gentlemen who have a feeling such as I have—a feeling on behalf of the guard to nurture it, to protect it, and to guard it against injustice—that in this measure there are three different sections which place the National Guard in a position of subservience to the Regular Army, which place the guard as menials to the officers of what is known as the volunteer force, which place the guard as policemen in the States in which they exist, and rob them of all the sovereignty of character, the dignity of nature, and the splendor of life that belong to an American citizen in the defense of his country and who tenders all he has to that noble aspiration.

It is said that in the beginning of our Government there was this opposition to the militia. True; but, as I pointed out to the able Senator from Idaho, keeping in view his confession that his relation to the guard as an institution had not been, of course, as intimate, as we all know, as his relation to the law on the subject, the difference—I may say the confusion—arose from the fact of our inability oftentimes to distinguish between the militia as a power out of which the guard could be organized and the National Guard being a part of the Organized Militia.

Mr. President, the able Senator from Idaho brought into requisition his usual fund of learning as he took legitimate recourse to his splendid historical knowledge. The Senator from Idaho, speaking for the school of thought for which he stands, and which he eminently represents, said that the National Government should have a supervision, I may say sovereign in character, over all of its forces within and without a State, its discipline and the officering of the guard or the militia; otherwise, according to his argument and the argument of many others, there would be no competent force within the State whatever and they would be useless organizations for national defense.

It is true that Alexander Hamilton made such observations as the able Senator from Idaho quoted from, but I wish to call to the Senator's attention and to the attention of the Senate, who do me the honor to hear these dry observations at this time, that those views were combated even then; that even then it was not regarded as prudent that we should sever local force from a local control; and I think I can point out that Mr. Hamilton subsequently, after returning to the State of New York, where he lived, finding that the people of New York did not exactly concur with his view and that it was contrary to the best interests of the local sovereignty of the States and for the future theory of our dual Government, qualified his own observation; but of that we will let the Senate judge.

I call attention, first, to the fact that during the debates upon the Constitution this question to which my able friend alludes arose, and touching the question, I wish at this time to call attention, first, to the observations of Patrick Henry upon the question of whether the Federal Government should have absolute power or control over the Organized Militia, what we now would call the National Guard, or whether it should be left, as is the theory of our Government now, to a local sovereignty, except in time of national crisis or national peril.

Says Mr. Henry:

> Your militia—

Referring to a then proposed proposition—

> Your militia is given up to Congress—all power will be in their own possession. Of what service would militia be to you, when, most probably, you will not have a single musket in the State? For, as arms are to be provided by Congress, they may or may not furnish them.

You will gather from this that this argument is very much along the line of my suggestions that if the States have the right to officer this force in time of peace they still would be powerless unless the Congress chooses to protect them and furnish them with proper sustenance and support. Continuing, Mr. Henry says:

> Let me here call your attention to that part which gives the Congress the power to provide for organizing, arming, and disciplining the militia—

Referring, of course, to the Constitution—

> and for governing such part of them as may be employed in the service of the United States; reserving to the States, respectively, the appointment of the officers and the authority of training the militia according to the discipline prescribed by Congress. By this, sir, you see that their control over our last and best defense is unlimited. If they refuse or neglect to discipline or arm our militia, they will be useless; the States can do neither, this power being exclusively given to Congress. The power of appointing officers over men not disciplined or armed is ridiculous; so that this pretended little remains of power left the States may, at the pleasure of Congress, be rendered nugatory.

Then Mr. Madison, having this proposition before him in the Virginia Convention, says:

> But the honorable member sees great danger in the provision concerning the militia. Now, sir, this I conceive to be an additional security to our liberties without diminishing the power of the States to any considerable degree. It appears to me so highly expedient that I should imagine that it would have found advocates even in the warmest friends of the present system. The authority of training the militia and appointing the officers is reserved to the States. But Congress ought to have the power of establishing a uniform system of discipline throughout the States, and to provide for the execution of the laws, suppress insurrections, and repel invasions. These are the only cases wherein they can interfere with the militia; and the obvious necessity of their having power over them in these cases must flash conviction to any reflecting mind. Without uniformity of discipline military bodies would be incapable of action; without a general controlling power to call forth the strength of the Union for the purpose of repelling invasion the country might be overrun and conquered by foreign enemies. Without such a power to suppress insurrections our liberties might be destroyed by intestine factions and domestic tyranny be established.

Indicating clearly that they saw the necessity of these local forces being organized, disciplined, and officered, even in time of peace, in order that in their own States they might be able to repel invasion against that particular State where there might not be time or opportunity to call in the forces of the Federal Government or to invoke its authority. Therefore, I think it was, that Mr. Hamilton later—I assume when discussing similar subjects, not, I must say, withdrawing from his previous attitude as expressed in the quotation made by the Senator from Idaho, yet qualified them—indulged in observations such as the following.

Says Mr. Hamilton:

> It requires no skill in the science of war to discern that uniformity in the organization and discipline of the militia would be attended with the most beneficial effects whenever they were called into service for the public defense. It would enable them to discharge the duties of the camp and the field with mutual intelligence and concert, an advantage of peculiar moment in the operations of an army; and it would fit them much sooner to acquire the degree of proficiency in military functions which would be essential to their usefulness. This desirable uniformity can only be accomplished by confiding the regular of the militia to the national authority. It is therefore with the most evident propriety that the plan of the convention proposes to empower the Union "to provide for organizing, arming, and disciplining the militia and for governing such part of them as may be employed in the service of the United States, reserving to the States, respectively, the appointment of the officers and the authority of training the militia according to the discipline prescribed by Congress."

The able Senator read a portion of this utterance, after which I beg now to add:

> If standing armies are dangerous to liberty, an efficacious power over the militia, in the body to whose care the State is committed, ought as far as possible to take away the inducement and the pretext to such unfriendly institutions. If the Federal Government can command the aid of the militia in those emergencies which call for the military arm in support of the civil magistrate, it can better dispense with the employment of a different kind of force. If it can not avail itself of the former, it will be obliged to recur to the latter. To render an army unnecessary will be a more certain method of preventing its existence than a thousand prohibitions on paper.

Now, I ask the committee, with great respect—I, who am not a follower of the doctrines of Mr. Alexander Hamilton, certainly not in all respects—I ask them if they will not apply to section 56 of this bill this doctrine, as I now put it in the language of Mr. Hamilton?

> If the Federal Government can command the aid of the militia in those emergencies which call for the military arm in support of the civil magistrate, it can better dispense with the employment of a different kind of force.

Why, then, this different kind of force, called the "volunteer army," if the Organized Militia can serve the purposes and uses which even Mr. Hamilton at that time saw, with the concurrence of the National Government, would be accomplished? If the full uses and, I may say, needs of our Government can thus be fulfilled, why should there be the introduction of this intermediate force, which in its very nature mascerates the guard out of existence as an independent and sovereign force within the State whenever the hour shall come when it shall be called

into service for the national defense? Therefore, quoting the last clause of Mr. Hamilton's utterance:

If it can not avail itself of the former, it will be obliged to recur to the latter.

But, as we have seen, it has always availed itself of the former, and may continue to avail itself of the former, why should there be this recurrence to the latter, to this extraordinary force introduced in this measure euphoniously designated the "volunteer force," and to which in a second I shall allude in more detail?

Mr. President, I am at a loss to understand what peculiar spirit there is in this Government at this particular time that has intruded itself upon this Republic to visit what I feel to be this affront upon the National Guard of the country. Why should it be at this particular time? May we not pause and ask something of the service of the guard? Who are these people? Has there ever been any evidence that the guard has shown hostility to the welfare of the country at large? I answer, none. Barring the single instance where they doubted the national authority touching the question of courts-martial, it is difficult for anyone to lay his hand upon an instance where the States—I am not now, of course, referring to the Civil War—ever offered the slightest opposition to any movement on the part of the National Government looking to the national defense or the national welfare.

We speak of the service of the guard. We should speak of it rather reverently. I know that here and there there have been instances to which gentlemen have alluded—and seemingly they do so with delight—wherein the guard has failed of that which might be expected; but those Senators, or those who have made such references, seem not to have paused to consider that much of that was caused by a lack of supplies. It was not due to a want of efficiency; it was due to a want of opportunity; they lacked the arms; they lacked munitions; they lacked training opportunity, and they could not accomplish, Mr. President, to the full extent the tasks the Regular Army accomplishes when they were so limited in means by comparison that they could not have that wherewith with which the Army had been equipped. Barring these illustrations which I offer, now, we turn and ask ourselves has there been at any time a reason why the guard should have been so discriminated against and at this particular time, so neglected?

Mr. President, we remember that the National Guard of the different States have been called upon from time to time to perform the most odious duties. They have been compelled to combat their own neighbors and friends, where there has been conflict between master and servant, between capital and labor. They have been called out to perform duty disagreeable in every aspect, wounding their every sensibilities; yet, notwithstanding that, in the pursuit of their duty they proceeded, taking the odium of the situation, the insult of those who surrounded them, bearing under disease, enduring the conflict of those who opposed them, firm in spirit and endowed with surpassing patience—in spite of all this, in spite of assaults upon them physically, they have proceeded in the performance of their duties to the State with honor and with dignity, and then they have returned to their homes to find in many instances that they were discriminated against, discharged by their employers, refused to be returned to their previous employment, left without a home, almost hopeless; and when they came here to Congress, seeking some recognition, they were flaunted and turned from the door; but, nevertheless, they returned to their undertakings in behalf of their State in just the same spirit of devotion as before. Each generation has produced a buoyant lot of young men, men of splendid spirit, with noble ardor, with warm and generous natures, who, realizing the splendid discipline they would obtain, and enjoying the association of their fellows, have every year presented that splendid front of noble force for the defense of the State and for the glory of the Nation.

Mr. President, there is a disposition now and then to assume that the National Guard of our Republic is something new and, therefore, something to be only tolerated. I assume to ask the able chairman of the committee, whose industrious efforts spent on this bill I naturally applaud, but from whose conclusions in many respects I differ materially, to pause to recall that this force, the intermediate guard, has ever been the salvation of nearly every Government which has ever assumed to support the doctrine of freedom.

I see before me eminent scholars of history. It has been an opportune reference when, occasionally, scholars have referred to the Pretorian Guard of Rome. Let it be remembered that it was the local guard of the imperial governments of Rome, created within their respective functions, that saved Rome from being overrun time and time again through the centuries. Long before the Goths and Vandals descended upon that imperial country with the blood of the virtuous Helvius Pertinax dripping from their fingers the members of the Pretorian Guard murdered their officers in fear that these might usurp the Government and overrun the land and produce that result which subsequently, years afterwards, was accomplished. On many occasions the army, being on distant outposts, could not be mustered and it was the guard led by Pretorius that saved Rome from foreign invasion. This was one of the lessons presented before our fathers who wrote the Constitution.

And Greece! Do I need refer to the historical fact that, when the Athenian League was dead and it seemed as if the liberty of that little country was imperiled by those who no longer desired it to remain free and were willing to surrender it to the legions of Philip, who then threatened it with despotism and destruction, it was the local force that amassed itself in a form which we speak of as the guard that rushing to the gates of the city stood with its sturdy strength, defended it against the invasion, and saved Greece that it might have life a little longer to present to us all the ideals of art, emblems of beauty, and models of classics; indeed, produced all the precedents and history of real democracy. It was from these that our fathers learned their earliest lessons, and profiting therefrom shaped the dual form of government by giving to the guard, the "militia," as it was then termed, its sovereignty within the States, and as Mr. Justice Story, in the last opinion in Twelfth Wheaton, directly varying from the opinion read by the eminent Senator from Idaho, clearly expressed his view of having this concurrent jurisdiction between the States and the National Government.

But surely, Senators, you will agree with me that it could never have been the idea that it could be a concurrent jurisdiction carrying with it the right of a National Government to invoke the State to the aid of the National Government in the hour of its peril, without calling for the corresponding duty of the National Government contributing to the State Government for the militia or guard, to the extent of its necessities, in order to bring it up to a disciplined organization essential to the welfare of the State against invasion that might be brought upon that State at any hour.

Yet, if the provisions of this bill shall remain as they now are, every incentive to the National Guard to continue the discipline which has been the glory of its past, and to maintain itself as a great force for defense against invasion will have ended, and the guard will have been placed in the humiliating position, after all these years of noble service of being subordinated to an intermediate force, not now in existence but to be called into power, to become commanded under the order of the President, while the officers of the guard become servants, and I may say servile, to those who will, while bearing the title of volunteer officer, will carry with them the power of the National Government. This makes the National Guard of every State of the Union really a third and ultimate force, only to be called upon when all others have been exhausted, and then used in such a manner that they remain subject to the orders of those officers who have been put in power under this bill, who may come from any part of the United States except the country, the State, or the locality whence the National Guard may have been organized. I hold that that is dangerous; I hold that that means the death of the guard. I am not willing that the home volunteer guard should receive this death stroke in the house of its guardians—I can not allow this measure, as much as I favor every form of organization of the Army, to be put upon the Senate with these provisions in it. They imperil the home forces of a country so heterogeneous as ours. Shall we mask the truth here, Senators? Are there any reasons to-day in this body why we should hide from ourselves the reasons why the National Guard should be kept in the States firmly and securely?

My friend from Iowa [Mr. CUMMINS], the able Senator who has been indulging in observations here; the Senator from Wyoming [Mr. WARREN], the eminent member of this committee; my friends, both the senior and the junior Senators from Minnesota [Mr. NELSON and Mr. CLAPP]—they live in a country of homogeneous population. They may never have reason to call for the guard in sudden emergency of things which they do not understand, not having experienced them. Let me turn to this side of the Chamber, and let us be frank at the expense of popularity. If ever the time comes that you dismember the National Guard in the States of the Pacific coast and forget the Chinese riots that they had to contend against, growing out, unfortunately, of labor disputes that Heaven hope may not be repeated, or of the Japanese uprisings, or uprisings of those who do injustice to the Japanese, we will say (accepting the views of others), or any of the nationalities upon which is precipitated difficulties which are wholly their own problems, where do you think these States, then, in such an hour, will get their defense? Shall they telegraph—as

under this bill it is necessary to do, as I think I can show you—to The Adjutant General of the United States, who may come from the State of Ohio or from the State of Illinois or from New England, and who, having possibly no appreciation of these local difficulties, must hesitate, must examine into the question, must pause, must consider before he can authorize this volunteer force to come to the defense of these localities, in the meantime of which every despoilation has been executed, every offense against the citizen, killing and murder, riot and incendiarism?

That, Senators, I am sure you will see, could not have been the intention of any of you, and yet it is the direct result of this bill in its construction, as I see it, and surely it will not be your purpose. Yet under these provisions the National Guard is left, notwithstanding the provision of the bill that seemingly masks—I do not say intentionally; I know the honor of the members of this committee—yet in its verbiage it masks the very evil to which I allude by saying there is reserved to the State the right to maintain these reserve forces, and then it immediately follows that by taking from the State every power by which it may execute, order, or enforce rights by these reserve forces, called "volunteer."

Now I come to my neighbors from the South. I was born in the South. To it I owe the gratitude of my rearing. I sympathize deeply with its problems, which never can be defined exactly to those outside of the South. You, Senators, well know what it has had to contend against from time to time; and while we will not charge the evil as against any race, we know it is sufficient to recall that the Southern States have been compelled to endure that which is nameless in respectable society. Yet under this bill, with no intention on the part of this committee, but unconscious of these situations, or for the moment indifferent to them, I do charge solemnly from my place, upon the responsibility of my position, that under four sections of this bill the State of South Carolina, the State of Mississippi, the State of Louisiana—States which in the past have been characterized with unfortunate inflammable exhibitions, or I may say the States have been inflamed because of the inflammable situation which from time to time has surrounded them—your guard, though reserved the right to serve in its local capacities, would be met with the following: The very moment there arose a crisis in these States by which this local force should be invoked for some reason it would be promptly pointed out that it had been usurped and supplanted under the provisions of the bill by the volunteer army; and it would also be pointed out, if they were attempting to interfere with what may be called rights claimed under the United States laws and the Constitution—to wit, in the case of the negro under the fourteenth amendment and in the case of the Japanese and Chinese under the treaty—that a State guard had no right or power and it was not within the right of the governor to call them out.

Of course we may haggle for weeks upon the legal construction, and we may find ourselves again, as the able Senator from Idaho and myself find ourselves now—he with one opinion of the court one way, I with an opinion from the same court another—both justified in the conclusions we draw; but in the meantime the unhappy situation of these States as I see it will become deeply deplorable beyond description.

Mr. CHAMBERLAIN. Mr. President——

The PRESIDING OFFICER (Mr. MARTINE of New Jersey in the chair). Does the Senator from Illinois yield to the Senator from Oregon?

Mr. LEWIS. Gladly.

Mr. CHAMBERLAIN. Do I understand now that the Senator from Illinois is complaining particularly of the provision in the bill for the creation of a volunteer force, or is he complaining of the attempt that is made to federalize the National Guard?

Mr. LEWIS. Mr. President, my complaint is twofold: First, that in federalizing the guard—which I feel should be concurrent—the effect of this bill is, as I see it, to repeal completely all the sovereign powers there are in the State with reference to the guard; second, that by virtue of the provision for the volunteer force in this bill the volunteer force will supersede the guard in all matters, except purely police duties within a State.

Mr. CHAMBERLAIN. In reference to the first proposition that the Senator lays down, permit me to say that every attempt at the federalization of the National Guard has been made at the earnest request of the National Guard itself, through its representatives, who have been given a patient hearing; and if the bill in that respect lacks anything at all, it lacks provisions that carry the National Guard as far into the federalization plan as the National Guard want to have it go.

Mr. LEE of Maryland. Mr. President——

Mr. LEWIS. Pardon me if I call my able friend's attention—I will yield to the Senator from Maryland in just a moment.

Mr. LEE of Maryland. I simply want to ask a question.

Mr. LEWIS. Certainly; I yield.

Mr. LEE of Maryland. I will ask the Senator from Oregon, the chairman of the committee, whether the provision in this bill is not that the control of the guard for services within the State is reserved to the governor and officers of the State?

Mr. CHAMBERLAIN. Practically so; but I wanted to call the Senator's attention particularly to that, because he is criticizing this bill on the ground that it contains provisions which have been insisted upon by every member of the National Guard who has been here. I call the Senator's attention particularly to an address delivered before the committee by Adjt. Gen. Foster, of Florida, and by the distinguished major general commanding the National Guard of New York, where they insisted that we had the power and that it was the desire of the National Guard to be federalized just as strongly as it was possible.

Mr. VARDAMAN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from Mississippi?

Mr. LEWIS. I yield to the Senator from Mississippi.

Mr. VARDAMAN. I wanted to ask the chairman of the committee if there is any provision in this bill which would interfere with the governor of a State using the National Guard to meet any emergency within the State?

Mr. CHAMBERLAIN. I do not think so at all. That is where I differ from the Senator from Illinois.

Mr. VARDAMAN. Of course that would be quite unfortunate. Having been the governor of my State, I know the necessity for the use of the National Guard. I had the opportunity and occasion a number of times to use the National Guard; and anything that will interfere with the right of the governor to call out the National Guard to meet an emergency would be quite unfortunate.

Mr. LEWIS. Now, Mr. President, I say to my able friend the chairman of the committee that it is true that the officers of the National Guard have asked that the guard be federalized. I have been one of those officers who have sought this; but when these officers have come before the committee, I beg to say to the chairman that they have asked to have the guard federalized but recognized upon an equality with every other force. They desire that the guard shall be federalized and that there should be two forces, namely, the Army and the guard. But when the federalization comes forth in the bill, I insist that the guard has been subordinated to the intermediate force of the Volunteer Army, which, I say to the able chairman, was never submitted to them, nor have they ever accepted it; and they never could have accepted it without realizing that their uses were at an end.

Now I come to the second question. The Senator from Maryland [Mr. LEE] asked the able chairman of the committee if there was not a power reserved in the bill leaving the militia under the control of the governor, to which the able chairman says, "Practically so." And when the Senator from Mississippi [Mr. VARDAMAN]—who, like the chairman of the Military Affairs Committee, was a distinguished governor of his State, and both recognized the needs of local sovereignty—asked the chairman of the committee if this bill allows the governor to call out the militia in case of any exigency, the able chairman says he "thinks so." It is that which gives me my concern; and I pointed out some time ago that the provisions of this bill are such that even the chairman himself, with his splendid ability upon the honor of his position, can not say absolutely that it is true.

Mr. CHAMBERLAIN. Then, Mr. President—if I may interrupt again—if the Senator is going to be afraid to act because of a doubt, he will have to eliminate the whole of the National Guard provision from the bill.

Mr. LEWIS. I will say to my able friend that I purpose offering some amendments that I feel will make exact these powers. I am only calling attention now to what I charge, and what I will continue to charge—that this committee, valorous and patriotic, in the pressure of affairs did not realize what it was doing in this bill; and I shall give a reason in a moment.

The able chairman recognizes that I am here, not criticizing the bill as an opponent, nor condemning the measure as one which I would have defeated, but as one alive to the best interests of the guard, pointing out to him as I see the matter, and pointing out to the committee, what I regard as provisions in this bill which later I shall allude to as placing the guard at a great disadvantage, and subordinating it to this third force,

this intermediate force which renders the guard impracticable for use and practically puts an end to its service.

Mr. CHAMBERLAIN. Mr. President, may I interrupt the Senator once more?

Mr. LEWIS. Oh, certainly.

Mr. CHAMBERLAIN. I am not going to interrupt the Senator again; I shall address myself to this matter in my own time after a while; but I want to call the Senator's attention, in connection with the National Guard which he is discussing, to the fact that the Constitution itself fixes the power of the governor over the National Guard of the State, and this legislation could not possibly take away or change that power. The differences of opinion here in the Senate are not over that proposition. All concede that the governor has absolute power under the prescribed terms and limitations of the Constitution. The differences amongst Senators here are as to the power of the Federal Government over the National Guard in view of the limitations in the Constitution.

There is not any question about the governor's power. That is fixed and determined, and I think is conceded by everybody. There is no purpose in this bill to take it away from the governor, and the Congress could not take it away if they tried.

Mr. LEWIS. The suggestion of the Senator from Nebraska [Mr. HITCHCOCK], a member of the committee, to the chairman of the committee that he call my attention to the fact that the Constitution authorizes the governor to call out the militia refers to something which we all recognize. I have pointed to that before. It is this—and now I ask the chairman to note the distinction:

The Constitution vests in the governor, whoever he may be, under the dual theory of our Government to which I have alluded, the right to call out the militia. It vests him with that privilege. I respectfully urge that the militias are left by this bill in such a condition that they would have no existence by virtue of which a governor could utilize them; for in this bill, as I see it, they are left so mangled as a guard that this intermediate force, called the volunteer army, so supersedes them that first they have no potency, no virility; second, that notwithstanding the Constitution vests in the governor the power to call them out, the provisions of this bill so vest privileges that heretofore have been exercised in another way that you create a conflict between the Federal Government and the State authorities as to whether the particular occasion that calls them out justifies the governor in calling the State force or the President to order out the National Volunteer Army.

Shall I remind my friend, the able chairman of this committee, that in his own State a governor named Pennoyer from one point of view directly opposed the President of the United States, Mr. Cleveland, a Democrat, on this very issue, standing on the State constitution, while those advising Mr. Cleveland stood on the Federal statute? Shall I remind him that in the State of Illinois, which I now in part represent, we had the exact situation between Gov. Altgeld, of Illinois, and the President in the Pullman-car strikes?

What I wish to call to the attention of my able friend, the eminent chairman of the committee, is that these provisions have so beclouded the heretofore sovereign power within the States over the Guard that they are now left to be a subordinate to an intermediate force, and that hereafter there will arise legal contenders who will say that the word "militia" in the Constitution, and the power over the militia in so far as it is vested in the President or in the Federal Government or in the State, has now been expressed by the Federal Government in that force called the volunteer force, leaving the thing we now call the National Guard as having no constituted authority from any recognized national source. That it has been superseded.

Therefore, in the language of Alexander Hamilton, which I read, that intermediate force is unnecessary. As long as the Guard in its original condition, in its power and virility, if properly used concurrently with the National Government, can serve the uses, I insist, first, that the volunteer force provided in this measure is not needful; second, that its existence will destroy the uses of the governor; third, that in making any attempt to organize it we will disorganize whatever Guard there is.

I have pointed out, Mr. President——

Mr. CHAMBERLAIN. May I interrupt the Senator once more?

The PRESIDING OFFICER. Does the Senator from Illinois further yield to the Senator from Oregon?

Mr. LEWIS. Surely.

Mr. CHAMBERLAIN. The Senator has referred to an occasion when a former governor of Oregon came in conflict with the President of the United States.

Mr. LEWIS. Yes.

Mr. CHAMBERLAIN. I remember that very well, because when the President of the United States suggested some course which should be pursued in Oregon, and wired the governor to that effect, the governor of Oregon telegraphed back to Mr. Cleveland: "You attend to your business and I will attend to mine," and the fact is that nothing was done.

But, Mr. President, I feel that if the position which the Senator takes is the correct one, and the Federal authorities can not be given some control over the National Guard, I, for one, will be in favor of withdrawing any support that the Federal Government gives the National Guard now. I differ from the Senator somewhat, and I shall discuss the matter a little later. I believe that Congress, by the exercise of its unused power, as stated by the Senator from Iowa, can go very much further toward federalizing the National Guard than the Senator from Idaho does. We have attempted to exercise all the power we thought Congress had under the Constitution. If we have not the power, or if we have gone further than we had a right to go, then I think it is useless for the Government to waste any more money on the National Guard. It was the very purpose of the committee, and it is partially the purpose of this bill, not to take away the power of the governor of the State—that can not be done—but to bring the National Guards so closely in touch with the Federal department that the Government itself shall have control over them.

Mr. BORAH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from Idaho?

Mr. LEWIS. I do.

Mr. BORAH. As I understand, there is no contention over the proposition that it is not within the power of Congress to take from the governor of the State the power to call out the militia for the purpose of enforcing the laws of the State or protecting the peace of the State, is there?

Mr. CHAMBERLAIN. Not at all.

Mr. BORAH. The Senator from Illinois is of the opinion that the committee have undertaken to do so.

Mr. LEWIS. Will the Senator finish whatever interrogatories he has? Then, I will answer them all.

Mr. BORAH. The point I wanted to have discussed, in view of this suggestion, was whether or not there is an attempt upon the part of the committee to take away the power of the State to use the militia for the purpose of enforcing the laws of the State, suppressing insurrection, and so on.

Mr. LEWIS. Mr. President, I first return to the chairman of the committee.

The observations of the chairman of the committee would intimate that I am opposing the federalization of the National Guard. I have pointed out to the chairman that I have not only sought its federalization here, but—if I may be pardoned for the vanity of indulging in something of my own experience in this behalf—I did so in the spring of 1899, while a member of the committee in the House of Representatives. I sought there, I have sought since, to bring about its federalization; and I have to-day read authorities—I regret that the senior Senator from Iowa was not here when I did so—supplementing some of the views of the Senator from Iowa. I pointed out that what we should have is a concurrent federalization, by which the National Guard and the Army should be the two forces of defense; that the intermediate force proposed here would destroy the Guard, and destroy the concurrent support between the local sovereignty of the State and the national unity, and that such destroys the uses of the Guard and renders it ineffective in the State, because there is no longer an incentive to maintain it either in an incipient state or in a state of organization.

Now I turn to the question of the Senator from Idaho. There is no provision in this bill that assumes directly to take from any governor the authority vested in him by the Constitution. What I wish to point out is that the definitions in the bill of authority to the Guard and to the Volunteer Army provided for under this act are of a nature which, failing to recognize the right heretofore existing within the State, will be hereafter construed to be an attempt to take it away, and that unless you can stand literally upon the constitutional clause there will be a dispute between those who will insist that the Volunteer Army has been given a privilege which supersedes the Guard, and those of my school who insist that the Guard still stands in every sovereign right that the Constitution provided for the States. It is that difficulty that I am pointing out and urging that it will surely arise. The Senator from Idaho was not here a moment ago. I will point out to him what I had in my mind, and I expressed it.

In ordinary strikes, as we call them, disputes between labor and capital, arising in the Middle West, let us say, there probably would be no serious dispute; but take the State of the Senator from Idaho, or the States on the Pacific coast, where there do arise conflicts touching those of oriental nations who claim their protection under the treaties of the United States and under the laws of the United States, but particularly by virtue of our international relations; or in a certain section of our Southern States, who claim that privilege under a direct United States constitutional provision. Does the eminent Senator from Idaho fancy there will not be those, in the event of any difficulty arising, who will insist that as far as these are concerned it is their right to be protected by the National Volunteer Army; that it is not in the right of the governor now to call out the militia touching any conflict created by their position; that they have a right to be protected under Federal power; and there will be the insistence that the Volunteer force is the only one that could be called out, and that only by the President, under this bill?

Mr. BORAH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from Idaho?

Mr. LEWIS. Certainly.

Mr. BORAH. I have been impressed with the view which the Senator is now expressing. I have not taken issue upon that proposition. I simply want to hear the Senator's view of it. But one thing seems to me rather extraordinary in that connection, and it is that the oath which the member of the National Guard is required to take relates alone to his obedience to the laws of the National Government and obviates entirely the question of his taking an oath to support the laws of the States. I think that is quite in harmony with the suggestion the Senator has made, but I think it is perfectly futile. It will have a tendency to mislead, as the Senator says; but as a legal proposition it can not accomplish what they seemingly seek to accomplish.

Mr. LEWIS. Mr. President, we must all concede, as the Senator from Iowa [Mr. CUMMINS] this morning intimated, that there are these legal doubts concerning these provisions. No man can really say that this or that is a fixed rule of law concerning how far the Federal Government may go toward the State and how far the State may go toward the Federal Government. We have for the first time begun to federalize the guard and put it in a position of concurrence with the Federal Government. That is to say, for the first time we have gone to a greater extent than we ever have heretofore; and it is very natural that the members of the committee should have been more or less confused in their views, able lawyers though they are. It is equally very natural that we should find ourselves at variance. We are really upon a new question, and all that Senators can do is to express, each for himself, the viewpoint as he sees it, trusting to this body, which is assembled here to do the very best it can, and hoping that it will be able, from these viewpoints, to reconcile the situation to the best conclusion possible. Thus it is that I am pointing out what I feel to be the perils of the omissions and expressions and policies set forth in this bill.

Now, let me take one particular illustration to which I happened to hear the Senator from Iowa [Mr. CUMMINS] this morning allude. Here is the guard. It is made subject to the service of the Federal Government if after you utilize the Army and the second force, known as the Volunteer force, it shall ever be reached; and if it has enough of existence then, in its being reached, to be of service to anybody—and yet this provision for advisory staff eliminates the possibility of these men, whose lives must be at stake, whose destinies are thrown in the balance, having anybody here at the Capital concerned in their welfare or speaking in their behalf or prescribing anything concerning their obligations within the State or for the national welfare. They may die for the Nation but have no representation. That is another illustration of the peculiar ignoring of the Guard which I feel has not been the intention of the committee, but which, nevertheless, expresses itself in a spirit that ought not to be longer allowed.

Now, I must move to a conclusion.

Mr. CUMMINS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from Iowa?

Mr. LEWIS. Certainly.

Mr. CUMMINS. Just a moment ago the Senator from Illinois made a suggestion that attracted my attention. I have not been able to hear his entire argument. I should like to ask him his view upon this subject:

Referring to section 56, which provides for calling out or organizing and training a certain number of men called volunteers, in doing so do we exercise the power given in Article I, section 8, of the Constitution to raise and support armies or do we exercise our authority in organizing or calling out the militia?

It has been said to-day, and with a great deal of force, that the Regular Army, so speaking, is made up of men who are professionally soldiers; that is, they enter the service for a definite time, and for that time they have no other occupation. Now, we undoubtedly have the power to raise armies. Will these volunteers, when they are organized as provided in section 56, be a part of the Regular Army or will they be one form of militia organized to prepare and train for the event of war?

Mr. LEWIS. Mr. President, the Senator has submitted a question filled with very annoying situations; and, so far as I am concerned, it is one to which I must reply that, as to the matters he is doubtful about I do not know. This much I will say to the Senator: When I have comprehended and contemplated that situation I am compelled now to say, and I will warn the able Senator from Iowa—who has been the executive of a State having a splendid Guard—that if this measure passes both Houses, then whenever this volunteer army wishes to undertake anything that can be justified as a militia it will be found claiming its authority under the term "militia" as found in the Constitution. When it runs counter to the Guard, whenever it wishes to do a thing which it feels is within the Army powers, it will contend that it is done under the Army powers as distinguished from the militia powers; and there will be that conflict until the question finally gets to the higher courts for construction. It is that very form of conflict, I will say to the eminent Senator, to which I have alluded in discussing the subject with the Senator from Idaho and other Senators taking an interest in this discussion, that compels me to invite the attention of the committee to the danger it is producing.

Now, I ask you, Senators, what do you think was the reason of introducing the provision creating this Volunteer Army as against the Guard, which I hope to see federalized with the National Government, leaving two forces, the Army and the Guard, and then the power to bring in the citizens from the hillsides and the valleys and their doorways and their homes, properly trained, as an additional force? What do you think has been the necessity of the intermediate force to which I am now referring?

I shall not permit myself to be personal, but I invite your attention to some history. I impugn the motives of no man in this place. I pray I may be divorced here from a prejudice that compels me, at times, to express condemnation in other quarters.

Mr. President and gentlemen of the Senate, do you fancy that this particular provision is new? I do not pose here as having more information than any of you; but, gentlemen of the Military Affairs Committee, I am sure your attention must have been drawn to the fact that this provision, with slight changes, found its authorship in 1866. It was duplicated in 1878. It was condemned by Gen. Grant, who was a volunteer soldier in all his sympathies and his soldierly qualities; and finally it made its appearance again in 1898, following the Spanish-American War, under the name of the Hull bill; and there has not been a time following any war in this Republic since the Indian wars when there have not been certain gentlemen who have taken the landwehr of Germany, the militis, the intermediate force that Napoleon created for the protection of the interior of France, and reproduced it in some form, and handed it in here as something new and novel; and even in the case of so able a lawyer as the former Secretary of War there were certain insistent, delusive, and attractive forces in this Government that were able to influence that eminent official into the belief that he had brought forth a new thought.

And why? I speak what I feel, and I ask no man to join me. First, it must occur to you Senators there is no need of that force if the Guard be patriotic. There is no need of that if the citizens are patriotic, for the citizen who is patriotic would go into the Volunteer Army, would go into the Guard already in existence, already caparisoned, already equipped. Then why do you seek through an intermediate course a force wholly original, to be newly trained, newly drilled, newly caparisoned for duty, for which we have already the units needed, only to be added to?

I answer, as the learned Senator from Idaho stated, the Constitution of the United States does not say "officered by the States," referring to the National Guard. If it had, this provision for a volunteer army never would have been here.

Mr. President, we have a great many men in the Army, patriotic men, who have come out of West Point and other national service and have reached some deserts, but not all they were entitled to. They have waited for years to have some recognition, and it is a legitimate aspiration. These conditions, however, our Government has not afforded the opportunity for; these officers could not be appointed officers of the Guard, a lieutenant of the United States service could not be made a captain,

a captain could not be made a major, a major could not be made a colonel because of that provision which the Senator from Idaho says stands as an obstruction to the nationalization, and the chairman, the Senator from Oregon, points out, because under that the State officers the Guard. If the President could have officered them there would never have been that provision for the Volunteer Army introduced in the Senate nor would it have imposed on our former Secretary of War, who is a good lawyer—these officers who have brought forth this invention would have had their just ambition gratified in being officers of the State forces.

Mr. WARREN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from Wyoming?

Mr. LEWIS. Certainly.

Mr. WARREN. I think the Senator with his vivid imagination is "seeing things" that have not materialized, as far as information that he intimates has surrounded the Committee on Military Affairs is concerned.

Mr. LEWIS. I have not intimated or said such a thing.

Mr. WARREN. So far as I know not a member of that committee had any intention by any act or any suggestion to make the National Guard less but to make it more. But I will ask the Senator, with the conditions as they are, suppose we become involved in war with Mexico, which is not entirely out of the question.

Mr. LEWIS. It is to be hoped it is out of the question.

Mr. WARREN. If we were compelled to go down into that country and meet an army much larger than our own what would the Senator do then for recruiting forces? He would send for the Regular Army.

Mr. LEWIS. The recruiting forces, the Regular Army?

Mr. WARREN. Yes; he would send for the National Guard.

Mr. LEWIS. The Senator is asking me what I would do. I promptly say that in any such condition of war I would carry out the provision that called at once for a force, as we have done many times before.

Mr. WARREN. What force?

Mr. LEWIS. I would call promptly for the volunteer forces. They would be in such time of war, the Senator will recognize, under the control of the President of the United States. It is no longer a National Guard.

Mr. WARREN. But what forces would the Senator call?

Mr. LEWIS. Any force that is within the limits capable of filling the required allotment of men necessary at the time.

Mr. WARREN. We could not do it with the National Guard unless they should enlist as volunteers in the Regular Army.

Mr. LEWIS. Surely the Senator does not intimate that the National Guard would not volunteer its services.

Mr. WARREN. I do not.

Mr. LEWIS. Its services have been volunteered in the past and they would do it again.

Mr. WARREN. The Senator has, I think, been misinformed or he would not indulge in what seems to be jealousy, because it is proposed to have some prepared force additional to the Regular Army and additional to the National Guard, which costs but little for maintenance for a few days or a month in each year, to fill such an emergency as I have indicated, where the Regular Army is too small and where the National Guard can not be called upon as a National Guard to aid the national forces. I say that that is no insult to the National Guard, as stated by the Senator, and never intended as such. Those that may claim this to the Senator either do not know what they are talking about or what others are thinking about when it is intimated that there is an intent to insult the Guard, that this has been put upon the bill in the interest of West Point officers, when, as a matter of fact, of the officers of the Army only 44 per cent of them were West Pointers to begin with. The Senator is impugning not only West Pointers but he is impugning nearly two-thirds of the force who never saw West Point as students.

Mr. LEWIS. I trust the Senator has satisfied himself that he has made his speech that may be quoted in his Army circles to prove him the great advocate of the Army and myself the critic. I certainly have nothing against the Army, nor can I ever make any reflection on the Army. The Senator knows his observations were gratuitous and unnecessary. The Senator has seen fit to put into my mouth expressions which I never used. He flatters himself that he has said something that he will stand hereafter as the great sponsor of West Point. I assure the Senator I have made no allusion to West Point soldiers except to call attention to the fact that they had not obtained their deserts. I have pointed out a way for them all to get promotion and raise of pay. This provision I condemn denies them both, yet flatters them with the prospect of superseding National Guard officials——

Mr. WARREN. Mr. President, it would be better, I think, for the Senator to answer the question. Of course, I do not mind the little ridicule in which he indulges. I accept it good-naturedly. But he has not told us yet what he would do in obtaining the additional force to take into Mexico.

Mr. LEWIS. If the Senator may be patient he will get a reply to all his inquiries. He may rest assured, since he has volunteered to make his speech in defense of some one who has not been assailed, his only purpose must have been to draw some benefit to himself at the expense of unjust criticism of me, for there was nothing from me calling forth such.

Now, the Senator says he assumes that I have exercised my vivid imagination.

Mr. WARREN. Did not the Senator say that these officers—I will not use the exact words, of course, of the Senator—have brought this about with their influence upon the committee to make promotions for themselves?

Mr. LEWIS. One can call the nature of a thing according to his own construction. I will repeat what I said, and as I repeat it and call your attention to it I think I will be able to verify it. First, I will say to the Senator the allusion that I have made to men from West Point was to call attention that large numbers of them come forth and have not received their deserts because of conditions that did not offer opportunities; that they could not be made officers of the State guard, because under this very provision those officers must be appointed wholly by the governor. I pointed out a way to use their valuable services to the State. Having made that observation once, I repeat it.

I also pointed out that if there had been places for these officers there never would have been a suggestion of intermediate force, because there would have been no incentive to create it.

The Senator from Wyoming, heretofore the chairman of this committee under a different administration, asks what I would do. I ask him, What did Lincoln do? What did the Presidents of the United States do when there was no such volunteer measure? What has ever been done? I would do exactly as has been the course of the Government for a hundred years. I would, if I were President, proceed to call out the forces, on the theory that we were at war, and so would come these volunteers, choosing their own officers or officered by the National Army, and the Army officers, whenever we could get their splendid skill, and we would get them in the exact measure we have heretofore. I would also indulge the assumption which my friend from Wyoming seems not to find agreeable, that the National Guard would be patriotic and diligent and would likewise serve their country.

I answer the Senator with another observation——

Mr. WARREN. Will the Senator allow me right there?

Mr. LEWIS. Certainly.

Mr. WARREN. I do not propose to be put in the position of taking any ground against the National Guard. I have belonged to the National Guard both as a private and as an officer, and I have in an humble way been in the Volunteer Army.

The Senator says he would raise an army as Lincoln did. If Mr. Lincoln had had a trained force of volunteers, it would have saved hundreds of thousands of lives, as we would do if we should go into war now if we had this despised force the Senator looks at, a volunteer force that may be trained and ready to go without sacrifice; but we have suffered heretofore from having called into war men entirely green and unprepared.

Mr. LEWIS. I do not know upon what assumption the able Senator from Wyoming assumes that I despise anything. I never used such an expression. I do not despise anything. I have been suffering much that was despicable at the hands of the Senator's party and the eminent Senator, but I never despised it or any member of it—I criticise, not despise.

But I pointed out to my able friend my viewpoint and I respect the viewpoint of every other Senator. I then answer the Senator as he has made an allusion which I have seen in print many times. I would like to call attention to the mistaken assumption and to say that if there had been this volunteer force to which my friend alludes and it had prevailed in all States of the Union, equipped, accoutered, provided for, previous to 1860, far from the advantage being to Mr. Lincoln there would have been a force of southerners who would have been so aided as to have made more difficult the then situation.

Mr. WARREN. I presume the Senator does not anticipate another civil war.

Mr. LEWIS. No; but my friend asked me as to what could have been done.

Mr. WARREN. The Senator does not expect such a comparison would be the same as that between the Republic of Mexico and the United States to-day.

Mr. LEWIS. No; I would not. Answering the Senator's question he asked me what I thought would have happened with Mr. Lincoln in his time if he had had trained forces. I answered that, while it had some benefit it also had a corresponding evil, so far as the Government of the Union is concerned, which has not been calculated by those who have made that very statement.

Mr. President, I ask the attention of the Senator from Wyoming to a statement of experience in military matters to verify the assertion I have made. I again assert if there had been places for many of these officers of the Army, whose splendid qualifications fit them for recognition by which they could have been appointed, or our Army had grown so large that there could have been places for them, there would not have been the suggestion of this intermediate volunteer force, because there was no need of it. It is plain that it would reopen many volunteer forces from the States who would be accessible to the Federal Government for any use in the world. I call the Senator's attention to the Hull bill.

Mr. WARREN. Will the Senator allow me?

Mr. LEWIS. Surely.

Mr. WARREN. I do not know of any commissioned officer in my acquaintance who has advocated the measure that we are now discussing unless it was referred to him and his advice asked. The inference the Senator tries to draw is that the ambition of officers who desire higher places has been the cause behind it all of our adopting this idea of a Volunteer Army. If that be true, I have never seen a shadow of it. That is all I can say, of course.

Mr. LEWIS. I will say to the Senator I can say nothing of these forces wherever they are seeking to obtain recognition of their merits except to approve such. They sincerely believe there should be an increase of the Army. Knowing in their hearts that there is a feeling in this country against a large increase in the Army, and knowing that they can not be officers of State guards, they sincerely believe that the creation of this intermediate course is justified by conditions of the time. But this creation of a force likewise gives opportunity to the scholars of military tactics which before did not exist.

I invite the able Senator's attention to the Hull bill. He was here in 1898. The provisions of the Hull bill contained a section—section 17, if I am not in error—that in the new organization of the Guards as certain members of the volunteer forces the President should appoint the officers. There was no provision to elect them between themselves, or choose them, nor in the States where these organizations were created was the power left in the governor. It was because of that opportunity—it was because of the particular privilege in that new bill—that there arose great opposition to it.

Now, the learned Senator will recall—and I must admit my turpitude, my culpability—that I was charged in those days with speaking of the West Point men as "satraps and sapheads," and that was sent out all over the United States and the State I then represented. This was to hold me up as being ridiculous and contemptible. Everyone knew I could never have said such a thing. It is well known that I, together with George B. McClellan, Member from New York, the son of Gen. McClellan, a veteran soldier; Col. Marsh, a Member from Illinois; and Gen. Grosvenor, Member from Ohio—these were the only Members who carried on the fight with me. We struggled as best we could to prevent that measure, but were unable; and when the fight was made on me, on the ground that I was opposing the organization of the Army, and I was being hissed from a waiting band of hopeful aspirants for commissions, I looked into the galleries where certain officers were caparisoned in gold lace and the soft sons of luxury breathing forth an air suggestive of golf links and tennis rackets, and who had come there in the hope of things they felt were going to transpire, I did say then, in response to this accusation, that I am in favor of an organization of the Army as it is being made; but then, on being hissed, I referred to the conditions I am now alluding to. I said, "I am in favor of an Army of soldiers." I see now my friend the Senator from Kansas [Mr. CURTIS], who was present, over there, and he will recall the expression. I said, "I shall demand the organization of the Army by soldiers; but I shall now, as I have heretofore, oppose the organization of the Army by tessellated military satraps on the one hand or gilded society sapheads on the other." I still stand there. I hope such a condition never existed, but in my mind at that time I so expressed the peculiar conditions. I call the attention of the able Senator from Minnesota [Mr. NELSON] to what happened. He called attention yesterday to this form of organization and referred to the Guard. He painted it as a general merger and said it was officered by Army officers; and I say to the able Senator from Minnesota there were some officered by officers of the Army, but in most instances political favorites were given command, without regard to any experience or no experience in military matters of any kind. I call to his attention that in a few instances they were splendidly officered; but the trouble that arose, which gave us all our difficulty, was the thing to which I now invite the attention of the Senator from Wyoming.

I call the attention of the Senator from Iowa to section 56:

> The President is hereby authorized, at any time, to organize, maintain, and train—

And so forth. You know the remainder of the act.

I read a part—

> The term of enlistment, which shall in no event be greater than that of the Regular Army, the period of service with the colors and with the reserve, and the period of training shall be as the President may prescribe, those passing to the reserve to have the status and obligations prescribed for reserves of the Regular Army. Officers and enlisted men of the volunteer forces raised under the provisions of this section shall be entitled to the pay and allowances of officers and enlisted men of corresponding grades in the Regular Army during periods of training only.
>
> Temporary appointments and promotions of officers of the Regular Army arising from the operation of this section may be terminated at the discretion of the President.
>
> Officers of the Regular Army who receive commissions in the Volunteer Army herein authorized shall in time of peace receive the pay and allowances of their respective grades in the Regular Army. * * *

Making the volunteer officers exact officers as it is now of the established Army. Then I will ask the able Senator from Wyoming to note that there is a provision by which the temporary appointment of this organization violates all the temporary-appointment laws I have ever known existing in our States. Heretofore, when a company organized in the way named, its officers were selected by the company temporarily. In the Army we know the system, but in this bill the—

> Temporary appointments and promotions of officers of the Regular Army arising from the operation of this section may be terminated at the discretion of the President.
>
> Officers of the Regular Army who receive commissions in the Volunteer Army herein authorized shall in time of peace receive the pay and allowances of their respective grades in the Regular Army, and no more.

I invite the attention of the able Senator from Wyoming that the provision there is almost identical. It enables the President of the United States to transfer any of the officers of the Army to the command of the Volunteer Army. I do not say it is a bad thing; I think it is probably an exceedingly good thing, if we are to have such an army; but I do respectfully call his attention that we now have a duplication of what Col. Marsh called attention to when he showed in 1898 that this measure was born in 1866. Now this, of 1916, was brought from 1898 all for the object that the Volunteer Army is to be officered by these members of our Regular Army, capable and efficient; and you will observe they are all but whose deserts ought be provided for by a proper increase of the Regular Army.

Mr. WARREN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois yield further to the Senator from Wyoming?

Mr. LEWIS. Gladly. I am glad to have the views of my able friend.

Mr. WARREN. I have been following very closely what the Senator has to say, and he called my special attention to section 17. The Senator will remember that the officers of the volunteer forces always in the Civil War, and always at other times, so far as I know, were appointed by the President.

Mr. LEWIS. I quite concur with what the Senator has already said as to the army of the Civil War.

Mr. WARREN. It is true in some States the companies elected their officers and sent them, if they were in the militia, to the governor, or maybe sent them to the President; but, as a matter of fact, the President makes the appointments in the Volunteers, and always has done so.

Mr. CUMMINS. Mr. President——

Mr. LEWIS. I beg pardon. May I answer the Senator from Wyoming? In time of peace the President is to appoint the officers of the Volunteers.

Mr. WARREN. I mean in time of war.

Mr. LEWIS. Yes; I concur; and I have been contending that that is to be done in time of peace, and that I am opposing.

Mr. WARREN. We are preparing in the volunteer service for time of war, or we would not have a force.

Mr. LEWIS. I point out to the Senator from Wyoming that under the provisions, lest I misconstrue them, these officers, temporary and otherwise, in time of peace, when there is no war, are to be appointed from the Army. I am sure the Senator will not disagree with me there.

Mr. WARREN. They are assigned always, so far as I know, like officers for service with the Volunteers. They do that in war time, and this measure proposes to do it in peace.

Mr. LEWIS. The Senator and myself wholly agree as to that, and there is where I feel arises the great difficulty. I yield to the Senator from Iowa.

Mr. CUMMINS. I call the attention of the Senator from Illinois to the amendment to section 56 that has been reported by the committee, and I assume adopted. I am not sure about that, however. However, the amendment proposes a change in the section limiting the period of service to 30 days in each year. Obviously these volunteers do not become professional soldiers under the definition that we have heard more than once to-day with regard to the difference between Regular Army men and militiamen. With that statement, I ask the Senator from Illinois if I may kindly address a question to the Senator from Wyoming in his time?

Mr. LEWIS. I am delighted to serve the Senator.

Mr. CUMMINS. It is purely for information, for I have the greatest desire to organize the most efficient strength that we can organize within proper limits for the national defense.

The Senator from Wyoming, of course, understands that Congress has just two powers relating to this subject. First, it has the power to raise and support armies; second, it has the power to provide for calling out the militia and for organizing, equipping, and disciplining it. Will these volunteers who are to be raised under section 56 be parts of the Regular Army? Do we organize the volunteers under our power to raise and support an Army, and if we do, may we raise an Army merely for the purpose of training its members 30 days in the course of a year? What is the difference between such a volunteer force and the militia? There is no such thing, as we have been told this morning, as a national militia, and I want to be clear on the one point as to whether these volunteers are to be reckoned, from the time they are enlisted, as professional soldiers, members of the Regular Army.

Mr. WARREN. I will say to the Senator from Iowa that they are very much in the condition of the reserves of the Regular Army. They are all volunteers, but in the reserves, being trained as the others have been, to be called upon in case of war as reserves are called upon. They are not a part of the militia, in my view of it, and they become instead, as I have stated, a part of the Regular Army.

Mr. CHAMBERLAIN. They are enlisted.

Mr. WARREN. They are enlisted regularly. They are enlisted as a reserve force and are to be trained within certain limits, and are to be at the call of the country in case of its peril.

Mr. CHAMBERLAIN. Will the Senator from Illinois pardon me a moment?

Mr. LEWIS. I yield to the chairman of the committee.

Mr. CHAMBERLAIN. In answer to the question of the Senator from Iowa I will state that there is not any question but that they become a part of the enlisted force of the Army in time of peace, only to be called on for the purposes of training, but until the enlistment period expires they can be called on at any time.

Mr. WARREN. They are the Regular Army in reserve.

Mr. CHAMBERLAIN. Yes, sir.

Mr. CUMMINS. Mr. President, just a moment——

Mr. LEWIS. I yield.

Mr. CUMMINS. As I understand it, they have all the characteristics of the militiamen, as described by the Senator from Idaho, namely, they are not in the Army as a profession. They enter the Army retaining their individual avocations as much as do merchants, or carpenters, or masons, or lawyers, but they are not in the service until the event that war transpires, and they are called into it then to defend the country. I should like to know what the difference is between such a man and a militiaman.

Mr. CHAMBERLAIN. The great difference is, if the Senator from Illinois will pardon me a moment——

Mr. LEWIS. I yield. I would like to have these differences composed without considering me.

Mr. CHAMBERLAIN. The men who enlist in the Volunteer Army sign the regular enlistment blank that is signed by a Regular soldier, but it limits their use in time of peace to 30 days' training. As to the National Guard, we have proposed that in addition to the oath they take as guardsmen they shall have a dual oath added to it. They not only swear that they will answer the call of the governor of the State, but also to answer the call of the President of the United States.

Mr. CUMMINS. I am not asking now what provision we may make about the National Guardsmen, but I am trying to ascertain the status of these volunteer militiamen who are entering the service just as a National Guardsman enters it—for the purpose of training and without the obligation to come to the colors until war or the imminence of war appears. I say, if we are to accept these views with regard to the difference between troops and militiamen and soldiers and militiamen, Congress has no power to bring such men into the service.

Mr. CHAMBERLAIN. Let me call the attention of the Senator to the decision of the Supreme Court in One hundred and thirty-seventh United States. The court held there—Mr. Justice Brewer, I think, delivering the opinion of the court—that signing the contract of enlistment changes the status of the individual. If his oath is to the State in one instance, the contract is directly with the State. To that extent the Senator from Idaho is absolutely correct in this contention.

But as to the National Guard it is proposed to go further than that, and an amendment I think will be offered recognizing the difference between the oath the man takes to serve the State and the one which he takes to serve the Federal Government. It proposes to put him in a dual position.

Mr. CUMMINS. I think there is no doubt about our authority to do that. I have not suggested a want of authority to do what is proposed in section 56, but I am trying to reconcile the differences that appeared this morning between the Regular Army man and a militiaman. The differences seem to be altogether in the character of their service. Whereas one served only for the purpose of training and maintained his place in society, the other gave his whole time to the country and became a professional soldier. I fear in view of the provisions of section 56 those differences will have to be accounted for in some other way.

Mr. LEWIS. Mr. President, referring in conclusion to the query of the Senator from Wyoming, I wish to call the attention of the able Senator, first, to the proposition respecting these officers being named by the Government. The Senator will surely recall that in the Spanish-American War the volunteer forces that went out from the States were not named by the President, but that they were designated, as the able Senator from Alabama [Mr. UNDERWOOD] calls to my attention from his experience, by the governors of the States or by the men themselves.

Mr. WARREN. Ah, but, Mr. President, they then became a part of the national forces the same as did the militia in the Civil War—the officers and men.

Mr. LEWIS. I ask the able Senator why should not that exact course be duplicated, if we shall have need of more men in any coming conflict, and followed exactly as it has been in the past, adding, however, to it a system that shall insure through discipline and organization our citizen soldiery possessing competent qualifications?

Mr. WARREN. It depends somewhat, of course, on what we shall do as to federalizing the National Guard; but it is perfectly plain that, in the present situation of affairs, if we want a force in addition to the Regular Army to be employed outside of the continental limits of the United States, we have got to have this force in some other form than as a National Guard. If the National Guard enlists as a volunteer force, and as United States troops, well and good; of course, they go into the national forces. All of the volunteers proposed in the pending bill are a part of the Regular Army in the sense that they are not responsible particularly, first, to the States, and, second, to the United States; but they are responsible only to the United States, almost exactly as are enlisted men in the Regular Army who have gone on the retired list, receiving smaller pay but ready at any time to respond to the call of the President and the War Department without reference to the States.

Mr. LEWIS. Mr. President, concluding—and my time has been taken by Senators who have offered me much advice, and have, I am sure, tendered many wise suggestions—I hold to my viewpoint that if we ought to have this intermediate force, then, with the Senator from Iowa, I think there can be no dispute that it ought to be a part of the Army, officered by West Point men or by any other efficient officers we could obtain. The more efficient they are the more necessary it is that they should be called into the service. That they have come from our schools, all the better; that they bring that splendid training to the Government, all the more to be commended; but they should be a part of the Army of the United States. In that I concur; with that I have been in accord; of that to-day I am an advocate; but if the attempt is to be made to create such an intermediate force, it will be neither Regular Army nor National Guard; and there is no place in the organization of this country for that form of service, either under the Federal Constitution or the State constitutions.

I ask my able friend from Wyoming to contemplate this: Does the able Senator from Wyoming, with his experience in military affairs, not recognize that the moment an attempt is made to have a volunteer force that will have nothing to say as to its officers, to be officered by gentlemen from far-off places, who know nothing of the men, and of whom they know nothing, we shall not be able to get enlistments? Will men enter into these organizations to have an officer who is a member of the Army, coming from a State far-away, a gentleman of whom he knows nothing, and who will naturally feel his social superiority to the men in the ranks, notwithstanding the gentlemen in the ranks may occupy the very highest place in the community where they live, not revolt from discipline? Is it to be assumed that under those conditions there can ever be obtained enlistments; that men will enlist under those conditions in a volunteer service which makes them so subordinate to their officers that they will be regarded as inferior and having no voice? Will it be assumed that you can ever get enlistments under such circumstances? My answer from my standpoint is that I do not feel that system will ever be a success; I can not see how it can survive; but if we desire an army that can be called upon in time of need we can increase the National Guard and add to the corps of Regular officers as we may need them and send them out to the National Guard from time to time to aid in the instruction, to act as drill masters and disciplinarians for our citizen soldiers. Then we will have a real volunteer army, as I see it, without the confusion which inevitably will follow the adoption of the plan proposed, and which might result in danger to our institutions.

Mr. President, let this Federal Government join concurrently, as Mr. Justice Story well says, and as Mr. Alexander Hamilton says, with the State governments, federalizing the State troops to the extent of affording them supplies and equipment and putting them on an exact level with the Regular Army for all national purposes, but leave them within their respective States subject to the sovereignty of the State, and to the command of the governor and the government of the State in wholly local affairs. Then, we will have two succinct, clearly defined forces heretofore recognized under the Constitution, justified under the decisions of the Supreme Court, and which have been under practice and not a stranger to the welfare of the Republic.

Mr. President, I have pointed out therefore wherein I feel the bill has a vice, but, as the Senator from Wyoming has said, not an intended one. The committee would have no object in such. If this has crept into the bill, it is because of misapprehension of its effect; and I am assuming to point out its effect as I see it and as it has been pointed out to me by those who are seeking the protection of their just interest and hoping to preserve the welfare of the Guard, by manifesting its dangers which I have assumed to describe.

Mr. President, I have occupied much time without intending to do so, but I feel that the time has been well occupied from the fact that the fallacy of my argument may have been disclosed or the virtue of it manifested on the part of able Senators in their interruptions and suggestions.

Mr. President, I have given utterance to these views in order that the committee may consider them. If upon examination they are found not to be well taken, then the committee no doubt will continue in its present position in adherence to the doctrines as set forth in section 57 of the bill. If these views of mine are conceived by other Senators to be worthy of consideration, then I trust that amendments at the proper place may be submitted by the committee, or, if not submitted by it, that they may be accepted by the committee when presented from other sources. My own purpose is to seek to preserve an organization for the defense of the country which shall have the respect of our countrymen and the affection of the members who constitute it; and not to embark on a course which at the outset will bring confusion and dissipate and destroy the very object to which we are turning our patriotic devotion.

I am necessarily advocating the interest of the National Guard; and I say that I feel their splendid service in the past entitles them to prime and first consideration. Indeed, my mind reverts, as I conclude, to the exquisite expression in the literary production of Ruskin, entitled "Sesame and Lilies," where he portrays the heathen woman confronting the civilized mother. The refined woman had displayed to the heathen one her jewels of adornment. The heathen woman, turning to her children and pointing to these brothers, the Gracchi, exclaimed, "Behold, these are my jewels." I would have our Government, remembering the National Guard, which has given such valorous service in the past, which has suffered so much in sacrifice for their civilization, when there is opportunity to reward them, I would have my Nation turn to the country, as did that heathen mother to the civilized mother, and, beholding that Guard in the splendor of what they represent, say to the world, "These are my jewels."

Mr. LEE of Maryland. Mr. President, in considering the question of preparedness, which has been forced upon us by modern wars and modern conditions, we must needs be practical. We have got to consider the limitations of recruiting, the limitation of the possible number of soldiers who may be gotten to enlist, as well as the reasonable limitations of expense.

There has been universal testimony rendered before the committees of both Houses to the effect that it is impossible to enlist for the Regular Army, even with the greatest possible effort, more than 50,000 men in a year. Considering the limitation which that imposes, and considering the necessary reductions to any existing force by the operation of expiring terms of enlistment and other causes, it is inevitable that for adequate preparation there must be some resource, some means of providing military defense upon land other than what will come from these limited possible enlistments. I believe that there is probably no point upon which the authorities who have testified have been more harmonious than upon the question of the limitation of the number of men—the 50,000 annually—who can with extraordinary effort be secured by enlistment in the Regular Army under present conditions of national prosperity.

Under these circumstances we necessarily and naturally turn to other forces for defense. We naturally turn to the constitutional soldier mentioned in the Constitution with the Regular Army, and with equal degree of dignity with the Regular Army, namely, the militia of the several States, and consider the defense possibilities in connection with that militia. Although I do not wish to go far afield upon this general subject, but desire to speak to the amendment, in view of what has been said here to-day I want to read into the RECORD an extract from Gen. Washington's address, dated June 8, 1783, to the governors of the respective States recently emerged from the condition of colonies:

> The militia of this country must be considered as the palladium of our security and the first effectual resort in case of hostility. It is essential, therefore, that the same system should pervade the whole; that the formation and discipline of the militia of the continent should be absolutely uniform; and that the same species of arms, accouterments, and military apparatus should be introduced in every part of the United States.

Mr. President, such a result for "the militia of the continent" could come from but one source and but one power, and that would be exercise of Federal power throughout the whole of this country. How natural and inevitable it was that the hand that penned the quotation I have just read should have also signed, as President of the Constitutional Convention, the great provision in section 8 of Article I of the Constitution, which has been referred to here to-day and which I desire to place in the RECORD in connection with the quotation I just made from this official letter of Washington:

> The Congress shall have power * * * to provide for organizing, arming, and disciplining the militia, and for governing such part of them as may be employed in the service of the United States, reserving to the States, respectively, the appointment of the officers, and the authority of training the militia according to the discipline prescribed by Congress.

Further in the same section of Article I:

> The Congress shall have power * * * to make all laws necessary and proper for carrying into execution the foregoing powers.

Mr. President, the amendment of the Senator from Iowa provides for the addition to the General Staff of the Army of five representatives from the National Guard or Organized Militia, a very small percentage of the whole of the staff. Naturally, it is suggested that there should be this representation by reason of the present relationship of the National Guard to the United States Army.

It was said here on the floor the other day that we have in the United States a mobile force of 30,000 men in the Regular Army. We have in this country also in the Organized Militia a mobile force of 134,000 men.

Is it inconsistent with the proportions to add to 95 officers on the General Staff, representing the 100,000 soldiers of the Army of the United States in this country and elsewhere, 5 National Guard officers, who represent 134,000 organized troops to join in consultation upon mutually important strategic questions? It is quite consistent, Mr. President, with some degree of representation and with a natural progress in harmony and cooperation which should exist between these two defending forces of our country. When you come to the question of mobilization, as I suggested this morning, the Senator from New York [Mr. WADSWORTH] on yesterday mentioned how the General Staff, having some question of mobilization to consider, sent for a National Guard officer to get from that officer the details and information absolutely necessary in considering the details involved.

I wish to read to the Senate now a quotation from a report by Capt. Mott of the United States Field Artillery, made in 1905, appearing on page 137 of Senate Document 796, presented by the Senator from Oregon [Mr. CHAMBERLAIN]. Capt. Mott calls attention to the question of mobilization; refers to what Switzerland can do in connection with mobilization with her highly organized citizen army, and points out that that citizen army of disciplined Switzers can be organized and handled quicker than our Regular Army can mobilize 30,000 Regular soldiers in this country. That is a statement of a Regular Army officer. Capt. Mott says:

Switzerland can mobilize an army corps in three days, ready in every particular of organization, equipment, munitions, and transport, to march against the enemy; they can mobilize four such corps at one and the same time.

In Senate Document 360, which I presented to the Senate, there is conclusive evidence to show that Switzerland did mobilize 200,000 men in 10 days at the beginning of the great war, and that her mobilization was probably more prompt than either that of Germany or of France. Capt. Mott goes on to say:

Just how many days it would require to concentrate in one place 30,000 of our Regulars with all their baggage and transport, or how long to assemble four such commands of Regulars and militia it is difficult to say, but probably it would be nearer three weeks than three days.

The Swiss mobilize their entire force every summer. Our country has never had any adequate preparation or experience in this respect. We should mobilize the whole National Guard of this country in proper military units every summer as a whole or combined with the Regular Army to make the action complete and educating the country and the military officers to the details of great military movements.

In the consultations which should take place as to mobilization and other military matters some representatives of the numerically greater existing force, the National Guard, should have their appropriate place on the General Staff, and I submit that 5 per cent of the consulting body of these conjoined military forces is not too great a proportion to concede to the National Guard. What I have already said illustrates in one aspect the necessity of this representation.

There is another matter to which I wish briefly to call the attention of the Senate, and which I think will illustrate in a different way the necessity of representation of the National Guard upon the General Staff. There is a great deal of information and a great deal as to the policy of general preparation that does not seem to be easy to get when it operates in favor of the citizen soldier. I have been since the middle of February to the middle of this month collecting, from sources which should have been able to give it at once, the information contained in Senate Document No. 360, as to the efficiency of the Swiss citizen army. If the Senate will take the trouble to read that document, they will see where difficulties and delays have occurred. They will see that there was an order of the Secretary of War preventing the giving out by the War College of this information, so that it was necessary for me to apply through the State Department to the Swiss military authorities for their permission to use information that really should have been directly and readily available, because it was in respect to matters that occurred in a neutral country, and, as is said in the letter of Maj. Lawton, could be seen by almost anybody standing on the corner of any road or street in Switzerland.

Mr. President, I wish to correct certain figures and apparent estimates that appear in the report of the committee and that appear on page 5077 of the CONGRESSIONAL RECORD. In doing so I desire to call attention to the fact that I do not believe this correction would have been necessary; I do not believe that it would have been necessary for me to write the letters which I did write to the Secretary of War, or that it would have been necessary for the Secretary of War to have answered me in the way he did, or that the committee would have been misled, as they apparently have been misled, by the figures which have been furnished to them from some source, if we had representation of the National Guard upon the General Staff. Mr. President, I will ask permission to put in the RECORD without reading the letters to which I refer.

The PRESIDING OFFICER. Without objection, permission is granted.

The letters referred to are as follows:

UNITED STATES SENATE,
Washington, March 25, 1916.

Hon. NEWTON D. BAKER,
Secretary of War, Washington, D. C.

MY DEAR MR. SECRETARY: There seems to be considerable difference in the estimates apparently being made in connection with the cost of the National Guard under the Hay House bill and Senate bill 4840. I have understood at the department that one estimate under the Hay bill is $25,000,000, whereas another estimate for somewhat similar provisions under the Senate bill 4840 is $46,000,000.

A new estimate is now being made, I believe, of the Hay bill provision on the plan of the estimate made for Senate bill 4840.

I would like to be informed in some detail as to the estimate covering $25,000,000 or a little over as cost of the provisions under the Hay bill, and also what would be the cost under the Chamberlain bill, estimating the same way as the Hay bill.

I would also like to have the details of the estimates covered by Table XII in the report of Senator CHAMBERLAIN on Senate bill 4840—cost of volunteers, total, $24,944,000.

Respectfully, yours,

BLAIR LEE.

—

WAR DEPARTMENT,
Washington, March 28, 1916.

Hon. BLAIR LEE,
United States Senate.

MY DEAR SENATOR: Referring to your letter of March 25, requesting information concerning apparent discrepancies in estimates of costs furnished in connection with bill S. 4840 and bill H. R. 12766, I may say in general that the War Department has furnished statements to the Committees on Military Affairs of both the Senate and the House, but is not informed as to the exact combinations of figures or the emphasis placed on the different items so furnished. It is believed that the sums arrived at in Table XI, page 25, Report No. 263, part 1, of the Senate Committee on Military Affairs on bill S. 4840, sets forth the original cost of the National Guard for the years covered in the table. In order to arrive at what would be required in the estimates for 1917, it would be necessary, therefore, to deduct the value of the material already in the hands of the militia. Preliminary figures available indicate that for the fiscal year 1917 estimates will be submitted by the Division of Militia Affairs amounting to approximately $14,000,000, and that the Quartermaster Corps will submit similar estimates amounting to approximately $11,000,000; making a total of approximately $25,000,000 for the militia under these two items. It is assumed that this is the sum which you have in mind and to which you refer in the third paragraph of your letter.

You will note that this does not take into consideration any of the ordnance equipment, which includes small arms, field cannon of various calibers, with their carriages, nor the ammunition for either, both of which are very large items. The exact figures for these items, based on the provisions of bill H. R. 12766, have not yet been arrived at.

I am submitting to the Committee on Military Affairs of the Senate to-day tables pertaining to bill H. R. 12766, which have been figured on the same basis as for bill S. 4840; a copy of these is inclosed.

With reference to paragraphs 3 and 4 of your letter, I am inclosing also copies of statements which have been submitted by the War Department in connection with bill S. 4840, showing the cost of volunteers under the provisions of that bill.

Sincerely yours,

NEWTON D. BAKER,
Secretary of War.

—

MARCH 29, 1916.

Hon. NEWTON D. BAKER,
Secretary of War, Washington, D. C.

MY DEAR MR. SECRETARY: I have received yours of the 28th with inclosed data and beg leave to thank you for same.

Unfortunately, however, this information comes in such shape as to be of very little use unless it is otherwise clarified and explained. For instance, referring to the sums arrived at in Table XI, page 25, report No. 263, part 1, of the Senate Committee on Military Affairs bill S. 4840. Your letter states that the items arrived at set forth the original cost of the National Guard for the years given in the table, but goes on to add that in order to arrive at what would be required in the estimates of 1917 it would be necessary to deduct the value of the material already in the hands of the National Guard. As the value of this material is not given, the sum required to provide for the National Guard for the first year can only be ascertained by further information.

Another difficulty is that Tables XI and XII fail to give the numbers of troops involved. Presumably from some of the substatements the minimum authorized is used for the first column, and at the end of the fourth year the maximum is arrived at. An explicit statement of the numbers would seem to be desirable.

Another suggestion, if you will permit it, would be that there is no summary or recapitulation of Tables XI and XII, or, what is more especially desirable, the first years of each with reference to the details desired and presumably furnished. I have been able to check off some of these details, but the bill being on the floor now for consideration by the Senate I should think that this statement from the department should be more explicit.

I will keep the papers sent me, as they may be of service in connection with other information sent to Senator CHAMBERLAIN, and I would respectfully suggest that my letter of March 25 be referred back to The Adjutant General together with this letter as tending to possibly lead to a more lucid statement.

As a further suggestion, taking page 25, Tables XI and XII, above referred to, and adding the numbers of men estimated for under each, what would be the average cost of a national guardsman under column 4, and what would be the average cost of a volunteer under column 4, and looking at this cost from a double aspect; first, the aspect of all that has been expended in the four years to create the individual guardsman under the fourth year; and, second, carrying forward to the cost of the guardsman of the fourth year only such elements of expenditures in the first three years as provided material in the hands of the guard in the fourth year and with a similar estimate for each volunteer in the fourth year?

As illustrating an objection to the figures given under the first year in Table XI—cost of the National Guard—above, I am advised that the National Guard already has equipment for 151,594 men, and I infer, although it is not positively stated, with reference to this first year's estimate, that it is an estimate for 87,000 men.

Respectfully, yours,

BLAIR LEE.

—

WAR DEPARTMENT,
THE ADJUTANT GENERAL'S OFFICE,
Washington, March 31, 1916.

Hon. BLAIR LEE,
United States Senate.

MY DEAR SENATOR: The department is in receipt of your letter of the 29th instant, asking for further information concerning the items referred to in Tables XI and XII, page 25, Report No. 263, part 1, from the Senate Committee on Military Affairs, on Senate bill No. 4840. *The figures showing the cost of the National Guard and of volunteers, in the tables referred to, appear to have originated with the Senate Committee on Military Affairs, although based on data*

presumably obtained from the different bureaus of the War Department. Every effort will be made to give you the additional information that you now desire, and your letter has accordingly been referred to the Chief, Division of Militia Affairs, and the Chief of Ordnance for remark, and they will be requested to furnish the data needed at the earliest practicable date, it being pointed out, however, that the assembling and comparison of the figures underlying those presented in the tables may take some little time.

However, I shall do everything possible to expedite the furnishing of the information that you ask for.

Very sincerely, yours,

H. P. McCAIN,
The Adjutant General.

—

UNITED STATES SENATE,
March 30, 1916.

Col. GEORGE W. McIVER,
Division of Militia Affairs,
War Department, Washington, D. C.

MY DEAR COL. McIVER: I have a letter from the Secretary of War dated March 28 in which he forwards some estimates in connection with Senate bill 4840 and referring more especially to Table XI of report 263, page 25, part 1, being the first year's total cost, $46,349,800, and says. "In order to arrive at what would be required in the estimates for 1917 it would be necessary, therefore, to deduct the value of the material already in the hands of the militia." This is necessary because, as he states in his letter, the $46,349,800 sets forth the original cost.

I am desirous of knowing how much material is already in the hands of the militia which would have to be deducted to arrive at the requirement for 1917.

Respectfully, yours,

BLAIR LEE.

—

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF STAFF,
DIVISION OF MILITIA AFFAIRS,
Washington, March 30, 1916.

Hon. BLAIR LEE,
United States Senate.

MY DEAR SENATOR: I beg to acknowledge receipt of your letter of March 30, 1916, in which you request to be furnished with the value of the material already in the hands of the militia, and in reply thereto to inform you as follows:

Value of field equipment in the hands of the—

Infantry of the Organized Militia	$6,927,549
Cavalry	954,336
Field Artillery	8,127,172
Engineers	146,718
Signal Corps	481,653
Coast Artillery	559,488
Sanitary troops	406,439
Total	17,603,355

The above figures do not include such reserve equipment that is known to be on hand in several of the States over and above their present needs, equipment of Coast Artillery armories, and ammunition. It will therefore be necessary to add to the above figures the value of this equipment, which is estimated to amount to approximately $1,800,000, making a total estimated value of the equipment now in the hands of the militia as $19,403,355.

Very respectfully, yours,

G. W. McIVER,
Colonel Infantry,
Acting Chief Division of Militia Affairs.

Mr. LEE of Maryland. I will proceed to requote portions of the letters, and especially wish to call particular attention to the portions of the report of the committee which seem to me to be in error. To briefly illustrate the situation, I read from the letter of March 28, 1916, from the Secretary of War to me, as follows:

It is believed that the sums arrived at in Table XI, page 25, report No. 263, part 1, of the Senate Committee on Military Affairs on bill S. 4840 sets forth the original cost of the National Guard for the years covered in the table.

In order to arrive at what would be required in the estimates for 1917 it would be necessary, therefore, to deduct the value of the material already in the hands of the militia.

And from the letter of Adjt. Gen. McCain, dated March 31:

The figures showing the cost of the National Guard and of Volunteers in the tables referred to appear to have originated with the Senate Committee on Military Affairs, although based on data presumably obtained from the different bureaus of the War Department.

But the most instructive letter is that of Col. McIver, Acting Chief of the Division of Militia Affairs, dated March 30, in response to my letter of the same date, in which he concludes that the amount of material or the equipment now in the hands of the militia is valued at $19,403,355.

Mr. President, according to this letter from the Acting Chief of the Militia Division the first-year cost column of Table XI of the report, and on page 5077 of the RECORD, which adds up $46,349,800, must be reduced $19,403,355 for the equipment now in the hands of the guard, and when so reduced it will represent a very liberal first-year cost.

In order to start the proposed volunteers on even terms of expense as compared with the National Guard it has been necessary to charge the guard, as of the present time, with a large part of the money spent on them in the last 12 years, which has averaged annually $5,118,863.39. And to do this the cost column, Table XI Senate committee report, also page 5077 of the RECORD, has been made to include as a first-year cost, and without further explanation, this $19,403,355 money expended in past years and representing equipment now in the hands of the Organized Militia.

The Senate bill suggests a reduction of the National Guard from 134,000, actual present strength, and 153,000 authorized strength under existing law, to 106,200, a reduction of 27,800 men from actual strength and of 46,800 men from the present authorized strength. If we take the reduced number proposed by the Senate committee and divide it into the improperly enlarged first-year cost, namely, 106,200 men into $46,349,800, we get an apparent first-year cost of $437 as the average for the National Guard, and which is a greatly exaggerated first-year cost and, as I now show, greater by more than 50 per cent than the true first-year cost.

If, on the other hand, we deduct the value of equipment now in the hands of the Organized Militia and improperly included, I think, in the first-year column of Table XI ($46,349,800 less $19,403,355), it leaves us a more correct estimate of what must be expended the first year for the National Guard, or $26,946,445.

To get the average cost, divide this sum by 106,000, the reduced number apparently contemplated by the Senate committee for the National Guard, or by 134,000, the present actual strength, or by 153,000, the present authorized minimum strength, and we get in the first instance $254, in the second instance $201, and in the third $176, as the first-year cost per man of the National Guard. The lowest is the most nearly correct, but the average is $216, or a first-year cost per man of less than half of that which is indicated by the committee's table, as published in the committee report and put in the RECORD at page 5077.

The chairman's statement at the bottom of page 5077 of the RECORD is apparently based on an error, as the force provided for by the first-year column of Table XII is not 261,000, but only 56,829 men.

The first year cost of volunteers—Table XII, page 25, Senate report—may be arrived at by dividing $24,944,938 by the 3,036 officers and 53,793 men it provides for, and this gives a first-year volunteer cost of $439 per man.

Mr. CHAMBERLAIN. Mr. President, may I interrupt the Senator?

The PRESIDING OFFICER. Does the Senator from Maryland yield to the Senator from Oregon?

Mr. LEE of Maryland. Certainly.

Mr. CHAMBERLAIN. Are the figures that the Senator is reading and the estimates he is now giving the Senate prepared by the War Department?

Mr. LEE of Maryland. What I am criticizing now is the column presented by the Senator from Oregon as chairman of the committee.

Mr. CHAMBERLAIN. No; but I am asking now if the estimates which the Senator has, and by which he seeks to correct those given in the RECORD, are given to him by the War Department?

Mr. LEE of Maryland. The only estimate that I necessarily have to have, to correct this view of the Senator's that 261,000 men are provided for by this first-year column of Table XII for the volunteers, is as to the actual number of men calculated for in that column. I have that estimate from the War Department, and they put it down as 3,036 officers and 53,793 men.

Mr. CHAMBERLAIN. But the Senator has given a good many figures and a good many estimates. I just wanted to know whether those were figured out by him or some one under him, or whether they were figured out by the War Department?

Mr. LEE of Maryland. The number of men provided for in the first-year volunteer column I have from the War Department.

Mr. CHAMBERLAIN. But the dollars?

Mr. LEE of Maryland. The dollars I get from the Senator's estimate, as published by him.

The explanation of the committee's preference for the proposed volunteer force may be found at page 5077 of the RECORD, where the chairman states, in response to my question, that the first-year estimate in Table XII provides for 261,000 men, which would give an average of $95 for first-year cost—an obvious impossibility, and contrary to the express statement of the War Department, which I can submit if desired.

The true comparison for the average first-year cost of the National Guard and the Volunteers is between $216 for the Organized Militia force and $439 for the Volunteer force; and these figures do not express some of the obvious advantages of the National Guard. The guard have had not only $19,000,000 and more already spent upon them by the United States, but also have the advantage of between $100,000,000 and $200,000,000 in armories and the annual appropriations of all the States.

If the equivalent proper and necessary expenditures were added to the Volunteer first-year cost, that would, in my judgment, largely increase the National Guardsman's advantage as to cost, so that it would be expressed better by a comparison of $216 to $500; but without adding any cost to the Volunteer first-year estimate, such as is represented by the State armories and annual State appropriations, the advantage in first-year cost to the National Government of the guardsman over the proposed Volunteer force is as $216 is to $439. And the very fact, Mr. President, that these figures and corrections have to be brought in here in this way shows the necessity and the propriety alike of some representation of this great force of citizen soldiers upon the strategic body of the United States Army.

PETITIONS AND MEMORIALS.

The VICE PRESIDENT presented a petition of the Georgia State Camp, Patriotic Order Sons of America, of Americus, Ga., praying for an increase in armaments, which was ordered to lie on the table.

He also presented resolutions of the United States Chamber of Commerce, favoring the enactment of legislation to prevent dumping of European products in the United States at the close of the European war, and also for the enactment of legislation to promote industrial efficiency and to protect and develop industries in the United States, which were referred to the Committee on Finance.

Mr. PHELAN presented a petition of the Woman's Club, of Watsonville, Cal., praying for an investigation into conditions surrounding the marketing of dairy products, which was referred to the Committee on Agriculture and Forestry.

He also presented a petition of Local Union No. 292, Musicians' Union, of Santa Rosa, Cal., and a petition of the Federated Trades and Labor Council of San Diego, Cal., praying for the enactment of legislation to further restrict immigration, which were referred to the Committee on Immigration.

Mr. CLARK of Wyoming presented petitions of sundry citizens of Wyoming, praying for an increase in armaments, which were ordered to lie on the table.

Mr. CHAMBERLAIN presented a petition of sundry citizens of Hood River, Oreg., praying for national prohibition, which was referred to the Committee on the Judiciary.

Mr. TOWNSEND presented petitions of sundry citizens of Michigan, praying for national prohibition, which were referred to the Committee on the Judiciary.

He also presented memorials of sundry citizens of Michigan, remonstrating against the enactment of legislation to limit the freedom of the press, which were referred to the Committee on Post Offices and Post Roads.

He also presented memorials of 2,651 farmers in the State of Michigan, remonstrating against the enactment of legislation to prohibit interstate commerce in convict-made goods, which were referred to the Committee on Education and Labor.

He also presented a petition of Major John C. Durst Camp, No. 40, United Spanish War Veterans, of Lansing, Mich., praying for the enactment of legislation to grant pensions to widows and orphans of veterans of the Spanish-American War, which was ordered to lie on the table.

Mr. BURLEIGH presented a petition of Local Union No. 13048, Federal Labor Union, of Millinocket, Me., praying for the enactment of legislation to further restrict immigration, which was referred to the Committee on Immigration.

Mr. GALLINGER presented petitions of 17 citizens of Pittsfield, N. H., praying for national prohibition, which were referred to the Committee on the Judiciary.

He also presented the petition of S. K. Kamaiopili, of Honolulu, Hawaii, praying for prohibition in the Hawaiian Islands, which was referred to the Committee on Pacific Islands and Porto Rico.

Mr. POINDEXTER presented the memorial of Lyman H. Wilmot and sundry other citizens of Eglon, Wash., and the memorial of C. D. Raymer and sundry other citizens of Seattle, Wash., remonstrating against the enactment of legislation to limit the freedom of the press, which were referred to the Committee on Post Offices and Post Roads.

He also presented a petition of Walnut Grove Grange, Patrons of Husbandry, of Grandview, Wash., praying for Government ownership of the telephone and telegraph systems, which was referred to the Committee on Post Offices and Post Roads.

He also presented the petition of E. O. Hagberg and sundry other citizens of Venersborg, Wash., praying for the placing of an embargo on munitions of war, which was referred to the Committee on Foreign Relations.

He also presented memorials of Calispell Grange, No. 500, Patrons of Husbandry, of Cusick; of Liberty Grange, No. 272, Patrons of Husbandry, of Granger; and of Walnut Grove Grange, Patrons of Husbandry, of Grandview, all in the State of Washington, remonstrating against an increase in armaments, which were ordered to lie on the table.

He also presented a memorial of sundry citizens of College Place, Wash., remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which was ordered to lie on the table.

He also presented a memorial of South Basin Grange, Patrons of Husbandry, of Orin, Wash.; and a memorial of Pomona Grange, Patrons of Husbandry, of Outlook, Wash., remonstrating against the passage of the bill (S. 2986) to provide capital for agricultural development, to create a standard form of investment based upon farm mortgage, to equalize rates of interest upon farm loans, to furnish a market for United States bonds, to create Government depositaries and financial agents for the United States, and for other purposes, which were ordered to lie on the table.

Mr. WADSWORTH presented a memorial of the Common Council of Hudson, N. Y., remonstrating against the enactment of legislation to provide a literacy test for immigrants, which was referred to the Committee on Immigration.

Mr. NELSON presented petitions of sundry citizens of Minnesota, praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. LIPPITT presented a memorial of Pomona Grange, No. 40, Patrons of Husbandry, of Laurel, R. I., remonstrating against any change in the parcel-post law, which was referred to the Committee on Post Offices and Post Roads.

He also presented a petition of Local Grange No. 51, Patrons of Husbandry, of Anthony, R. I., and a petition of sundry citizens of Providence and Kingston, all in the State of Rhode Island, praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. CATRON presented petitions of sundry citizens of Buchanan and Yeso, in the State of New Mexico, praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. LODGE presented memorials signed by A. Lawrence Lowell, president of Harvard University, and sundry other citizens of Cambridge, Mass., remonstrating against the separation of the Cambridge (Mass.) postal station from the Boston (Mass.) post office, which were referred to the Committee on Post Offices and Post Roads.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. ASHURST:

A bill (S. 5346) granting a pension to Henry W. Buckley; and

A bill (S. 5347) granting a pension to George Seaver; to the Committee on Pensions.

By Mr. WARREN:

A bill (S. 5348) to authorize the exchange of lot 10, section 19, township 45 north, range 114 west, sixth principal meridian, for certain private lands needed in connection with the construction of Jackson Lake Reservoir, Wyo., and for other purposes; to the Committee on Public Lands.

By Mr. McLEAN:

A bill (S. 5349) to amend section 4414 of the Revised Statutes of the United States relating to the appointment of local and assistant inspectors of steam vessels; to the Committee on Commerce.

By Mr. PHELAN:

A bill (S. 5350) granting a pension to Susan E. Cline (with accompanying papers);

A bill (S. 5351) granting a pension to Rose Butcher (with accompanying papers); and

A bill (S. 5352) granting an increase of pension to Viola E. Webster (with accompanying papers); to the Committee on Pensions.

By Mr. OLIVER (for Mr. PENROSE):

A bill (S. 5353) to correct the military record of John Brown; to the Committee on Military Affairs.

A bill (S. 5354) granting an increase of pension to Susan Liggins;

A bill (S. 5355) granting a pension to John B. Chandler; and

A bill (S. 5356) granting a pension to Joseph Zimmerman; to the Committee on Pensions.

By Mr. PENROSE:

A bill (S. 5357) granting a pension to E. P. Lewis;

A bill (S. 5358) granting an increase of pension to Matilda Stoneback;

A bill (S. 5359) granting an increase of pension to Louise D. Finley; and

A bill (S. 5360) granting an increase of pension to Philip Robuck; to the Committee on Pensions.

By Mr. GORE:

A bill (S. 5361) to encourage military instruction in certain educational institutions; to the Committee on Education and Labor.

By Mr. SMOOT:

A bill (S. 5362) to authorize the Secretary of the Interior to issue patent for certain lands in the State of Utah to Cyrena E. Young; to the Committee on Public Lands.

THE JUDICIAL CODE.

Mr. SHERMAN submitted an amendment intended to be proposed by him to the bill (S. 1412) further to codify, revise, and amend the laws relating to the judiciary, which was referred to the Committee on the Judiciary and ordered to be printed.

NATIONAL DEFENSE.

Mr. GORE. I submit an amendment to the pending Military Establishment bill, which I ask may be printed in the RECORD.

There being no objection, the amendment was ordered to lie on the table and be printed, and to be printed in the RECORD, as follows:

Amendment intended to be proposed by Mr. GORE to the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States, viz: On page 196, after section 120, add the following:

"SEC. 121. That before the next succeeding 13 sections of this act shall be administered in any State the legislature thereof shall assent to the same.

"SEC. 122. That the term 'school board' as used in this act shall include any board of regents, board of trustees, board of commissioners, or any other duly constituted authority having legal control and direction of an eligible school as hereinafter defined and having power to employ the members of the faculty thereof and to determine courses of instruction therein.

"SEC. 123. That eligible schools for the purposes of this act shall consist of universities, colleges, academies, high schools, and other secondary schools, not including those institutions to which officers from the active or retired list of the United States Army are now or may be hereafter detailed under existing law which have a bona fide enrollment of not less than 50 male students 16 years of age or over and which have in their employ an instructor qualified, in the judgment of the Secretary of War, to impart suitable military instruction and training.

"SEC. 124. That in addition to the requirements and conditions enumerated in section 123 of this act the Secretary of War shall have the power to prescribe such requirements and conditions and to make such rules and regulations as may be necessary to carry into effect the provisions of sections 121 to 134, inclusive, of this act.

"SEC. 125. That any school board desiring to secure the benefits of this act in behalf of the school or schools under its control and direction shall make and file with the Secretary of War an application to that effect upon a form to be prescribed and furnished by said Secretary. Said application shall state specifically the character, amount, and other conditions concerning military instruction and training to be required by the Secretary of War, and shall include any information that may be required by said Secretary. The board shall also specifically declare its desire to secure the benefits of this act in behalf of the school or schools under its control and direction, and shall obligate itself to the faithful observance and execution of the terms and conditions of this act and of the rules and regulations made in pursuance thereof. The board shall also in its application specify the name of the instructor expected and qualified to impart the required military instruction and training, together with the amount of the total annual salary contracted to be paid such instructor.

"SEC. 126. That upon the receipt of any application fulfilling aforesaid requirements, and if, in the opinion of the Secretary of War, the public interest will be subserved thereby, said Secretary shall ascertain the qualifications of the instructor designated to perform the duties required by this act, and if said Secretary is satisfied as to his fitness, said instructor shall be designated as a military instructor of the United States.

"SEC. 127. That before any such instructor shall enter upon the discharge of his duties, he shall subscribe to the oath of office required of officials of the Government of the United States, and the school board employing such instructor shall execute to the Secretary of War, in such form and in such amount as he may require, a bond for the safe care and keeping of all property of the United States furnished to said board.

"SEC. 128. That when such bond shall have been executed and such instructor shall have entered upon his duties, the Secretary of War is hereby authorized and directed to pay to such instructor from time to time an amount not exceeding two-fifths of his stipulated salary in any one scholastic year: *Provided*, That in addition to such payment upon his salary, the Secretary of War may pay to such instructor an additional sum not exceeding 20 per cent of such salary at the end of the scholastic year, to be based on and graduated by the fitness and efficiency of such instructor: *Provided however*, That the Secretary of War is hereby authorized to discontinue such arrangement and such payments whenever the services of such instructor shall prove unsatisfactory or whenever his employment shall be discontinued.

"SEC. 129. That the Secretary of War is hereby authorized to enter into an agreement with any school board for admittance to military instruction and training of all male persons of suitable age who are not duly enrolled as students in such school.

"SEC. 130. That the Secretary of War is hereby authorized to supply to school boards rifles, side arms, and other necessary military accouterments for the use of persons receiving military instruction and training in pursuance of this act.

"SEC. 131. That the Secretary of War is hereby authorized and directed to prepare for the files of his office from the names of men who have graduated from any educational institution to which an Army officer has been detailed as military instructor under existing laws a list of persons qualified to give military instruction and training; and said Secretary may furnish such list upon request to any school board desiring to take advantage of this act.

"SEC. 132. That whenever the legislature of any State shall give its consent the Secretary of War is hereby authorized to enter into an arrangement with the State superintendent of public instruction of such State for the furnishing of such information and for the performance of such other service in the administration of this act as may be mutually agreed upon by said Secretary and said State superintendent of public instruction; and for compensation for such service the Secretary of War is authorized to pay such superintendent not exceeding $500 per annum to be graduated in accordance with the character and amount of such service.

"SEC. 133. That to carry into effect the provisions of this act the sum of $ is hereby annually appropriated out of any money in the Treasury of the United States not otherwise appropriated; and all payments for the purposes of sections 121 to 134, inclusive, of this act shall be made by the Secretary of the Treasury upon the warrant of the Secretary of War.

"SEC. 134. That the Secretary of War is hereby authorized to require such reports to be made by the school boards having in charge the schools benefited by this act and to make such inspections from time to time as he may deem necessary and proper."

Mr. BRANDEGEE. I submit an amendment to add to the committee amendment proposed by the Senator from Oregon [Mr. CHAMBERLAIN], which I ask may be read.

The amendment was read, ordered to lie on the table, and to be printed, as follows:

Amend the amendment proposed by the committee on page 106, end of section 2, as follows:

"Strike out the words 'one hundred and eighty thousand' and insert the words 'two hundred and fifty thousand' and add at the end of the amendment the following:

"'*Provided further*, That in addition to the units specified in this section, additional units of Infantry, Cavalry, or Field Artillery to conform in composition with the requirements of sections 19, 20, and 21 of this act may be organized in the discretion of the President; but in no case shall the additional units so organized exceed in total enlisted strength the number of 50,000 men.'"

RECESS.

Mr. CHAMBERLAIN. Mr. President, I do not know of any other Senator who wishes to address the Senate this evening. I therefore move that the Senate take a recess until Monday at 12 o'clock.

The motion was agreed to; and (at 4 o'clock and 35 minutes p. m., Saturday, April 1, 1916) the Senate took a recess until Monday, April 3, 1916, at 12 o'clock meridian.

HOUSE OF REPRESENTATIVES.

SATURDAY, *April 1, 1916.*

The House met at 11 o'clock a. m.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

Eternal God, our heavenly Father, we thank Thee for a great country, a great people, a great past, and for the promise of a greater future. And we most earnestly pray that every American citizen may be inspired with a patriotism which shall make him loyal to its sacred institutions, a patriotism broad enough and strong enough to render unto others the privileges which he desires for himself in his civil, political, and religious preferences, that we may live together in peace and harmony and grow in everything that makes a nation truly great, and strive to live in peace with all the nations of the earth, ever remembering that "righteousness exalteth a nation, but sin is a reproach to any people." So may we live, prosper, and grow valiant in the things which make for righteousness. For Thine is the kingdom, and the power, and the glory forever. Amen.

The Journal of the proceedings of yesterday was read and approved.

DESERT-LAND ENTRIES IN RIVERSIDE COUNTY, CAL.

Mr. HAYES. Mr. Speaker, I ask unanimous consent to take from the Speaker's table Senate bill 4671, agree to the Senate amendment, and pass the bill, and that an identical House bill, which is now upon the calendar, be laid on the table.

The SPEAKER. The Chair lays before the House the Senate bill, which the Clerk will report.

The Clerk read as follows:

A bill (S. 4671) to exempt from cancellation certain desert-land entries in Riverside County, Cal.

Be it enacted, etc., That no desert-land entry heretofore made in good faith under the public-land laws for lands in townships 4 and 5 south, range 15 east; townships 4 and 5 south, range 16 east; townships 4, 5, and 6 south, range 17 east; townships 5, 6, and 7 south, range 18 east; townships 6 and 7 south, range 19 east; townships 6 and 7 south, range 20 east; townships 4, 5, 6, 7, and 8 south, range 21 east; townships 5, 6, and sections 3, 4, 5, 6, 7, 8, 18, and 19, in township 7 south, range 22 east; township 5 south, range 23 east, San Bernardino meridian, in Riverside County, State of California, shall be canceled prior to May 1, 1919, because of failure on the part of the entrymen to make any annual or final proof falling due upon any such entry prior to said date. The requirements of law as to annual assessments and final proof shall become operative from said date as though no suspension had been had. If the said entrymen are unable to procure water to irrigate the said lands above described through no fault of theirs, after using due diligence, or the legal questions as to their right to divert or impound water for the irrigation of said lands are still pend-

ing and undetermined by said May 1, 1919, the Secretary of the Interior is hereby authorized to grant a further extension for an additional period of not exceeding two years.

The SPEAKER. The question is on the third reading of the Senate bill.

Mr. HAYES. The Senate amendment was read in the bill.

Mr. MANN. The question is on unanimous consent.

The SPEAKER. Is there objection?

Mr. FITZGERALD. Reserving the right to object, what is the effect of the Senate amendment as compared with the House bill?

Mr. HAYES. The House bill is recommended by a unanimous vote of the Committee on the Public Lands to be amended in exactly the same particular.

Mr. MANN. The Senate bill follows the amendment which the House committee reported.

Mr. HAYES. It simply cuts out some provisions at the end as to further extensions, and limits the bill as it was originally introduced.

The SPEAKER. The gentleman is talking about an amendment. Is it a Senate amendment?

Mr. HAYES. Yes; a Senate amendment.

The SPEAKER. Then it comes over here as a part of the bill.

Mr. SPARKMAN. Mr. Speaker, I want to ask where this will lead us? How much discussion is there to be on it?

Mr. HAYES. None at all.

The SPEAKER. Is there objection?

There was no objection.

The SPEAKER. The question is on the third reading of the Senate bill.

The Senate bill was ordered to be read a third time, was read the third time, and passed.

The SPEAKER. Without objection, the similar House bill (No. 11081) will be laid on the table.

There was no objection.

RIVERS AND HARBORS.

Mr. SPARKMAN. Mr. Speaker, I move that the House resolve itself into Committee of the Whole House on the state of the Union for the further consideration of the rivers and harbors bill.

The SPEAKER. The gentleman from Florida [Mr. SPARKMAN] moves that the House resolve itself into Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 12193, the rivers and harbors bill.

The motion was agreed to.

The SPEAKER. The gentleman from Kentucky [Mr. SHERLEY] will take the chair.

Accordingly the House resolved itself into Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 12193, the rivers and harbors bill, with Mr. SHERLEY in the chair.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 12193. The Clerk will report the title.

The Clerk read as follows:

A bill (H. R. 12193) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. DUPRÉ. A parliamentary inquiry, Mr. Chairman.

The CHAIRMAN. The gentleman will state it.

Mr. DUPRÉ. How much time remains for general debate under the agreement?

The CHAIRMAN. Fifty-five minutes remain to the gentleman from Florida [Mr. SPARKMAN] and 70 minutes to the gentleman from Washington [Mr. HUMPHREY].

Mr. MANN. Each 70 minutes?

The CHAIRMAN. No; 55 to the gentleman from Florida and 70 to the gentleman from Washington.

Mr. SPARKMAN. Mr. Chairman, will the gentleman from Washington use some of his time now?

The CHAIRMAN. Does the gentleman from Florida desire to be recognized?

Mr. SPARKMAN. I yield seven minutes to the gentleman from Maryland [Mr. LINTHICUM].

The CHAIRMAN. The gentleman from Maryland [Mr. LINTHICUM] is recognized for seven minutes.

Mr. LINTHICUM. Mr. Chairman, of late we have heard a great deal about preparedness. The whole country seems to be on tiptoe demanding proper defense in the event of an attack by any foreign power. We all are in favor of preparedness and the proper protection of this country against anything that may happen.

There is a subject, however, which I feel is almost as vital to the American people as preparedness, and that is the protection of our food supply. The vitality of the people is the strength of the Nation, and the proper protection of foods and their sources of supply is of the utmost necessity for this vitality.

We have enacted a great deal of legislation and spent much money in the protection and inspection of the meat supply of the country. We have endeavored to protect the children from undue hardships and to prevent their employment in factories under certain ages, because it is detrimental to their strength and their ability to become useful, healthy, and prosperous citizens in later years. There is one subject, however, which it seems to me has been utterly neglected by Congress, and to a great extent by the various States throughout the Union, and that is the dairy and dairy products of the land.

For that reason I have introduced into this House a resolution providing for the appointment by the Speaker of a committee of five Members of the House, whose duty it shall be to investigate and report as speedily as practicable, as follows:

(a) Whether conditions prevailing in dairies and dairy products seriously menace the health and property of the people of the United States.

(b) Whether Federal inspection and supervision, either alone or in cooperation with State and municipal inspection and supervision, is necessary to the reasonable protection of the health and property of the citizens of the United States.

(c) If so, then the best and most economic methods of inaugurating and enforcing such inspection and supervision.

WIDE USE OF MILK AND MILK PRODUCTS.

Milk and milk products enter more universally into human health and happiness than any of all the foods. The safety and good name of milk and milk products should be guarded by Federal, State, and municipal authorities more carefully than any other food, and yet Congress has paid less attention to this, the greatest of all human necessities, than to any other food affecting the health and vitality of our people. So far as the National Government is concerned, dairies, creameries, and centralized plants and butter factories may be said to run wide open.

It is widely claimed that outrageous crimes are committed by the manufacturers of butter against the American people and vast frauds against the revenues of the Government and the good name of American-made goods in foreign markets.

I am not prepared to say whether these facts are true, although I am prepared to quote the testimonials of many people and the editorials from many reputable papers and magazines of the country showing their belief in its correctness. If these charges are true, then it is the duty of Congress to investigate and to pass such legislation as may be necessary to remedy the evil. If they are untrue, then Congress should, by proper investigation, show this to be the fact that the uncertainty now prevalent among our citizens may be alleviated and the real facts known, so that the people may freely and unceasingly avail themselves without fear and trembling of this splendid product, the most nutritious, useful, and, when produced and distributed under proper sanitary methods, the most healthful of all.

NEW CONDITIONS.

It may be said by some, Why has it become necessary for Congress to investigate the dairies and dairy products of the country? Have they not continued for years and years under present conditions and have not our people thrived as perhaps no others in the world, and why, then, is there danger arising from this source?

We must remember in connection with this that conditions have changed in reference to dairies and dairy products as well as they have changed in reference to the other food products of the country. There was a time when the farmer's wife prepared the butter in the cool spring house with definite care and cleanliness, and it was carried to market and sold directly to the consumer. Then came the time when creameries sprang up in every milk-producing neighborhood. The fresh milk was carried directly from the farm to the creamery in the near-by village, where the cream was separated and made into butter and the separated milk returned to the farmer for such purposes as he might apply it on his farm. The butter made from it was known as whole-milk butter and was well made, cleanly, fresh, and usually pure. Then came the present situation. New methods created by virtue of our greater population and the unusual demand for these products resulted in the centralizing factories, to which milk is shipped for hundreds of miles to be made into dairy products. The new situation brought new conditions on the farms and among the purchasers of milk. The long-distance hauls made delays beneficial until large quantities for shipment could be collected.

Then came the question of stale milk and cream and the further question of the methods used by the centralizers in preparing this stale milk and cream so that it could be made into butter. The question of the use of coloring matter in butter, so

that no matter how impure, no matter how long it had stood, no matter how unclean it might be, it could be covered and hidden from the general consuming public by this coloring matter, the contents of which in itself is usually impure and unhealthy.

INVESTIGATION.

This situation having arisen, the National Government, through the Department of Agriculture, felt the necessity of making some investigation into the dairies and dairy products industry. The department reported the situation in the Annual Report of the Department of Agriculture for 1912, pages 315 to 334, in which it says that cream is frequently shipped great distances to creameries to be made into butter and is very often received in such a filthy and putrid state as to be thoroughly unfit to enter into composition of a good product; that an examination of 1,554 lots of cream after being delivered to the creameries and cream-buying stations showed that 957, or 61.5 per cent, were of third grade, i. e., cream that is dirty, decomposed, or very sour; that an inquiry covering 715 creameries, located in six States, showed that only 196 pasteurized their cream, while 519, or 72.6 per cent, do not pasteurize the milk so as to destroy any disease germs that might be present; that as disease-producing germs are known to survive a long period in butter made from unpasteurized cream, and as butter is eaten in the raw state, this product when made under such conditions as prevail in the majority of creameries can not be said to be wholesome and free from danger to human health; that millions of gallons of cream that has been allowed to stand in the barn, in the cellar, or in the woodshed until it is sour or decomposed is sent to the creamery and without even being pasteurized is made into butter.

Referring to this report of the Department of Agriculture, Hoard's Dairyman, in an editorial February 21, 1913, commenting upon the report, says:

Is the butter industry working under conditions about which we must speak in whispers and behind closed doors? Are we hiding a skeleton in the closet? Dare we not speak the truth about American butter making without shuddering, lest the truth will be used against us? Where are we at anyhow? * * * We know that there has not been a dairy convention for years but at which one of the subjects that absorbed the most earnest attention was the bad cream conditions. Resolutions have been passed and passed again. Grading systems have been created only to go to pot. * * * The cry is, "Something must be done," but nothing has been done. All have favored reform and yet reforms have not come.

No one familiar with the facts, and finding himself behind suitably closed doors, has denied the conditions. That these conditions must be remedied before the butter-making business is above criticism is an axiom.

There are certain tendencies in the creamery business that are demoralizing to the last degree. We refer to the willingness of creameries to accept poor, badly decomposed cream, knowing if they do not the cream will go to a competitor. The large centralized creameries have been the chief, although not the only, sinners in this respect. They have invaded the territory of the local creameries and forced them to let down the bars to all that is bad in cream.

In conclusion the editor says:

Would it not be the wiser part to act on the suggestions of the Department of Agriculture and secure inspection that will remove all further criticism and put the dairy business on a higher plane, at least as high as has been vouchsafed to the packing business by the Government?

The same journal as late as November 5, 1915, page 458, complaining, says:

Much is said and but little done about the importance of patrons delivering a better quality of cream to our creameries. Too many feel that if they refuse to accept anything but good cream they will suffer financially, that competitiors will drive them out of business.

In the American Food Journal, November, 1915, page 566, it is said:

There are practically three grades of cream used: First. Sweet cream, from which is manufactured the highest quality of butter, known on the market as "whole-milk" butter, which is produced only in the smaller creameries of the Northern States which draw their supply of butter fat from within a radius of a few miles.

Second. What is known in centralized creameries as No. 1 cream, which is of a fair flavor and which will respond to the use of chemicals or what is known as "neutralizer." * * * When this cream is churned it makes a commercial grade of butter of passably good quality, which is in fact the standard creamery butter of the country.

Third. Stale cream or cream that foams or that has contracted some foreign flavor, such as coal oil, due to age or poor handling, graded commercially as No. 2.

A. W. McCann, pure-food editor of the New York Globe, in a series of editorials in that paper and largely quoted in National Pure Food News, describes conditions as he claims to have found them on a recent tour of investigation through the creameries and butter factories of several Western States. He says that in a pasteurizing creamery in Chicago he found men working over full tubs scraping the surplus off with a stick, squeezing it with bare hands into lumps, and flopping it into empty tubs, and that flops of butter hanging from the tubs were picked up from the floor and put back into the tubs, and that it was called pasteurized butter. He claims that in a pasteurizing plant he found processed, renovated, and ladle butter being manufactured. In the ripening vat of one plant he says dirt was scattered over the surface of the pasteurized cream. In another creamery, also pasteurizing, he says he found an open sewer trap ejecting sewer gas into the plant, and girls working with their bare hands in the print room, one of them was coughing, and that there was no medical supervision in the institution. He claims the same conditions are characteristic of hundreds of Illinois creameries and centralizing plants.

He claims to have visited a Wisconsin creamery and to have seen a lot of cream received which was so fermented that one can had blown the top off, notwithstanding the shipper had taken the precaution to tie the tops down with a tar rope. He says he saw rotten cream neutralized with whitewash before churning; that in this dairy, as was the case with hundreds of others, some of the cream was sour, some stringy, some lumpy, some vile smelling, some merely dirty.

Referring to McCann's charges, Prof. Farrington, head of the dairy school of the University of Wisconsin, is quoted in the Chicago Dairy Produce, November 22, 1915, page 22, as saying:

I am not going to offer up any excuse for a lot of the bad conditions that do exist in the Wisconsin creameries, and the same will apply to the creameries of all other States. There is poor-cream conditions on many of the farms in Wisconsin; poor cream is taken at a great many of the creameries and made into poor butter. I believe I am safe in saying that 90 per cent of the creameries of the State do not pasteurize.

In the Chicago Dairy Produce, August 7, 1915, page 22, it is said:

The introduction of the hand separator opened avenues for poor cream way beyond the possibility of the old gravity system. For example, 90 per cent of the hand separators in dairy use throughout the country receive improper care, and on many farms the cream is allowed to accumulate from 3 to 10 days exposed to all sorts of contamination, and without proper methods of cooling before it is hauled to the creamery. The result is inevitable, a poor grade of butter, for which is received a correspondingly poor price. Last year 63 per cent of the butter in Minnesota was classed as seconds and thirds, and butter of these grades is not considered of high enough quality to satisfy the taste of the average consumer. Now, the reason poor cream is hauled to a creamery is not because the farmer does not know better, but he has been used to think that if one man does not take his inferior produce another would.

Prof. T. L. Haecker, head of the dairy department of the University of Minnesota, is quoted in the Rural Weekly, St. Paul, Minn., November 4, 1915, as saying:

The butter produced in St. Paul and Minneapolis is not fit to eat. It comes from the centralizers of those cities, and these centralizers are a menace to the dairy industry. Men and women who will pasteurize skimmed milk for their hogs and neglect to pasteurize milk, butter, and ice cream for their children deserve to be classified with the hogs. If they understood what we who are said to occupy higher places understand concerning the dangers of raw dairy products, Congress would pass a law overnight forbidding the manufacture of butter except pasteurized butter for interstate commerce, and all the milk of the country would have to be pasteurized before its consumption.

* * * Take one centralizer, for instance, in St. Paul. I happen to know that at this place cream of all ages is used. It oftentimes takes a long trip, generally in cans not free from germs; then it is all dumped into one big lot and the butter made from that; such butter is dirty and impure. If the cattle from which the cream comes have tuberculosis, there may be chances of infection; but even if it does not cause tuberculosis, it certainly can cause intestinal disturbances.

The Butter, Cheese, and Egg Journal of December, 1915, in speaking of the chemicals used in cream for neutralizing the acidity, says that they stand with any individual or publication in the condemnation of that practice, and further:

We take this stand unhesitatingly, as we feel sanguine that it has been the ruination of the quality of the bulk of American butter, and so long as dope will be permitted to be used in cream, so long will the United States make a poor quality of butter and so long will the farmers receive a low price for their cream.

* * * It will only be a question of time that the deodorizing processes will be tolerated, and the sooner the practice is prohibited the sooner the creamery business will be placed on a satisfactory and rational basis (p. 11).

The protection of those who eat ice cream is the aim of the New Rochelle (N. Y.) Board of Health. * * * It was said that ice cream being a milk and cream product is just as popular a breeding medium for bacteria as milk, and ice cream that is made from low-grade milk or other materials, or which is not kept properly, is quite as dangerous for human consumption as low-grade milk.

COLORING MATTER.

Mr. Chairman, it is my idea that if the creameries of the country propose to use coloring matter for their butter, then this fact should be known to the consumer by the proper marking of the covering containing same. The purchaser should know that he is using a food product so colored as to make it attractive or perhaps for the purpose of rendering its impurities less ascertainable. I earnestly hope I shall see the day when coloring matter will be eliminated from the manufacture of butter. It is useless, except for looks, and from all the data I can obtain as to the composition of the coloring matter, it is insanitary and generally unclean and should not be used.

Those who have a desire to ascertain more as to the ingredients of this coloring matter need but turn to Wagner's Chemical Technology, published in 1887, by D. Appleton & Co., page 523, or Allen's Commercial Organic Analysis, volume 5, published by F. Blackiston & Co., Philadelphia.

It is not commonly known among consumers that the great bulk of butter is colored in imitation of the June product. The butter thus painted sells for considerable over its true value, while if not colored it would mean a saving of millions of dollars to the consumers, money which at the present time is being spent in the innocent support of a fraudulent practice. If butter is to be sold artificially colored, why should it not be made obligatory to state this fact upon the label?

As Hoard's Dairyman has well said, milk is so constituted that the eye can not detect careless handling to which it may have been subjected and so its quality can not be determined. When purchasing many other commodities the eye assists the purchaser in selecting the desired grade; hence we see the crying need of some way to ascertain quality in milk for the information of the consumer so that he can be sure of getting quality in milk when quality is sought.

The act of Congress of August 2, 1886, as amended May 9, 1902, defines butter to mean "the food product which is made exclusively from milk or cream, both with or without common salt, and with or without additional coloring matter," and under this act the Department of Agriculture has ruled that artificial coloration of butter is not required to appear upon the label.

Does it not seem strange that oleomargarine should be prepared under Government inspection, thus protecting the consumer against unwholesomeness and allowing the producers whatever commercial advantages there may be in inspection, while no such benefits are offered in the case of butter? From the standpoint of the consumer there is just as much need for inspection of one as of the other—quite apart from any question as to the merits of the two products.

I feel that the manufacturer of good butter is just as much entitled to have the Government, by inspection, give him its guaranty as is the manufacturer of oleomargarine or the dealer in meat products.

The American Food Journal, December, 1915, says:

Oleomargarine is now being manufactured under Federal inspection, the same as we suggest for butter, and bears on each container the legend "Inspected and passed by Department of Agriculture, under the act of Congress of June 30, 1906." Can the creamery man afford to permit the oleomargarine manufacturer to have this tremendous leverage in his favor?

CAUSES DISEASE.

Mr. Chairman, there is, however, another vital point connected with this investigation which I have inaugurated, and that is the effect of milk obtained from tubercular cattle upon the consumer.

Shocking as are the charges of uncleanness, worse still is it that these products are among the most active agents in spreading disease. Tuberculosis is one of the diseases which may be passed from animal to man. Tubercular bacilli are frequently found in milk and butter. Hoard's Dairyman of December 31, 1915, quoting H. L. Russell, Dean of the Wisconsin College of Agriculture, says:

There is no use of talking. The fact is that there is an element of danger in the presence of bacilli in milk. It is, however, now thoroughly well recognized that this danger is very much greater in the case of infants and young children than with adults.

A considerable fraction of glandular tuberculosis which develops in connection with the cervical gland and glandular organs associated with the intestines are produced by the ingestion of tubercular milk from bovine sources. It is also recognized that the tubercular bacilli may live in butter, if such product is made from infected milk and cream.

From the twenty-fifth annual report of the United States Bureau of Animal Industry, page 148, I find that a fair average of our dairy cows infected with tuberculosis is about 20 per cent, and that tuberculosis occurs to some extent in about 30 per cent of our dairy herds.

D. E. Schroeder, in a hearing before the Committee on Agriculture in the Sixty-first Congress, said:

The remarkable thing found by Dr. W. H. Park and his associates was that among a certain number of fatal cases of tuberculosis among infants 10 per cent is due to bovine sources. Among a certain number of children under 5 years of age, not all of which were fatal, something in the neighborhood of 26 per cent was due to bovine sources; among children between 5 years of age and 16 years of age about 16 per cent was due to this source; and he estimates that 15 per cent of all American tuberculosis is of bovine origin.

It is also shown by estimates—

Said Mr. Schroeder—

that 60 per cent of the bacilli in a sample of milk is concentrated in the cream.

In the twenty-fifth annual report of the Bureau of Animal Industry, page 152, it is said:

The conclusion is almost forced upon us that a tubercular dairy cow is, to say the very least, one of the most important sources of tubercular bacilli with which we have to deal.

In an examination made by Park, of the New York City Board of Health, says Milk Hygiene by Moeller and Eichhorn, page 106, and so forth, the presence of bovine tuberculosis in man is as follows:

In adults 955 cases were examined, of which 940 showed human infection and 15 bovine infection. In children from 5 to 16 years of age, out of 177 cases examined, 131 were human infection and 46 bovine infection. Among children under 5 years of age, out of 368 cases, 292 were of human infection and 76 of bovine infection.

Furthermore, Park mentions the very suggestive results obtained from nine children under 6 years of age who were fed exclusively on cows' milk at the Foundling Hospital; five of these children died of bovine infection and four of human infection. On the other hand, in the Babies' Hospital, where the children are nursed or fed on prescription milk, out of 63 children dying of tuberculosis, 59 deaths were brought about by human infection and 4 by bovine infection.

If we compile the result of these figures—

Says he—

the following conclusion may be seen: That although tubercular cattle are less dangerous for men than is tuberculosis of man, the danger from the enormous spread of the disease in our herds, and especially among the dairy cows, should in no way be underestimated. Therefore the requirement of the elimination from dairy herds of all tuberculous animals which pass tubercle bacilli with their milk appears to follow as a matter of course.

The Forecast, of December, 1915, page 399, says:

The Department of Agriculture several years ago proved conclusively that disease germs survive in butter kept in cold storage for five months and suffered no diminution in virulence in three months.

Other investigators, working independently in various parts of the world, have proved with equal conclusiveness that children are the chief sufferers from the bovine type of tuberculosis, which is so prevalent in cattle that it is useless to think of its immediate eradication. The only protection for our children, until this can be accomplished, is pasteurization.

There is no escape from the conclusion, therefore, that in permitting the use of milk or milk products without pasteurization we are responsible for the slaughter of innocents compared with which that of Herod was a trifle; and many of those whom we do not kill we maim and cripple for life, for the deadly tubercle bacillus attacks the bones, joints, and glands of the unhappy little ones rather than their lungs.

In an address by Prof. A. W. Rudnick at the Iowa Dairymen's convention he is quoted in the Chicago Dairy Produce, November 2, 1916, as follows:

Tuberculous cattle are kept on one farm; the milk or cream is brought to the creamery; skim milk or buttermilk is taken home by other patrons as food for the various animals, thus spreading tuberculosis over the entire community. In one community where a study was made of this prob'em only three herds were found to be free from tuberculosis.

The by-products are not the only substances that offer means of spreading disease. The butter itself may carry disease. We have known that some investigators found that out of 1,233 samples of butter examined 163, or 13.2 per cent, were found to contain these organisms.

I have thus endeavored to give quotations and figures from many people who have made a study of tuberculosis in dairy cattle—an exhaustive one—but there is far more that I could use to uphold my position had I sufficient time and space in which to use it.

REVENUE FRAUDS.

There is another important phase of this subject, however, about which I will not have much to say, and that is the phase which covers in dollars and cents the loss to the Government. My particular interest in this subject is to protect this extremely important food product in the interest of the children and adults of the country; to make it wholesome and pure as well as nutritious; to prevent the spread of tuberculosis and other diseases by impurities and disease germs contained in the dairy products of the country and the dairy cattle of the land. While I merely mention the loss of revenue, it is not one in which I am very deeply concerned, because when a subject is merely a question of dollars and cents it can be borne without material injury to anyone; but when it comes to a question of the health and happiness of our people, then it is one which strikes at the very root of the Nation. Suffice it to say, however, that while these charges of widespread, unclean, and diseased condition of dairies and dairy products are generally made, there are other charges against the dairy and butter business as at present conducted in the United States which is likewise of grave concern, and that is the fact that by reason of noninspection of the dairies and dairy products of the country by the National Government vast revenue frauds are perpetrated. For example,

the annual report of the Secretary of the Treasury for 1915, page 139, says:

One case was discovered during the current year where the amount out of which the Government had been defrauded reached a total of $1,503,203.30, which sum represented the tax on the product manufactured for a period of six years. These frauds had continued undetected, all of the product in this case having been placed on the market as butter without payment of any tax.

This was classed as an oleomargarine fraud, because it was claimed that under the law all butter into which any foreign fat is introduced is removed from the classification of butter to that of oleomargarine.

Butter factories being free from inspection, it is said, are able to get into their factories oils, artificial colorings, and so forth, and thereby greatly increase their output which they sell as if it were butter. It is not claimed, of course, that any large percentage commit this fraud, but from articles appearing in the papers from time to time it would appear that it is not an uncommon thing.

TOO MUCH MOISTURE AND SALT.

It is likewise claimed that too much moisture is used in the manufacture of butter and, of course, increases its weight and is sold at the price of butter when it is merely water. In the Chicago Dairy Produce, February 1, 1916, its New York staff correspondent is quoted as saying:

The excess moisture trouble is not a new one by any means. Last summer and early this fall, when 10,000 or more tubs of good table butter was being exported weekly to England, the amount of excess moisture discovered was not only surprising but appalling, and quite a number of concrete instances were given these columns.

Exporters were greatly discouraged, as so many of their purchases had to be turned back after moisture test had been made. For weeks and weeks at a stretch all the dairy organs discussed the excess-moisture question, during which time a number of creamery men who had been heavily fined were exposed, but it is the same old story.

In the Chicago Dairy Produce, September 7, 1915, it is said:

Nine arrests were made in Brooklyn, N. Y., Thursday of last week by Federal authorities, alleged butter frauds being charged. It is said that there is a trust back of the alleged violators of the Federal law. Assistant United States District Attorney Henry Ward Beer, who has charge of the prosecution, said he is determined to break up the trust. According to Beer, the agents of the alleged trust have driven legitimate dealers of farm products out of business by underselling them with inferior products.

In the Chicago Dairy Produce, November 16, 1916, page 2, it is said:

All over the country there is a movement on to demand purity in all food products and a demand for State or Government action or laws to insure purity in all foods. We need to get the idea of and the necessity for pure dairy products more prominently before our minds.

In a communication sent out last week, said this journal, the Agriculture Department is calling attention to criticism from Great Britain of cheese recently exported from the United States to that country. Our cheese makers are acused of making cheese with an abnormally high-water mark and a consequently poor quality.

In connection with these alleged evils I would call attention to the address of B. H. Rawl, chief, Dairy Division, of the Department of Agriculture, before a meeting of the National Dairy Council, November 5, 1916, page 31, in which he mentions the fact that while in 1881 the United States had an export business of 150,000,000 pounds of cheese a year, it was gradually reduced until in 1914 it amounted to practically nothing. While prior to 1881 there was comparatively small importation in this product, now we are importing something like 50,000,000 to 60,000,000 pounds.

Then there is the charge of too much salt. The New York correspondent of the Chicago Dairy Produce is quoted, November 2, 1915, page 12, under the heading "Too much salt," as follows:

If it is not one thing it is another it seems. For weeks it has been necessary to discuss the abundance of excess moisture in butter coming to this market, which, by the way, is still coming, but in lesser amounts, fortunately. Now, it is necessary to complain about the butter being overloaded with salt.

The Chicago Dairy Produce, October 12, 1915, strikes the right key when it says:

For a considerable time past the question of the unwholesomeness of butter as it is marketed to-day and the consequent danger to health incident to its consumption have been very generally discussed by the daily press and the creamery-trade papers, creamery men's associations, food commissioners, woman's clubs, and medical associations. It would be quite in keeping with this knowledge and moreover consistent with sound business policy for the American creamery man immediately upon the assembling of Congress to demand that the Department of Agriculture take over the supervision of the manufacture of butter and cheese and establish a system of inspection. Should the confidence of the American people in dairy products be weakened or shakened, the consumption of these products would very naturally suffer a decline. The National Dairy Council's decision a few days ago to expend some $600,000 in promoting a larger consumption of dairy products will result in a useless waste of money if the adverse publicity now appearing in the columns of the press is allowed to proceed; and since there is no good or valid defense against the truthfulness of this publicity, we believe that our suggested solution of the difficulty is the only one practical. The trend of the times is for better food, better health, better living conditions, better physical men and women, better things to live for. The people have suddenly come to a realization of their needs, their ills, and their rights.

I do not propose, Mr. Chairman, to take up any more of the time of the committee at this time. I have alluded to many things and given data which seems to sustain the resolution which I have introduced. I believe that we need proper supervision and inspection under the Agriculture Department, and that we would by such action not only vastly improve the dairies and dairy products of the country and remove to a great extent the cause of so much disease arising from impurities in this industry, but we would also place the industry itself upon a high plane, from which it would make wonderful progress, not alone by the increase of consumption of the products in this country, but by a much larger export business. In this view I am sustained by innumerable resolutions and letters from organizations of all kinds and men and women occupying important positions of trust. The whole sentiment and demand is for action not words. [Applause.]

The CHAIRMAN. The time of the gentleman from Maryland has expired.

Mr. LINTHICUM. Mr. Chairman, I ask permission to revise and extend my remarks.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. SPARKMAN. Mr. Chairman, will the gentleman from Washington use some of his time?

Mr. HUMPHREY of Washington. I yield 10 minutes to the gentleman [Mr. TOWNER].

The CHAIRMAN. The gentleman from Iowa [Mr. TOWNER] is recognized for 10 minutes.

Mr. TOWNER. Mr. Chairman, I am glad so many yesterday expressed their objection to the consideration of this bill at this time. I voted against considering it yesterday, and I shall vote against its passage. Neither the immigration bill nor the rivers and harbors bill are necessary for consideration at this time. There is a necessary program of legislation which consists of three classes—national defense, appropriations, and revenue bills. All other bills, while important, should be deferred until this necessary and imperative legislation has been secured. The House can not justify itself in taking up other bills until this necessary legislation is passed. To take up a week's time as we did in considering the immigration bill, while bills of the necessary character referred to were deferred, was unwise. To take up a week's more time now with the consideration of this bill is wholly unjustifiable. If bills belonging to the necessary program were not ready, there might be some excuse for taking up other matters.

Mr. SPARKMAN. Mr. Chairman, will the gentleman yield for a brief question only?

Mr. TOWNER. Yes.

Mr. SPARKMAN. Is not the river and harbor bill a regular appropriation bill?

Mr. TOWNER. Yes; but not a necessary one. There have been many times, many years, when no river and harbor bill was passed. My point is this, I will say to the gentleman: That while this may be an important bill, it is not a necessary bill for consideration, especially ahead of and displacing the bills that should be immediately considered.

Mr. SPARKMAN. In those years when no river and harbor bills were passed by Congress provision was made for works in progress by anterior bills; bills that had passed theretofore. Occasionally three years passed without a river and harbor bill, but appropriations were arranged for three years ahead.

Mr. TOWNER. But that does not change the fact that now there is no necessity for passing a river and harbor bill, but there is an absolute and imperative necessity that we should now pass these national-defense bills and appropriation bills and revenue bills.

It was possible immediately following the passage of the military bill to have at once entered upon the consideration of bills necessary to be passed, and to have continued their consideration until the necessary legislation was passed. The Agricultural appropriation bill has been ready for consideration since March 4. It must be considered and passed.

The Diplomatic and Consular bill has been on the calendar since March 17. It is necessary.

The Senate has sent us a bill doubling the number of cadets at West Point.

It has also sent us a bill authorizing the construction or purchase of an armor-plate plant.

I am informed that the fortifications bill is ready to be reported.

These are national-defense bills, and no other matters should be allowed to precede them.

Mr. MOORE of Pennsylvania. Will the gentleman yield?

Mr. TOWNER. I yield to the gentleman from Pennsylvania.

Mr. MOORE of Pennsylvania. The gentleman does not object to continuing work already in progress, where large amounts of Government money are at stake?

Mr. TOWNER. I do not object to the consideration of such projects, but I think that now we ought to make these other questions to which I have referred primary and bills such as this secondary.

Mr. MOORE of Pennsylvania. If a dam has been partially constructed in the middle of a river, and the failure of this bill will mean the cessation of work upon that dam, and great waste will result, does not the gentleman think that such a condition would put this bill in the category of necessary bills? I will say to the gentleman that that condition does prevail in many parts of the country.

Mr. TOWNER. I am aware of the gentleman's interest, and I appreciate it.

Mr. MOORE of Pennsylvania. It is not a personal interest.

Mr. TOWNER. I know it is not a personal interest, and this is a great question; but my proposition is that we ought not now to displace these necessary matters of national defense and appropriations and revenue for this bill, which is not necessary at this time.

Mr. MOORE of Pennsylvania. Will the gentleman permit one more question?

Mr. TOWNER. I have such a small amount of time——

Mr. MOORE of Pennsylvania. I beg the gentlemans pardon. I will not trespass upon it.

Mr. TOWNER. I am aware there has been much unwarranted criticism of Congress for its inactivity. Congress has met promptly and fully every demand made upon it by the Executive for provision for national defense. It will continue to do so. But there is a measure of responsibility which is our own, and that consists in disposing of our necessary duties before we take up unnecessary ones. While the press of the country is holding Congress responsible for delays in legislation, which is not justly ours, we should be very careful that we promptly and fully perform those duties which are justly ours. We can not justify ourselves before the country for thrusting aside national defense measures to consider what the country believes to be a "pork-barrel" bill.

It has been stated in the press and elsewhere that these unnecessary bills are pressed now because it is believed they will not be considered at all this session unless they are forced in ahead of necessary legislation; that Congress will be likely to adjourn at once on having completed such necessary program. I hope no one has been authorized to make such statement. It is utterly indefensible and discreditable. To so act would merit all the condemnation we have received and more.

I sincerely hope no other unnecessary bills will be thrust in to delay consideration of the program of necessary legislation. I believe it to be the duty of every patriotic member of the House, no matter how it may affect bills in which his constituents may be particularly interested, to vote against the consideration of every bill which is not a part of the imperative legislation until that program is completed. [Applause.]

Mr. BENNET. Mr. Chairman, I make the point of order that there is no quorum present.

The CHAIRMAN. The gentleman from New York makes the point of order that there is no quorum present. The Chair will count. [After counting.] Fifty-eight Members are present—not a quorum. The Clerk will call the roll.

The Clerk proceeded to call the roll, when the following Members failed to answer to their names:

Anthony	Copley	Focht	Howard
Austin	Crago	Gallagher	Hutchinson
Bacharach	Crosser	Gallivan	Igoe
Bailey	Dale, N. Y	Gard	Johnson, Wash.
Barchfeld	Dale, Vt.	Gardner	Jones
Beales	Dallinger	Garrett	Kahn
Browne	Darrow	Glass	Kearns
Browning	Davis, Minn.	Godwin, N. C.	Keister
Bruckner	Dent	Graham	Kennedy, Iowa
Burnett	Dewalt	Gray, N. J.	Kennedy, R. I.
Caldwell	Dooling	Greene, Vt.	Kiess, Pa.
Cantrill	Doremus	Griest	Kreider
Carew	Drukker	Hamill	Lafean
Carlin	Dyer	Hastings	Lehlbach
Carter, Mass.	Edmonds	Haugen	Lewis
Cary	Edwards	Hay	Liebel
Casey	Emerson	Heaton	Lindbergh
Chandler, N. Y.	Estopinal	Henry	Littlepage
Clark, Fla.	Fairchild	Hill	Loft
Coady	Farley	Hilliard	Loud
Coleman	Fess	Hood	McArthur
Collier	Finley	Houston	McCracken
McCulloch	Oakey	Sabath	Sutherland
McKenzie	Oldfield	Scott, Pa.	Swift
Maher	Olney	Scully	Talbott
Meeker	Patten	Shackleford	Tinkham
Mooney	Peters	Shouse	Vare
Moores, Ind.	Pou	Siegel	Venable
Morin	Price	Slayden	Walker
Morrison	Ragsdale	Slemp	Ward
Moss, W. Va.	Reilly	Smith, N. Y.	Watkins
Mudd	Riordan	Snyder	Watson, Pa.
Neely	Roberts, Mass.	Stedman	Williams, W. E.
Nelson	Roberts, Nev.	Steele, Pa.	Wilson, Ill.
Nichols, Mich.	Rodenberg	Stephens, Cal.	Wingo
North	Rowe	Stiness	Young, Tex.
Norton	Rowland	Sumners	

The committee accordingly rose; and the Speaker having resumed the chair, Mr. SHERLEY, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee having had under consideration the river and harbor bill, H. R. 12193, and finding itself without a quorum, he caused the roll to be called, whereupon 286 Members, a quorum, answered to their names, and he reported the names of the absentees to be printed in the Journal and RECORD.

The SPEAKER. Two hundred and eighty-five Members, a quorum, have answered to their names, and the committee will resume its sitting.

Accordingly the House again resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the river and harbor bill, H. R. 12193, with Mr. SHERLEY in the chair.

The CHAIRMAN. The gentleman from Washington [Mr. HUMPHREY] has 51 minutes.

Mr. HUMPHREY of Washington. Mr. Chairman, a few days ago my distinguished friend from North Carolina [Mr. KITCHIN], the majority leader, made one of his brilliant and characteristic speeches upon the floor of the House. I refer to the gentleman as my friend because he is my friend, and there is no man in this House on either side for whom I have a more genuine affection than I have for the gentleman from North Carolina, and I have been greatly pleased to see him receive deserved honor at the hands of his party.

In making that speech the other day the distinguished gentleman did me the honor of devoting a portion of it in reply to what I had formerly said upon the floor of the House. As I recall, the speech to which he referred and which he was answering, was delivered about two years ago. I think that a Democratic leader who can keep within two years of current events is to be congratulated, and I hope that in two years from now the distinguished gentleman may reply to what I say to-day.

Now, among other things that he read were a number of clippings from certain papers in the West. He also referred to a certain letter—I do not remember that he gave the name of the writer—but it was some one of my constituents, in which he said that the conditions in the State of Washington were all right. Sometimes a little incident throws a great light on a big question. As I was saying, I do not recollect that the distinguished gentleman from North Carolina gave the name of the writer of the letter who said that things were all right in the State of Washington under this administration, but I think, if I remember correctly, the headline was Steilacoom. I will not say that Steilacoom is the headquarters of the Democratic Party in my State, but that is where the insane asylum is located. [Laughter.]

I have some clippings myself here to-day that I would like to read that were called forth by the statement of my distinguished friend from North Carolina that conditions were in good shape in the State of Washington. I will read, first, one written by a member of the legislature from Danville, Wash., in which he says:

DANVILLE, WASH., *March 18, 1916.*

Hon. W. E. HUMPHREY,
Washington, D. C.

MY DEAR MR. HUMPHREY: The inclosed clipping from yesterday's Spokesman-Review indicates that with our Democratic friends prosperity, like business depression, may be largely psychological. If your district is "enjoying exceptional prosperity because of the Democratic national administration," then I think I shall move over on the Sound; but maybe at that I would have to become a Democrat in order to "function on that particular plane." Mr. KITCHIN certainly has a large imagination and a convenient memory. He knows how to sugar-coat his "views with alarm the robber tariff."

Now I will read an extract from another letter. This is from Issaquah, written by Mr. Sylvester, a justice of the peace:

ISSAQUAH, WASH., *March 21, 1916.*

MY DEAR MR. HUMPHREY: I have been wanting for some time to write and tell you how heartily I am in sympathy with all of your utterances, and I back you up thoroughly. I haven't a single favor of any kind to ask. I just want to let you know that I am with you.

Referring to the inclosed clipping, you can tell the honorable gentleman that when he says that this section is enjoying exceptional prosperity that he is as far from the truth as heaven is from hell. I

haven't been away anywhere; have been right here for the past 20 years, and I know that the Democratic administration has just about ruined us. I am over 65, had practically retired on a nice little competence, but the taking the tariff off from shingles has changed income to an expense and bids fair to take every cent I have and leave me dependent on my daily labor in my old age. As I said, I have been here and I know.

Yours, very sincerely, W. W. SYLVESTER.

Now, then, I have another letter here which is written to a distinguished Member of this House, and I have been furnished with a copy of it, but, being a modest man, I will ask the Clerk to read it, and I hope he will read it slowly, with emphasis, so that my distinguished friend from North Carolina can get the full import of it.

The Clerk read as follows:

SEATTLE, WASH., *March 17, 1916.*

Hon. CLAUDE KITCHIN,
House of Representatives, Washington, D. C.

MY DEAR MR. KITCHIN: I read the press reports of your speech in the House yesterday criticizing our Congressman HUMPHREY, and am prompted to write you because of the many delightful chats I had with you at the Hotel Driscoll a couple of winters some years ago.

Let me state that I voted for President Wilson and during that campaign served on the committee of the Democratic candidate against Congressman HUMPHREY. While Mr. HUMPHREY is really my personal friend, and I admire him for his many brilliant qualities and, above all, for his steadfast and consistent attitude on public questions, yet we are so far apart on some vital matters that I was especially interested in his defeat four years ago. We failed in the attempt, but succeeded in electing a Democratic governor, and came very near capturing the electoral vote for Mr. Wilson.

Since then I am sorry to state that we have had the most distressing period financially that I have ever known in Seattle or on the Pacific coast. I am sorry that, as one who voted for President Wilson, I must confess that Congressman HUMPHREY has not exaggerated the situation here in his speeches I have read, and I think I have read all of them. Times have been very bad on the Pacific coast during the past two years especially. Now, I do not blame all of this on the administration at Washington, but it is chiefly responsible. We are delighted with the improvement in the Interior Department under Secretary Lane, and I want to extend credit where it is so justly due, but I doubt if even that will justify me in again voting for President Wilson, while a majority of the committee who conducted the campaign against Mr. HUMPHREY four years ago, including myself, now say they will vote for his election to the Senate.

Yours, very truly,

MAURICE D. LEEHEY.

Mr. HUMPHREY of Washington. Now, Mr. Chairman, I have other clippings that I am not going to take the time to read. One of them I will refer to. It shows that the increase of the imports from British Columbia to the State of Washington during the last year increased 83 per cent. The imports that came into the State of Washington last year from British Columbia was of the value of $31,847,000, practically double what it was the year before and three or four times what it was during the last year of Republican administration. These imports represent largely lumber and shingles. This $31,847,000 represents that much work taken away from the workmen in my State and given to the workmen in British Columbia. As the workmen in my State look at the trainloads of shingles coming in from British Columbia while a large portion of our own mills are closed and many men idle, seeing more than a million dollars a month taken away from him in wages and given to the Chinese, Hindus, and Japanese in British Columbia, can you wonder that they are not worshipers of this Democratic administration.

The Democratic Party not only took off the duty on shingles and lumber but also on lime, and you also took it off of fish. Ten thousand men engaged in fishing in the State of Washington are directly affected by having their wages reduced. Not only that, you took the duty off from eggs, and I would like the distinguished gentleman from North Carolina to go with me some day down on the wharf and see the loads of Chinese eggs coming into this country. I know that then he would realize that the poultry raisers of my State ought to be grateful to the Democratic Party.

You also took the duty off from fruit, and the fruit growers of my State ought to be grateful to the Democratic Party. Today the Royal Ann cherry can be sent from Italy as far west as Indianapolis and Cincinnati at a less price than we can send them from Washington, owing to the cheap labor in Italy, so the fruit growers of the West are very grateful to the Democratic Party.

Mr. GORDON. Will the gentleman yield?

Mr. HUMPHREY of Washington. Well, I do not know that I would feel that my speech was complete without one interruption from the gentleman from Ohio. [Laughter.]

Mr. GORDON. Does the gentleman think that we ought to put on a tariff so high that it would enable them to grow tropical fruits in Washington?

Mr. HUMPHREY of Washington. I want the tariff so high that the American citizens in my country will not have to compete with the Chinese in British Columbia or the cheap labor of Italy, and that is what the Democratic Party made us do.

Mr. GORDON. Will the gentleman yield further?

Mr. HUMPHREY of Washington. No; I will not yield to the gentleman further; he has embalmed in my remarks one question, and that is quite enough.

Mr. LONGWORTH. Were not the Chinese eggs the gentleman alludes to embalmed?

Mr. HUMPHREY of Washington. Yes; being somewhat bad they stand as a good illustration of the Democratic Party. Now, another reason why we are greatly enamored with this Democratic administration outside of the tariff question. They promised us a free canal for American ships in the coastwise trade. Then the President came before the House and asked you gentlemen on that side to change that law, to show your "generosity," and to do it without asking whether you were "right or wrong," and 50 Democrats changed their position and did it. There were some honorable exceptions.

Mr. FITZGERALD. How many Republicans on that side changed?

Mr. HUMPHREY of Washington. Because the Democrats made an error is no justification for Republicans.

Mr. FITZGERALD. Will the gentleman yield?

Mr. HUMPHREY of Washington. No; I will not.

Mr. FITZGERALD. For one little question?

A MEMBER. Just a little one? [Laughter.]

Mr. HUMPHREY of Washington. Oh, if it is going to cause so much hilarity on this side of the House I will yield to the gentleman from New York.

Mr. FITZGERALD. No; I will not put the question. It would improve the gentleman's speech too much and give it tone, and I will not contribute to it. [Laughter.]

Mr. HUMPHREY of Washington. Perhaps everyone would not place so high an estimate on the gentleman's remarks as he does or as I do. Mr. Chairman, in regard to the Panama Canal, we had expended something like $10,000,000 at the port of Seattle in preparation for the opening of that canal, based on Democratic promises; and the Democratic Party, in the face of its promises in its platform, repealed that law. By that act the freight upon every thousand feet of lumber that crosses this continent or that goes through Panama Canal was increased a dollar and a half. It increased the freight rate upon every bushel of wheat 5 cents and the freight rate upon every car that crosses this continent $60. Yet they expect us out in the State of Washington to be enamored of this Democratic administration.

I want to ask you gentlemen on that side what a Democratic promise is going to be worth in the platform that you are going to write at the coming convention at St. Louis? Who will believe it or place any credence in what you may say in your platform, in view of the repudiation of the Panama Canal and practically every other plank in your last platform? After you got through with the Panama Canal you passed the seamen's law. Oh, you stood up here, some of you, and you sobbed and sniffled about the American sailor and said that we must enact this seamen's law in order to protect the American sailor and free him from slavery. You were repeatedly told on the floor of the House that if you did pass the seamen's bill every American ship would be driven from the Pacific Ocean, and that is what has happened.

The other day they had examinations [illegible] in the Puget Sound district under this new seamen's law to see who were qualified under that act. They examined at the city of Seattle 891 applicants, and out of that number 9 were American citizens. Yet, in order to do something for these men who do not think enough of the country that feeds them and gives them employment to take out their naturalization papers and become American citizens, you passed the seamen's law and drove every vessel from the Pacific Ocean that flies the American flag, and you are rapidly driving every foreign line from Seattle over to Vancouver, British Columbia. That is another reason why we are not greatly enamored of the Democratic Party out in my State. You propose now to follow the seamen's law by passing a half-baked socialistic proposition that you call your Government shipping bill, and take away from the Pacific coast all hope for an indefinite period of ever having an American merchant marine.

My good friend from North Carolina [Mr. KITCHIN] says that we are having great prosperity out in the State of Washington under this Democratic adminstration. If so, we are ungrateful; we do not appreciate it. Let me make him a prophecy here to-day. When we think of the tariff law and the seamen's act and the Panama Canal act—and the people out there have not forgotten—in next November when we have an opportunity to express our opinion of this Democratic administration at the polls, remember this prophecy: The State of Washington will give a Republican majority of not less than 75,000. [Applause on the Republican side.]

There is one other matter to which I desire to call attention for a few moments in regard to the policy of this Democratic administration. I want to read from a dispatch from Tacoma, Wash., under date of March 1:

TACOMA, WASH., *March 1.*

Stirred by the announcement that the contract for supplying the Alaska Railway Commission with 1,500,000 feet of lumber will go to H. A. Dent, a Seattle lumber broker, who is interested in a British Columbia mill, and by the fact that Mr. Dent's bid was $2,000 less than the bids put in by any of the large Puget Sound mills, Northwest lumbermen are discussing the matter from all angles at the meeting of the West Coast Lumbermen's Association, being held here.

Local manufacturers say that the awarding of the contract to a Canadian firm will put the Government in a false position.

The announcement of the result of the opening of the bids came like a bombshell to the Sound mills, who anticipated securing the order. Mr. Dent's bid was $30,794.21 for the entire order, while the large mills bid all the way from $32,000 to $35,000.

The big mills there referred to are the mills on Puget Sound. I do not know whether that deal has been consummated or not, but that is in line with Democratic administration. You take Government money and expend it in Alaska for an Alaskan railway——

Mr. GORDON. Mr. Chairman, will the gentleman yield?

Mr. HUMPHREY of Washington. No.

Mr. GORDON. I would like to ask the gentleman——

Mr. HUMPHREY of Washington. Oh, if I were to yield every time the gentleman wanted to ask me something I would not occupy any of my own time. I do not know what has been done in reference to that particular matter, but I do know that it is in line with the general Democratic policy. They propose to take Government money and expend it in Alaska, build the Government railroad, and then go over into British Columbia and buy their material instead of buying it in America. Of course the $2,000 of difference will be saved to the Government, it is true, but that means that $31,000 are taken from this country and given to British Columbia, and what is still more, of that more than 90 per cent represents wages, and those wages are taken from the men who work in the mills on Puget Sound in the United States and are given to those across the line who work in foreign mills.

The other day we had the sugar tariff under consideration, and during that debate the argument was made, as it has been from the beginning, that it is necessary to have this tariff on sugar because of the reduction in the revenues at the custom-house.

FREE TRADE AND NOT THE WAR IN EUROPE IS RESPONSIBLE FOR THE PRESENT DIRECT TAX LEVIED UPON THE PEOPLE.

The echo of the first gun in the great European tragedy had hardly reached our shores until the President rushed before Congress and declared that the customs revenues had been so reduced on account of the war that a direct tax must be placed upon the American people to raise money to meet the expenses of government. The appearance of the President, asking that this be done, was so prompt that it demonstrated that the question of revenue was troubling the administration before anyone ever suspected that we would have war in Europe. Ten months had demonstrated conclusively the dismal failure of the Underwood law as a revenue producer and its unexampled success as a poverty producer.

The Democratic Party was delighted to find an excuse to levy taxes. They proceeded to do it in such haste as to suggest the thought that they were not going to take any chances on the war ending before they got such a law on the statute books. They passed a direct-tax law, the first one in time of peace in the history of the Nation, and then loudly proclaimed it a "war tax," although it was a time of profound peace. Ever since they have been boasting of the fact that this administration has kept us out of the war. The present direct tax was solely the result of the war waged by the Democratic Party on American industry.

Ever since the day that the President appeared before Congress and asked this legislation administration officials have kept up the cry that the war in Europe has reduced imports and caused the decrease in the customs revenues. Before this administration went into power I prophesied that before it ended it would levy a direct tax or issue bonds, or do both, to meet the ordinary expenses of government. They have levied the tax, and I still predict that they will issue bonds before they go out of power, as they certainly will on the 4th of March, 1917. I read from one of the campaign documents sent out every few days by the Department of Commerce, for which a part of the direct tax levied upon the people is used to pay:

Decreased customs revenues in the fiscal year 1915 clearly reflect the influence of war, which operated to cut off imports generally.

How much truth is there in that statement and in all statements of a similar character that the war in Europe has reduced imports and thereby the customs revenue? The distinguished leader of the majority, Mr. KITCHIN, said that the only fair way to judge the present tariff law was by its workings and results before the war. I agree with him entirely. In that statement he is absolutely fair and just. Let us see how the figures correspond with the statement that I have just referred to issued by the Department of Commerce. I call your attention to this table of figures:

Imports of merchandise by months during the first 10 months of the Underwood (Democratic) tariff law preceding the European war and during the 10 months preceding the enactment of the Underwood law, or the last 10 months of the Payne (Republican) tariff law; also the revenue collected thereon.

October, 1913, to July, 1914, Underwood law before European War.			December, 1912, to September, 1913. Payne law, last 10 months.		
	Imports.			Imports.	
	Value.	Revenue.		Value.	Revenue.
1913.			1912.		
October	$132,949,302	$30,138,049	December	$154,095,444	$24,243,161
November	148,236,536	21,173,627			
December	184,025,575	21,510,139	1913.		
			January	163,063,438	29,334,124
1914.			February	149,913,913	27,605,116
January	154,742,923	23,528,079	March	155,445,498	27,457,480
February	148,044,776	17,609,603	April	146,194,461	23,693,967
March	182,555,304	25,927,212	May	133,723,713	20,434,740
April	173,702,114	22,232,766	June	131,245,877	23,608,593
May	164,281,515	20,800,573	July	139,061,770	27,806,655
June	157,529,450	23,553,447	August	137,651,553	30,934,952
July	159,677,291	22,988,465	September	171,084,843	26,794,491
Total	1,605,804,786	228,861,960	Total	1,481,480,515	261,918,305

Gain in imports, $124,324,271; loss in revenue, $33,056,345.

Says the majority leader, the Underwood law should be judged by its results before the war, and there it is.

During the 10 months period under the Underwood law before the war the foreigner invaded our markets in a greater degree than ever before in the Nation's history, as these figures fully demonstrate. During that time we bought from the foreigner $1,605,804,786 worth of products. This was $124,324,271 more than we had bought during the last 10 months of the Payne law. And yet the Government lost in revenue during the 10 months under the Underwood law, compared with the 10 months under the Payne law, $33,056,346 in revenue. This vast loss must be made up by direct taxes on the people.

This free-trade law not only took the markets of the American producer and the work of the American laborer from them and gave them to the foreigner, but it actually makes the American producer and the American workingman pay for the privilege of having the foreigner compete with them. This is what the President probably had in mind when he talked about sharpening our wits in a contest with the other nations of the world.

Will some one who contends that the present loss of revenue is due to the war in Europe please explain how it was that we lost over $33,000,000 during the first 10 months of the Underwood law—over $3,000,000 per month—before the war in Europe began. As you look at these figures showing conditions before anyone anticipated war, you can easily understand the feverish haste, when war did come, of the Democratic Party to enact a direct tax giving this as an excuse.

But while the foreigner was selling us more than ever before under this new Democratic tariff law, were we selling him more than ever before? Not so. This free-trade law benefits only the foreigner but never the American. During the 10 months' period of the Underwood law before the war in Europe began, we lost in our foreign trade at the rate of more than a million dollars a day. While the foreigner sold us $124,324,000 more during that period than during the last 10 months of the Payne law, we sold the foreigner $350,000,000 less than we did during the last 10 months under the Republican law. Or, during the first 10 months of the Underwood law, before the war in Europe, we lost and the foreigner gained over $475,000,000.

During the month of December, 1913, the second full month of the present law, the first month when its full effect was really felt, we lost in our foreign trade, as compared with the corresponding month of December, 1912, $46,000,000. The last month before the war in Europe—July, 1914—we lost in our foreign trade, as compared with July, 1913, $27,457,000. Were these vast losses, incurred months before the war in Europe, due to that tremendous tragedy?

Canada is our greatest and best customer. During the first 10 months of the present free-trade law, before the war in Europe, the amount we sold to Canada, as compared with the

last 10 months under the Republican law, decreased 15 per cent. The amount Canada sold to us increased 35 per cent. Or, a benefit to the foreigner in that vast volume of trade of 50 per cent in 10 months, and this 10 months was before there was any war in Europe.

During the first 10 months the Underwood law was upon our statute books, the 10 months before the war, the 10 months which the leader of the majority says is the fair and just period by which it should be judged, there were more imports brought into this country than during any other 10 months' period in our history. We lost more of our foreign trade at that time than in any other 10 months' period in our history. During those 10 months there were more business failures in the United States than during any other 10 months in our history. During those 10 months there was a greater decrease in the bank clearances in this country than in any other 10 months' period in our history. During those 10 months there were more mills and factories closed than in any other 10 months in our history. During those 10 months there were more idle cars on the sidetracks of our railroads than during any other 10 months in our history. During those 10 months there were more men and women thrown out of employment than during any other 10 months in our history. During those 10 months there were more unemployed being fed by charity than during any other 10 months in our history. [Applause on Republican side.] Certainly I agree with the distinguished leader of the majority that the 10 months before the war in Europe is the period that really demonstrates what the Underwood tariff will do in normal times and is the period by which it can be justly judged.

But did these falling revenues and rapidly emptying Treasury, all this poverty and want mean anything to the Democratic Party? Instead of practicing economy and trying to decrease the burdens that the people have to carry, they created more high-salaried, useless offices and filled them with deserving Democrats than ever was done before. As the distinguished Chairman of the Appropriations Committee, Mr. FITZGERALD, said, during this period the Democratic Congress was the most extravagant that ever met in the Capitol.

No one can look upon these figures and the record of this Democratic administration and not fail to realize the truth. It was not the war in Europe but Democratic incompetency and extravagance that emptied the National Treasury and made necessary a direct tax upon the people. Yes; the present tariff law should be judged by its effect before the war in Europe, and upon that record the American people have already set their seal of disapproval.

But what about the oft-repeated statement *that since the war decreasing imports are responsible for the decreasing revenues?* As the fairest comparison that can probably be made, let us take the last nine months of 1915, the latest figures available, and compare them with the last nine corresponding months of the last Republican tariff. I ask your attention to these official figures and you will see demonstrated the utter falseness of this statement. To bring out the condition more fully, I have compared in this table this period by separate months.

Nine months of Payne law, 1912–13, compared with corresponding nine months of Underwood law, 1915.

	Imports.	Revenue.	Gain in imports.	Loss in revenue.
April, 1913	$146,194,461	$23,693,967	$14,381,645	$7,673,277
April, 1915	160,576,106	16,020,690		
May, 1913	133,723,713	20,434,749	8,561,133	3,449,923
May, 1915	142,284,851	16,984,826		
June, 1913	131,245,877	23,608,599	26,449,263	5,613,855
June, 1915	157,695,140	17,991,744		
July, 1913	139,061,770	27,806,655	4,182,967	12,821,013
July, 1915	143,244,737	14,985,642		
August, 1913	137,651,553	30,934,952	4,152,640	15,154,312
August, 1915	141,804,202	15,780,540		
September, 1913	171,084,483	26,794,494	[1] 19,848,457	11,870,891
September, 1915	151,236,026	14,923,639		
October, 1912	177,987,983	30,216,824	[1] 28,815,257	12,903,934
October, 1915	149,172,729	17,308,830		
November, 1912	153,094,898	25,666,353	2,401,777	9,273,630
November, 1915	155,496,675	16,393,353		
December, 1912	154,095,441	24,248,161	17,746,211	7,877,622
December, 1915	171,841,655	16,370,539		
Total			29,212,136	86,646,695

[1] Decrease.

Total imports.

1912–13, nine months' period	$1,344,140,185
1915, nine months' period	$1,373,352,321

Total revenue.

1912–13, nine months' period	$233,404,754
1915, nine months' period	$146,757,801
Rate of duty under Payne law—per cent	17.36
Rate of duty under Underwood law—per cent	10.60
Amount of duty that would have been received under Payne rate	$238,413,962
Loss by Underwood rate as compared with Payne rate	$91,656,161

Let us look at April, 1913. Gain in imports, $14,000,000; loss in revenues, $7,000,000. In June, gain in imports, $26,000,000; loss in revenues, $5,000,000. September and October are the only two months in which there was a decrease in imports, and in December there was a gain of $17,000,000 in imports and a loss of $7,000,000 in revenue. So, taking the total of those nine months we have a gain of $29,000,000 in imports and a loss of $86,600,000 in revenues. [Applause on Republican side.] Now, how can you say that it is the loss in imports that has caused the decrease in revenue?

Mr. KITCHIN. Will the gentleman yield for an interruption?

Mr. HUMPHREY of Washington. Certainly.

Mr. KITCHIN. Why does not the gentleman take the whole year 1915 and show the imports for the entire year instead of taking nine months and compare with the imports of 1913? If you take the year instead of taking the nine months the gentleman will have over $10,000,000 less imports in 1915 than in 1913. And does not the gentleman know that there was an increase of $82,000,000 in the imports of 1915 of articles which were on the free list under the Dingley Act, on the free list under the Payne Act, and which were retained on the free list under the Underwood Act? The gentleman did not know about that. [Applause on Democratic side.]

Mr. HUMPHREY of Washington. Yes; I knew about that; but I do not know that I know what the gentleman thinks he knows.

Mr. KITCHIN. I will say to the gentleman that what I stated are exactly the facts——

Mr. HUMPHREY of Washington. The gentleman thinks he knows; but the facts will show differently. I put these figures against the gentleman's statement.

Mr. KITCHIN. I will suggest to the gentleman why he took them. It is because in taking those months instead of the whole year you had an excess of imports of 1915 over 1913. Let me tell the gentleman, I can take three months of 1913 and compare with same three months of 1915 and make $76,000,000 excess of imports over the imports in 1915; but that would not be right and fair. The gentleman ought to take the whole year, and then he will have over $10,000,000 excess of imports of 1913 over 1915.

Mr. HUMPHREY of Washington. I will satisfy the gentleman in a moment with some other figures of some other months that I think will please the gentleman more than the ones I have used. I have not had time to put them on the chart yet. The gentleman can explain to the House two years from now when he replies to this speech, if he takes as long to reply to this one as he did to the one he replied to a few days ago.

If you had put the Payne rate upon the statute books instead of the rate you have under the Underwood law upon these imports for the last nine months, 1915, you would have had in the Treasury $91,656,000 more than you have now. [Applause on the Republican side.] Now, the distinguished gentleman [Mr. KITCHIN] seems to think I have selected those months because it made out a good case. On yesterday I got the figures for the last two months, just past, January and February of this year, and I hope the distinguished gentleman will listen to these figures—and I compare January and February of 1913, under the Republican law, with them. The imports for January, 1913, were $163,000,000, giving round numbers; for January, 1916, they were $184,000,000, a gain of imports of $21,000,000, a loss in revenue of $13,790,000. [Applause on the Republican side.]

But if that astonishes the gentleman, I want to call his attention to the last month just past, the month of February, and I want the House to listen to these figures. For February, 1913, our imports were $149,913,918, under a Republican tariff law. For February, 1916, under the Democratic tariff law, when you on that side were here before the House and asking to place a tariff upon sugar because imports were decreasing, the imports for February, 1916, were $193,935,117—the largest imports in any month in all the history of this Nation. [Applause on the Republican side.]

Mr. KITCHIN. Would the gentleman mind giving us the exports during those months, too, showing what the balance of trade is in our favor?

Mr. HUMPHREY of Washington. That does not look very much like a balance of trade in your favor.

Mr. KITCHIN. Give the exports, and see how much they are. [Applause on the Democratic side.]

Mr. HUMPHREY of Washington. I know that you gentlemen over there need information. If you give me the time I will furnish you the figures. I confess that the only way you

will get the facts will be for me to furnish them, judging from the speech the gentleman from North Carolina made. He has not put it in the RECORD yet. It has been held out so long—I may have forgotten part of it, I am not criticizing him for holding it out—but if I misrepresent anything that he said in that speech I am certain it will be decidedly to his advantage.

The gain of imports in the month of February, 1916, was $44,000,000, as compared with the month of February, 1913. The loss of revenue for February, 1916, as compared with February, 1913, was $8,365,581. Here are the figures for these two months arranged as I have the others I have quoted:

	Imports.	Revenue.	Gain in imports.	Loss in revenue.
January, 1913	$163,063,433	$29,334,124	$21,128,562	$13,790,124
January, 1916	184,192,000	15,544,000		
February, 1913	149,913,913	27,605,116	44,021,190	8,365,581
February, 1916	193,935,117	19,239,535		

Now, these figures make it perfectly plain what is the matter with our revenue. It is not the war in Europe. It is the free-trade tariff law upon our statute books that is reducing our revenue. [Applause on the Republican side.] If you had had the same rates under the Underwood law that you had under the Payne law during the last 11 months, this Government would have received into the Treasury $105,000,000 more than it did receive. [Applause on the Republican side.]

Mr. MILLER of Pennsylvania. And you would not have needed the war tax.

Mr. HUMPHREY of Washington. No; especially if our Democratic friends had not been quite so extravagant with their appropriations.

Mr. GORDON. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Washington yield to the gentleman from Ohio?

Mr. HUMPHREY of Washington. No. I would yield to the gentleman, but I do not want to get into the Democratic habit of changing my mind every few minutes. [Laughter.]

But, say our Democratic friends, while you are speaking of our imports, look at the vast increase in exports. But exports have nothing whatever to do with bringing in revenue, and I am now speaking of the causes for a depleted Treasury.

In the munitions of war there has been an increase. Our increased exports are measured by the toll of death taken by the battle fields of Europe. Our balance of trade boasted about by the Democratic Party is the balance produced by the awful tragedy of war. I demonstrated this conclusively a few days ago by official figures when I spoke upon "Battle Field Prosperity."

Our exports to the nations of peace under the present tariff law have generally decreased or our imports have generally increased. This is strongly shown when you compare the figures for 1915, the last year under the present Democratic tariff law, with the figures for 1913, the last year under the Republican tariff. Taking these years for comparison, the following is the result:

With Argentina our imports increased 270 per cent; our exports decreased 4 per cent.

With Brazil our imports increased 19 per cent; our exports decreased 12 per cent.

With Peru our imports increased 46 per cent; our exports only 4 per cent.

With Chile our imports increased 26 per cent; our exports only 7 per cent.

With Australia our imports increased 207 per cent; our exports decreased 20 per cent.

With China our imports increased 32 per cent; our exports decreased 22 per cent.

These figures show conclusively what the present tariff law will do when it is not stimulated by the abnormal demands that come from the great tragedy being waged in Europe.

But I am not dealing with exports to-day. I am dealing with the many times repeated assertion that the condition of the Treasury is due to decreased imports caused by the war in Europe—a statement that the figures that I have given demonstrate to be absolutely without a shadow of foundation in fact.

Our Democratic friends say that it is necessary to tax the people to secure money to run the Government because of decreased imports brought about by the war in Europe. The conclusive answer is the figures that I have already quoted.

Under the present tariff our imports would have to increase more than a billion dollars a year over what they were last year to produce a sufficient amount of revenue to meet the expenses of government. Such a tremendous increase would close our mills and factories, make us a nation of paupers, and plunge us into poverty and wretchedness beyond imagination. Does the Democratic Party advocate this plan? Does the Democratic Party advocate increasing imports or direct taxes or a bond issue to secure money with which to run the Government? Either course is certain eventually to bring us industrial ruin.

These figures that I have quoted demonstrate that there were more imports in this country during the last nine months of 1915 than in any other nine months' period in our history, except only the nine months prior to the war in Europe, under the present law. These figures tell the entire story. Nothing more can be added. If the same rate of revenue had been imposed in the Underwood law as in the Payne law during the last nine months of 1915, we would have collected $91,656,161 more than we did collect under the present law. Take this sum and add to it the amount of useless and inexcusable extravagance by the present administration, and you will have approximately the present estimated deficit. Or, in other words, by official figures it is shown that not the war in Europe but free trade and extravagance are responsible for our present financial condition.

And let it never be forgotten that if the imports amounting to $1,344,140,185 that came into this country during the last nine months of 1915 to compete with our producers and our laboring classes had paid $91,656,000 more revenue into the Treasury than they did pay, that this amount would not have added a single penny to the price of the goods, as they were sold to the original producer, and the American people would not have been compelled to pay a direct tax to that amount. While the foreigner was selling in our market, he got the entire benefit of the $91,656,000. It went into his pocket instead of the United States Treasury, and the American consumer paid just as much for these imported goods as he would have paid if the additional duty had been levied.

On the other hand, most of these imports consist of competitive articles that could have been made at home, and if they had been produced at home not only would our own people have had the work and the wages; not only would the money have remained in this country instead of going abroad; not only would we have had both the goods and the money, but the American consumer would undoubtedly have paid less for a large portion of what we buy, and the Treasury would have been enriched by the vast sum of over $90,000,000 and the American people would have been relieved from that much taxation.

When you look at these facts and figures you can readily understand the frantic efforts of the majority to keep the tariff upon sugar. You can understand the sudden conversion of the Democratic Party to a tariff commission that it has so often heretofore condemned and denounced. When you look upon these facts and figures you can understand the many reverses of the President that have recently been made so rapidly and completely as to cause the entire country to be seasick from the motion. You look at these figures and you see more imports than ever before, less revenue than ever before, more free trade than ever before, more taxation than ever before, more Democracy than ever before, more discontent than ever before. [Applause on the Republican side.] Free trade, direct taxes, and an empty Treasury—the trinity certain and inseparable that comes with every Democratic administration. [Applause on the Republican side.]

Mr. ROGERS. Mr. Chairman, will the gentleman yield there?

The CHAIRMAN. Does the gentleman from Washington yield to the gentleman from Massachusetts?

Mr. HUMPHREY of Washington. Yes.

Mr. ROGERS. Just for one question. Can the gentleman give us the ad valorem rate for the last two months?

Mr. HUMPHREY of Washington. I am only stating the facts from memory. I think it was about 9 per cent.

Mr. ROGERS. It was 8.4 per cent.

Mr. HUMPHREY of Washington. Then I was conservative in my statement. These figures further demonstrate that but for the war in Europe, that is acting as a high protective tariff, that is compelling the foreigner to sell us less and buy from us more, that this country would absolutely have been flooded with foreign cheap goods. These figures demonstrate that but for the war in Europe the foreigner would have largely driven us from our own markets and our own people into idleness and poverty.

But it is not what might have happened, it is not what has happened, but what the future holds that now most concerns us. These tables show that before the war our imports were greater than ever before. They show that even since the war our imports are greater than they have ever been before, even in time of peace, except only the period under the present law before the war. The loss of revenue followed by direct taxation is only one of the evils. What will follow when the war in Europe

ends if we still stand defenseless under the present free-trade law?

Twenty millions of men are to-day under arms, women are filling the many places in the field of labor formerly filled by these soldiers, more people are working to-day in Europe than ever worked before if we count those who are in the army. What will be the result in the industrial world when the great conflict is over, when these millions turn from the pursuits of war to the pursuits of peace, when these nations burdened with poverty and debt, when every country will be struggling to revive her industries? It must be remembered that all of Germany, all of England, practically all of France, Italy, Austria, and the greater part of Russia have not been invaded; that these nations can instantly, when the war closes, start their mills and factories running. With the end of hostilities in the tented fields will begin the industrial contest, the greatest industrial war in all the world's history, as stupendous and surprising as the present contest of armies, and surpassing all others as the present war has surpassed all other wars heretofore fought. Yet, in the face of this inevitable danger, uncertain only in the exact hour it will come, we procrastinate, vacillate, hesitate, and do nothing.

Unless we prepare against that time by placing a protective tariff upon our statute books it is just as certain as that the war will end that this Nation will be invaded and overwhelmed by the products of the cheap labor of Europe. Then either our mills and factories must close or wages in this country must be reduced to the level of that paid in Europe, and the American workman must live as the workmen of those poverty-stricken nations will live. Poverty and ruin is certain. The only question is, In what shape will it come?

The talk of an "antidumping" law as a remedy for this situation is too silly to command serious consideration. To talk of a tariff commission to be appointed by the President is to temporize and evade for campaign purposes. To place the tariff on one item at a time is simply to juggle and speculate as to how long we can escape the inevitable. The one remedy, and the only one, is to place upon our statute books a tariff law not founded upon free trade, not "for revenue only," but for the specific purpose of protection—to protect American labor and American industry from the deadly competition of the foreigner. [Applause.]

To keep out of America the products of foreign pauper labor is as important as to keep out pauper labor itself.

Foreign pauper labor admitted into this country would be no more deadly to American labor than the products of the pauper labor produced in foreign soil and admitted free to American markets. [Applause.]

This great duty of enacting a protective tariff for the protection and the safety of America can hardly be left to the party that has always worshipped at the shrine of free trade and daily pays its adoration to the discredited fetish of "revenue only," and that for three-quarters of a century has mumbled that protection is unconstitutional. The safety and the hope of the American people lies in the fact that each day makes more certain that on the 4th of March, 1917, the party of protection, preparedness, patriotism, and prosperity will again enter into power. [Applause.]

Mr. Chairman, how much time have I left?

The CHAIRMAN. The gentleman has 12 minutes remaining.

Mr. HUMPHREY of Washington. Mr. Chairman, I promised to yield 10 minutes to the gentleman from New York [Mr. HULBERT].

The CHAIRMAN. The gentleman from New York [Mr. HULBERT] is recognized for 10 minutes.

Mr. HULBERT. Mr. Chairman, it is to be hoped, in view of the very wide discussion that has taken place during the seven hours allowed for debate, that gentlemen will remember that it is the river and harbor bill that is under consideration; and if the gentleman from Washington [Mr. HUMPHREY] did not see fit to spend any part of the time allotted to himself for the consideration of the question to discuss the single item contained in the minority views filed by him with reference to the inclusion of the item appropriating $700,000 for the improvement of the East River in New York, it is at least due to him that I should say that he has been fair and courteous enough to extend to me an opportunity to defend that item, which I was active in having included in the bill, when, as a matter of fact, I, although a member of the Committee on Rivers and Harbors, was unable to secure any time whatever from the chairman on my own side of the House.

Mr. SPARKMAN. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from New York yield to the gentleman from Florida?

Mr. HULBERT. Yes.

Mr. SPARKMAN. I suppose the gentleman is aware of the fact that I tendered him 10 minutes?

Mr. HULBERT. The gentleman did not tender me 10 minutes. On the contrary, the gentleman told me last evening that the time had been allotted—15 minutes to New York Harbor—and he was going to allot that 15 minutes to the gentleman from New York [Mr. FITZGERALD].

Mr. SPARKMAN. I did tender to him 10 minutes, through another party, this morning.

Mr. HULBERT. After the gentleman told me last night that he would not give me any time, and after I had gone to the gentleman from Washington and secured the time, a gentleman on the Republican side of the House came to me and said I could get the time if I would apply again.

Mr. MILLER of Pennsylvania. Take it now.

Mr. HULBERT. No; I do not want the time. I will not take it on that side now.

Now, Mr. Chairman, I ask leave to extend my remarks by putting in the RECORD evidence and facts taken before the Committee on Rivers and Harbors on February 12, 1916.

The CHAIRMAN. The gentleman from New York asks unanimous consent to extend his remarks in the RECORD by inserting the matter referred to. Is there objection?

There was no objection.

Mr. MOORE of Pennsylvania. Does this include the entire hearing?

Mr. HULBERT. It includes so much of it as relates specifically to the New York Harbor project.

Mr. MOORE of Pennsylvania. That is rather lengthy, is it not?

Mr. HULBERT. It covers altogether, I think, 39 pages.

Mr. MOORE of Pennsylvania. I will say to the gentleman that I am in favor of his project.

The matter referred to is as follows:

EAST RIVER, N. Y.

COMMITTEE ON RIVERS AND HARBORS,
HOUSE OF REPRESENTATIVES,
February 12, 1916.

The committee met at 10.30 o'clock a. m.

The CHAIRMAN. We have met this morning partly for the purpose of hearing parties whom Mr. HULBERT desires to present to the committee. Before we do that I want to read a letter I received from the secretary to the President.

Mr. HULBERT. Mr. Chairman, pardon me. I wanted to introduce the correspondence that brought forth that letter, if I may do so, as a part of the hearings.

The CHAIRMAN. Let me read the letter first. [Reading:]

THE WHITE HOUSE,
Washington, February 11, 1916.

MY DEAR MR. SPARKMAN: The President directs me to say to you that he is strongly of the opinion that the pending river and harbor bill should carry an appropriation for the immediate improvement of the East River adjacent to the Brooklyn Navy Yard. He fully appreciates the fact that this would be contrary to the rule of the committee not to recommend appropriations for new projects at this time, but he feels that the importance of the matter in its relation to the question of national preparedness fully justifies an exception to the rule.

The President understands that Secretary Daniels has fully explained this matter to the committee.

Sincerely, yours, (Signed) J. P. TUMULTY,
Secretary to the President.

Hon. S. M. SPARKMAN,
Chairman Committee on Rivers and Harbors.

The CHAIRMAN. Inasmuch as this is a part of the project which has been recommended by the engineers for the improvement of the East River in the interest of commerce and navigation, of course it is properly before our committee.

Mr. HUMPHREY. I was just wondering how many other letters we could get of a similar nature?

The CHAIRMAN. I do not know.

Mr. HUMPHREY. Personally, I am not inclined to let the President tell this committee what it should do.

The CHAIRMAN. At all events, we have this letter before us.

Mr. HUMPHREY. If we are going to inaugurate that system, I want to pass up some more before we act upon this bill. There are other places in this country where it is necessary to have improvements for preparedness, and if we are going to pass this bill up to the White House with regard to certain features, why not pass it up in its entirety and get opinions on all of it?

The CHAIRMAN. That, of course, is for the committee to say.

Mr. HULBERT. I would like to put those letters into the record to show the sequence of events.

The CHAIRMAN. Put them in and they may be printed.

Mr. HULBERT. I want to offer, first of all, a letter from the Secretary of the Navy addressed to the Speaker of the House of Representatives and dated December 21, 1915.

The CHAIRMAN. To what end? Does that give the committee any information it ought to have on this matter?

Mr. HULBERT. This is the matter which the President's letter referred to, as I understand from my conference down there yesterday, when he said that the Secretary had already put the facts before the committee. It is a letter which was written by Secretary Daniels to the Speaker on December 21, and was referred by the Speaker to this committee, and I brought the matter to your attention yesterday, and you read the letter yesterday before the committee.

The CHAIRMAN. That may be printed.

(The letter here submitted by Mr. HULBERT is as follows:)

DECEMBER 21, 1915.

The SPEAKER OF THE HOUSE OF REPRESENTATIVES.

SIR: I have the honor to invite your attention to the serious condition existing at the navy yard, Brooklyn, N. Y., in so far as pertains to the depth of water in ship channels leading thereto.

There is not sufficient water in these channels to insure the entering or leaving of a first-class battleship at all times.

At present only one battleship can be handled per day, and then only provided the weather conditions are normal. If the winds are such as to blow the water out of New York Bay then the depth of water in the approach channel is not sufficient to safely navigate a large ship. As an illustration, the following is noted:

On November 3, 1915, the U. S. S. *Texas*, one of our new first-class battleships, was ready to leave the yard, but the prevailing northwest winds had so reduced the depth of water in the Buttermilk Channel that even at high water there was not sufficient depth to insure her leaving the yard in safety. This ship therefore, was forced to remain in the navy yard for over 24 hours.

This condition is a serious one and might cause grave complications. I understand there are two propositions before Congress—one providing a channel 35 feet deep and 1,000 feet wide in Buttermilk Channel, and the other north of Governors Island up the East River through Hell Gate. The second would provide for ships passing from the yard to lower New York Bay or to the Sound, a condition highly desirable from a strategic point of view. Either project will provide for free access to the navy yard.

The increase in size of ships has not yet reached its limit.

Through injuries received in battle, a ship could readily be drawing more water than normally at a time when it was most necessary to dock her.

It is therefore most urgent that an approach channel to the New York Navy Yard be maintained of not less than 35 feet depth at mean low water and 1,000 feet wide, and I can not too strongly urge the serious attention of Congress to this matter.

Sincerely, yours,

(Signed) JOSEPHUS DANIELS.

Mr. HULBERT. I want to submit a letter written by me to Secretary Daniels on January 25, 1916, in which I asked him for a further expression of his opinion; and I submit his reply to that letter, addressed to me, under date of February 10, 1916. I do not know whether the committee desire to have that read or not, but I would like to call the attention of the committee to a sentence in the letter. The letter goes into specific details in regard to this matter, and it contains, among other things, this sentence [reading]:

"As stated above, the question of deepening the East River and clearing Hell Gate and the channel through into Long Island Sound is of paramount importance and a pressing need and it should receive immediate attention."

The CHAIRMAN. That all shows the forces that were at work to get the President to write this letter. I have no objection whatever to those going in the record, but I do not think it necessary to take up the time of the committee to read them.

Mr. HULBERT. I just read an excerpt to give you the character of the letter, and that is all.

The CHAIRMAN. The first and the main thing the committee wants to know is the President's views on the subject.

(The letters here submitted by Mr. HULBERT are as follows:)

JANUARY 25, 1916.

Hon. JOSEPHUS DANIELS,
Secretary of the Navy, Washington, D. C.

MY DEAR MR. SECRETARY: In the copy of last Saturday's RECORD, which I handed you this morning, I discussed the necessity for the deepening of the channel in the East River to 35 feet, to which you called attention in your letter of December 21, 1915, and which I put in the RECORD. I also emphasized that this improvement, connecting up New York Harbor and Long Island Sound, would constitute a marine trench, upon which I propose to elaborate in an address I have been invited to deliver at the annual banquet of the Cleveland Democracy in New York next Saturday evening.

I should like to know, if it is possible to make an estimate for such an illustration, approximately how many battleships or other naval vessels might be dispensed with, in the event of such improvement being made, to make equally efficient the defense of New York Harbor and the New England coast under present conditions—that is, if your timely warning were not heeded and the improvement failed of adoption—and I would appreciate as strong a letter from you on this subject as you can consistently write to aid me in organizing and enlisting the support of the civic associations of New York City.

If, when you have revised the admirable address made by you at the National Democratic Club a week ago last Saturday, you will favor me with a copy, I should be pleased to extend my remarks in the RECORD so as to incorporate the same.

—

FEBRUARY 10, 1916.

MY DEAR MR. HULBERT: Replying to your letter of January 25, regarding the deepening of East River to 35 feet, I have to say that this question has recently received very earnest consideration by the officers of the department, and particularly by the General Board.

The value, if not the absolute necessity, of deepening East River to 35 feet and clearing the channel to Hell Gate is considered one of the most important questions now before the Navy Department. The reason for this is that a study of the strategic features of the east coast of the United States, with a view to making the best disposition of our forces for defense against a possible enemy in the Atlantic, has demonstrated the fact that Long Island Sound is probably one of the strongest natural rendezvous for a naval force that possibly could be formed, either artificially or by nature. Its value would be decidedly enhanced by having two outlets; that is to say, either through the race at the east end of Long Island Sound or through the harbor of New York and out by Sandy Hook or the Ambrose Channel.

However, having the above two outlets must not be considered as in any way decreasing the number of ships that are needed for the naval service, but it can readily be seen that with these two outlets it would require a double force of the enemy's vessels to guard both of these outlets in order to prevent our vessels from getting to sea through either one or the other.

The necessity for at least 35 feet of channel is too evident to be dwelt upon, because any engagement taking place off New York would probably result in injury to some vessels, compelling them to seek shelter and to be drydocked as soon as possible. Naturally the draft of these vessels would be very much increased due to the injury they had received, so that from a military standpoint the deep channel is absolutely necessary. "As stated above, the question of deepening the East River and clearing Hell Gate and the channel through into Long Island Sound is of paramount importance and a pressing need, and it should receive immediate attention."

As regards the deeping of the East River between the navy yard and the entrance to New York Bay to the southward—that is, through Ambrose Channel—has been made very evident during the past winter when some of our larger ships were not able to reach the navy yard for necessary work, although only at their normal draft (and possibly a little less), and had to wait several days before they could bet in, and had the same trouble to get out after getting in. It needs no argument to impress upon anyone how serious it would be should some of our large battleships, which now are all based on the New York Navy Yard, be at the yard at the time their presence is urgently needed outside and the condition of the channel should be such that they could not get out.

Sincerely, yours,

(Signed) JOSEPHUS DANIELS.

Hon. MURRAY HULBERT, M. C.,
House of Representatives.

Mr. HULBERT. In order that the letter which you have just referred to from the President, in which he emphasized its relation to the Brooklyn Navy Yard, may be understood by the committee, it seems to me it is also essential that a foundation may be laid so that this committee may know what facts were presented to him that brought forth that letter.

Mr. TREADWAY. This hearing is connected with the East River project, so called, is it not?

Mr. HULBERT. It is.

Mr. TREADWAY. Just what is the bearing between the East River and the location of the Brooklyn Navy Yard?

Mr. HULBERT. The Brooklyn Navy Yard is on the east side of the East River, just above the Brooklyn Bridge.

Mr. TREADWAY. Will this project begin there? In other words, where does this new project that we are considering to-day begin?

Mr. HULBERT. This project begins at the Battery and extends the length of the river, which is 16 miles long, and connects with Long Island Sound at a point known as Throgs Neck.

Mr. TREADWAY. I understood you, before the committee all through our hearings, to refer more especially to the channel connecting East River with Long Island Sound, did you not?

Mr. HULBERT. Precisely.

Mr. TREADWAY. So that the navy yard is practically at the beginning of the position where you desire to have the project work done?

Mr. HULBERT. Oh, no; not at all; and, moreover, Mr. TREADWAY, do not lose sight of the fact——

Mr. TREADWAY. I only want to get the geography clear in my mind.

Mr. HULBERT. I will emphasize it as much as I can. You are going to have Admiral Benson and Col. Black before you. Admiral Benson has navigated the largest type of battleships in that very channel from the Battery up to the navy yard, but by connecting up this project for the East River, aside from its commercial importance, which, of course, affects materially its navigability, so far as such projects are taken up by this committee, it will also afford an entrance channel from the upper bay of New York Harbor to the Long Island Sound by the adoption of the project. So that we are then in a position, as this committee may from time to time deem it advisable to appropriate money for the completion of that 35-foot channel, giving you a double entrance to the Brooklyn Navy Yard.

Have you ever stopped to consider what might happen——

The CHAIRMAN. We have experts here.

Mr. HULBERT. I want to offer next, Mr. Chairman, a letter which I addressed to the President yesterday, under date of February 11, and also a letter addressed by Congresman FITZGERALD, chairman of the Committee on Appropriations, to the President yesterday; and then, following that, is a letter from the Secretary to the President, which the chairman has already read and which I suppose is now in the RECORD.

(The letters here presented by Mr. HULBERT are as follows:)

FEBRUARY 11, 1916.

The PRESIDENT, *The White House.*

MY DEAR MR. PRESIDENT: The Committee on Rivers and Harbors have practically concluded their labors and will presently report a bill carrying approximately $40,000,000 to continue the work on existing projects.

Since my appointment upon this committee at the opening of the present session, I have been strenuously urging the necessity for the adoption of a 35-foot project for the improvement of the East River, even to the extent of making it the one exception to the committee's rule not to take on any new projects.

The present project is for a 26-foot channel, adopted in 1868 and 70 per cent completed. Since Col. Black recommended a 35-foot channel in 1912, no moneys have been appropriated for the improvement of the East River. Aside from its commercial importance, having a commerce of 45,000,000 tons of an approximate value of $1,500,000,000 and 22,500,000 passengers, there is no doubt that at this time its strategic value is of paramount importance. Secretary Daniels pointed out in a letter to the House of Representatives, under date of December 21, 1915, that it was impossible to float modern dreadnaughts in or out of the Brooklyn Navy Yard except in high tide, and that there have been occasions when, owing to a heavy wind, which blew the water out of the channel, it has been necessary to hold the boats in the yard for 48 hours. In another letter which the writer received from him this morning, the Secretary emphasizes the value which this improvement would have in making New York Harbor the only harbor in the world having two entrances and two exits; for the connecting up of the upper bay with Long Island Sound by the 16-mile 35-foot channel would make necessary double the number of vessels now required to successfully blockade New York Harbor in addition to giving the vessels in the navy yard a means of exit to the east in the event that the channel below the yard might be blockaded by the destruction of a bridge below the yard. Admiral Mahan testified at the hearings of 1911 that of the Atlantic bases, New York is distinctly the best, and, because of its two entrances, etc., "constitutes a base of naval operation probably unique in the world."

Chairman SPARKMAN reported that you were opposed to taking on any new projects, but the exception always proves the rule, and Congressman FITZGERALD subsequently said that you had told him you expected the East River improvement, which only involves an initial appropriation of $500,000 this year, would be taken on as a part of the national defense. Inasmuch, however, as some of the members of

the committee still seem to feel that an exception should not be made unless with your acquiescence, I hope you will feel at liberty to advise the committee before the bill is reported.

—

FEBRUARY 11, 1916.

The PRESIDENT, *The White House.*

DEAR MR. PRESIDENT: I am reliably informed that the river and harbor bill will not contain any new projects. The determination to follow such a policy excludes the possibility of provision for the improvement of the East River or Buttermilk Channel in New York Harbor so that safe passage may be afforded naval vessels entering or leaving the navy yard.

It will be preposterous to provide extraordinary appropriations for new and larger war vessels, if provision be not made to enable them to utilize the essential facilities for their maintenance; and the Representatives from New York will be placed in an impossible position if they support revenue measures which will largely increase the burdens of their constituents while failing to obtain legislation deemed essential for the security of the metropolis of the Nation.

Unless some word be sent by you to the Committee on Rivers and Harbors that the situation relative to New York is essentially different from new projects for purely commercial projects no provision will be made for the improvement. The Secretary of the Navy has addressed two communications to the House on the subject, and I sincerely trust that you will urge that action be taken at this time.

Respectfully, yours,

(Signed) JOHN J. FITZGERALD.

In that connection I would like permission to submit here a telegram from the commissioner of the department of docks and ferries, R. A. C. Smith, addressed to me, dated yesterday [reading]:

[Telegram.]

NEW YORK, *February 11, 1916.*

Hon. MURRAY HULBERT,
House of Representatives, Washington, D. C.:

Confirming telegram of to-day, it is with deep regret that I can not be with you to-morrow morning and appear before the committee. Aside from the question of national defense, which so strongly demands the provision of an East River channel for an outlet to the east through the Sound, the amended project submitted in report in House Document No. 188, Sixty-third Congress, first session, should be approved by Congress as an urgently needed commercial improvement of national importance. I will cite but one section of the East River water front: From Williamsburg Bridge to Forty-second Street, which is nearly 2 miles in length and capable of immediate development for the accommodation of ocean-going vessels so soon as the Government removes from the navigable waters the dangerous reefs and rock shoals in that neighborhood. I may add that on that stretch alone 82 steam vessels could be accommodated. This is only one of the sections which is of potential value to foreign commerce and now paralyzed because of impossibility of access. For the best illustration as to the wisdom of these improvements, I need only refer to one of them: The Bay Ridge Channel, which cost the Government approximately $2,500,000. I believe that I am conservative when I say that the total cost of the improvements at that point by the State of New York, by the municipality, and by privately owned properties amounts to over $30,000,000 since the project was made a fact, and that if it were not for that particular territory to-day, the port of New York would not be able to meet the demands of commerce. There are many sections of this harbor in the East River section which are as important and subject to prompt development on the adoption of the amended project recommended by the Army Engineers. I will in the next few days send you a complete analysis of all improvements to this harbor as requested by you.

R. A. C. SMITH,
Commissioner Department of Docks and Ferries.

In addition to that I want to submit an excerpt from the testimony of Rear Admiral Mahan, appearing on page 54 of the hearings of 1911, before the Committee on Expenditures in the Navy Department, House of Representatives, which I also will not take the trouble to read at this time, but the gist of it is that it emphasizes the fact that in New York Harbor strategic considerations, industrial considerations, and economical considerations are all combined, which is one of the few places where you will find the trinity with regard to the development of the naval resources and commercial resources and the economical advantages of this Government; and then he emphasizes the necessity for a strategic base on the Atlantic Ocean and expresses the opinion that New York Harbor is the most desirable place on the Atlantic Ocean for the larger vessels of the Navy.

Mr. BURGESS. What is the date of that?

Mr. HULBERT. That is 1911. That is prior to the report upon which this provision or project was adopted and included in the bill of 1913.

(The statement here submitted by Mr. HULBERT is as follows:)

"As before remarked, the entire coast frontier, like any land frontier, is the national base of operations. Our coast frontier divides into three sections—the Atlantic, the Gulf, and the Pacific. Naval stations for these must be chosen in accordance with the two principal objects stated: (1) To insure the safety of the coast; (2) to facilitate external operations in support of national policies.

"This is the point to introduce a remark which governs the military determination of navy yards and naval stations, a consideration too rarely distinctly formulated; that is, that navy yards are for war, not for peace; that, therefore, they are primarily yards for repair and refit, not for construction, because under modern conditions naval vessels must be constructed in peace, the duration of war not allowing time. The function of naval stations therefore is to maintain in efficiency ships already built, and their location should be determined by this consideration, irrespective of facilities for building, whether natural or acquired.

"This amounts to saying that the choice and maintenance of naval stations should be determined by strategic considerations rather than by such as are industrial or economical. Of course, where the three coincide, as in New York, it is a fortunate conjunction; but where there is a collision of considerations the place which is superior by situation, nearness, defensive strength, and the possibility of storing resources is to be preferred to one industrially or economically greater. Let me add that the chief of all elements of refit is the dock, and suitable ground for docking or harboring floating docks is a prime consideration.

"The Atlantic seaboard is obviously the most important of the three principal divisions of our sea frontier. Its function in a general scheme of naval provision is largely defensive, because it is not nearest to either of our external objects of policy. In case of war with a naval power so far superior as to be able to maintain on that coast a navy stronger than our fleet our fleet would need at least two principal bases, because the existence of two not only provides alternate refuges in case of need, but by that very fact facilitates also the offensive operations of any character, the execution of which is the office of a defendant navy. The question of the Atlantic seaboard, viewed distinctly as a military problem, is therefore simple; nor is there any doubt that Chesapeake Bay and New York represent the two best positions. That the two are principal does not imply that they are equal or should receive equal development. New York is distinctly the better, because it has two entrances, for New York must be understood to embrace Long Island Sound and may advantageously be extended to include Narragansett Bay. So extensive an interior sheet of water, covering unlimited resources, with two entrances over a hundred miles apart, each capable of powerful fortification, constitutes a base of naval operations probably unique in the world."

Mr. Chairman, I think now we had better call either Admiral Benson or Col. Black.

STATEMENT OF REAR ADMIRAL WILLIAM S. BENSON, UNITED STATES NAVY.

The CHAIRMAN. Admiral, you are here this morning at the request of the Secretary of the Navy, I believe?

Admiral BENSON. Yes, sir.

The CHAIRMAN. For the purpose of explaining the importance of the improvement of so much of East River as would permit the Navy to carry its vessels to and from the navy yard?

Admiral BENSON. Yes, sir.

The CHAIRMAN. Will you kindly proceed now and give your own views as to the necessity for that work?

Admiral BENSON. The necessity for having a proper channel, particularly to the southern entrance of the navy yard, to get into the navy yard with safety with our large vessels, has been very apparent for some time.

The CHAIRMAN. Before you proceed any further, Admiral, have you a map showing the East River and bay?

Mr. HULBERT. In that connection, if any gentlemen are examining the map, I would like you to notice the depth at the points in the river except where these shallow rocks occur.

The CHAIRMAN. That will be all right.

Mr. HULBERT. You will see, gentlemen, the river is 50 or 75 feet deep, except where these rocks occur. May I also suggest that much of this data will be found in House Document 188 (63d Cong., 1st sess.), which individual members might like to look at.

Admiral BENSON. I think I can make the point more clear by pointing out the direction the ships ordinarily take.

Mr. HULBERT. Will you identify Governors Island before you begin, as a starting point?

Admiral BENSON. This [indicating on map] is Governors Island; this is North River, and this is East River, going up through here. This is the navy yard, this is the Brooklyn Bridge, and this is the Manhattan Bridge, as it is called. Then, there is another one here, and so on.

Vessels, for instance, come out of East River or down the North River or down here through the Narrows and out through the main channel out to the ocean; that is the channel that is used now.

The CHAIRMAN. Ambrose Channel is below there?

Admiral BENSON. The Ambrose Channel is 6 or 8 miles below this point [indicating], out through the lower bay and Narrows, and leaving Sandy Hook on the right as you go out, and standing eastward, with Coney Island on the left.

Mr. TREADWAY. Where is the Statue of Liberty?

Admiral BENSON. The Statue of Liberty is over here [indicating], and this is Jersey City, with the Pennsylvania Railroad Station and the Jersey Central there. Here is the Battery [indicating].

For many years vessels coming up from the anchorage down at Staten Island would come up and go through here [indicating].

Mr. HULBERT. You mean between Governors Island and the Battery?

Admiral BENSON. Between Governors Island and the Battery. I have never used any other channel.

Mr. HULBERT. I am asking that question, Admiral, for the purpose of the record, so that anyone reading it hereafter may identify it.

Admiral BENSON. I myself have always used the channel between Governors Island and the Battery, running in on a range on end of pier over in Brooklyn and the Hotel Margaret. I commanded the *Utah*, and she was quite a good-sized ship.

Mr. HULBERT. What is the draft?

Admiral BENSON. I have come out of there in the *Utah* drawing a little over 29 feet; 29.6 is about the most I have ever taken through there, and I have frequently gone in and out without a pilot; but it was always with a great deal of anxiety and only at the very top of the tide, when the current was practically still and not running at all, because on the south side here [indicating] toward Governors Island, is Diamond Rock, which is a very dangerous reef, and on the left going in is Coenties Reef, and it is absolutely necessary to steer between those two shoals; then, after getting over to a certain point in the river, you stand up to the navy yard just in here.

Mr. TREADWAY. May I ask what the distance is from Governors Island to the Battery?

Admiral BENSON. Across there? It is not more than five or six hundred yards. I am simply guessing.

Mr. TREADWAY. From Governors Island to the Battery?

Mr. HULBERT. Eight hundred yards.

Mr. TREADWAY. And then may I further ask how far those two reefs, one from Governors Island to which you refer and one from the Battery—in other words, how wide is your full depth of channel between Coenties Reef and Diamond Rock?

Admiral BENSON. Diamond Rock is there [indicating] and Coenties Reef is there. The distance between those two reefs, of course, in one direction is, I should say, probably 200 yards; but in going in, in order to get your turn up the river and avoid both of them, you have to steer at an angle, and it leaves the available space between them very small, not certainly over 100 yards, and I do not think it is that much. I never felt I had that much leeway when I went up there.

Mr. HUMPHREY. How often do battleships go through there?

Admiral BENSON. I should say, for instance, we base all of our big battleships as they come out, as a rule. Heretofore they have been fitted out at the New York Yard, and they all have to go there to fit out, and then the first four or five of them have been basing on the New York Yard until another one came out, and then the smallest one of the five dropped out and went to some other yard; and I imagine these five ships will average going up there and out again at least four times a year.

Mr. HUMPHREY. And all of the battleships of the Navy have gone in and out of that channel, have they not?

Admiral BENSON. No; latterly all of the big ships have been going up Buttermilk Channel on account of the greater difficulty of steering in between those reefs.

Mr. SMALL. Where is that channel?

Admiral BENSON. Buttermilk Channel is between Governors Island and Brooklyn shore.

Mr. HUMPHREY. How many accidents have happened getting battleships in and out there?

Admiral BENSON. Well, I can recall, I think, three. For instance, there was one ship, the *North Dakota*, that struck some object in going out of there.

Mr. HULBERT. Out of the North Channel?

Admiral BENSON. Out through here [indicating], north of Governors Island, and in that vicinity; I do not know exactly where it was. There was another case of an obstruction being struck, and I think the *Massachusetts* struck something there at one time. Those are the only three I have in my mind, and they are more or less indistinct, except the *North Dakota*.

Mr. HUMPHREY. What was the obstruction which you say they struck?

Admiral BENSON. My opinion is that there is a rock somewhere in there, a very small pinnacle rock, which it probably struck. At the time it was supposed that it struck an obstruction which had dropped over, because at a certain point along there there is at low water only about 27 or 28 feet, and an obstruction dropping over, even a very small one in that depth, and the vessels passing over it, even if only a couple of feet, would probably strike. That was the supposition. You can readily understand how a big stone from a barge might drop over on this hard bottom, as I understand it is, and that might bring the bottom up, so to speak, that much, and the vessel going over it would strike.

Mr. COSTELLO. By using Buttermilk Channel you avoid all that?

Admiral BENSON. As I say, latterly the big vessels have been using that.

Mr. COSTELLO. With complete safety in doing so?

Admiral BENSON. At certain stages of the tide there is not water enough there.

I was going on to say that this was emphasized recently by the big ships *Wyoming*, *Arkansas*, and *New York*, when a northwest wind was blowing at low water, could not go up there because there was not enough water.

Mr. TREADWAY. How much do they draw?

Admiral BENSON. They draw between 29 and 30 feet.

Mr. TREADWAY. The same as the *Utah*?

Admiral BENSON. About the same.

Mr. HULBERT. The later vessels draw more water, do they not—the *Arizona*?

Admiral BENSON. They may draw up to 32 feet.

The CHAIRMAN. What depth has Buttermilk Channel?

Admiral BENSON. Thirty to thirty-one feet.

Mr. HUMPHREY. What is the depth at high tide?

Admiral BENSON. The rise and fall, as I recollect it, is about 5 feet.

Col. BLACK. The ordinary range of the tide there is 4 feet. The spring tides have a range of 6 feet, and the water is lowered by wind action frequently 2 feet. So it is not at all unusual to have 4 feet less than mean low water in that vicinity.

Admiral BENSON. There are points here having 27, 29, and 28 feet, and I think about 27 feet is the lowest I have seen here. That would give you at the ordinary high tide 31 feet.

Mr. TREADWAY. What is the width between Governors Island and the Brooklyn shore?

Admiral BENSON. I would say that at the narrow point there would be about 200 yards.

I would like to say to the committee that they may be surprised that I do not know these figures more exactly, but I have navigated in every port on this coast and many others, and it is a little hard to remember all the details. That is the reason I can not give you more definitely the figures.

Mr. HUMPHREY. I want to ask you about the obstruction. You said one of the battleships struck an obstruction going through the channel. Was not that simply a temporary obstruction, a stone dropped off the barges or something of that character?

Admiral BENSON. I really could not say what it was. My own opinion is that there is a rock there somewhere which probably ought to be removed. That I do not know, and I got that idea very largely in conversation with Col. Black.

Mr. HUMPHREY. Your experience has been at high tide. To put it another way, except in low water, the battleship can get in and out of the yard without much difficulty?

Admiral BENSON. Under normal conditions, with good high tide and dead high water, a battleship properly handled up to certain draft, say, 30 feet, could get in there, but it is always a dangerous undertaking. I always feel in going in there that while I had confidence in myself that I could take the ship in, I was taking more or less chances to do it, and I do not think, if I may state it, that it is a risk that any commanding officer should be exposed to in command of one of our big ships unnecessarily.

Mr. EDWARDS. Where is the navy yard?

Admiral BENSON. Right there [indicating on map]

Mr. HULBERT. How far is it from Governors Island to the navy yard?

Admiral BENSON. That is 1½ to 2 miles, about.

Mr. EDWARDS. Admiral, how much has the Government invested in that navy yard up there?

Admiral BENSON. I should say in the neighborhood of twenty or twenty-five million dollars.

Mr. EDWARDS. How do you suppose it was that they ever located the navy yard in there where they could not get to it?

Mr. HULBERT. They could get up easily with the draft of vessels being built at that time.

Admiral BENSON. At the time it was located, of course, vessels were very much smaller, and the draft of water was such that they had no difficulty whatever in going out and coming in there at any time.

Mr. EDWARDS. They did not locate it there with a view to deep-draft vessels, because they did not have deep-draft vessels and the larger type of vessels?

Admiral BENSON. Oh, no. The yard has been there a hundred years, nearly.

Mr. EDWARDS. Is there not a point below there, outside that point, on which that navy yard could be transferred?

Admiral BENSON. There are other places where the navy yard could be placed, certainly.

Mr. COSTELLO. When the tide is high, in using Buttermilk Channel you avoid all the dangers ascribed to the other?

Admiral BENSON. Yes, sir.

Mr. COSTELLO. And there is no reason why you should not use it under those conditions, is there?

Admiral BENSON. If there is sufficient water, there is no reason.

Mr. COSTELLO. There is no need of your taking all the chances of going up through the channel between the Battery and Governors Island when you can go on this side of the island?

Admiral BENSON. Not at all; that would be the normal thing; but you have got to take that at the high tide, because there is only 27 or 28 feet there, and you must take it at the height of the tide, but if we can get 31 or 32 feet—31 feet is running pretty close—that is better, because we are running with the tide and the dangers should be less.

The CHAIRMAN. How long does low tide last?

Admiral BENSON. I think the water is slack off the Battery there about 20 minutes or a half an hour.

The CHAIRMAN. As a rule, you would not have to wait long, then, for a tide providing sufficient water?

Admiral BENSON. We have high tide about every 12 hours.

The CHAIRMAN. Would you then have to wait 12 hours?

Admiral BENSON. We would have to wait 12 hours for high water; and at night, as a rule, we do not attempt to go in there. That is another objection, because the yard is closed, and all the activities of the yard are closed.

Mr. BOOHER. Are there any other navy yards on the Atlantic coast where these big vessels can get in that are heavy-draft vessels.

Admiral BENSON. They can go into most any of the yards now; that is to say, they could get sufficient water in the Delaware for them to get up there.

Mr. BOOHER. That navy yard is open at all times?

Admiral BENSON. You would have to go up the Delaware, and you have to take it at practically high water. It is the same thing at Norfolk. You would want the high water, because the channel at Norfolk is very restricted, and at present it is too narrow to turn one of our big ships.

Mr. BOOHER. Then the navy yards all along the Atlantic coast are practically in the same condition as the one at Brooklyn is—the harbor conditions are practically the same?

Admiral BENSON. I do not know. I do not think so, sir.

Mr. BOOHER. You say you have got to wait for high water if you take the Buttermilk Channel? What is the difference in the channel there and at the other navy yards?

Admiral BENSON. The conditions are practically the same in that respect—that you have to wait for high water; but at Norfolk, for instance, I think the later ships coming out will have considerable difficulty in turning.

Mr. BOOHER. The difficulty is about the same at all the navy yards on the Atlantic coast, is it not?

Admiral BENSON. No; I would not say it was so great in the Philadelphia yard.

Mr. TREADWAY. How about Charlestown?

Admiral BENSON. At Boston?

Mr. TREADWAY. Yes, sir.

Admiral BENSON. They could go there, too.

Mr. BOOHER. Can you use the Philadelphia Navy Yard for the largest vessels without waiting for high water?

Admiral BENSON. We could use that, but there is no dry dock at Philadelphia that would take the ships. That is one of the features the Brooklyn yard possesses that the Philadelphia yard does not—they have a dry dock that big ships may go into.

Mr. BOOHER. Would not it be cheaper for the Government to build a dry dock at Philadelphia than to deepen this channel we are considering?

Admiral BENSON. I do not think so.

Mr. BOOHER. What would be the cost of a dry dock at the Philadelphia Navy Yard?

Admiral BENSON. The lowest estimate we had on the big dock there was a little over $3,000,000.

Mr. BOOHER. What will it cost to do this work? Is it not estimated to be $13,000,000?

Mr. HULBERT. $700,000; the $13,000,000 covers the whole East River up to Long Island Sound. This is the initial part of the project.

Mr. BOOHER. Then this would only be a portion of that project. How much larger vessels will the Brooklyn Navy Yard take in the dry dock than Philadelphia?

Admiral BENSON. And all of our ships can dock there, sir, that we have in contemplation.

Mr. BOOHER. At Philadelphia?

Admiral BENSON. No; New York, sir. For instance, the *Arkansas* and *Wyoming* and all of the vessels coming after those—the *New York* and *Texas*, the *Pennsylvania*, *California*, and all those ships would not be able to dock at Philadelphia.

Mr. HULBERT. Those ships have a draft of 31 feet, have they not—the *Arizona* has 30 feet?

Admiral BENSON. It has about 30 feet.

Mr. BOOHER. Can not all of these vessels you mentioned dry-dock at Portsmouth?

Admiral BENSON. I do not think so; I do not think any of them could.

Mr. BOOHER. The reason I asked you that is that somebody connected with the Navy in the hearings before the Naval Committee said that Portsmouth is the only naval station on the Atlantic coast where all of these larger vessels could dock.

Admiral BENSON. We dock them all at New York.

Mr. BOOHER. Could they dock at Portsmouth, too?

Admiral BENSON. I do not think they could, sir.

Mr. BOOHER. Could they dock at Charleston?

Admiral BENSON. South Carolina?

Mr. BOOHER. Yes, sir.

Admiral BENSON. They could not.

Mr. TREADWAY. Will you please make the same comparison with the Boston Harbor? Can these large vessels get into Boston?

Admiral BENSON. They might get in; they could not dock—these later ones.

Mr. TREADWAY. Has not the State of Massachusetts constructed a dry dock?

Admiral BENSON. They are building one, and when it is completed they will be able to take in any of them. It is to be 1,000 feet long, and it would hold any ship we are contemplating building.

Mr. TREADWAY. Is that larger than the one the navy yard now owns at New York?

Admiral BENSON. I think it is.

Mr. TREADWAY. But, so far as water is concerned, there is ample water to get in at Boston?

Admiral BENSON. Yes; they could get in there.

The CHAIRMAN. What size ships can you dock at Brooklyn Navy Yard?

Admiral BENSON. I have forgotten—about 32 feet.

Mr. HULBERT. Except for these rocks referred to being there, what is the depth of the channel in the East River from Governors Island up to New York Yard?

Admiral BENSON. You could count on getting at least 40 feet.

Mr. HULBERT. When you have been interrogated in regard to the desirability of entrances to other navy yards, as compared to New York, have you had in mind the fact of the size of the commerce in the East River as compared with the commerce upon the streams leading to the other navy yards upon the Atlantic seaboard?

Admiral BENSON. I have no idea whatever of the commercial side of it.

Mr. HULBERT. Do you know, for instance, that the commerce on the East River is twice as large as the commerce on the Delaware leading up to Philadelphia?

Admiral BENSON. I have not the slightest idea.

Mr. BOOHER. If that was true, would it not be better to dry dock war vessels where commerce did not interfere; for instance, if the Charlestown Navy Yard could be made usable with the expenditure of money for a dry dock, would it not be better to avoid the large commerce in the East River and take it some place where there is not so much commerce and where you would have more room for the war vessels?

Admiral BENSON. I would say, sir, that if we could start a navy yard new, where we could avoid the channels and commerce and at the same time get the labor market and the supplies that are necessary for the proper running of the navy yard, that it would undoubtedly be very much more desirable.

Mr. BOOHER. Could not that be had at Philadelphia, Boston, or Charlestown, or Hampton Roads, down here, with a great deal less money than you could get it there, or even lower down in the city of New York?

Admiral BENSON. That might be; if you only want one navy yard, it could be done. I do not know about the cost. I am not in a position to discuss the cost of this.

Mr. BOOHER. Could you not get all the naval stores at Boston, Philadelphia, and lower down there in New York, or at Charlestown—any of those places?

Admiral BENSON. Unquestionably.

Mr. HULBERT. Is not the importance of the naval base determined by the value of the property to be protected, and is not the choice of the New York Navy Yard one of importance, by reason of the great amount of wealth centered in that section of the country?

Mr. BOOHER. What is the objection to letting the West contribute?

Mr. HULBERT. New York City is contributing very liberally and paying two-thirds of the Underwood tariff law and nearly one-half of the tax upon individual incomes, and more than one-fourth of the tax upon corporation incomes.

Mr. BOOHER. You ought not to have so many rich men in one locality, but spread them around over the country.

Mr. HULBERT. New York hands it all back to the country.

Mr. COSTELLO. I take it you are here to answer questions in regard to navigation on these two points?

Admiral BENSON. Yes, sir.

Mr. COSTELLO. You do not want to enter into the controversy in regard to these other matters? There are other parts of the country besides New York. Admiral, if the Buttermilk Channel was dredged to give you a sufficient depth, as far as the naval base there is concerned, all the requirements would be met?

Admiral BENSON. Under normal conditions.

Mr. COSTELLO. I take it that is what you are here for, to answer these particular questions about getting in and out of the war vessels?

Admiral BENSON. Yes.

Mr. TREADWAY. That being the case, Admiral, what is the distance from where you get 40 feet down here below Governors Island up to a point where you begin to get 40 feet again in the river?

Admiral BENSON. About how far is it?

Mr. TREADWAY. How far would it require to be dredged to get 40 feet through the Buttermilk Channel?

Admiral BENSON. About half a mile.

Mr. TREADWAY. Then, by dredging about a half mile through the Buttermilk Channel you can get 40 feet of water from the ocean, by way of the Ambrose Channel, to the Brooklyn Navy Yard?

Admiral BENSON. Yes; I should say so.

Mr. TREADWAY. In other words, from the Battery up there is ample water; I understood you to say there was 40 feet of water from the Battery up?

Admiral BENSON. If this channel were deeper, there is no question about getting on this side, from the south.

Mr. SMALL. In using Buttermilk Channel there, the deepening required would be to the extent of about a half mile, you say?

Admiral BENSON. Yes.

Mr. SMALL. And after leaving that stretch, going up the East River, until you come to the navy yard, there is how much water?

Admiral BENSON. It is about 40 feet, the least I find there.

Mr. LIEB. Are you familiar with the quality of material at the bottom; is it hard or soft in the Buttermilk Channel?

Admiral BENSON. I understand it is soft; I do not know.

Mr. LIEB. It could be dredged?

Admiral BENSON. I understand it could, sir.

Mr. HULBERT. Admiral, will you tell us what is the importance, from a strategical standpoint, of the improvement of the East River beyond the navy yard up through Hell Gate and up into Long Island Sound?

Admiral BENSON. That is, from the naval standpoint, the strategical value of the navy yard, we consider it almost if not an absolute necessity, in order to fully develop this position. For instance, not so much the New York Navy Yard as Long Island Sound. Long Island Sound has a tremendous strategic value from its position and the fact that at the eastern end of Long Island Sound it is already fortified and is susceptible of being protected at the entrance to it by mines and other means.

Mr. HULBERT. How long is Long Island Sound?

Col. BLACK. The distance between the Sandy Hook entrance at the southern end of New York Harbor and the eastern entrance of Long Island Sound is about 110 miles; practically it is 125 miles.

Mr. HULBERT. And what is the greatest width of Long Island Sound?

Col. BLACK. Fifteen or twenty miles.

Mr. HULBERT. What is the least width of Long Island Sound?

Col. BLACK. The least width is at the two ends. At one end, at Throgs Neck, there is a width of 4,000 feet, with deep bays at the side. Thence to the east the sound widens and continues wide until you get to the eastern entrance, and at the eastern entrance, as I recollect it—about 5½ miles.

The CHAIRMAN. Follow on down the map; I think it shows that.

Col. BLACK. You can see that here is Throgs Neck [indicating on map], the western end of the sound. Throgs Neck is 16 miles from the Battery. Then it widens out into a very large body of water, and at the eastern entrance is where the fortifications are.

Mr. HULBERT. I would like to ask a question, if it is proper for me to do so. I do not want to go beyond the scope of what is proper here. I would like to ask if there are desirable places on Long Island Sound for the location of a navy yard and naval ship-building plant.

Admiral BENSON. I think that there are, but, as I say, that is a question that should be decided by a careful examination, by men who are familiar with that particular phase of the work. I should think, from the general conditions as I have seen them in passing there, that there are places that would do for a navy yard very satisfactorily.

Mr. HULBERT. How many bridges are there below or south of the Brooklyn Navy Yard?

Admiral BENSON. Two.

Mr. HULBERT. One is the Brooklyn Bridge and the other is the new bridge known as Manhattan Bridge?

Admiral BENSON. Yes.

Mr. HULBERT. If either one of those bridges were destroyed and blocked the channel of the East River, would it be possible for you to take the large-draft dreadnaughts through Hell Gate and Throgs Neck and Long Island Sound and through the Race out into the Atlantic Ocean?

Admiral BENSON. I do not believe it would. It would be one of those cases where you might run the risk, but it would be too hazardous to undertake. It would be absolutely unpardonable to attempt it except in a case of absolute necessity.

Mr. HULBERT. Was there not a vessel taken through there some years ago?

Admiral BENSON. Yes; the *Massachusetts* ran through there.

Mr. HULBERT. What is her draft?

Admiral BENSON. Twenty-five or twenty-six feet.

Mr. HULBERT. She is one of the oldest ships?

Admiral BENSON. One of the first.

Mr. HULBERT. And after she went through was there not an order issued by the Secretary of the Navy directing commanders not to take any vessels of that class or character through Hell Gate?

Admiral BENSON. Yes, sir.

Mr. HULBERT. What is the minimum depth of the East River Channel above the navy yard, if you know?

Admiral BENSON. I do not know; probably 40 or 50 feet.

Mr. HULBERT. You have referred here to the North River. For the purpose of the record I would like to have it appear that the North River and the Hudson River are interchangeable terms.

Admiral BENSON. They are; yes, sir.

Mr. HULBERT. Can any of these larger vessels, such as vessels of the *Arizona* type, be accommodated at the present time in the Charleston (S. C.) Navy Yard?

Admiral BENSON. They could not.

Mr. HULBERT. Do you know what the average depth of the Delaware River is up to Philadelphia Navy Yard?

Admiral BENSON. I think you can count on 35 feet at high water all the way up.

Mr. BOOHER. How much at low water?

Admiral BENSON. I should think you could count on 30 feet.

Mr. BOOHER. Then, low water at Philadelphia Navy Yard is about as high as high water at New York Navy Yard, is it not?

Admiral BENSON. At certain points. For instance, in the Buttermilk Channel, as I said, you could count normal high water at 32 feet.

Mr. BOOHER. That is at New York?

Admiral BENSON. That is at New York in the Buttermilk Channel.

Mr. BOOHER. Thirty-five feet at Philadelphia?

Admiral BENSON. At high water.

Mr. BOOHER. At low water at Philadelphia it is 30 feet; what is the low water at New York Navy Yard?

Admiral BENSON. You mean the channel leading to it, I presume?

Mr. BOOHER. Oh, yes.

Admiral BENSON. In the Buttermilk Channel, as I say, there are places as low as 27 feet, and in this channel here it is 28 feet.

Mr. BOOHER. That is between Governors Island and the Battery?

Admiral BENSON. Between Governors Island and the Battery.

Mr. BOOHER. The low water at Philadelphia and high water at Philadelphia is better than it is at New York, is it not, at the navy yards?

Mr. HULBERT. Of course, Judge Booher knows we just appropriated over $2,000,000 for the deepening of the Delaware River, and have not appropriated anything in four years for the development of the East River.

The CHAIRMAN. Let the admiral answer the question and then interject remarks.

Mr. BOOHER. It does not do any harm to get all of these statistics before the committee.

The CHAIRMAN. One at a time.

Mr. BOOHER. I want all of the facts before the committee, so they can put it properly before the House.

Admiral BENSON. As I said, I think you can count on 30 feet in the channel normally. Of course, when everything is normal you can get 30 feet at the Philadelphia Navy Yard at low water.

Mr. BOOHER. How much can you count on when the same conditions prevail at the New York yard?

Admiral BENSON. I should say not over 28 feet.

Mr. BOOHER. Under the same conditions, what is the state of affairs at the Boston Navy Yard?

Admiral BENSON. I would have to look over the Boston charts. As I said in the beginning, while I have taken the *Utah* into the Boston Harbor, I have taken it into every other harbor along the coast, and I would have to look at the chart to give you any exact information. I would not be willing to risk a positive statement without consulting the chart.

Mr. BOOHER. Admiral, would it not be a good plan, in your judgment, to have a navy yard properly equipped with a dry dock into which all the larger vessels of our Navy could go, south of Hatteras?

Admiral BENSON. Yes I think so; yes, I do.

Mr. BOOHER. Would it not be better for the vessels themselves, for the men on the vessels, and for the Government if a navy yard

was south of Hatteras and one north of Hatteras, into which all the large vessels could go—those coming from the north to go to one north of Hatteras and those coming from the south to the dock south of Hatteras?

Admiral BENSON. I understand you are only going to have one navy yard?

Mr. BOOHER. I asked if it would not be better to have the two, one to be located south of Hatteras?

Admiral BENSON. I think we ought to have one on both sides. I think we ought to have at least one south of Hatteras and I think the other should be north of Hatteras.

Mr. BOOHER. Would it not be a good idea to put it at the place north of Hatteras where we have got the best water conditions as to depth, and so forth?

Admiral BENSON. You must consider the labor market and materials. That is a very important adjunct.

Mr. HULBERT. Must you also not consider the present investment?

Admiral BENSON. I think that should be. Of course, that is not in my province, but I think it should be.

Mr. BOOHER. Taking everything into consideration, would it not be better to put the navy yards at a place where you have got plenty of water—Boston, Philadelphia, or Portsmouth—than to put it where you have got to dredge so much for water?

Admiral BENSON. I think that goes without saying; if you can get all the conditions as they should be, that is the place to put the navy yard.

Mr. HULBERT. May I interject? I will put it in the form of a statement. I just want to call attention to the fact that for the improvement of the East River the total amount of money expended up to the present time is $6,505,203, and no appropriations have been made under the project of 1868 (70 per cent completed) since 1912; that the annual commerce is 46,553,605 tons, having an approximate value of $1,537,239,286, while for the improvement of the Delaware River from Allegheny Avenue, Philadelphia, to the sea the total amount expended is $21,187,000, and $5,388,525 will be required to complete the project for a river having a commerce of 24,817,952 tons having an approximate value of $1,033,229,869, and that last year the Government expended on that river $1,278,039.89, as against nothing on the East River.

Mr. COSTELLO. In answer to Judge BOOHER'S question about having ideal conditions, or what you had in your mind about ideal conditions, Philadelphia could furnish those conditions as to labor, raw material, and water facilities.

Mr. TREADWAY. Include Boston and I will agree with you.

Admiral BENSON. I would say, without any hesitation, that I do think that Philadelphia possesses all of the qualifications for a first-class naval station, providing the channel is kept up in proper condition to reach it.

Mr. TREADWAY. Suppose I should ask the same question in regard to Boston, what would be your reply to that?

Admiral BENSON. I think the Boston yard possesses a great many of the desirable features. It has the location to a certain extent; it is a little nearer the position that the enemy's vessels could take up on the outside with modern gunfire, and its area is very restricted.

Mr. TREADWAY. Have you any information, Admiral, as to how nearly completed the dry dock is in Boston?

Admiral BENSON. They have just commenced it, and I think probably it will take one and a half or two years to complete it.

Mr. TREADWAY. But you have already told me that when completed it will be able to accommodate the largest vessels so far planned?

Admiral BENSON. Yes, sir. Any vessel that would go through the Panama locks could be accommodated in that dock.

Mr. HULBERT. Admiral Benson, is there any harbor in the United States other than the New York harbor that has a double entrance and double exit?

Admiral BENSON. I do not think we have any, sir.

Mr. HULBERT. Do you consider that to be a decided advantage in favor of the navy yard and New York Harbor, as against Philadelphia and Boston?

Admiral BENSON. I think that this channel, if dredged to proper depth, regardless of the navy yard or the city of New York or Brooklyn or any other consideration whatever except the national defense of the country, from the strategic standpoint, is unexampled on the coast.

* * * * * * *

Mr. COSTELLO. Mr. HULBERT in his remarks brought out the fact that the East River has two entrances. The Government has considered, and there is before the committee, a project for the purchase of the Delaware & Chesapeake Canal, and with the taking of that over by the Government, and Philadelphia on the Delaware River, Chesapeake Bay would be connected up by that link, and that would give an exit both by the Chesapeake Bay and Delaware River to the Atlantic Ocean.

* * * * * * *

Mr. HULBERT. Will the gentleman from Pennsylvania permit a question? The Chesapeake Canal is a new project. What is the estimated cost of its completion?

Mr. COSTELLO. I can not answer that question. I do not know.

Mr. HULBERT. Connect up the Delaware River with Raritan Bay, and New York Harbor will have three entrances and three exits.

Mr. BURGESS. Admiral, how long has this navy yard been located in New York?

Admiral BENSON. As I said, about 100 years. I would have to consult the records to get it exactly.

Mr. BURGESS. Can you give me any rough figures of the total cost of the yard up to date?

Admiral BENSON. You mean the yard and what it cost to man it, and all that?

Mr. BURGESS. Just rough figures, if you can come near it.

Admiral BENSON. That would be the wildest kind of a guess. To begin with, I do not know just how many years, as I said before, it has been in existence. The estimated value would be between $20,000,000 and $25,000,000, but part of the yard, as you know, was sold off some years ago, and whether that was a source of revenue I could not say, and it would be an absolute impossibility for me to approximate what it has cost the Government, but it must have cost—as I take it you would want all of the money expended on it, regardless of any other consideration?

Mr. BURGESS. Yes.

Admiral BENSON. That would be hundreds of millions. I could not tell.

Mr. EDWARDS. Have you conceived a proper plan for national defense that would fail to include a navy yard in the neighborhood of New York that could be satisfactory and meet the necessities?

Admiral BENSON. It might be possible, but not desirable.

Mr. HULBERT. Admiral, you were speaking of the difficulties awhile ago of getting around from the North River to the navy yard, both as to going through Buttermilk Channel, on account of the lack of depth at certain times, and through the other channel of East River on account of certain obstructions. There are times, I suppose, when a vessel might be in such a condition as to draw much more water than in normal conditions?

Admiral BENSON. Yes, sir; she might be injured, and from our point of view that is what we always consider—that we ought to have a depth of water that would allow a ship that had suffered underwater damage and was drawing an abnormal draft to enter, and it would undoubtedly require a greater draft of water to get up there.

The CHAIRMAN. Suppose you had a depth of 30 feet, you could carry the vessels you now have through the channel under ordinary conditions? I am not speaking of vessels to be built in the future.

Admiral BENSON. Yes, sir.

The CHAIRMAN. How much water might one draw in a crippled condition?

Admiral BENSON. We ought to have at least 35 feet.

Mr. BOOHER. What is the condition of the river at Buttermilk Channel; is that soft bottom?

Admiral BENSON. I understand that is soft.

Mr. BOOHER. And could be dredged out to get all the depth there you want in a half mile, could you not?

Admiral BENSON. That is my understanding.

Mr. BOOHER. Have you ever estimated what the cost would be to dredge Buttermilk Channel and give you all the water you need to get up to the navy yard?

Admiral BENSON. I have not.

Mr. HULBERT. I would like to ask the admiral if there is any other explanation he desires to make.

Admiral BENSON. As representing the Navy Department, I would feel that I was neglecting what I came for, so far as the department is concerned, if I did not insist that as long as we have a New York Navy Yard, with the dry dock prepared to do the work it is intended for, that it is a pressing necessity that we should be able to get up there under all conditions.

Mr. HULBERT. Are there any dreadnaughts under construction at the New York Navy Yard at the present time?

Admiral BENSON. Two—at least, the *California* is nearing completion there; the *Arizona* is being constructed; and *No. 43* will be laid down there during this year.

Mr. HULBERT. What is the draft of the *California?*

Admiral BENSON. About 30 feet.

Mr. HULBERT. And the *Arizona* is 30 feet?

Admiral BENSON. They are all that.

Mr. HULBERT. And what is intended to be the draft of *Nos. 43* and *44*, which are about to be laid down?

Admiral BENSON. They are the same.

Mr. TREADWAY. Is that the full capacity of the yard?

Admiral BENSON. Practically, at present. The *Arizona* has been launched, the *California* will be launched this summer, and one of the others will be laid down.

Mr. TREADWAY. You have as many in the ways as the capacity of the yard will accommodate?

Admiral BENSON. Under present conditions.

Mr. HULBERT. When the *California* is launched it will be possible to lay down another on the ways?

Admiral BENSON. It will be possible to lay down another on her ways immediately on her being launched, and we are also anticipating possibly trying to get the way for another.

Mr. HULBERT. So that you anticipate within the next year having three dreadnaughts of 30-foot draft or more under construction in the Brooklyn Navy Yard?

Admiral BENSON. The *California*, *Arizona*, and *No. 43*, all 30 feet.

Mr. HULBERT. Is not the *California* 31 feet?

Admiral BENSON. I do not think it is.

Mr. TREADWAY. Has there been any estimates as to the time of completion of the *California?*

Admiral BENSON. There has been. We hope to complete her certainly within a year.

The CHAIRMAN. Admiral, what is the difference in draft of those battleships before the load is on and after the guns and equipment are aboard?

Admiral BENSON. I suppose when they are launched they would not draw over 20 feet. The way we get at it is by tons per inch; about 91 tons weight on one of them causes them to sink in the water 1 inch.

The CHAIRMAN. Is there in contemplation the building of larger guns—guns of heavier weight?

Admiral BENSON. We are putting 14-inch guns on all these vessels being built there.

The CHAIRMAN. That adds to the weight, of course.

Admiral BENSON. That adds to the weight; but their ultimate weight will be approximately what they were designed to carry, and they were designed to carry 14-inch guns.

The CHAIRMAN. I was inquiring whether or not that would necessitate deeper-draft vessels?

Admiral BENSON. They were designed to carry 14-inch guns; so that their draft would be, as I say, 30 feet.

The CHAIRMAN. You do not have in contemplation building any vessels that would draw more than 30 feet?

Admiral BENSON. Yes; the subject is under discussion; and, as I say, we have even contemplated building vessels up to 32 feet draft.

The CHAIRMAN. You may have stated awhile ago, but how many vessels can you accommodate at the same time at the Brooklyn Navy Yard?

Admiral BENSON. We only have one building slip there now—for dreadnaughts—but in a recent report received from the yard they said they had room there to build one more slip, provided the money were appropriated—that they thought they could provide for one more slip—so that two ships would be on the building ways under construction, and two alongside the fitting-out pier for completion, which would practically mean four ships under construction at the yard at the same time. At present, of course, we only have the one building slip.

The CHAIRMAN. Two for construction and two for the purposes of fitting out vessels?

Admiral BENSON. Yes, sir.

The CHAIRMAN. After they have been launched?

Admiral BENSON. After they have been launched they are completed and then fitted out at that yard.

Mr. SMALL. As I understand you, representing the Navy Department, you express the opinion that an increase of depth of the entrance from

the lower bay, either via Buttermilk Channel or through the channel between Governors Island and the Battery, to 35 feet will answer the purposes of a complete use and utilization of the navy yard?

Admiral BENSON. Yes, sir.

The CHAIRMAN. If there is anything more, Admiral, we will be glad to hear you.

Admiral BENSON. I think I have stated my case. There is only one thing we would like you to fully understand—that is, we consider it a pressing necessity to be able to get to the New York Navy Yard under all conditions.

STATEMENT OF COL. WILLIAM M. BLACK, PRESIDENT BOARD OF ENGINEERS FOR RIVERS AND HARBORS, GOVERNORS ISLAND, N. Y.

The CHAIRMAN. What I wanted to ask you about first, Colonel, was the cost of removing the obstructions in East River where the vessels go out of North River to the navy yard.

Col. BLACK. Yes, sir.

Mr. HULBERT. May not Col. Black take up each successive obstruction from the North River Channel up to the navy yard and locate the rocks to be removed and give us an idea of its extent and what it would cost to take it out?

The CHAIRMAN. I wish to confine the investigation first to the matter covered by the letter from the President.

Mr. HULBERT. Up to the navy yard.

Col. BLACK. There are no obstructions at all in the channel from a point opposite old slip on the East River, east side of Manhattan, to the entrance to the navy yard. The only obstructions that there are in the channel itself are limited to Coenties Reef, southwest of that slip on the East River and on a line between Castle William and the Battery on the west.

Mr. HULBERT. Castle William being on Governors Island?

Col. BLACK. Castle William being on Governors Island. There is deep water all through here. I will show you a channel to-day which has over 35 feet, if you will just follow my pointer. There is a channel now through the rock, but you can see the shape of it; a ship can not follow it.

Mr. HULBERT. It is like a letter "S."

Col. BLACK. There [indicating] and right in the channel is a pinnacle rock having over it only 28 feet of water, and all around it it is over 35 feet.

These obstructions here consist, first, of a rocky reef running out from Governors Island toward this deep channel; another rocky reef running out from the Battery, limiting the channel.

These are pinnacle rocks in the channel, and the reef called Coenties Reef, lying in East River, a little way beyond it. The Coenties Reef lies directly across the line of the present deep channel there [indicating]. This material in these "reefs," as we call them, is not very thoroughly known. The reason is that in order to know it thoroughly you have to go to a very large expense in making probings and borings over the whole surface, and that expense has not been warranted yet, for the reason that it has not yet been allowed by Congress, the project not having been approved, but Coenties Reef has been gone all over in that way, and it is almost entirely rock. There are 28,000 cubic yards of rock in Coenties Reef and only about 5,000 yards of soft material, so that is negligible. We believe, from the knowledge that we have of pinnacle points sticking up and the knowledge of the formation of the bottom of the East River elsewhere, that these reefs are irregular rock surfaces, with the hollows filled in with hardpan, and until we have money and the project is adopted, which will enable us to bore over the whole thing, that is the closest description anybody can give; but we know there are rocky points sticking up in that.

The CHAIRMAN. Has the process of sweeping been utilized to ascertain that?

Col. BLACK. The process of sweeping will tell us how many protuberances there are, but the course we have been compelled to follow in the absence of a general project for the East River is to have a ship run into one of these. The complaint is then made that there is an obstruction; then we sweep to find the nature of the obstruction, and we find the rock.

The CHAIRMAN. It has to injure the ship first?

Col. BLACK. Yes, sir; that is the way the rocks are found in East River. I am not joking, because only two weeks ago on Shell Reef the advice came in that a ship had struck an obstruction where the water was reported 19 or 20 feet deep, and it was supposed to be a rock. Then, as is our duty, we went out to investigate and found pinnacle rocks right there where the chart shows a greater depth, and the reason the charts are wrong is no fault of the Coast Survey, but simply you can not locate those rocks by sounding, and sweeping each river is expensive, and we are doing it as fast as we can, but it is slow.

On this Buttermilk Channel we have here [indicating] a reef of rock sticking out. Separate projects have been made for the improvement of the Buttermilk Channel and for the channel between Governors Island and the Battery. The Buttermilk Channel is part compacted mud and sand, some rock, and some soft material. The estimated cost of making a channel through the Buttermilk Channel which would take up the whole width between Governors Island and Brooklyn is, as I recall, $1,950,000, with $25,000 annually for maintenance. I would want to look up the figures to be accurate. There is a printed and recommended project before you, so it is easy enough to tell from that. All I know is that it is considerably more than it would cost to improve and take out the reefs here [indicating the outer channel]. The cost of removing these reefs here and getting the 35-foot channel 1,000 feet wide, which will afford 1,000 feet of channel with a depth of 35 feet at mean low water and 1,100 feet in addition of channel with depths over 18 feet of water, is $777,000. Nothing is estimated for maintenance, since experience so far has shown that stable conditions prevail.

The CHAIRMAN. You are speaking now of removing the obstructions?

Col. BLACK. All obstructions here in this entrance of East River directly off the Battery.

Mr. SMALL. That gives an uninterrupted minimum of 35 feet from the east to the navy yard?

Col. BLACK. Yes, sir. I am taking this whole thing, including Coenties Reef, as one piece of work.

Mr. SMALL. Will you kindly describe the location of Coenties Reef; point it out?

Col. BLACK. Coenties Reef is here [indicating], running that direction.

Mr. SMALL. Opposite where?

Col. BLACK. Opposite Coenties Slip. The other reefs then start in a little to the south of that, right here [indicating], this one coming north from Governors Island; this one going south from the Battery, leaving this deep channel in between, which has some pinnacle rocks in it.

Mr. SMALL. And the partial project you describe, giving a minimum depth of 35 feet from the east up to the navy yard, between Governors Island and the Battery, includes Coenties Reef?

Col. BLACK. Yes, sir.

Mr. SMALL. And it would cost $777,000?

Col. BLACK. That is the estimated cost we gave here.

Coenties Reef is about to be taken out, partly by the city of New York, and the specifications for that work are in the hands of the Chief of Engineers for approval. We hope to get them back and have the work advertised for proposal within a very short time.

Mr. SMALL. How much has been appropriated for that? Has sufficient been appropriated for that work by Congress in cooperation?

Col. BLACK. Yes, sir. Congress has appropriated a sufficient sum, but there was an unfortunate misunderstanding of just the meaning of Congress, and the city of New York has appropriated $240,000, and unless I can get pretty good bids, which I am working for, and which I have reason to hope we will get, we can not go into it, because I do not think the city of New York, tied up with a subway and big piers, can afford to give more than $240,000.

Mr. SMALL. How much had she ought to give?

Col. BLACK. That is all she ought to give; but in order that I should be able then to enter into contract at all for any of it, the contract price must be low enough to have the $240,000 cover New York City's share. Do I make myself clear?

Mr. HULBERT. For the purpose of the record, how much has Congress appropriated for this work of removing Coenties Reef?

Col. BLACK. Congress passed a joint resolution last year, authorizing this work to be done, and allotment has been made from the lump sum for that.

Mr. HULBERT. Of how much?

Col. BLACK. I did not bring those figures with me; I can find them for you. I have, from the allotment and the authorization from the whole appropriation, available for this work the sum of $264,000, and I did not expect to use it. The cost to the United States would be in the neighborhood of $150,000 or $160,000—considerably less than the cost to the city of New York. In order that we can make a contract at all I have got to get a price which will be less than $240,000 for the city of New York's share, which is more than half the total cost.

Mr. SMALL. Have you gone sufficiently far to see what the probability of your getting such a bid is?

Col. BLACK. I did not put out specifications until I found that out, Mr. Small.

The CHAIRMAN. Why is it costing New York more?

Col. BLACK. The reason is this, and I did not think it was apprehended—the rock is of that shape [indicating a flat cone]. The United States takes down to the 35-foot depth, taking off the small top. New York takes down there between 35 and 40 foot depth and gets the big base.

Mr. TREADWAY. You spoke of a misunderstanding as between the city and Congress?

Col. BLACK. No, sir; I did not speak of that. The misunderstanding was between my office and the Chief of Engineers, but that is a separate matter. I would be very glad to explain. However, all I think is necessary now is that I have every reason to believe that within the next month we can advertise and that after the month of advertisement we will be able to enter into a contract in accordance with the terms of Congress for the complete removal of Coenties Reef.

Mr. SMALL. How much will that reduce the original estimate of $777,000?

Col. BLACK. I made my estimate three or four years ago for $777,000 for that whole thing. Since then, the State of New York has passed a labor law and employer's liability law, which bears particularly hard on men engaged in dredging and excavating rock under water. In addition to that, the prices of labor have gone up very materially, and I had put my estimates down to what I thought was the lowest figure I possibly could at that time. I was very much in hopes that the committee would not interrogate me too closely and would let me have that little margin that I may get from Coenties Reef, knowing perfectly well I will get the best contracts I could and keep the prices down to the lowest, and I would have a little margin.

The CHAIRMAN. He is asking you with reference to the estimates.

Col. BLACK. That is it. I was just saying I was hoping that question would not be asked, and that you would take $777,000 and forget there was anything as to Coenties Reef, knowing full well that the money would not be spent if not needed.

Mr. FREAR. Do you not think it best to let us work intelligently?

Col. BLACK. I am perfectly willing to tell the committee everything.

The effect of my work in New York, gentlemen, has been to reduce the cost of work of excavation each time, because I was convinced that the price that had been paid for rock excavation was too high. The contractors complained a little, but I threatened to put my own plant in and do a lot more things, and the result is I have been successful in getting cheaper bids right along.

You gentlemen ask me what reason I had to believe that I could get this contract made for Coenties Reef. The reason was just this——

(At this point informal discussion was had.)

Mr. KETTNER. There are two channels. One is termed Buttermilk and the one between Governors Island and the Battery—they have been spoken of this morning?

Col. BLACK. Yes.

Mr. KETTNER. Which one of those, in your opinion, is the greatest good to commerce?

Col. BLACK. This one, because it is wider; the one between Governors Island and the Battery will give, in addition to a thousand-foot channel, 35 feet deep, 1,100 feet of channel for vessels between 18 and 30 feet.

Mr. KETTNER. Then if the committee would undertake either one——

Col. BLACK. I would strongly recommend this one [indicating]. Then there is another advantage about this one, and that is in all of this work on the East River we had ever done in clearing away these reefs there is no cost for maintenance. It is permanent.

Gentlemen were speaking of the Delaware River. It is true they have a 60-mile channel 30 feet deep, a pretty nice channel, of ample width. But they have to dredge it each year; it will not hold. This work in the East River is permanent. It is a removal of things which do not come back.

Mr. KETTNER. The only work you think that it is absolutely necessary in the interest of both commerce and the Navy would be this $777,000 appropriation that you speak of?

Col. BLACK. At this point [indicating Corlears Hook Reef] is a reef, which also figures in our estimates, a reef opposite the navy ward.

Mr. TREADWAY. You said that this estimate of $777,000 was made several years ago?

Col BLACK. Yes, sir.
Mr TREADWAY. And in the meantime we have appropriated money to do away with Coenties Reef?
Col. BLACK. Yes, sir.
Mr TREADWAY. And consequently there is a come and go margin in that $777,000?
Col. BLACK. Yes, sir.
Mr. TREADWAY. But in view of the additional cost to which you have referred, such as increased labor, the liability law, etc., how much difference, do you take it, there would be in your estimate of $777,000 if we were bringing that estimate up to date?
Col. BLACK. I think if I were bringing that estimate up to date I would put pretty nearly the same I have now. One reason why I always hold my estimates low, at the risk of going back to Congress, is this: When the contractor has commenced to figure on a new piece of work, the first thing he does is to take the engineer's estimate, and if the engineer's estimate is up in the air he will bid accordingly. So, even at the risk of having to come back—fortunately, I have not done it—all my works are being completed inside of the estimate; I take the risk of coming back partly for the reason that if I put my estimates high the contractor will bid high.
Mr. TREADWAY. As I understand you, $250,000 will be expended on Coenties Reef?
Col. BLACK. No, sir; I have $248,000 available, belonging to the United States, of which I expect to spend $150,000, or maybe $170,000.
Mr. TREADWAY. In other words, you would increase the estimate to-day for that work if you had it to do over again $150,000?
Col. BLACK. About that; about what would do for this Coenties Reef.
Mr. TREADWAY. I would like to get that clear in my mind. What project is this $777,000 item under?
Col. BLACK. The general project for the improvement of East River.
Mr. HULBERT. I have a map here, Mr. Chairman, which has the exact outline of what these rocks are, and perhaps it would be better understood if you would look at this map.
Mr. TREADWAY. I would like to get it in my mind clearly as regards the relations between the project now in process, including this appropriation, and the further appropriation. That, of course, is the old project; that has been adopted?
Col. BLACK. Which one?
Mr. TREADWAY. This $777,000?
Col. BLACK. No, sir.
Mr. TREADWAY. But the Coenties Reef has?
Col. BLACK. That was last year by a joint resolution, and the reason of that is because they are building a tunnel there, and it would be dangerous to take the reef out after the tunnel has been completed.
Mr. TREADWAY. Yes; but this $777,000 project—where does that project end and where does the so-called East River project of $777,000 begin?
Col. BLACK. The $777,000 item is a part of the $13,000,000 project.
Mr. TREADWAY. To what point does your $777,000 estimate run?
Col. BLACK. From that slip to the deep water of the bay [indicating].
Mr. TREADWAY. In other words, the adoption of the $777,000 project would give 40 feet to the Brooklyn Navy Yard?
Col. BLACK. Thirty-five feet mean low water.
Mr. TREADWAY. The admiral testified both sides above Governors Island and below, 40 feet. You say 35 feet.
Col. BLACK. I am only taking out 35 feet across these reefs.
Mr. TREADWAY. Other than at the reefs, the highest projections?
Col. BLACK. Exactly.
Mr. TREADWAY. Then you would, by the adoption of the $777,000 project, get clear 35 feet from here to the Brooklyn Navy Yard at mean low water?
Col. BLACK. Yes, sir
Mr. TREADWAY. If the wind does not blow it out more than ordinarily?
Col. BLACK. The mean low water is the mean between the spring and the neap-tide low waters.
Mr. TREADWAY. Does the adoption of that portion of the project calling for the apropriation of this $777,000 carry with it the adoption of the entire East River project?
Col. BLACK. Not unless Congress so wills.
Mr. TREADWAY. In other words, are we considering two separate projects? That is what I am trying to get clear. Whether we are mixing in the fact of getting good water to the Brooklyn Navy Yard with the further fact of getting 30 or 35 feet out to Long Island Sound?
Col. BLACK. The original project that I had was to get deep water and good water from the deep water of the upper harbor to the deep water of the Sound.
Mr. TREADWAY. What do you call the "upper harbor"?
Col. BLACK. The upper bay of New York. There are the upper and lower bays [indicating on the map]. The completion of the entire project would get deep water from the ocean on the south to the deep water of the ocean oposite the eastern end of Long Island, and in making estimates of required work the estimates for certain specific points which I named were totaled. This is one of the specific points, one of the items entering into the $13,000,000 project.
I had this strong hope that Congress would see its way clear to adopt the project in full, and then allow the money to be expended at the points where it was most needed, but under the circumstances that seems to be considered impracticable.
Mr. TREADWAY. Under your hopes, as expressed, what would you consider the first point needed?
Col. BLACK. Gentlemen, here is Long Island Sound [indicating]; here are the Narrows down there. The distance between here, the entrance to the Sound, and the entrance there, is about 125 miles, roughly, outside. We have fortifications here [indicating]; we have inner fortifications here at Throgs Neck.
Mr. TREADWAY. How far is Throgs Neck from the navy yard?
Col. BLACK. About 15 miles, just at the end of East River.
Then we have fortifications here, right across there [indicating], at the eastern end of Long Island Sound.
Mr. HULBERT. That is what you refer to as the "race."
Mr. SWITZER. How long would it take to do the work covered by this $777,000 project?
Col. BLACK. Three years.
Mr. TREADWAY. May I finish?
Col. BLACK. There was one other point I have not finished. There is one other reef area, out at Hell Gate, which bars the passage into the Sound, and that is all. The estimated cost of removing that reef area is about $1,841,000.
The CHAIRMAN. Point that out.
Col. BLACK. Right here [indicating on the map]. Going back to the $13,000,000 project, as reported on page 6 of Document 188, Sixty-third Congress, first session, the items of work named in the table at the foot of the page, which are necessary to do for the free movement of the Navy in or out of New York Harbor, at both entrances, are the first item: Work at and near Battery Channel, 1,000 feet wide, $777,223, and the seventh and eighth items for $1,841,000.
Mr. BOOHER. Is that the project we are talking about now?
Col. BLACK. Yes, sir; the seventh and eighth items.
Mr. FREAR. It would help us if you would point to it.
Col. BLACK. These items cover the work of removal of the reef between Wards Island and Hallets Point.
The CHAIRMAN. Colonel, will you point the places out on that map?
Col. BLACK. Right there [indicating on map]. If you will take that House document, it is all there. It is these shaded portions right there.
The CHAIRMAN. Where is the navy yard?
Col. BLACK. The navy yard is here, where my stick is pointing.
The CHAIRMAN. You had a map with both?
Col. BLACK. Here it is on this map [indicating on blue print]. Here, where you see the spots of red is the $777,000 point.
Mr. HULBERT. That is the first one?
Col. BLACK. That is the first one. Coming up the East River there is the navy yard [indicating]; going on out the East River there is the end of Hell Gate, where the $1,000,000 work ought to be done.
The CHAIRMAN. $1,800,000 work?
Col. BLACK. Yes, sir.
Mr. HULBERT. Where is the pot rock?
Col. BLACK. Right in this same area I pointed out.
Mr. TAYLOR. I want to ask you one question. The President informs our chairman of the committee that immediate improvement of the East River adjacent to Brooklyn Navy Yard should be taken up. Point with your stick what you construe his meaning to be on the chart.
Col. BLACK. I am quite sure that he means this down here [indicating], and he may mean this [indicating Corlears Hook Reef] as well.
Mr. TAYLOR. Remembering what you have available, if anything, what should this bill contain to cover the idea expressed by the President adjacent to the navy yard?
Col. BLACK. I think he had in mind purely the reefs at the mouth of the river.
Mr. BURGESS. That is between Governors Island and the yard?
Col. BLACK. Yes, sir. If you should want to include an item of this kind, you simply say for the item such and such page, such and such document, to provide a through channel 35 feet, work at or near channel 1,000 feet wide.
Mr. TREADWAY. That brings us right back to the question previously asked, which I do not still understand. Do you construe that item as a possible item, irrespective of the adoption of the entire East River project?
Col. BLACK. Yes, sir; it can be put in in either way Congress desires.
Mr. TREADWAY. And you consider that the item that you have just read is the one to which the President refers in his communication to Mr. SPARKMAN?
Col. BLACK. That is my belief.
Mr. TREADWAY. You have given us a very interesting description of certain features of the so-called preparedness or national-defense proposition. Let me ask you whether or not, under our jurisdiction—I mean this committee—having to do with commercial navigation, this one item to which you have referred, called for $777,000, is not the item directly applicable to navigation in connection with various subdivisions?
Col. BLACK. It is. One of the United Fruit steamers struck on Coenties Reef a while ago.
Mr. TREADWAY. We ought not to consider Coenties Reef.
Col. BLACK. That is in this item.
Mr. TREADWAY. What, in addition to the depth of 35 feet at Coenties Reef, will remain to be done of this $777,000 project when that project is finished?
Col. BLACK. About $700,000 worth of work will be required.
Mr. TREADWAY. What proportion of the entire project is the Coenties Reef project—I mean this one item?
Col. BLACK. Perhaps one-eighth; I am not quite sure. It is very hard to get at it in that way. Coenties Reef is a deep reef, and you can cut it off in deep cuts. These others are shallow cuts.
The CHAIRMAN. It is considerably more than one-eighth, because it is $250,000 out of nearly $800,000.
Mr. SMALL. I understood the colonel to say the matter was made difficult and indefinite on account of labor conditions and other conditions.
Col. BLACK. I have allowed that margin to get through on.
The CHAIRMAN. In answer to Mr. TREADWAY'S suggestion, of course it is very easy to adopt that particular work and not adopt the whole project. We did that when we took on the Coenties Reef by using appropriate language.
Col. BLACK. And if you are alluding, in your adoption, to this document, the place and the work to be done is absolutely fixed on the maps given in this document.
The CHAIRMAN. The language can be framed to cover that.
Mr. TREADWAY. I understand him to say so far as the $13,000,000 project is concerned, the one section calling for this appropriation of $777,000 or thereabout, is the one section having to do with the item of commercial interest of New York.
Col. BLACK. Not the one section; it all has to do with that, but all of it is very important commercial matter to New York.
Mr. TREADWAY. The exigencies which we are meeting hereabout and which our colleague has presented to this committee, looking toward certain features of preparedness, would not apply to mercantile projects other than from the factor of preparedness? I am trying to differentiate in my mind between what is important in this project for commerce and what is important for preparedness.
Col. BLACK. For commerce the whole project is important; for preparedness the two ends of it, the Hell Gate and the Governors Island end.
Mr. SMALL. May I make a statement here, and follow it by a question, with the hope of clarifying the situation a little? The President has asked that we include in this bill the improvement of the East River adjacent to the Brooklyn Navy Yard?
Col. BLACK. Yes, sir.
Mr. SMALL. You have stated, in answer to a question, that you interpreted that language to mean that part of the improvement leading from

the Upper Bay through the channel between Governors Island and the Battery, and which includes Coenties Reef, at an estimated cost of $777,000?

Col. BLACK. Yes, sir.

Mr. SMALL. Now, you have found it difficult to estimate how much the pending appropriation for the removal of the Coenties Reef would reduce that original estimate?

Col. BLACK. Yes, sir.

Mr. SMALL. But you would bring it down to $700,000?

Col. BLACK. I think so.

Mr. SMALL. Now, if this committee should undertake to include that in this bill, how much of that $700,000 would you require—how much could you economically spend for the next fiscal year, or until the next river and harbor bill, which must be passed at the short session in December?

Col. BLACK. I could not expend in that time over $200,000.

Mr. SMALL. Then, further, you have also stated that while this was an entire project from the Upper Bay to the end of the East River at Hell Gate, that it had been divided and that this part, leading from the Upper Bay to the navy yard could be adopted as a part without adopting as a whole.

Col. BLACK. Yes, sir; that can be done.

Mr. SMALL. So that if the committee should adopt this part of the project it would only require an appropriation in this bill of $200,000.

Col. BLACK. That is all the appropriation, but if you want to get the work done inside the figures, you would have to give me authority to make a continuing contract for the whole of it.

Mr. SMALL. For the whole thing?

Col. BLACK. Yes. Cash $200,000, and a continuing contract for about $500,000. That would enable me then to get the best bid.

The CHAIRMAN. Just one moment. Then, Colonel, in order to get the larger ships to the navy yard, all that we have to take out is Coenties Reef. Just point to the places where rocks are that should be taken out to comply with the President's recommendation, and to enable ships to get into the navy yard with 35 feet of water.

Col. BLACK. They extend from a point here [indicating] to the south of Old Slip right to a point at the east end of the Battery, this area here that I am covering with my pointer between the Battery and Governors Island.

The CHAIRMAN. That requires about $730,000—$777,000 is given, less whatever comes out? That is the item you refer to?

Col. BLACK. Yes.

Mr. BOOHER. Colonel, I want to ask you a question as to Document No. 44, Sixty-third Congress, first session, relative to the improvement of Buttermilk Channel. Now, you say that the other is better. Why the change?

Col. BLACK. There is no change. You will find that both projects are printed in the House documents of the Sixty-third Congress, first session. The Buttermilk Channel report is in Document No. 44, the East River report in Document No. 188. Both are important and much-used entrances to the East River. They were considered as such, reported on by different people. Both are worthy of improvement. At some time both will be improved, and it is simply a question which will be improved first.

* * * * * * *

Mr. EDWARDS. Both are a menace to commerce now?

Col. BLACK. Yes; and both are crowded.

The CHAIRMAN. You are correct in assuming that both will be done, I think, because both are needed.

Col. BLACK. Yes. There is no question of that.

The CHAIRMAN. Buttermilk Channel will have to be deepened eventually?

Col BLACK. Yes; as certainly as anything can be.

Mr. EDWARDS. Why do they call it Buttermilk Channel?

Col. BLACK. I don't know. It is said that at one time the cows used to walk across from Governors Island to Brooklyn. I don't know whether that has anything to do with it or not.

Mr. BOOHER. Now, you refer to that navy yard there as New York Navy Yard and then as Brooklyn Navy Yard. Are they both the same?

Col. BLACK. Both the same. The New York Navy Yard is situated in Brooklyn.

Mr. BOOHER. I asked that because I didn't think there were two navy yards there.

Col. BLACK. Just the one.

The CHAIRMAN. It was at one time called Brooklyn Navy Yard, because Brooklyn was not in New York City then.

Mr. EDWARDS. It used to be always known as the Brooklyn Navy Yard.

* * * * * * *

Mr. HULBERT. I want to ask you if the ferry boats operating between New York and Brooklyn and New York and Staten Island do not make almost exclusive use of the Buttermilk Channel route?

Col. BLACK. The greater numbers operating from the south ferry go through the Buttermilk Channel. One line which runs to Staten Island sometimes goes this way and sometimes the other way.

Mr. HULBERT. Isn't there a greater amount of small boats passing through Buttermilk Channel than through the channel between the Battery and Governors Island?

Col. BLACK. No; there is not a greater amount in quantity but relatively to the width of the channel there is. The maximum channel that can be obtained through the Buttermilk Channel is 1,000 feet, while the channel between Governors Island and the Battery can have 2,200 feet.

Mr. HULBERT. So that the development of Buttermilk Channel to the exclusion of the other would create greater interference with small boats?

Col. BLACK. Yes.

Mr. HULBERT. Have you a statement of the amount of money expended by the local interests for the improvement of East River?

Col. BLACK. I have one that is not up to date. It was prepared in July, 1913, by direction of the Chief of Engineers.

Mr. HULBERT. You spoke of the necessity of improving Hell Gate and Potts Rock, and I want to ask what is the smallest amount of money, or what is the greatest amount of money that you could expend in the improvement of those places within the next year?

Col. BLACK. They are very close together, and there should be only one plant working there, and they would not spend more than $300,000 or $400,000 a year.

Mr. HULBERT. So that considering the improvement of Hell Gate, with respect to giving us an outlet to the ocean to the east of Long Island, and the improvement of the reef off the Battery, giving us an outlet from the navy yard to the ocean to the west of Lond Island, which would make navigable the whole East River from the Upper Bay to the sea for the larger vessels, you would require an appropriation of $500,000 and a continuing contract in the case of the lower reef of $500,000, and to Hell Gate and Potts Rock of how much?

Col. BLACK. If I could get $400,000 or $500,000 for that—I don't think it is advantageous or that anything would be gained by making a contract for more than $500,000 or $600,000. No contracts can be made for amounts greater than have been authorized by Congress. Therefore the amount appropriated, or authorized by continuing contract provision, should be the amount necessary to obtain advantageous bids. In the case in question, since the estimate is $1,841,000, three separate appropriations of $613,000 each would secure good results.

Mr. HULBERT. You don't think it advisable that the whole project should be adopted with an authorization at this time for the commencement of work at the Battery, and at Hell Gate, and at Potts Rock?

Col. BLACK. If that were practicable. I understand that there are objections against the adoption of the entire project at this time. It would be very advantageous if it were adopted in its entirety, because every once in a while we find a rock in the East River which should be removed promptly. The adoption of the complete project would enable the most advantageous use to be made of whatever sums might be appropriated annually. Further, it is expected that the contract prices will vary from time to time, and that while the entire work can be completed within the estimate, the actual cost of work included in any one of the items given on page 6 of document 188 may be somewhat greater or less than the estimate for that item.

Mr. HULBERT. In other words, if the whole project for the improvement of the East River were taken on at this time, it would leave you free to spend the appropriation of Congress to remove these obstructions, which are not now easily discoverable, but which are turned up from time to time by injuries resulting to freight steamers and passenger steamers?

Col. BLACK. Yes.

The CHAIRMAN. Any further questions? Capt. Knapp is here. Would you like to make a statement, Capt. Knapp? We would be glad to hear you.

Mr. HULBERT. I would like to have a statement from Col. Black, as a matter of record. I am going to refer to this map, and I want to call Col. Black's attention to the piers which are represented on this map.

Col. BLACK. Piers 4, 5, and 6 are used for barge traffic. Piers 7 to 14 are used mainly for coastwise lines. The Ward Line people are making very many improvements at their piers, 13 and 14.

Mr. HULBERT. This rock that you have just been speaking about, the removal of which will cost in the neighborhood of $700,000, projects in front of piers 4, 5, and 6, and when that rock is removed, then it will be possible for the city of New York, by deepening, to get the deeper draft vessels up to pier 4.

Col. BLACK. At present no deep-draft vessels use any pier between 4 and 7.

The CHAIRMAN. Any further questions? Capt. Knapp is here. Would you like to make a statement, Capt. Knapp?

STATEMENT OF CAPT. H. S. KNAPP, UNITED STATES NAVY.

Capt. KNAPP. I have very little to add, except that I do not think Admiral Benson perhaps made plain all the difficulties that we have in getting through this present channel between Governors Island and the Battery. In the first place, this range over here [pointing to range of channel just mentioned] is a miserable affair, owing to the formation of the land. There is a low front range mark on the wharf and a high back range mark on the Hotel Margaret, and very frequently a mist will cut out the lower range. In the second place the deep-water channel is very narrow, and in the third place there is a large amount of traffic around there [pointing to channel]. I have myself been in a ship in this channel when we had to stop and back to avoid a tow that was being swept down the tide across our bow; and to stop a large vessel in a narrow channel with cross currents is a dangerous thing to do. Finally, to avoid Coenties Reef in entering it is necessary to go over quite close to the Brooklyn shore, and then make a considerable turn in order to go under the bridge and approach the navy yard.

If I may add a word about the navy yard. A number of questions have been asked about that. The yard is there. It is not adequate in area for the growing needs of the Navy. But if we had an appropriation at this moment for a new navy yard and the site all picked out, we would still have to use the existing yard for many years, because it takes a long time to build up a new yard and get all its utilities in. So, looking at the approach to the navy yard as a practical question, whatever is done about a new site for a navy yard, if that should be decided on later, we have got to count for a great many years ahead upon using every facility of the existing yard in Brooklyn.

The CHAIRMAN. Your statement might or might not suggest some intention of moving that navy yard or discontinuing it later on.

Capt. KNAPP. Well, sir, that was brought out, as I understood, in previous testimony.

The CHAIRMAN. You are referring to previous questions?

Capt. KNAPP. Yes; but whatever is done and whether we have a new yard on a new site, we have got to use the present navy yard for a long time, and it should be a place whose approach is safe.

Now, as a naval officer handling a ship, if this [pointing to Buttermilk Channel] was a perfectly good channel I would prefer it, because it is a comparatively straight channel; but still, with Coenties Reef removed, the channel north of Governors Island will be perhaps as straight as the other. At any rate, as I understand the scheme given by Col. Black, the removal of Coenties Reef will make a perfectly safe and practicable channel from the south to the navy yard.

There has been a very unfortunate side to the lack of depth and width of channel on the way to the navy yard in this fact—that two ships are about all that can go up on a tide. There are times, especially in the winter, when there is only one daylight tide a day, strange as it may seem. I have known it to be the case when it was most desirable to get a number of ships into the navy yard as quickly as possible, that owing to the fact that the ships had to go through within a limited time—about slack water—and to the fact that there was only one daylight tide—only one, or perhaps two ships at most would get up to the navy yard in one day. We do sadly need an improved channel to the navy yard, one making approach possible at any time as far as depth and width of channel are concerned.

The CHAIRMAN. Anything else?

Capt. KNAPP. There is one thing that I may mention which has been recommended by the General Board of the Navy: That the depth from the sea to all of our naval stations should be 40 feet. That is a question of what should be, of course, and not of immediate action. That recommendation has been approved by the Navy Department as its policy. While 35 feet is better than anything we have now, it would not, I think, certainly take care of a wounded ship, as our battleships are now designed. A wounded dreadnaught might easily draw 37 or 38, perhaps 40, feet.

Mr. HULBERT. A reading of this record, Mr. Chairman, will evidence the fact that the proposition that has been presented in this bill is not as well understood as might be the case if all of the gentlemen had the opportunity to grasp the physical situation that is presented in the case. For instance, it was emphasized by one of the gentlemen at that hearing that five or six of the capital ships of the Navy had occasion to enter the East River to go to dry dock in the Brooklyn Navy Yard perhaps four or five times a year, making a total of about twenty-four times for those ships. So I wrote to the commandant of the Brooklyn Navy Yard, and I desire now to read a letter which I received from him, giving the exact particulars with regard to that situation. The letter is dated March 3, 1916, and is as follows:

UNITED STATES NAVY YARD,
New York, N. Y., March 3, 1916.

MY DEAR MR. HULBERT: I have just returned from duty in Washington for one or two days, and find your letter of February 29 asking information as to the ordinary tonnage of naval vessels passing to and from the navy yard, and this with a view of affording you data in connection with the provisions in the rivers and harbors bill for removing Diamond Reef, off the Battery, in the channel north of Governors Island. The Diamond Reef, as you know, lies in the way of the North Channel, whereas the navy-yard ships are using the Buttermilk Channel at present, and probably must continue to use it for some time to come, and consequently I hope your interest includes the deepening of the Buttermilk Channel as the immediate necessity for providing free access for deep-draft capital ships of the Navy to and from the navy yard.

I might state in that connection that the Buttermilk Channel can only be used at high water; and as high water comes twice in 24 hours, and once at night, therefore the channel can be used only once in 24 hours, and then for a period of about 30 minutes.

Data compiled in this office shows the number of vessels piloted to and from the navy yard during the last eight years and is quoted below:

1908	372
1909	392
1910	442
1911	415
1912	456
1913	418
1914	416
1915	462

Evidencing the fact that there has been an increase of approximately 25 per cent in the last eight years. Yet, in spite of that, I want to call the attention of the House to the fact that since the year 1912 there has not been a dollar appropriated for the improvement of the East River at that or any other point.

These figures show not only that in 1908 we were piloting more than one vessel per day, but that in 1915 we piloted 90 more ships than in 1908.

It should be noted further that the pilot's services are required almost exclusively for large vessels, so that these figures quoted above apply in large measure to the heaviest ships.

These heaviest ships are increasing in tonnage from year to year with each new vessel launched; and while the earlier dreadnaught displaced 20,000 tons, those building to-day will displace 32,000 tons.

I have quoted these tonnages as a more direct answer to your request for the same, but when speaking of the depth of water in the channel it occurs to me that the draft of ships is more pertinent, and I would say that our large vessels, such as are referred to above, draw 29, 30, and 31 feet, as circumstances may require, and these drafts necessitate plenty of water in the channel, certainly not less than 35 feet at low water, if we are to enjoy the facility for handling vessels in and out of the yard without restriction as to the depth of water in the channel.

And I would say that at this time the depth of the channel in the East River at this point is only 26 feet, whereas the average depth of the vessels is 29, 30, and 31 feet, so that they can be brought in there only at high tide.

Indeed—

The letter continues—

one collier arrived at the yard drawing 33 feet, and could only be brought at exceptionally high tide. Nor is it a question of whether we wish to take one or more vessels out of the navy yard at one time, but rather a matter of military necessity as, for instance, on an occasion when the fleet might be suddenly called to action from a period of docking or fitting out in the navy yard, since, under present conditions, we are many times restricted to taking out only one ship a day and, indeed, only within the last few months we were unable to take even one ship out during a period of several days, and this for the reason that long-continued westerly winds had kept even the high tides so low that we dared not venture the channel.

On another occasion three dreadnaughts were detained at Tompkinsville for several days, waiting for the westerly winds to permit of higher tides.

Nor does any of this touch upon the even deeper water that would be necessary for bringing to the yard a ship wounded in action, leaking, and perhaps at abnormal draught.

It is my earnest hope that as an urgent item of national defense, you may be successful in representing these facts before the Congress with such conviction as to carry the appropriation.

Faithfully, yours,

N. R. USHER,
Rear Admiral, United States Navy,
Commandant, Navy Yard and Station.

HON. MURRAY HULBERT, M. C.,
House of Representatives,
Washington, D. C.

Mr. MOORE of Pennsylvania. Will the gentleman yield?

Mr. HULBERT. I yield to the gentleman from Pennsylvania.

Mr. MOORE of Pennsylvania. The New York Navy Yard item was placed in the bill very much at the instance of the gentleman from New York [Mr. HULBERT], who is now addressing the House?

Mr. HULBERT. And of my colleague [Mr. FITZGERALD].

Mr. MOORE of Pennsylvania. It had the indorsement of the President of the United States?

Mr. HULBERT. And of the Secretary of the Navy.

Mr. MOORE of Pennsylvania. And it was the only exception, so far as new projects were concerned, admitted into the bill by the Rivers and Harbors Committee?

Mr. HULBERT. It was.

Mr. MOORE of Pennsylvania. The only new project in the bill?

Mr. HULBERT. Yes.

Mr. MOORE of Pennsylvania. Now, that being the actual condition with respect to this New York item, the merit of which I concede, does the gentleman intend to support the river and harbor bill as written?

Mr. HULBERT. I am not in a position to answer that question at this time. I want to state that when the bill came up in the committee I did not vote to report it out. There are items in the bill to which I objected in committee, and I did not vote to report it out because I desired to reserve the right to vote upon the floor to strike out any provision of the bill which I do not believe a Member of the House in conscience can support.

Mr. MOORE of Pennsylvania. There being other meritorious projects not admitted to the bill by reason of the action of the committee prior to the visit of the gentleman to the White House, I want to know, now that the New York item is in the bill, and properly in the bill, whether the gentleman intends to support the bill?

Mr. HULBERT. I propose to support every item in this bill which a majority of this House determines to be an honest, equitable, proper provision.

Now, the gentleman has directed my attention to the letter of the Secretary of the Navy which precipitated this action on my part, which letter was addressed to the Speaker of this House under the date of December 21, 1915, and was never brought to the attention of the Rivers and Harbors Committee until I brought it up at the close of the hearings on this bill. That letter was permitted to slumber in the office of the chairman of the committee and never was brought to the attention of any individual member of the committee, so far as I know, until it was mentioned to me by the Secretary of the Navy and brought by me to the attention of the committee.

Mr. SPARKMAN. I yield 15 minutes to the gentleman from New York [Mr. FITZGERALD].

Mr. FITZGERALD. Mr. Chairman, I very rarely discuss tariff matters. As illustrated by the remarks of the gentleman from Washington [Mr. HUMPHREY], anything can be demonstrated from figures on the tariff. The gentleman from Washington [Mr. HUMPHREY] is not a notorious exception to the rule. He has shown that he can establish any position, regardless of the facts, to meet the peculiar exigency of his situation.

I have a table on imports from the official records of the Treasury Department to which I wish to refer. It will to some extent explain what I shall have to say upon the river and harbor bill and my justification for certain conclusions which I shall reach.

It appears that in the fiscal year 1911 the value of the free imports was $776,972,509; in 1912, $881,670,830; in 1913, $987,524,162; in 1914, $1,127,502,699; in 1915, $1,033,526,675. The percentage of free imports in those years was, in 1911, 50.88 per cent; in 1912, 53.95 per cent; in 1913, 54.47 per cent; in 1914, 59.53 per cent; in 1915, 61.70 per cent.

So that under the Democratic tariff bill the volume of free imports was much in excess of the free imports under the Payne bill and the value of the dutiable imports considerably less. In the fiscal year 1911 the value of all imports was $1,527,226,105; in 1912, $1,653,264,934; in 1913, $1,813,008,234; in 1914, $1,893,925,657; in 1915, $1,674,169,740, or $200,000,000 less than in the fiscal year 1914. Yet it is insisted that the imports are greater now than in previous years, and that they have been increasing instead of falling off.

Fiscal year—	Free imports, value.	Per cent free.	Dutiable imports.	Per cent dutiable.	Total imports, value.	Duty collected on consumption.	Average rate.
							Per cent.
1911	$776,972,509	50.88	$750,253,596	49.12	$1,527,226,105	$309,581,944	0.203
1912	881,670,830	53.95	771,594,104	46.05	1,653,264,934	304,597,035	.184
1913	987,524,162	54.47	825,484,072	45.53	1,813,008,234	312,252,215	.172
1914	1,127,502,699	59.53	766,422,958	40.47	1,893,925,657	283,511,564	.149
1915	1,033,526,675	61.70	640,643,065	38.30	1,674,169,740	205,754,064	.123

Imports for the last five years for the subdivisions noted below were as follows:

Countries.	1911	1912	1913	1914	1915
Australia	$9,102,868	$9,606,423	$10,956,200	$17,088,534	$23,705,010
Europe	768,167,760	819,585,326	892,866,384	895,602,868	614,354,645
North America	305,496,793	334,072,039	361,943,659	427,399,354	473,079,796
South America	182,623,750	215,089,316	217,734,629	222,677,075	261,489,563
Asia	213,449,730	225,468,250	276,494,777	286,952,486	247,770,103

The tax on consumption in 1911 was 0.203 per cent; in 1912, 0.184 per cent; in 1913, 0.172 per cent; in 1914, 0.149 per cent; and in 1915, 0.123 per cent. So that under the Democratic tariff law the tax on consumption has been very greatly reduced and the value of imports free of duty has been very greatly increased. These are the facts available to the gentleman from Washington, which completely demolish his argument; but his peculiar use of facts explains, perhaps, the statement in the minority report that he submitted to the House on the pending bill, and to which he had five of his associates on the Republican side subscribe. The report contains this statement:

We regard the inclusion of the item in the bill giving $700,000 for the improvement of the East River, N. Y., as plain, political favoritism and without justification. The committee voted that, owing to the condition of the National Treasury and in compliance with the wishes of the President, no new projects should be carried in the bill. This rule, after it was adopted, was violated by taking on the above item, it being the only new project carried in the bill, and it is worthy of note that the majority, that had favored the rule in the first place, largely at the suggestion of the President, was willing to violate it because of influence coming from the same source.

That is a very extraordinary declaration for a Member of this House to make—that the President of the United States, pretending that an appropriation was essential for the national defense, used that subterfuge for a purely political advantage. The gentleman from Washington knew that his statement was not justified by the facts. This matter had been called to the attention of Congress in a communication addressed to the Speaker of the House and the President of the Senate on the 21st of December, 1915. The letter is as follows:

DECEMBER 21, 1915.

The PRESIDENT OF THE SENATE.

SIR: I have the honor to invite your attention to the serious condition existing at the navy yard, Brooklyn, N. Y., in so far as pertains to the depth of water in ship channels leading thereto. There is not sufficient water in these channels to insure the entering or leaving of a first-class battleship at all times.

At present only one battleship can be handled per day, and then only provided the weather conditions are normal. If the winds are such as to blow the water out of New York Bay, then the depth of water in the approach channel is not sufficient to safely navigate a large ship. As an illustration of this condition, the following is noted:

On November 3, 1915, the U. S. S. *Texas* (one of our new first-class battleships) was ready to leave the yard, but the prevailing northwest winds had so reduced the depth of water in the Buttermilk Channel that even at high water there was not sufficient depth to insure her leaving the yard in safety. This ship, therefore, was forced to remain in the navy yard for over 24 hours.

This condition is a serious one and might cause grave complications. I understand there are two propositions before Congress—one providing a channel 35 feet deep and 1,000 feet wide in Buttermilk Channel and the other north of Governors Island up the East River through Hell Gate. The second would provide for ships passing from the yard to lower New York Bay or to the Sound, a condition highly desirable from a strategic point of view. Either project will provide for free access to the navy yard.

The increase in size of ships has not yet reached its limit. Through injuries received in battle, a ship could readily be drawing more water than normally at a time when it was most necessary to dock her.

It is therefore most urgent that an approach channel to the New York Navy Yard be maintained of not less than 35-foot depth at mean low water and 1,000 feet wide, and I can not too strongly urge the serious attention of Congress to this matter.

Sincerely, yours,

JOSEPHUS DANIELS,
Secretary of the Navy.

(Similar letter sent to the Speaker of the House.)

In it the Secretary of the Navy points out the necessity for certain improvements of immediate importance, as a matter imperative for the public defense.

On the 19th of January, 1916, he addressed another communication to the Speaker of the House, reiterating his position and emphasizing the necessity for this improvement. These letters came to my attention, and upon making inquiry I ascertained that the Committee on Rivers and Harbors had determined not to include in the pending bill items that are known as new projects, and that that determination had been reached after a conference with the President, when it was agreed upon as a matter of policy because of existing conditions.

I called the attention of the President to the situation, and pointed out that such a rule, in view of existing conditions, could not be justified; that if this Congress were to be asked to expend very large sums in order to perfect the defenses of the country, that an item pointed out by the Navy Department as absolutely essential from the standpoint of the Navy could not be excluded from consideration because of such a hard and fast rule.

The importance of this matter was presented to the Committee on Rivers and Harbors by Admiral Benson. He stated in the hearings before the committee that while he had frequently taken vessels in and out from the navy yard, he had always done it with the utmost anxiety, fearing on every occasion disaster to vessels under his control.

Yet the gentleman from Washington, with that peculiar bitterness which characterizes all of his utterances in the House, in the minority report filed on this bill in which he discusses this one item, attempts to make it appear that there is no justification whatever or any necessity for the provision, but that the President had indulged in cheap, dishonest partisan politics for some personal or party advantage.

In his remarks yesterday the gentleman from Massachusetts [Mr. TREADWAY] stated that—

The only emergency existing is, before another river and harbor bill is prepared there is to be a national election. The hearing does not contain any evidence whatsoever going to show that this appropriation need be made at the present time.

Not only do the hearings show the absolute necessity of the initiation of this work and for the removal of certain rocky shoals that are now a menace to navigation of battleships or other large naval vessels going into the navy yard, but Col. Black, when he appeared before the Committee on Rivers and Harbors, was asked how much of the total $700,000 required for this work could be used prior to the enactment of the river and harbor bill at the next session of Congress, and in reply to that question stated that he could not expend in that time more than $200,000; but that if the work were to be done within the estimates which he had made authority was necessary for contracts for the entire work. The provision in the bill is in strict accord with his recommendation. It makes a cash appropriation of $200,000, with an authorization for continuing contracts for $500,000 additional.

This is one of two isolated parts of a great project imperative to be done at this time. The last Congress authorized the removal of Coenties Reef to a depth of 35 feet provided the city of New York would provide the money necessary to produce a depth of 40 feet. It will cost the Federal Government to obtain a depth of 35 feet about $160,000, and it will cost the city of New York $240,000 in order to get the additional 5 feet.

And yet, in view of all the information before the committee, six members of the minority seeking in a desperation to obtain some political advantage, have attempted to place this entire matter upon the plane of pure political expediency.

Yesterday the gentleman from Massachusetts [Mr. TREADWAY] stated that he believed that this was an important and desirable improvement, that it was a necessary improvement, that it was a meritorious improvement, and that his only objection to it was that it should have been included in this bill, while an item in which he was interested for the harbor of Boston was excluded.

Mr. Chairman, that is a justifiable argument, but the gentleman from Massachusetts is one of those members who in addition to filing minority views upon this bill himself joined with those other partisans on that side of the House in which he said he regarded this item as plain political favoritism and without justification.

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. SPARKMAN. I will yield the gentleman three minutes more.

Mr. FITZGERALD. Let me read what the gentleman stated about it so as to compare the two statements.

In his speech yesterday the gentleman stated:

It will thus be seen that my opposition to the New York project is not one of opposition to its intrinsic merits, but rather to the method in which it comes before the House in the present bill. Political partiality has been shown this project by the administration——

Mr. TREADWAY. Mr. Chairman, will the gentleman yield?

Mr. FITZGERALD. I yield for a question.

Mr. TREADWAY. I wanted to ask the gentleman if he considered the way in which it was included in the bill was right and proper in view of the method that we employ in the committee to make up the bill?

Mr. FITZGERALD. It was the only way it could have been gotten in. I have stated what the facts were. There is nothing to conceal. It was believed desirable by those in charge of the administration that new projects should not be included in this bill. The naval experts for a number of years have been pointing out the necessity for this improvement. The Secretary of the Navy addressed two communications to the Congress emphasizing the necessity of commencing it at once as a matter essential for the safety of naval vessels. I took the matter up with the President. Does anybody find fault with that action? Is it a crime to discuss a matter of vital importance to the port of New York with the President of the United States? Upon stating what the facts were he very frankly expressed the opinion that this matter was one of such extraordinary importance, so vital to the defense of the country, that exception should be made in its favor, and as a result gentlemen see phantoms and ghosts. I heard it rumored—I looked for it in some of these statements—that the President had made a political bargain with me as a result of which Democratic Members from New York were to support matters in which he is interested.

I am glad that gentleman did not have the temerity to make any such statement as that publicly. The Democratic Members from the city of New York will give this President and this administration as loyal support as Members of Congress from any section of the country. They appreciate the splendid manner in which he is administering public affairs. They realize the benefits that the people are deriving from this Democratic administration. They know that he has earned and has won the respect and confidence, and deserves the support of the country, and they know that that confidence and respect will be expressed this fall by votes so substantial and by majorities so overwhelming that it will silence forever these narrow, petty, partisan critics of a man who retains his poise under such an unwarranted attack and continues to merit public approval by his disinterested public services. [Applause on the Democratic side.]

Mr. HUMPHREY of Washington. Mr. Chairman, I yield to the gentleman from Minnesota [Mr. SCHALL].

Mr. SCHALL. Mr. Chairman—

Truth crushed to earth shall rise again—
The eternal years of God are hers;
But Error, wounded, writhes with pain,
And dies among his worshippers.

I wish to add my little in assistance of the burial by asking unanimous consent to extend my remarks in the RECORD upon the well-worn subject of protection.

The CHAIRMAN. The gentleman from Minnesota asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. HUMPHREY of Washington. Mr. Chairman, I yield now to the gentleman from Illinois [Mr. MANN].

Mr. MANN. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. MOORE of Pennsylvania. Mr. Chairman, I make the same request.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. SPARKMAN. Mr. Chairman, I yield 25 minutes to the gentleman from North Carolina [Mr. SMALL].

[Mr. SMALL addressed the committee. See Appendix.]

Mr. SPARKMAN. I yield to the gentleman from Indiana [Mr. LIEB].

Mr. LIEB. Mr. Chairman, this is the third time a river and harbor bill has been brought before the House since I have been a Member of this exalted body. On the two previous occasions I felt it my duty to address the House in favor of the pending measures. Now that it is my privilege to command the worthy aims of legislation for rivers and harbors, as proposed for the third time within my own experience, I feel it more than ever my duty to say a few words.

I hope the House will pass the bill in its present form. The committee, of which I am a member, has worked long and tirelessly to shape up a measure that would meet existing needs, at the same time having in mind the question of economy. The committee took into consideration the present condition of the Treasury; it weighed long and carefully every item, ever with a view of the resources, conditions, and prospects of stimulating navigation in the particular section where money was to be expended. The work has been done thoroughly. Critics may hurl invectives at every item read; they may go into hysterics on every proposal advanced; they may tell us we can spit across half the rivers in the United States; but as men of modern times stand up courageously by their honest convictions and withstand the merciless onslaughts of their decriers, so can this bill stand up under any kind of fire and in the end commend itself to the people of the country.

This bill contains no new projects, with the single exception of the East River item, which Chairman SPARKMAN has already discussed. This bill, then, proposes to continue work on which money has already been expended. Could anything be more simple? While there are projects that are worthy, indeed, other than provided for in this bill, the committee did not find it possible to incorporate any of them, for the reason we were bound to place a limitation, in view of other pressing questions of the hour.

A great deal of money must come from the Treasury for rejuvenating our land, our sea, and our air forces in connection with the policy of national preparedness. At the same time everybody should agree that it would be a national shame to neglect our rivers and harbors. It is a business proposition. We should not have our future generations say of us that we let our works lie idle one year or two years once we had started these projects. If all of our works should be stopped to-morrow and not a dollar spent for river and harbor improvements for one year, the Government would be charged with neglect on a scale that would amount to open revolt and national indignation.

The House has overwhelmingly gone on record in favor of national preparedness. I refer to the passage of the Hay bill. It was the first of the preparedness bills. I maintain—and I think others accept it as such—that the rivers and harbors bill is also a preparedness bill. Transportation is a tremendous factor in warfare of to-day. If we should have war to-morrow, every navigable waterway in the country would be subject to the usages of transportation of supplies, ammunition, armor, arms, food, clothing, and for the transportation of troops and horses. Any railroad line in the United States could be paralyzed in a few seconds with a few sticks of dynamite properly set off by the enemy. But you can not efface a single river in the United States. That is one reason why we should perfect the system of navigation, so if the occasion ever arises we can utilize our rivers, and the only way they could be utilized with absolute dependence would be by the foresight of the present generation in providing for permanent navigation.

A good deal has been said about lobblying for the rivers and and harbors bill. One or two critics would have us believe a few men in this country are back of these appropriation bills. Mr. Chairman, I came from a district where 140,000 people live on or within short access of the banks of the Ohio River. I have met about every voter in my district, and I have yet to have a single one of these persons say a word against this legislation. In fact, I can say that I have more than 140,000 lobbyists in my district, for while they do not all of them come to Washington to attend the annual meeting of the National Rivers and Harbors Congress they are always represented by a few delegates whose expenses are paid out of public funds of city and county governments. And I have never heard anyone kick about the taxes thereby imposed, although very often there are earthly rumblings when taxes for some other things become due. Looking at this matter from a broader viewpoint, let us consider the number of people who live on the banks of the entire length of the Ohio River. The last Federal census gives the population of the counties bordering on the Ohio River as 4,135,832. That does not take into consideration the hundreds of thousands of people living on the tributaries of this one river. It does not take into consideration the hundreds of thousands of people living in the Ohio Valley whose counties do not touch the river, but who in a great measure are among those awful lobbyists who see the tremendous advantage to their commercial interests to have the Ohio made permanently navi-

gable by this Congress. It does not take into consideration the millions of other people who live on all other rivers in the United States. Yes; if a census were taken to-morrow of the lobbyists for river and harbor improvements we would find that some forty or fifty million of them live on rivers which the Government should eventually improve so they would have navigation the year round.

Suppose private interests as powerful financially as the owners of the railroad systems of the United States should suddenly obtain possession of all the rivers of the country. Would they hesitate to grasp the opportunity to finish canalization of the Ohio or of the other rivers? Why, then, should the Federal Government hesitate? Because some improvements in the past have been held up as horrible examples of public expenditure of money, does it signify that the present bill is indefensible?

Some critics gloat in quoting tonnage figures in their opposition to this legislation. The inconsistency of this can be summed up in the recitation of one example of the unreliability of this method of argument. From 1870 until 1900 water traffic between the Atlantic and Pacific coasts declined to a noticeable extent. Did that deter the Government from building the Panama Canal? Should the fact of decline in river tonnage shipments on some rivers deter the Government from improving them?

In closing I want to summarize briefly some of the things I have in mind regarding the Ohio River:

It is the only river in the United States carrying tonnage from its source to its mouth.

It has a shipping tonnage greater than the Panama Canal, even though the Ohio is not now navigable at all seasons.

If the river is to be canalized as authorized, there must be consent to annual appropriations.

The Ohio Valley is in the throes of commercial rejuvenation since the canalization project was launched six years ago.

The internal-revenue receipts of the six Ohio River States are annually more than one-half the receipts of the entire country.

From whatever view the Ohio River improvement is regarded, whether from the standpoint of peace or war, or both, its early completion is essential to the public welfare.

Mr. SPARKMAN. I yield to the gentleman from Louisiana [Mr. ASWELL].

Mr. ASWELL. Mr. Chairman, I rise to discuss one of the most important rivers in the country. The Red River is over 1,200 miles in length, nearly 400 miles of which is in Louisiana. With the proper improvements it will be one of the great rivers of the world, draining an area of over 200,000 square miles of the most fertile soil on earth, growing luxuriantly every plant known to the Temperate Zone. The Red River is 300 miles longer than the Ohio, twice the length of the Seine, drains an area as large as France, now supports a population of over a million and a half, and is capable of supporting well 10,000,000 people—one-tenth of the population of the United States. Surely, then, such a river deserves continued support from the Federal Government. With reasonable support, this great valley will be more productive and versatile than the reclaimed arid lands of the West. As an economic proposition for settlement alone, the eyes of the country should turn there. The urgent necessity is for the country to know the actual advantages and possibilities of this wonderful valley with its enormous wealth of soil and climate. The $10,000,000 recommended by Gen. Bixby for the improvement of Red River and its valley would be a profitable investment by the Government, far more profitable than reclaiming the deserts of the West. Through the dissemination of information and education the people of the country will ultimately come to see this patent fact.

The Board of Engineers of the War Department went to Shreveport in person, had a hearing on Red River, and have made a favorable report upon this project named in the item of this bill. The board could not go to this rich valley without being impressed with its possibilities and its value to the whole country.

The fact first to present is the enormous tonnage of commerce adjacent and accessible to the river, including 2,000,000 bales of cotton and other agricultural products in proportion, with timber and minerals—all astounding in the volume of commerce available when this river is made navigable.

Take one city, for example, to illustrate the growing importance of the Red River and the rapidly increasing commerce of its valley. Alexandria is located on Red River, within 7 miles of the center of Louisiana, 184 miles northwest of New Orleans, and 125 miles southeast of Shreveport. Its present population, as shown in the city directory published in May, 1915, is 18,249.

It is the largest lumber manufacturing point in the State, there being eight large lumber mills located there, and shipping an average of 75 cars per day, a large percentage of which is for export through New Orleans. It is the second largest interior cotton market in the State, and handles annually about 40,000 bales of cotton.

It is served by eight railroads: Chicago, Rock Island & Pacific, Louisiana & Arkansas, Louisiana Railway & Navigation Co., Alexandria & Western, Southern Pacific, Texas & Pacific, St. Louis, Iron Mountain & Southern, and Vicksburg, Alexandria & Southern Railway.

Alexandria is the third largest distributing center in the State, being exceeded only by New Orleans and Shreveport. It is the distributing point for practically all central Louisiana. There are 19 jobbing houses located at Alexandria, serving a territory within a radius of 75 miles, and covering 15 parishes, with a population of 430,513.

It is a fast-growing city, and to give an index of the increase in population I quote from the Thirteenth Census Report of the United States for 1910:

Population in 1890	2,861
Population in 1900	5,643
Population in 1910	11,213
Census of Louisiana Directory Co., in May, 1915	18,249

There are at present located in Alexandria 23 manufacturing concerns, with a combined capital of $5,800,000, consisting of sawmills, iron works, machine shops, cottonseed products, mattress factories, shuttle, barrel, ice cream, brick, and wood works, with a total output of $4,500,000 yearly.

The eight railroads serving Alexandria for the period from June 30, 1914, to June 30, 1915, handled into Alexandria 213,310 tons of freight and 647,340 tons outbound. The excess in outbound tonnage is accounted for by the large amount of forest products which has its origin at Alexandria.

It is estimated that at least one-eighth of this tonnage, or about 100,000 tons could be handled on Red River.

With the present shortage of motive power and car equipment the railroads are not able to handle the tonnage without serious delay and the resultant injury to the shipping public, and only through water navigation can this difficulty be overcome.

Shreveport, La., with her 71 factories, 11 railroads, and population of 40,000 people, has had an equally remarkable growth and also fully illustrates the commanding position of this great valley and her growing cities and increasing wealth.

To say nothing of the money that the people of Arkansas, Texas, and Oklahoma have expended on this river, the State of Louisiana in the past five years has expended $1,377,000 in bank protection and drainage work. Louisiana has constructed 249 miles of controlling lines of levees on Red River.

The project for the bed and bank improvement of lower Red River adopted by Congress in 1828, renewed in 1872, reenacted in 1892, and again recognized in 1909, involves an expenditure by the Federal Government and the local interests of $3,448,000. With reference to this project which is nearly 100 years old, in his report to the Government, Gen. Bixby, of the War Department, says:

> I am decidedly of the opinion that while the river is at present only partially utilized for purposes of navigation, yet it exercises a great and valuable control over the transportation interests of its entire drainage area, and that, as the river conditions shall be improved, its actual use will increase and its control of transportation interests will be better at the same time that the country next the river will become better developed.

Gen. Bixby then recommends a large and comprehensive plan of improving the Red River and its great valley. He estimates that the cost will be ten millions, to be expended jointly by the Federal Government and the States in the valley, which would be money profitably invested. I greatly hope to see this plan of bed, bank, and drainage improvement soon adopted by Congress and Gen. Bixby's great idea made a reality.

That the river, if made navigable, is worth millions to the valley alone in freight rates is shown by the fact that the freight rate on flour from St. Louis to Pollock is 7½ cents higher than it is to Alexandria. The same difference in freight rates to all inland and river points is noted. The difference is even greater on first-class freight. If the river is abandoned, the whole valley will suffer seriously by the advance of freight rates to all river points certain to follow such abandonment.

The Government reports show that for 23 years, ending June 30, 1913, the average annual value of the tonnage on Red River, below Fulton and above the mouth of the Black, was $4,220,000, while the average value of the tonnage between the mouth of the Black River and the mouth of the Red River for the same period was $5,401,648, making the average total value of the tonnage on the lower Red, below Fulton, exactly $9,621,648 a year.

It is true that the tonnage on the Red for the last few years has been light, but the tonnage of a few years taken apart from the history of a river does not correctly indicate its commerce.

The value of the tonnage in 1915 was $3,000,000, but the nine million mark, which was the average for 23 years prior to 1913, can and will be reached again by the keen interest and hearty cooperation of all our commercial and industrial organizations along the river. The proper steps are being taken now. The cities of Shreveport and Alexandria, supported by other towns on Red River, have organized a boat-line company, capitalized at $200,000. They have paid in now about $75,000 of that amount for a boat and barge line from Shreveport to New Orleans. This company has the active support and cooperation of the leading bankers and business men of the entire valley within the Louisiana limits. It is not a theory. This boat line has been organized and will go into effect. The people of the valley are stirred as never before. They will demonstrate to the country the value of the river in handling its great commerce, in holding transportation rates at a reasonable figure, and thus influencing the whole great fertile valley by gradually bringing back to the river a commerce that will not only be satisfactory to this Congress but will startle the country with its growing importance.

In view of these facts, surely there will be little opposition to this small item of $55,000, which should be increased to $150,000 for Red River.

Not even the gentleman from Wisconsin [Mr. FREAR], who has had his rivers and harbors and creeks and mud puddles all fixed by Federal aid, and who now opposes such aid in an effort to imitate Mr. Burton—our greatest American four flusher on this subject—the gentleman from Wisconsin who delights in incessant and senseless talk merely "to hear himself roar," not even he, the gentleman from Wisconsin, can make an honest objection to this item of $55,000 recommended and indorsed by expert engineers who have visited the ground and have ample and intelligent information on the subject.

Mr. FREAR. Mr. Speaker, I desire to extend my remarks in the RECORD on this one subject which has just been discussed.

The CHAIRMAN. The gentleman from Wisconsin asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. SPARKMAN. Mr. Chairman, I wish to use a portion of the few minutes remaining in an effort to explain, in so far as an explanation may be necessary, what the gentleman from New York [Mr. HULBERT] unwittingly left unexplained a while ago regarding an episode between him and myself. Yesterday afternoon, after the House adjourned, I met the gentleman on the way from here to the House Office Building, and after some remarks regarding this bill he asked me in substance when his time would come to speak. I told him that I understood it would come under the five-minute rule. He said he wanted to speak in general debate. I then remarked that I did not know those were his wishes, but that I had understood he was willing to speak under the five-minute rule when the New York item should be reached, and that I had promised to try to secure for him ample time under the five-minute debate. I will say, further, that was my purpose then and is my purpose now. I then explained to him that I had parceled out all the time and had agreed to yield to the gentleman from New York [Mr. FITZGERALD], his colleague, 15 minutes. He stated that he did not know that Mr. FITZGERALD had been given any time, and that he desired time as a member of the committee. Now, having allotted the entire time at my disposal, I could not say just then what I could do, because it was growing late and I could not see the Members to whom I had agreed to yield.

Mr. HULBERT. Will the gentleman yield for a question?

Mr. SPARKMAN. Let me finish my statement.

Mr. HULBERT. Will the gentleman then give me an opportunity to reply?

Mr. SPARKMAN. Let me finish my statement first; then I will yield. This morning, having seen one of the gentlemen to whom I had promised 10 minutes, I asked him to permit me to yield that 10 minutes to the gentleman from New York, which he very kindly and promptly consented that I should do. About that time another Member of the House spoke to me here on the floor in regard to the desire of the gentleman from New York [Mr. HULBERT] for further time, and I told him he might say to the gentleman that I had secured 10 minutes which I would yield to him. The message came back that he had already made arrangements and did not desire the time. That is all I care to say about the matter.

Mr. HULBERT. I would like to ask the gentleman if he recalls a morning in this House when I appeared here with a prepared speech to answer the gentleman from Wisconsin [Mr. FREAR] in reference to a letter which the gentleman had put into the RECORD, and if the gentleman from Florida recalls that I discussed the subject of that speech both with himself and with the gentleman from New York [Mr. FITZGERALD], and if I did not tell the gentleman from Florida that the gentleman from New York [Mr. FITZGERALD] thought that I had better defer that reply until the river and harbor bill came up, and put it in under general debate, and if the gentleman from Florida did not agree with me at that time?

Mr. SPARKMAN. I do not now recall that, but I have no doubt but that it is true. I remember I did intend, so far as I could bring it about, that the gentleman should have ample time to discuss the East River item either in general debate or under the five-minute rule. This is the only explanation I want to make. I may say, however, in behalf of the gentleman from New York [Mr. HULBERT] that he has been very industrious and insistent in regard to this and other New York items. I was very sorry to hear him admit awhile ago, however, that he had not voted to report the bill. I did not intend to state that. I never feel justified in stating outside what goes on in the executive meetings of the committee. But although the gentleman was very properly so industrious and active in behalf of the East River project, yet without the motion to report the bill for which he says he did not vote it could not have been considered in the House.

Mr. HULBERT. Will the gentleman yield for one further question?

The CHAIRMAN. The gentleman's time has expired. All time has expired.

Mr. SPARKMAN. I ask the Clerk to read the bill for amendment under the five-minute rule.

The Clerk read as follows:

Be it enacted, etc., That the following sums of money be, and are hereby, appropriated, to be paid out of any money in the Treasury not otherwise appropriated, to be immediately available, and to be expended under the direction of the Secretary of War and the supervision of the Chief of Engineers, for the construction, completion, repair, and preservation of the public works hereinafter named.

Mr. MANN. Mr. Speaker, in line 4, page 1, I move to strike out the words "to be paid."

The CHAIRMAN. The Clerk will report the amendment offered by the gentleman from Illinois.

The Clerk read as follows:

Page 1, line 4, strike out the words "to be paid."

Mr. SPARKMAN. I can not understand the importance of that amendment. It certainly is not surplusage there.

Mr. MANN. It certainly is surplusage there. I guess it is the first time it ever appeared in an appropriation bill. We appropriate money out of any money in the Treasury not otherwise appropriated. That is the form.

Mr. SPARKMAN. Perhaps this is not absolutely necessary.

Mr. MANN. It is improper language.

Mr. SPARKMAN. I can not see that it is, Mr. Chairman; but I have no objection to its being stricken out.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois [Mr. MANN].

The amendment was agreed to.

Mr. MANN. Mr. Chairman, I move to amend, in line 5, by striking out the words "to be immediately available."

The CHAIRMAN. The gentleman from Illinois offers an amendment, which the Clerk will report.

The Clerk read as follows:

Page 1, line 5, strike out the words "to be immediately available."

Mr. MANN. Mr. Chairman, this is not an appropriation for a fiscal year. If it was a regular appropriation bill for the fiscal year ending June 30, 1917, the appropriation would not be available until the 1st of July unless we used the language "to be immediately available"; but all of the appropriations in this bill are available as soon as the bill becomes a law.

Mr. GARNER. Has the gentleman ever had any construction of that language by the Engineering Corps of the Army?

Mr. MANN. It does not require any construction.

Mr. GARNER. I am inclined to think that the gentleman is in error, from their construction of the language in river and harbor bills heretofore.

Mr. MANN. Oh, no; not at all.

Mr. GARNER. Probably not.

Mr. MANN. This is not an appropriation bill.

Mr. GARNER. I agree to the gentleman's conclusions; but I do not know how it would be construed.

Mr. MANN. There is no earthly object in sticking in things that do not mean anything. I know it is the common practice of many gentlemen introducing bills, where the bill carries an appropriation, to say "to be immediately available," but everything in this bill is immediately available as soon as it is law. It is not an appropriation for a particular fiscal year.

Mr. SPARKMAN. I shall have to insist, Mr. Chairman, on the words remaining in the bill.

Mr. MANN. I suppose they will stay in the bill, if the gentleman insists upon it. The gentleman can insist upon putting in useless language in the bill, but it does not change the meaning.

Mr. SPARKMAN. According to my recollection, this language has been in all the river and harbor appropriation bills. I do not like to consent to a departure from established language, language that has been used on river and harbor bills almost from time immemorial.

Mr. MANN. The language has been in some river and harbor bills, no doubt about that, but that means nothing. If the man who prepared the first bill knew what he was about, the language never would have been in it.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois.

The question was taken, and the amendment was rejected.

Mr. FREAR. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

At the end of line 9, page 1, insert:

"*Provided*, That before the payment of any moneys for projects hereinafter specifically mentioned the Secretary of Agriculture, Secretary of Labor, and Secretary of Commerce shall, by written report to the Secretary of the Treasury, approve the public necessity on each individual project, and that such expenditure is to serve a public use in aid of navigation: *Provided further*, That said board may make or cause to be made independent examinations of the character of any and all projects and may call upon the Army engineers or employ the service of such other experts as may be necessary in determining the surrounding conditions, general character, and public use which such project is intended to serve."

Mr. FREAR. Mr. Chairman, I will say that this is practically the same amendment that was offered to the last bill, and the purpose is to provide a check upon the system and an investigation of public necessities before paying over the money. It has been set forth so frequently that I will not go into it. We would have by this a check by the administration, so that we would know whether or not public interests will be benefited by the appropriation.

Mr. COOPER of Wisconsin. Will the gentleman yield?

Mr. FREAR. I will.

Mr. COOPER of Wisconsin. The gentleman a few moments ago said that the engineers of the United States Army who have charge of the river and harbor work were influenced, some of them; that two Senators and nine Members of the House of Representatives visited them and talked to them about certain river and harbor matters. Does the gentleman think that the United States Army engineers, who are not in political life at all and not amenable to the votes of Senators and Representatives, are any more susceptible to influence by two Senators and nine Members of the House of Representatives than the Secretary of Commerce, the Secretary of Labor, and the Secretary of Agriculture would be, all of whom belong to one party and have to be confirmed by the Senate?

Mr. FREAR. The time the gentleman occupies unfortunately takes away my time. He has misapprehended my position. I asked a question and stated the facts that existed.

Mr. COOPER of Wisconsin. But I asked the gentleman——

Mr. FREAR. Mr. Chairman, I want to occupy my time myself. I have not made the statement that the gentleman suggests. I asked if it was not a fact that the engineers did change their report after these people came before them, and that is the fact. I do not believe that the Army engineers are infallible, and we have plenty of evidence of what I state. I do believe that if a check is placed here upon them by three administrative officers it will be a check on unnecessary appropriations and be a benefit to the Public Treasury.

The CHAIRMAN. Does the gentleman from Florida make the point of order?

Mr. SPARKMAN. I do.

The CHAIRMAN. The point of order is sustained.

Mr. MANN. But, Mr. Chairman, this is a legislative bill, and we have a right to change the law. I do not know what the point of order is, for the gentleman from Florida has not stated it. We have a right to provide for river and harbor improvement on any condition we please. It is not an appropriation bill. There is no point of order as to change of law; there can be no point of order as to the germaneness of the proposition, because here is an appropriation to be expended as provided by the bill under the direction of the Secretary of War and Chief of Engineers. We have the right to say before the money is expended other conditions shall prevail. We frequently insert in a river and harbor bill that the appropriation shall not be available until local intersets provide money for certain purposes. We have the same right to say that the money shall not be expended until some one else has passed on the proposition. The Chair will recall that the rules in reference to appropriation bills do not apply. This is a legislative bill. We may make an appropriation for improvement of rivers and harbors on any condition we choose as a matter of legislation.

The CHAIRMAN. Does the gentleman from Florida desire to say anything?

Mr. SPARKMAN. I do not desire to say anything except to say that I am not entirely clear that it is subject to a point of order.

The CHAIRMAN. The Chair in ruling had in mind legislation on appropriation bills. The gentleman from Illinois is quite right that a river and harbor bill is in a different class, carrying certain legislative powers as well as appropriating money, and on reconsideration, the Chair overrules the point of order.

Mr. SPARKMAN. Mr. Chairman, I hope the amendment will not prevail. This is only one of a class of efforts that is being made by the gentleman from Wisconsin to take the improvement of rivers and harbors out of the hands of the Secretary of War and the Engineer Corps of the Army, and I do not think it ought to be done; in fact, I am sure that it ought not to be done.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Wisconsin.

The question was taken, and the amendment was rejected.

Mr. FREAR. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Page 1, at the end of line 9, insert:

"*Provided*, That if the President shall, upon investigation, ascertain and determine that any project or projects hereinafter provided for are not of material value to the public, he may, in his discretion, withhold such specific appropriations until further action by Congress."

Mr. FREAR. Mr. Chairman, I do not care to take up the time of the House in discussing this because the purpose of the amendment is clearly shown when it is read.

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was rejected.

Mr. FREAR. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

At the end of line 9, page 1, insert:

"*Provided*, That no expenditure for any project shall be made until the Secretary of the Treasury shall be advised by the Board of Army Engineers that suitable public wharves and terminals have been provided by local interests sufficient in character to afford ample accommodations for all traffic upon said waterways, and that such public wharves and terminals, subject to general supervision and care of the local authorities, will be kept open at all reasonable hours for the free use of any and all persons desiring to use the same."

Mr. FREAR. Mr. Chairman, in line with the suggestions made by the gentleman from North Carolina [Mr. SMALL] a few moments ago upon the floor, and based upon the action of the River and Harbor Committee of some years ago, when that committee urged terminals be supplied, I have offered this amendment. The purport of it is to require public terminals to be furnished in every case, in order that the Government be not engaged in improving waterways whether they be harbors or rivers, without having public places at which to land. The chairman of the committee well knows that in many cases that provision is not complied with to-day.

Mr. COX. Mr. Chairman, will the gentleman yield?

Mr. FREAR. Yes.

Mr. COX. What is the rule in this particular in foreign Governments, particularly England, Germany, and France?

Mr. FREAR. I would say that the rule is different in different countries. I do not profess to give the exact rules. For instance, in some cases in England the rights are let out to private parties and they make the charge themselves and maintain the improvements and the Government has no part in the improvements, as, for instance, in the case of the Manchester Canal. In Germany and other countries they pursue different policies.

Mr. COX. What is the German policy? I have a very high opinion of the Germans.

Mr. FREAR. I would not care to be quoted as to that. The Government owns the railroads and owns the waterways and owns practically all of the privileges that are granted. I assume from that that there must be public terminals in every case. We have not those public terminals in our country, and it seems to me that we ought to pass an amendment of this kind in order to require public terminals before making an appropriation.

Mr. SPARKMAN. Mr. Chairman, we have not yet reached the point in the development of the rivers and harbors of this country when we can establish a hard and fast rule of that kind. It is to be hoped that in the not distant future we will reach the point where Congress will refuse to make appropriations for such improvements unless there are ample public terminals, owned either by the municipalities or the State or by

some other subdivision of the State that can control them as against private monopoly. I think that is proper, and we are going in that direction as rapidly as possible, but we have not yet come to the point where we can establish such a rule without doing injustice to many harbors and rivers now unimproved, but needing improvement very badly. I hope the amendment will not prevail.

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was rejected.

Mr. FREAR. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Page 1, at end of line 9, insert:

"*Provided*, That one-half of the appropriation shall be available whenever there shall be contributed by the State, county, city, or locality or localities an amount equal to one-half of such appropriation, which amount so raised shall be placed to the order of the Secretary of War and shall be expended by him pursuant to the report of the United States engineers on such project: *Provided further*, That the remaining half of such appropriation shall be retained in the Treasury subject to the order of the Secretary of War, and to be used by him whenever needed in the completion of the project for which such appropriation is made."

Mr. FREAR. Mr. Chairman, I shall discuss this but a moment. I simply want to say that local cooperation is required in practically every country of continental Europe, according to my investigation. We have applied the same rule in this country in many cases. The State of Texas and the State of California and other States are making contributions to-day under the requirements of Congress. It would seem to me that it is fair to treat all alike, and it will at least remove part of the inducements offered in securing appropriations when there is no contributions on the part of local interests.

Mr. SWITZER. Mr. Chairman, will the gentleman yield?

Mr. FREAR. Yes.

Mr. SWITZER. I would ask the gentleman whether his amendment would apply to the Ohio River, for which Congress has appropriated about half the money for the completion of a sixty-four million dollar project, and whether he would expect the localities and States along that river to make a contribution in such sum as may be necessary to complete the project?

Mr. FREAR. Mr. Chairman, in view of the fact that the people along the Ohio River have made no contribution up to the present time, either to the improvements or public terminals, so far as I am aware, it would seem to me that it is a proper time to urge upon them the necessity of cooperation and that they do something toward the project.

Mr. SWITZER. And if the States should refuse to contribute, would the gentleman favor leaving the 20 uncompleted dams in the river?

Mr. FREAR. I do not know but that it would be for the benefit of the Government to-day if we were to stop work on the Ohio at the present time. I am not prepared to say as to that. I would like to have better information. At the present time I am urging them to show a disposition for cooperation before further appropriations are made.

Mr. McLAUGHLIN. Mr. Chairman, the unwisdom of the amendment offered by the gentleman from Wisconsin [Mr. FREAR] is shown clearly enough in the matter of the St. Marys River Canal, between Michigan and Ontario, where something more than $13,000,000 have been expended in the building of locks and in otherwise preparing the waterway there for transportation. It is a project in which the localities are not particularly interested. That river improved as it is takes care of commerce of the Lakes for the entire Northwest going east and south and the commerce of the East going north and west. Some idea of the importance of those works can be gathered from the fact that $13,275,000 had been expended upon that river at that locality where the locks are located up to the 1st day of July, 1915—the greatest waterway in the world, where more commerce passes and of greater value than through any other waterway in the world, aggregating, according to the last figures that I have, something like 80,000,000 tons of freight a year. The value of that improvement to general commerce may be gathered from the fact that the average rate of freight per ton-mile is only six-tenths of a mill, whereas the average freight rate by railroad is ten times that amount.

Mr. BARCHFELD. Will the gentleman permit an inquiry?

Mr. McLAUGHLIN. I will.

Mr. BARCHFELD. The gentleman says that the amendment of the gentleman from Wisconsin is one of unwisdom.

Mr. McLAUGHLIN. I do; in my opinion it is.

Mr. BARCHFELD. That the people along St. Marys River have no license to contribute personally. We are in the habit of buying our iron ore from the Mesaba country to the extent of about 30,000,000 tons a year. If the people of the St. Marys country will not contribute, I suppose the gentleman from Wisconsin would have us at Pittsburgh contribute for the operation of the canal which makes it possible to keep our city going?

Mr. McLAUGHLIN. Why, it is a matter of general interest to the country. Sixty per cent of the entire freight carried through these locks was iron and copper ore last year, and I believe that has been about the average during several years back. It is a matter in which particular localities are not interested, but is a matter of interest to the entire country, and the entire country ought to bear the expenses.

Mr. CALLAWAY. Will the gentleman yield?

Mr. McLAUGHLIN. I do.

Mr. CALLAWAY. The gentleman is defending the St. Marys Canal, and that is a little different problem from inland waterways and rivers and canals ordinarily. Possibly the proposition the gentleman from Wisconsin wishes to apply generally to rivers and canals he would not desire to apply to that at all. No man, as far as I have heard in my service in this House, objected to the Government opening canals between great waterways, and when a canal is the line of transportation——

Mr. McLAUGHLIN. But the amendment offered by the gentleman applies to the entire bill, to all projects alike. Many gentlemen here have no conception of the magnitude or the importance of the improvements on St. Marys River or of the business transacted on and through that river.

During the year 1913 the freight carried through the Soo Locks amounted to 79,718,344 short tons. The value of that freight was $865,957,838; there was paid for carrying that freight, including loading and unloading, $44,380,864, and the value of the craft using the canals that year was $142,421,200. The cheapness of water transportation and the great reduction even in the low water rates as a result of the improvement of this river appears when it is known that in 1887 the freight rate per ton-mile on freight passing through the Soo Locks was 2.3 mills, while the rate per ton in 1914 was only six-tenths of 1 mill. The average railroad freight rate per ton-mile is about 7 mills, or more than ten times the water rate.

The Suez Canal is known as one of the great waterways of the world. It is. It cost $100,000,000, while the canals of St. Marys River have cost only $13,275,000. And how about the amount of business passing through the Suez and the St. Marys Canals? Possibly you believe the business is in proportion to the cost of the canals. In the year 1913 the number of ships of all kinds passing through the Suez was 5,085 and the net registered tonnage of those ships was 20,033,884, while the number of ships which passed the St. Marys locks that year was 23,795, with a net registered tonnage of 57,990,000.

The Panama Canal is a great waterway. It ought to be; it has cost $375,000,000. We have no figures as to the amount or value of business transacted, but it is interesting to remember that a few years ago, when Government experts were estimating the amount of tonnage to be passed through the canal, for the purpose of arriving at the proper toll to be charged against and paid by ships using the canal, it was estimated that within the next 10 years an annual tonnage of 10,500,000 tons would pass through; that is, after a development of 10 years the business of the Panama Canal will be one-sixth of the business now done at the St. Marys Canals each year.

Mr. Chairman, the amendment offered by the gentleman from Wisconsin [Mr. FREAR] ought not to be adopted. It might be all right for some kinds of projects which are largely of local interest and of local advantage, but it is all wrong as to the waterways of the Great Lakes, which are national projects.

The CHAIRMAN. The time of the gentleman from Michigan has expired.

Mr. HULBERT. Mr. Chairman, I move to strike out the last word for the purpose of correcting the RECORD as between the gentleman from Florida and myself. I wish to merely state that last Wednesday, and again yesterday, when the gentleman from Wisconsin was discussing the question before the committee, I requested time from the gentleman from Florida.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Wisconsin.

The question was taken, and the amendment was rejected.

Mr. MADDEN. Mr. Chairman, I would like to ask unanimous consent to speak for 15 minutes. I have not taken up any time on this bill.

The CHAIRMAN. The gentleman from Illinois asks unanimous consent to speak for 15 minutes. Is there objection? [After a pause.] The Chair hears none.

Mr. MADDEN. Mr. Chairman, there is no committee in the House more industrious or painstaking than the Committee on Rivers and Harbors. They are at work all the year round. They not only work in their committee room, but they travel

around the country to ascertain where the money which they appropriate should be expended. I am in favor of appropriations for rivers and harbors where navigation is to be advanced by reason of the improvements, and it would be a great mistake to dispense with appropriations for proper river improvement, and especially for harbors. I believe, however, that there are many items in this bill which could just as well be postponed. We are to-day confronted with an empty Treasury. We have been taxed in time of peace in the name of war to produce sufficient revenue to run the ordinary affairs of the Government. We are faced to-day with a situation in the country which demands the expenditure of large sums of money. We will be called upon to levy additional taxes upon the people to meet the preparedness which is now in contemplation. We ought in justice to the people, who are already overburdened with taxation, to go slow in the appropriation of moneys for purposes which can be well set aside. I have no special complaint to make about any particular item in this bill, but I realize, as everyone must, that there are many items in the bill that could be left out, and if we can lighten the burden of taxation upon the people by leaving out unnecessary items from this bill, we should feel in duty bound to do so. We will be called upon very shortly, in view of legislation already enacted, to vote additional sums of money for the maintenance of the Army.

We will be called upon at no distant day to vote out additional sums for the increase of the Navy. The sentiment of the people is in favor of these additional appropriations. They are willing to pay taxes to meet any necessary preparations for the defense of America, but I submit to the judgment of the House that in the face of the necessity for this preparation every additional unnecessary expenditure should be set aside. The allotments in this bill are made in a large measure to a section of the country which will pay but little toward the additional cost of maintaining the Government under the system of preparation for defense upon which we are about to enter. For example, in the present bill during the fiscal year 1915 the State of Illinois paid into the Treasury of the United States $2,949,789.60 in corporation income taxes and $2,668,520.78 in individual income taxes, making a total net revenue from the State of Illinois from these two sources alone of $5,618,400.38. While its cash appropriations for rivers and harbors in this bill amount to but $136,000, of course it is true that there is an item for continuing contracts amounting to $714,000 which might be added to the $136,000. The State of Florida has $956,500 in this bill, and in 1915 it paid into the Treasury of the United States $107,344.21 in corporation income taxes and $120,114.05 in individual income taxes, making a total of $228,358.25.

And that will be the proportion of its payment toward any added cost to maintain the Government when we finish our preparation for the defense of the Nation.

The State of Louisiana has $395,000 in this bill, and in 1915 it paid into the Treasury of the United States for the two kinds of tax that I have described but $519,467.75, whereas the State of Florida will take out through this bill alone over $700,000 more than it paid into the Treasury as income tax in 1915.

Mr. SWITZER. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. MADDEN. No; not just now. I will yield later. The State of North Carolina has $271,850 in this bill, and that State paid into the Treasury of the United States $255,959.64 in corporation income tax, and $123,384.96 in individual income tax, making a total of $379,344.60 for the year 1915.

The State of South Carolina has $259,250 in this bill, and it paid into the Treasury in 1915 for income tax $159,000, thus drawing out over $100,000 more in this one bill than it paid in from the income tax.

The State of Georgia has $873,750 in the bill, and the State of Georgia paid into the Treasury last year $433,928.41.

The State of Texas—the great State of Texas—has $2,861,500 in the bill, and it paid into the Treasury for income tax in 1915 $1,033,873.91, thus drawing out of the Treasury $1,500,000 for rivers and harbors alone more than it paid in during the year 1915 on the incomes of individuals and corporations in that State.

The State of Arkansas has $560,000 in the bill, and paid but $125,954.51 income tax in 1915.

Mr. SPARKMAN. Mr. Chairman, will the gentleman yield right there?

Mr. MADDEN. Yes.

Mr. SPARKMAN. I did not catch the gentleman's criticism in regard to Florida.

Mr. MADDEN. I said Florida had $976,500 in the bill.

Mr. SPARKMAN. Did the gentleman state in that connection that the projects in Florida were given more than was collected from the income of the industries in that State?

Mr. MADDEN. I said that the State of Florida got $733,000 more out of the Treasury in this bill than it paid into the Treasury of the United States in 1915 for income tax and corporation tax. The records of the Treasury Department show that. These figures are not mine. They are the Treasury figures.

Mr. SPARKMAN. I will say to the gentleman that the city in which I live paid into the Treasury $3,000,000.

Mr. MADDEN. Not of income or corporation tax.

Mr. SPARKMAN. It is just as relevant.

Mr. MADDEN. Oh, the gentleman is talking about customs revenue tax. I could say that the State of Illinois itself pays about $11,000,000 into the Treasury annually in customs duties and $30,000,000 internal-revenue tax, besides $20,000,000 from the post office in Chicago, in addition to what it pays in as corporation and income tax, so that you see Illinois would pay one-tenth of all the money paid into the Treasury of the United States from every source. But we do not take credit for that, because the customs tax may be collected in Florida or Illinois or New York, while it may belong to some other place. But the income tax is the only true tax that can be charged or credited to a State.

Mr. BLACK. Mr. Chairman, will the gentleman yield there for a question?

Mr. MADDEN. Surely.

Mr. BLACK. Is it not true that the great city of Chicago gets a great deal of trade throughout the South, and especially from the State of Texas?

Mr. MADDEN. I hope so.

Mr. BLACK. That is true.

Mr. BARKLEY. Mr. Chairman, will the gentleman yield?

Mr. MADDEN. Surely.

Mr. BARKLEY. Are we to infer from the gentleman's remarks that the appropriations ought to be made by the Government in proportion to the prosperity of the different sections?

Mr. MADDEN. What I wanted to impress upon the House was this, I will say to the gentleman from Kentucky: That when we enter upon the preparedness program, which will take millions and millions of appropriations, we may expect the States which I am enumerating to pay only the proportion which their income tax and corporation tax indicate toward this vast expenditure of money, and that the people living in the section of country that receive no appropriations to speak of for any purpose out of the Federal Treasury will be called upon to pay all the cost, while the States that pay no part of the cost take the appropriations.

Take, for example, the Agricultural appropriation bill alone. Last year we increased the Agricultural appropriation bill materially. Those appropriations are made in lump sums, allotted to the Secretary of Agriculture for distribution; and in making the distribution among the various States he allotted 202 per cent additional to the Southern States, and to the great North and Northwest and East only 11 per cent.

Tennessee has $705,000 in this bill, and it only pays into the Treasury $407,000.

Alabama, the great State from which comes the former Democratic leader of the House, now the distinguished Senator from that State, my friend, Mr. OSCAR UNDERWOOD, has $879,000 in this bill; and the State of Alabama, with all its great iron and steel institutions and its other manufactures, paid into the Treasury of the United States in 1915, for income and corporation tax, only $258,000.

The State of Mississippi has $896,000 in this bill, and in 1915 paid into the Treasury $72,786.52 in corporation-income tax and $34,528.93 in individual-income tax, making a total of $107,315.45.

It will be seen that the corporation and individual income tax paid by the State of Illinois to the Federal Government in 1915 amounted to $5,618,400.38, or one-fourteenth of the total revenue derived from these two sources, while the combined amount paid by the States of Florida, Mississippi, Louisiana, Texas, Arkansas, Tennessee, North Carolina, South Carolina, Georgia, and Alabama was $3,654,294.17, or one twenty-first of the total corporation and individual income tax received by the Government.

The total appropriation in this bill for rivers and harbors in the State of Illinois, including a continuing-contract item of $714,300, amounts to but $850,300, while the appropriation for the States above enumerated amounts to $6,478,050.

The total appropriation carried in the river and harbor bill amounts to $39,608,410. Of this the State of Illinois receives but one forty-sixth, although paying one-fourteenth of the corporation and individual income tax received by the Government.

The 10 States above enumerated receive one-sixth of the total appropriation for rivers and harbors, but pay only one twenty-first of the corporation and individual income tax.

The South is truly in the saddle. It has come back into its father's house. It has the power to tax the North while it enacts legislation to retard the country's prosperity, and we Republicans are powerless to prevent it. The northern Democrats here are bound by caucus rule while a minority controls the destiny of the country and continues to impose unjust and unjustifiable burdens upon the people.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. MADDEN. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. MOORE of Pennsylvania. Mr. Chairman, since I have not spoken on this bill I ask unanimous consent to proceed for 15 minutes.

The CHAIRMAN. Is there objection to the gentleman's request?

Mr. HULBERT. Reserving the right to object—and I do not intend to object—I would like to ask the gentleman from Illinois [Mr. MADDEN] if in connection with the figures given by the gentleman he will allow me to put into the RECORD two items of figures?

Mr. MOORE of Pennsylvania. If the gentleman from Illinois does not object, I shall not object.

Mr. MADDEN. I did not hear the gentleman.

Mr. HULBERT. I asked the gentleman if, in connection with the figures he gave, I may insert in the RECORD two items of figures.

The CHAIRMAN. The gentleman from New York asks unanimous consent to extend his remarks in the RECORD by inserting the figures indicated. Is there objection?

There was no objection.

Mr. HULBERT. These are the figures: The total annual corporation income tax collected in New York was $10,221,206.65 and the total individual income tax collected was $17,417,537.60, making a total of $27,638,744.25.

The CHAIRMAN. The gentleman from Pennsylvania [Mr. MOORE] asks unanimous consent to proceed for 15 minutes. Is there objection?

There was no objection.

Mr. MOORE of Pennsylvania. Mr. Chairman, the project that I wish to speak about briefly is one of those that is criticized in connection with the general agitation against what is called "pork-barrel" legislation. It suffers by reason of that criticism.

It is one of the projects that is not now in the river and harbor bill. I regret to say that the committee, following out its idea of economy to which the gentleman from Illinois [Mr. MADDEN] has just referred, did not see fit to put into the bill this year any provision for the opening up of the waterway between the Chesapeake and the Delaware Bays, a connecting link, which you will pardon me for saying, has been approved by the War and Navy Departments for years, and which, no matter what its importance seems to be to the Nation, comes generally under the ban when we get to the River and Harbor Committee. Yet no more meritorious project appears in the bill than this one of linking up these two great bays, the Delaware and the Chesapeake, with a view of further linking up all the waterways of the North and the South along the Atlantic seaboard. Sometimes gentlemen who come from the interior—and I say this as politely as I can—and particularly those who have been criticizing river and harbor legislation recently, misunderstand what we call the coastal project. They seem to think that we intend to build a canal all the way, 1,800 miles, from Maine to Florida. A more ridiculous misapprehension, or one showing more ignorance of the geography of the country, could not be advanced. The truth of the matter is that God Himself in His wise dispensation adjusted certain channels, bays, sounds, rivers, ponds, and so forth, along the Atlantic seaboard inside the coast line, which simply require a little digging in order to connect them up in a completed chain.

The total amount of digging is insignificant, and the relative cost, in view of the importance of the population and the manufactures and the agricultural interests involved, would be trifling indeed. For instance, here [indicating upon map] is the port of Boston, directly upon the sea. For 200 years it has been proposed to bring Boston closer to New York and the South by cutting through Cape Cod, this arm of land which juts out into the sea and around which storms and fogs constantly prevail, making it a great danger point to mariners. For 200 years there has been an agitation for it, in Congress and out; that is to say, in Congress since Congress was organized, something less than 200 years ago. Only recently, however, has a cut been made through that arm of land, and that cut is due to a private corporation. There is now a canal running from Cape Cod on this side [indicating] over to Buzzards Bay, on that side, a distance of 8 miles, which saves an outside sailing distance through storms and fogs and the perils of the sea and greatly reduces the sailing time to New York and the South. Now, we approach Long Island Sound and the East River of New York, a project for which will be reached here a little later. It is the only so-called new project introduced into this bill, a project that ought to be written into the law and for which an appropriaion ought to be made, because it tends to make a safe and natural inside passage as between the North and South from Long Island Sound to New York Bay.

I shall not discuss Coenties Reef, which was referred to here by the gentlemen from New York, Mr. FITZGERALD, Mr. BENNET, and Mr. HULBERT, but I shall stop long enough to say that it seems a menace and a shame that a great connecting link of water like that between Long Island Sound on the north and New York Bay on the south and those other connecting waterways which run on inland to the Southern States should not be improved.

The claim that it would be expensive is absurd in view of the importance of it all. Of course, it would cost money, but suppose in case of war our fleet should be driven into Long Island Sound. What would we then pay to get them out? These little marks here on the map are intended to indicate a hostile fleet that is blockading the coast. If the United States fleet were driven into Long Island Sound from the upper or eastern entrance, with the East River rocks as they are to-day, that fleet could not pass through to the New York Navy Yard, but could be bottled up in the Sound by a superior force on the outside just as securely as Sampson and Schley bottled up Cervera in the Bay of Santiago.

Mr. HULBERT. Will the gentleman yield for a question?

Mr. MOORE of Pennsylvania. I am afraid I have not time.

Mr. HULBERT. It is very brief.

Mr. MOORE of Pennsylvania. Go ahead.

Mr. HULBERT. Does the gentleman know that a full 35-foot channel, which will accommodate any battleship in the United States, connecting East River with Long Island Sound, can be completed for the sum of $3,225,000?

Mr. MOORE of Pennsylvania. That may be, and until it is completed you must contend with rocks and a treacherous current, to which the naval property of this Government ought not to be subjected. There should be no such risk to Government vessels, at least.

Now, the coastal project, which is so often misunderstood, passes through from Long Island Sound into New York Bay and connects with Raritan Bay. Years ago, before the advent of railroads, the Delaware & Raritan Canal was constructed across the State of New Jersey, connecting New York Bay through the Raritan River with the Delaware River at a point near Trenton.

In this way is made up the great coastal canal which these gentlemen worry themselves about who think we expect to do 1,800 miles of digging. What is proposed here across the State of New Jersey is simply to improve an existing canal of 33 miles or build a new one. Our forefathers built this old canal and opened it up for business in 1834. They at least saw the wisdom of it; it bisects the State of New Jersey and is in active operation to-day, but it is absolutely controlled by one great railroad corporation which fixes the freight rate and determines the commerce that seeks to pass through it from New York to Philadelphia, and so to the north and to the south. And yet gentlemen, apparently in the interest of the railroad corporation that owns this canal, contend that we should not spend a little Government money to give the people a serviceable waterway that means so much for commerce or defense, as between New York Bay and the Delaware River and points beyond.

But what I want to talk about particularly now is this: More than 50 per cent of all the wealth of this country lies in this section here—indicating New England and Middle States. Over 50 per cent of all the manufactured products of the United States are developed on this coast line, within half the area of the thirteen original States. We should be prepared to protect so important a territory. The completion of the coastal project is one of the ways to do it.

In 1825 some of our forefathers conceived the idea of connecting up the Delaware River at this point—at Delaware City, Del.—with the Chesapeake Bay at this point—Cheseapake City, Md.—a distance of 13 miles. Why did they do it? They were

using sailing vessels then, and Philadelphia was the great maritime center, having exceeded New York as a metropolis prior to the construction of the Erie Canal. When they sailed out of Philadelphia these vessels came down the Delaware River, and came out through the Delaware Bay with its varying channels. And understand, incidentally, that no channel can be maintained from year to year without the expenditure of money. A channel swept by wind and tide must be cared for.

It is just like a floor that has to be swept every day in order to keep it clean. It is this fact which goes to explain why we have to make appropriations constantly for the maintenance of channels after we construct them.

Now these vessels came out of the Delaware Bay into the sea. Those whose draft exceeds 9 feet have to do so yet. They would sail outside, and if any of you have taken the trip on a pilot boat or sailing craft you know what it means. It is hard on the landlubber, and unless you are a good sailor you do not want to take a second trip. The ships come out here—Delaware Bay—and if their destination is Baltimore they pass Delaware, they pass Maryland, they pass Virginia, and sail around here to the Chesapeake and up to the Patapsco, and then land at Baltimore, a very long and expensive outside route. This little cut of 13.7 miles, marked by the black line, between the Chesapeake and the Delaware is a route laid out by our forefathers who, by the construction of this canal in 1825, shortened this route from Philadelphia to Baltimore just 321 miles. This canal is in operation to-day; it carries a million tons of commerce annually, which pays a liberal freight. The advantage in going through the canal is not so much a saving in freight rate as it is to get more expeditious service by water. It is true that whereas you can ship a cargo from New York via Philadelphia to Baltimore in 12 hours from the time of shipment at Philadelphia, the delivery by rail under present conditions from Philadelphia to Baltimore runs into days, and under recent embargo conditions sometimes not at all.

Now, that is the commercial part of it. As we are discussing preparedness for war, let us see what it means not to undertake improvements of this kind. The water in this canal, antiquated as it is, will not permit of vessels to pass through with a draft of more than 9 feet. It has nominally 10 feet of water in it, but no vessel is permitted to go through that draws more than 9 feet. Gentlemen, that bars the smallest torpedo boat or submarine the Government now possesses. It is not commonly known that the War Department itself, which uses the inside waterways upon which it conducts its business, has a fleet of more than 2,500 vessels; they do not all go to sea.

They are not all transports. Some of them are vessels that ply along the coast line and use the inside waterways, and this canal would be of service to them. Submarines of the Navy can not pass through it. Let us suppose a fleet of superior force lies outside, a British fleet or a German fleet, for instance, and our vessels go up here into this bay. They could not proceed to the Philadelphia Navy Yard for strategic reasons or for repairs. They could not go forward or backward.

Mr. HULBERT. Will the gentleman yield?

Mr. MOORE of Pennsylvania. Yes.

Mr. HULBERT. With the development of the two canals, would it not give three exits and three entrances both to New York and Philadelphia?

Mr. MOORE of Pennsylvania. I am very glad the gentleman from New York made the point, I am coming to that if I can get to it in the brief time I have remaining. Here is Norfolk, with its navy yard——

Mr. CALLAWAY rose.

The CHAIRMAN. Does the gentleman from Pennsylvania yield to the gentleman from Texas?

Mr. MOORE of Pennsylvania. I will.

Mr. CALLAWAY. Is the gentleman advocating a canal wide enough and deep enough for all the war vessels to pass through?

Mr. MOORE of Pennsylvania. If I had my way, that canal of 13 miles would be capable of passing the greatest battleship the United States owns. [Applause.] I will say further to the gentleman from Texas that the paltry sum that any one State contributes to the United States Government would be insignificant compared with the defense that would be accorded to all the States by opening up that canal so that war vessels could pass back and forth.

Mr. CALLAWAY. Has the gentleman any estimate as to how much it would cost to construct the canal so that war vessels could pass through?

Mr. MOORE of Pennsylvania. To a depth of 12 feet through here, it would cost about $8,000,000.

Mr. CALLAWAY. But it takes 35 feet to pass a dreadnaught through.

Mr. MOORE of Pennsylvania. A depth of 35 feet could be put in there for $20,000,000. That was the estimate of the Agnus Commission in 1907.

Mr. CALLAWAY. The three canals the gentleman speaks of?

Mr. MOORE of Pennsylvania. If you make the cut across the State of New Jersey, which is an expensive one, and the other cuts that have been recommended by the United States Army engineers, the total cost at the depths recommended for commercial purposes from New York to Key West would be about $47,000,000. If greater depths are to be attained, it might approximate $75,000,000.

Mr. CALLAWAY. That is for all three.

Mr. MOORE of Pennsylvania. And I will tell the gentleman this: It would be worth the money. At the port of Philadelphia, where they have not had $20,000,000 spent on their river from the beginning, they take in as much as $20,000,000 every year at the customhouse and turn it into the Treasury of the United States. That is a mighty good return on the investment for the channel.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. BENNET. Mr. Chairman, I ask unanimous consent that the gentleman have five minutes more.

The CHAIRMAN. The gentleman from New York asks unanimous consent that the time of the gentleman from Pennsylvania be extended five minutes. Is there objection?

There was no objection.

Mr. CALLAWAY rose.

Mr. MOORE of Pennsylvania. Mr. Chairman, I must decline to yield to the gentleman because of the time limit.

Mr. CALLAWAY. Has the Government ever been called upon to make an estimate as to the cost of this?

Mr. MOORE of Pennsylvania. Yes, and the gentleman from Texas is thoroughly familiar with it; several times he has undertaken to dissect it on the floor. Estimates have been presented here from time immemorial, and it is just such obstructive tactics as the gentleman from Texas is well capable of that have held up this project, that in time of war would be a saving clause to the Nation. [Applause.]

Mr. Chairman, it is unnecessary for me to refer, so far as the gentleman from Texas [Mr. CALLAWAY] is concerned, to the reports of the engineers or to the distinguished men of the Army and Navy who have urged the construction of these important coastal canals—no less distinguished a man than George Dewey, the present Admiral of the Navy, was one of them. Men of this type have been on the boards reporting on this project, and they have said that it is absolutely essential to the proper protection of the coast. They have dealt with the commercial features of it, but they have always insisted that as a matter of preparedness for war it is necessary, and yet all these reports do not seem to prevail with the gentleman. I could quote Secretary Daniels and other Secretaries of War and Navy, but time does not now permit.

I have in my hand one of the latest of the reports, known as the "Agnus" report, which was prepared by military and naval officers and civilians. In that report (1907), as to the commercial side, they say:

An idea of the trade immediately affected can be had from the statement contained in report No. 2725 to the Fifty-eighth Congress, which says:

"The commerce of the Delaware & Chesapeake, registered and otherwise, has been estimated all the way from 50,000,000 to 90,000,000 tons annually. This is much larger than the tonnage of the entire annual foreign commerce of the United States. The Isthmian Canal Commission estimated that the Panama Canal, now to be built at a cost approximating $200,000,000, would have carried a tonnage in 1899 of but 4,574,852 tons."

Of the registered tonnage traffic in a recent compilation, 25,873,167 were on Delaware Bay points and 24,151,932 on Chesapeake Bay points. These figures, however, do not include the undocumented and unregistered tonnage traffic, which would add nearly 100 per cent to the total.

Considerably less than one-tenth of the traffic on the Delaware and Chesapeake Bays and their various points belongs to foreign commerce. The great value of the proposed canal would be in facilitating the coastwise trade.

As to the military side, they say:

Assuming, however, that both termini are to be properly defended, the canal itself offers many advantages to such defense by the ready means of intercommunication afforded. The canal would permit the prompt interchange of troops and munitions between the coast batteries, and particularly of the submarines, scout boats, and coast-defense monitors, that now form an important factor in seacoast defense, thus minimizing the number required for a complete defense.

Another important feature of the canal would be the obstacle presented by it as an adjunct for land defenses. These would serve as a base for troops operating to break up military occupation of the peninsula, or to check advances therefrom, without reembarkation should such occupation become effective. A geographical study of the Atlantic coast of the United States, as at present defended, shows the peninsula of Maryland and Delaware as the most vulnerable and suit-

able place for the location of a base for land operations, should our Navy be driven from the seas. This was demonstrated by history in the War of 1812.

There is so much of this that I shall have to stop in order to read a portion of an even more recent report. It is contained in Senate Document No. 14, a document that was prepared since the present agitation for preparedness began. These military gentlemen know exactly what it means for a foreign ship to get into those bays. There are no defenses here at the entrance to the Delaware Bay, no fortification on the Cape May side nor on the other side. This bay is clean and clear of fortifications until we arrive up here 40 miles from the mouth, where there are three forts, and I wish to say, to the shame of our state of preparedness, that this Government has but 200 men to man these three forts, not sufficient to keep the guns of the Government in order. The nominal quota is 800 men, but they have been removed from two of the forts and have been put on the Delaware side of the river in order to keep the machinery in that fort, at least, oiled and in condition. It is easy to observe that if an enemy came into this river—the Delaware—with its great industrial establishments and shipyards, the railroads from Boston and New York and points north going along this coast line to points south could be put under control. It would not take very long, in our present condition, to stop communication between the north and the south, if those railroads were torn up or if the enemy should take possession of that country.

But I desire, in the few minutes left, to say something about the latest Army report. It comes from Brig. Gen. M. Macomb, Chief of the War College Division; Brig. Gen. Tasker H. Bliss, of the United States Army, Chief of Staff; and ex-Secretary of War Garrison. On February 27, 1916, they joined in making the following answer to queries put to them by the Senate:

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. SMALL. How much time would the gentleman take to develop that idea?

Mr. MOORE of Pennsylvania. I would want only about three minutes.

Mr. SMALL. Then I ask unanimous consent that he be permitted to proceed for three minutes.

Mr. HOPWOOD. Mr. Chairman, I suggest that he be given sufficient time to conclude.

Mr. MOORE of Pennsylvania. I shall not want more than five minutes.

Mr. HOPWOOD. Then I ask unanimous consent that he may proceed for five minutes.

The CHAIRMAN. The gentleman from Pennsylvania asks unanimous consent that his colleague may proceed for five minutes. Is there objection?

There was no objection.

Mr. MOORE of Pennsylvania. Mr. Chairman, this is the official report of the War College, backed up by the Secretary of War. Kindly bear in mind that we propose to spend millions, maybe hundreds of millions, putting new battleships on the seas and in building submarines. We propose to spend millions, even a hundred million, in increasing the armed forces upon land; and yet here, where the vessels of the Government and these increased forces may be called upon to make their final stand, we stop, even though in times of peace it would be of the greatest commercial advantage to the people of the land; still we stop, unprepared, because it will cost eight millions or some other sum to build a canal and put our Government in possession of essential advantages for passing submarines and warships to our various navy yards.

Mr. STAFFORD. Mr. Chairman, is the present canal suitable for the passage of submarines?

Mr. MOORE of Pennsylvania. It is not. I have asked the Navy Department on several occasions to send their submarines through that canal, and in each instance they have replied they could not do it. In one instance four of those vessels were sent from the navy yard at Philadelphia to the navy yard at Charleston. I asked that they be sent through the canal. The answer was that there was not sufficient depth of water there to permit it. Those valuable pieces of Government property went to sea, and they struck a storm outside of Cape Hatteras and were blown back. In due course Congress was asked to make appropriations to put in repair the ships that were damaged.

Mr. SMALL. It has a depth of only 9 feet and the width of locks is only 34.

Mr. MOORE of Pennsylvania. The width of locks of the Chesapeake & Delaware Canal is 24 feet odd, and the commercial vessels that use those locks are built away up in the air, to accommodate these antiquated locks of 1829. And yet commerce is begging, commerce is pleading, to go through, while the railroads have the situation entirely in their hands. [Applause.] This War Department report which bears so directly upon this matter is as follows:

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF STAFF,
Washington, February 27, 1915.

Memorandum for the Chief of Staff.
Subject: Military advantages of the Chesapeake & Delaware Canal.

1. There is returned herewith a memorandum with attached papers on the above subject, dated February 24, 1915, from the Secretary of War to the Chief of Staff, wherein three questions are submitted:

"(a) The military advantage, if any, of the existence of this canal.

"(b) Whether a canal along this line would be of any military advantage; and if so, what?

"(c) What character and size the canal would have to be in order to be of any advantage?"

These questions apparently refer both to the present and contemplated canal along this line.

2. In answer to 1 (a), it is believed that the existing canal has some value as it exists to-day as an obstacle to the advance of a hostile expedition landing on the west bank of Delaware Bay and advancing against Wilmington and Philadelphia. The fine, undefended harbor at Lewes, Del., makes such a landing a probability. The canal, especially at the locks, is so narrow, only 24 feet at the locks, as to form an obstacle not very formidable. The canal is too small for the passage of submarines or other naval craft that would be used for preventing the landing of troops from hostile transports, and too small and obstructed by locks for rapid transport of troops and material from one bay to the other.

3. As to 1 (b), a sea-level canal along this same line would be of very great military importance from the following points of view:

(a) For the movement of submarines and other craft that must constitute an important part of our coast-defense system.

(b) As forming an almost impassable obstacle to the passage of troops advancing to attack Wilmington or Philadelphia from the peninsula between Delaware and Chesapeake Bays.

(c) For the transport of men and matériel of the Coast Artillery and the Coast Artillery supports from one bay to the other.

4. The first of the points enumerated in paragraph 3 is a military one, because submarines and other small craft are believed to be at present an integral part of the seacoast defense, for use not only against naval attack on the harbors, but in a still more important sense against transports attempting to land a hostile force on our shores in case of the defeat of our Navy. Seacoast defenses reach no farther than the range of their guns, and it is impossible to distribute mobile army troops at all possible landing places to prevent the landing of troops without so frittering away the Army in small detachments as to render it almost impossible to collect them for united action. A canal such as proposed would allow the whole force of submarines, etc., to be held in one of the two bays and used with equal efficiency in either. Without the canal the force of submarines, etc., must be divided between the two bays, and to reenforce one another they must attempt a passage by the outside, a distance of over 200 miles, as against about 15 miles by the canal.

A canal along this line and one from Delaware Bay to New York Harbor would make a landing of hostile troops almost impossible between Narragansett Bay and Chesapeake Bay, and the construction of this canal is an important step toward the accomplishment of this result.

5. As an obstacle and a part of the land defense of Wilmington and Philadelphia a canal suited for other commercial and naval purposes would be of great importance. Defended by a few troops and small gunboats, such an obstacle (of the size recommended below) would hardly be crossed, and it is not believed that it would be attempted.

6. As a means of transport it has a measure of value for the easy transportation of men and matériel between the fortifications of Delaware Bay and of Baltimore.

7. As to 1 (c), the objects set forth in paragraph 3 above can be obtained by a sea-level canal having a depth of 18 feet at mean low water and a bottom width of about 150 feet. While tides of 6 feet to 10 feet prevail in the waters at the ends of the canal, investigation has shown that guard locks will not be necessary and that an open canal will be entirely feasible.

M. M. MACOMB,
Brigadier General, Chief of War College Division.

I concur.

TASKER H. BLISS,
Brigadier General, United States Army, Acting Chief of Staff.

I concur.

LINDLEY M. GARRISON,
Secretary of War.

With these facts before us, gentlemen, what shall we do? If a foreign fleet should suddenly drive our vessels in, what are we going to say to the people of the United States when they ask us why we did not make ready a passageway for our own vessels, so that they might get to New York or to the Philadelphia Navy Yard for repairs? It is not a question of digging 1,800 miles; that is rot. It is a question of connecting up a little link here and there to make a connected chain. It is the doing by man of that sensible thing which God intended he should do along that coast. [Applause.]

The CHAIRMAN. The time of the gentleman has again expired.

Mr. MOORE of Pennsylvania. Mr. Chairman, may I have leave to extend my remarks?

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania? [After a pause.] The Chair hears none.

Mr. GOOD. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 1, at the end of line 9, insert the following:

"*Provided*, That no part of the money hereby appropriated shall be used to pay for any work done by private contract if the contract price is more than 25 per cent in excess of the cost of doing the work by a Government plant."

Mr. GOOD. Mr. Chairman, this bill, as I understand, carries an appropriation of $39,600,000. By the majority of the committee reporting it here it is contended that every item in it is a meritorious provision. By others it is contended there is a great deal of "pork" in the bill, and that many items should not be appropriated for. With this contention I have no quarrel. In reading over some of the items it seems to me, however, that we are providing considerable pork in the way of private contracts. For instance, under the engineer's reports, at page 486, with reference to inland waterways from Norfolk to Beaufort, I find the engineers report 1,282,833 cubic yards of material have been removed by day labor, using Government plants, resulting in 3.2 miles of completed channel; 4,698,225 cubic yards of material have been removed by contract, giving 14.4 miles of completed channel. The average cost of the work with Government plants was 0.043 cent per cubic yard, place measurement. The average contract price was 0.0752 cent per cubic yard, place measurement. That shows there is over 100 per cent profit to the private contractor. That certainly is unreasonable. We ought to put in this bill some provision, some limitation, beyond which the Army engineers, or those having control of this large sum of money, can not go. We ought to say, when we are appropriating $40,000,000, all of which can be expended by private contract, that not to exceed 25 per cent of profit shall be given to private contractors. If we are ever to relieve this bill from the charge of "pork," let us put in such a provision; and if 25 per cent is not sufficient, write in a larger percentage, but let us put a limitation, beyond which the Army engineers can not go. I for one feel that 25 per cent is sufficient.

Mr. FORDNEY. Will the gentleman yield?

Mr. GOOD. I yield.

Mr. FORDNEY. In the expense given for that work done by the Government, what is included there for dead expense, depreciation, taxes, insurance which that property would pay provided it were private property? Are those things put into the cost of production the same as private property?

Mr. GOOD. I do not know.

Mr. FORDNEY. No, they are not.

Mr. GOOD. The report as I read it does not show, but the gentleman, I fear, is not informed with regard to this because I have searched the report and it is silent on this subject.

Mr. FORDNEY. It never is on Government property.

Mr. GOOD. I may say to the gentleman even if it is not included, if the amount I have inserted is not sufficient to yield fair returns, let us here as business men, capable of passing upon this subject, say how much shall be included as interest on investment, for depreciation, and everything of that kind. I believe, knowing what I do of a project wherein we are appropriating this year a million dollars, that 35 or 40 per cent of it will be profit to the private contractor if the work is all done by private contract. He will do that work in one year or less time. His equipment does not involve a great amount of money, but his profit will be between $300,000 and $400,000, and it seems to me that some limitation ought to be put on these expenditures. Such a thing ought to be impossible.

The CHAIRMAN. The time of the gentleman has expired.

Mr. FORDNEY. Mr. Chairman, I move to strike out the last word. I want to say in reply to the gentleman from Iowa [Mr. GOOD] that it would be fair to say when comparing the cost of construction of work by doing the entire amount of work by private contract or by a Government contract in the calculation of the cost, that where it is done by the Government or by municipalities, the cost of interest on the money invested in the plant, the taxes that property would pay if it were private property, depreciation, and all overhead expenses are not included. Therefore, when comparisons are made of the cost in such a matter it is not a fair comparison. It is not just to private individuals, and I defy the gentleman or any other gentleman to point out where the Government, or any State, or any city, or any municipality, ever did work by day or by month or in any other way where it did not cost more money than if constructed by private individuals. Of course, contracts may be made with private individuals where the price is entirely too high, but the actual cost between the two is always greater.

Mr. GOOD. Mr. Chairman, will the gentleman yield?

Mr. FORDNEY. Yes.

Mr. GOOD. Perhaps the gentleman did not notice the reading of my amendment.

Mr. FORDNEY. Yes; I did.

Mr. GOOD. It took the cost to the Government, which the gentleman says is much higher than it would cost a private manufacturer. Therefore, instead of a profit of 25 per cent, we ought to cut down the percentage, because the private manufacturer will have some profit in addition to the 25 per cent.

Mr. FORDNEY. I am agreeing with the gentleman that some limitation would be right; but to make those comparisons without giving all items of cost in production is absolutely unfair. The gentleman knows that in giving Government costs overhead expenses are not included.

Mr. SMALL. Mr. Chairman, everyone must be in sympathy with the purpose of the gentleman who offers this amendment in so far as it is intended to effect economy, but the amendment is not practicable and will not subserve the purpose which the gentleman has in view.

In the first place, while it appears in this particular instance that the contract price was greater than the cost of what appears to have been similar work done by the Government, that was an exceptional case. According to my information, upon the average the contract price of dredging and other excavation is less than it usually costs by Government plants.

Now, in making the calculation of the cost by Government plant there is not taken into consideration the initial investment in the dredge and the equipment. There is not taken into consideration the necessary cost of supervision by the engineers, whose salaries are already paid and do not come out of the appropriation. Neither is there taken into consideration the wear and tear of the plant; so that when you omit those three items—wear and tear, the interest on the investment, and the cost of supervision—it can well be seen that there is no fair comparison between the cost by Government plant and the cost by private contractor.

Mr. SWITZER. Mr. Chairman, will the gentleman yield?

Mr. SMALL. Yes.

Mr. SWITZER. Will the gentleman please state how long it would take to complete the project referred to on the Beaufort Canal with Government equipment?

Mr. SMALL. It would be indefinite. Probably if they were given all the money they could spend, by Government plant it would take 15 years.

Mr. SWITZER. Has not the price of iron and everything gone up considerably in the last two years?

Mr. SMALL. There is no doubt about that.

Mr. HULBERT. Mr. Chairman, will the gentleman yield there?

Mr. SMALL. Yes.

Mr. HULBERT. Did not Col. Taylor state that if this work were done entirely by Government plant it would require only six or seven years?

Mr. SMALL. It is my impression that he said "15 years."

Mr. HULBERT. I have it written down that he so stated; that it would require six or seven years.

Mr. SMALL. Then I am glad to be corrected.

Mr. SIMS. Mr. Chairman, will the gentleman yield there?

Mr. SMALL. Yes.

Mr. SIMS. Is it not a fact that the building of the Panama Canal was undertaken at first by getting outside men to look after it, but is it not also a fact that after the Government placed its own engineers in charge, with Col. Goethals at the head, they continually decreased the cost per unit of construction from the time they took charge until they finished the work, and had no motive except to build as best they could for the least money? And even considering the deterioration in the value of equipment, the work ever since the engineers took charge at Panama has been cheaper than any work ever done by private contractors on earth?

Mr. SMALL. Perhaps that is a debatable question as to the cost, but there were reasons for putting that work into the hands of the Army engineers that seemed to be conclusive. But there is another fact that I wish to suggest, and that is that there is not a Government plant used upon many works of improvement. There are only a few works of improvement where the construction of a dredge has been authorized by the Government, so that on many of the works of improvement in progress there would be no test of the prospective cost by private contract or by Government plant; so that no matter how much we may be in sympathy with the amendment to effect economy, yet as a matter of fact under existing conditions it is impracticable.

The CHAIRMAN. The time of the gentleman from North Carolina has expired.

Mr. FREAR. Mr. Chairman, I believe the chairman of the committee will agree that when Col. Taylor was before us on this very proposition he stated that when the Government had a dredge upon any particular piece of work it had the effect of creating competition, so that private companies always reduced their rate. That is true, is it not?

Mr. SPARKMAN. That is substantially true.

Mr. FREAR. So the very fact that the Government has its plant there compels the private company to reduce the charge it

would otherwise make. In this case of the Beaufort Canal the charge is about double the cost of Government work. There was no statement made before the committee, so far as I recollect, why a million dollars should be appropriated when something like $200,000 was sufficient to keep the Government crew employed. It was stated that six or eight years would complete the work, if I remember correctly. That means between three and four hundred thousand dollars additional price for 1916 because of private contractors, without reference to the Government dredge. Just why private contractors are to be employed and why the large appropriation is proposed has not been made plain.

Mr. HUDDLESTON. Mr. Chairman, it seems to me that the arguments of the gentleman from North Carolina [Mr. SMALL] and of the gentleman from Michigan [Mr. FORDNEY] do not respond to the amendment proposed by the gentleman from Iowa [Mr. GOOD]. The argument in favor of that amendment is that where the Government can do the work cheaper than it can be done by private contract the work ought to be done by the Government.

Assuming that the Government can do the work 25 per cent cheaper than by having it done by private contract, why should not the work be done by the Government directly? I ask any gentleman to give me any good reason why the Government should let out the work to private contractors when the Government can do it more cheaply than the contract price. This Government does not exist and Government work is not done in order to make private business. It is done for the public welfare. Contracts are not let in order to have contractors make profits. They are let in order that the business of the Government may go on in the best and most satisfactory and cheapest way.

I would like to have some gentleman here present a fair answer to the question, Why should we take money out of the Public Treasury merely in order to put it in the pockets of contractors? I want to say to you gentlemen that I think all Government work should be done directly by the Government when it can be done as cheaply and as satisfactorily as it can be done by private contractors. If there is any good reason to the contrary, I should like very much to hear it, for I have never had the pleasure of hearing such reason in all my life.

Mr. McLAUGHLIN. Mr. Chairman, I move to strike out the last two words. I have some information in regard to river and harbor work down on the Great Lakes. I have a harbor district, and I have seen some of that work going on, and know something of the letting of contracts for the work. As to the dredging, I think it would be advisable for the Government to provide dredges for doing much more of the work than is now done by the Government itself. On the Great Lakes there is one large dredge, or sand sucker, the *Gen. Meade*, which is in constant use during the season of navigation and is doing splendid work. One reason why the dredging that is done by the *Gen. Meade* can not be done to advantage by private interests is that when the work is to be let to individuals or private companies it must be let by contract, and often it is necessary to do dredging work without permitting the time to elapse which would be necessary for getting bids for the work. All along the shores of the Great Lakes after a storm bars are formed at the harbor mouths, and the *Gen. Meade* is sent from one harbor to another under the direction of the local Government engineer to dredge away those bars, and in that way the work is done promptly. If it were necessary to have the work done by private concerns it would be necessary in each case to advertise for proposals, and considerable time must elapse, which would be time wasted.

Now as to the difference between the cost to the Government of doing its own work and the cost to the Government of having it done by private interests, I believe the Government is doing the work much more cheaply, although it is true, as stated by the gentleman from North Carolina [Mr. SMALL], that it is difficult for us to make an estimate of the original cost to the Government of supplying the plant, of building the ship, and of operating and maintaining it when it is not engaged in actual work. But I should dislike very much to see any reduction in the plants of the Government now devoted to that kind of work. Some one asks why the Government does not do all that kind of work itself, and not permit private interests to bid on it and do the work. It is on account of the unwillingness of Congress to supply the money necessary for the building of these great dredges. I think it would be the part of wisdom and that it would certainly work economy if the Government were willing to appropriate the money for the building of more of these great dredges. The work would be done more expeditiously, more satisfactorily, and with economy if Congress would appropriate the money necessary for the construction, maintenance, and operation of these dredges.

Mr. SPARKMAN. Mr. Chairman, this is another effort to establish a hard and fast rule where I think it is not advisable to do so. The House is not at this time in a position to do that intelligently. It has not the information before it necessary to enable it to act wisely, even if it were otherwise thought advisable to establish such a rule, which I very much doubt. If a remedy is needed it does not lie along that line, in my opinion, but along the line of more Government dredges; that is, a sufficient number of dredging and auxiliary plants owned by the Government to do all the river and harbor work the Government has to do. When the Government is thus equipped and not before can we eliminate this contract work. I may say further, that it has not been the policy of Congress, so far as I know, to discourage private enterprise. But it has been the policy to construct dredges enough to prevent private contractors from holding up the Government, and this has practically been accomplished. We have a large collection of plants now; perhaps not as many as we ought to have, but we have enough to exert a potent influence on private contractors or would-be contractors. In some instances it may cost more to employ them, but in others it is cheaper. Still, in the future it may be wise to establish some such rule; but until we have more information before us, sufficient information to enable us to establish an equitable rule—a rule that is workable—we should not, in my judgment, adopt any such provision as this, and I hope it will be voted down.

Mr. GOOD. I ask unanimous consent to proceed for five minutes.

The CHAIRMAN. The gentleman from Iowa [Mr. GOOD] asks unanimous consent to proceed for five minutes. Is there objection?

There was no objection.

Mr. SIMS. May I ask the gentleman if he does not think it is our patriotic duty to save this Government from being robbed of 100 per cent more than a reasonable profit, by making no limitation on these things?

Mr. GOOD. Yes; and if this committee votes down this amendment it practically reverses itself with regard to the purchasing of ammunition and war supplies. A few years ago we found that limbers purchased from the Bethlehem Steel Co. for as high at $1,700 and $1,800 apiece were being manufactured in the Government arsenal for $650 apiece, and Congress put a stop to the practice of paying that exorbitant price. The gentleman from Michigan says that the matter of depreciation is not figured in here at all. I do not know that. I rather think he is correct, but I do know that at a hearing before the committee on fortifications, when we were considering the matter of depreciation of plant relative of the cost of powder, Admiral Twining appeared before the committee and said depreciation should be figured at 3 cents a pound. We found that we had one Government plant where the buildings and equipment cost $340,000 which had an annual capacity of 3,000,000 pounds. Multiply 3,000,000 pounds by 3 cents, which he said was a reasonable allowance for depreciation, and you have $90,000 a year depreciation of plant that only cost $340,000. Then we have his testimony that the plant ought to last at least 10 years, and that the Government plant at Indianhead, with slight improvements, was as good then as it was 10 or 12 years before, when it was constructed.

The Wall Street Journal of the 29th of February contains a statement made by Dow, Jones & Co., wherein they say that 27 munition factories in the United States have contracts of war orders for 1916 to deliver to the European powers aggregating $2,000,000,000 and that the profits on those contracts will aggregate more than $1,000,000,000. That is about the percentage of profit recognized by military men. When you gentlemen come to face the preparedness bills that will come before this House you will have the same question that confronts us now. Are you going to run away from it or are you going to meet it like men? If 25 per cent is not enough—and I think it is enough for any concern—if that is not enough profit, make it 50 per cent, but for Heaven's sake do not let the Army engineers in the future, as they have in the past, give private contracts with more than 100 per cent profit. I have instanced cases where the profit is over 300 per cent. That is all this amendment is; it simply provides a limitation on the power of the Army engineers and the Secretary of War to grant private contracts. It provides that contracts shall not be made when the profits aggregate more than 25 per cent as based on the cost to the Government. Everybody concedes that the Government costs are always higher than private costs for the same thing. That has been testified to by admirals in the Navy and by generals in the Army in regard to the production of war supplies. There are

many reasons for it. It is true because of certain regulations in all Government work that do not obtain with a private manufacturer, and therefore when I am offering an amendment limiting the profit to 25 per cent, based on Government costs, in actual operation it will yield a profit of more than 35 per cent to the private manufacturer, and I submit that that is enough to take reasonable care of interest on capital invested, depreciation, insurance, and such charges, and it will, in addition, even pay a big return on watered stock.

Gentlemen talk about competition in contracts. You and I know that in railroad contracts and river and harbor contracts there is, as a general rule, no fair competition, and the only place you have to practice real economy and to protect the Treasury from being robbed is to write in bills like this limitations of this kind. I submit that 25 per cent is not only ample, but it is a liberal profit.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Iowa.

The question was taken; and on a division (demanded by Mr. GOOD), there were 22 ayes and 48 noes.

So the amendment was rejected.

The Clerk read as follows:

Georges River (Thomaston Harbor), Me.: For maintenance, $10,000.

Mr. HUMPHREY of Washington. Mr. Chairman, I move to strike out the last word. I do that for the purpose of saying to the chairman that I will ask unanimous consent that before we consider any of the other items we go to the item at the bottom of page 4, the East River of New York, and take that up and dispose of it. The reason I do that is because I think the item in regard to the East River may influence Members whichever way we act on it, especially if we reject it. And it would shorten up the time on the consideration of the bill. Further than that, I feel that a good many Members will be guided in their votes on other items quite largely by what happens to that item.

Another thing, I do not think that it is fair that we should pass upon the items before we reach the New York item, because if we are going to take on new projects I anticipate that will decide a good many votes on the other items in the bill. Speaking for myself frankly, to illustrate what I mean, if the New York item be taken on in the bill, being a new project, I think there are several other items which will be offered as new projects. I do not think that we ought to be compelled to vote on the Boston Harbor amendment until we know whether the committee is going to sustain the River and Harbor Committee in taking on this new project. I think it would be a saving of time, and I think it would be fair all around, if we go to the East River item first. Therefore I ask unanimous consent that the East River item be immediately considered before reading any other portion of the bill.

The CHAIRMAN. The gentleman from Washington asks unanimous consent that the item found on page 4 of the bill, line 23, be considered now, out of its order. Is there objection?

Mr. SPARKMAN. Mr. Chairman, I very reluctantly object to that. I have been giving it consideration while the gentleman has been speaking, and it seems to me that we had better go ahead with the bill as it is.

The Clerk read as follows:

Harbor at Boston, Mass.: For maintenance, $100,000.

Mr. TREADWAY. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

After the period, on page 2, line 8, insert the following:
"Harbor at Boston, Mass.: For improvement with a view of providing a channel between President Roads and the sea, 40 feet deep at mean low water, in accordance with report of the Chief of Engineers, United States Army, published in House Document No. 931, Sixty-third Congress, second session, $400,000."

Mr. TREADWAY. Mr. Chairman, I ask unanimous consent that the amendment which I have just offered be regarded as pending and passed over until the item on page 4, line 23, and page 5, lines 1 to 12, be disposed of, and that this amendment which I have just offered be taken up at the conclusion of the item referred to.

The CHAIRMAN. The gentleman from Massachusetts asks unanimous consent that the item and amendment he has offered thereto be passed until after the consideration of the item found at the bottom of page 4, line 23. Is there objection?

Mr. SPARKMAN. I object.

Mr. TAGUE. Mr. Chairman, the amendment offered by my colleague from Massachusetts [Mr. TREADWAY] is, to my mind, one that deserves the favorable consideration of this House at the present time. I do not intend in any way to hold up the proceedings of this body in supporting this amendment, and it is only with the intention of laying before the body just what this amendment means to the people of Massachusetts that I rise. We have heard a good deal during this session about preparedness. We have been told that we are going to expend millions of dollars in building up a Navy and Army, and yet, Mr. Chairman, at this very moment there stands one of the new products of the Navy of this country, the *Pennsylvania*, unable at low tide to come up into the navy yard at Boston, because there is not water enough to admit her. That is the condition that prevails to-day in the harbor at Boston in the bay of Massachusetts, and we, the Representatives from that State, come before you and ask in all fairness to Massachusetts, which is nearer by 190 miles to the countries across the sea than any other port of the country, that our harbor be deepened, as it should be. For years the merchants of Boston and Massachusetts have liberally expended their money upon the port of Boston. For years they have been building up a port that will be a credit to the Nation, anticipating, as they have, that when the right time came, and it comes now, the United States Government would be willing to put their small share into the bucket in order that the harbor might be improved as it should be.

In our city within the last few years we have expended $9,000,000 in building docks and are to-day building the largest and the best dry dock that can be built for the reception of the ships for repair. This dry dock will be built at an expense of over $3,000,000 of the business men's money of the State of Massachusetts. The State of Massachusetts has said to the Government, "You have the right to that dock as against all commercial or business enterprises." The State of Massachusetts has also built at a great expense out of her treasury the largest pier on the Atlantic coast, large enough to accommodate six of the largest ships afloat, and in each of these docks they have deepened the water to 40 feet, while the main channel in our bay is only 35 feet, and is unable to accommodate ships that are now being constructed, and which should be brought in for commercial as well as military purposes. A great deal has been said here in criticism of the committee that has brought in this appropriation bill, but I do not wish to criticize that committee and I will not, because I believe they have done a great work for the Government. I realize how hard it is to bring in an appropriation bill that will satisfy everyone. I realize that every district of the Nation is clamoring for some improvement, which is the same that we are doing for the improvement in our district, and I realize, too, that it is the ambition of every Member of Congress that that improvement shall go where he thinks it is for the best interest for the people of his community and will bring to the Government the best return. I am a believer in the opening up of the waterways of the country.

I think it is the best thing for the commercial interests of the Nation that wherever a river is not navigable and it is going to improve the Nation's resources, it is the duty of the Government to open the river up to such a degree of navigation that any ship that floats that will be required to enter may be able to do so. It is with that in mind that we from Massachusetts to-day say to you—and I know I speak the mind of my colleagues—that we do not want to deter this measure by any rider or amendment that might be proposed. We simply come here and ask as an act of justice at this time that the navy yard of our district be protected; that the commercial interests of our district be protected; that means be used whereby one of the great navy yards of these United States can be utilized to the best interests of the Government. [Applause.]

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

Mr. TREADWAY. Mr. Chairman, I ask unanimous consent that the gentleman may be permitted to proceed for five minutes further.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. TAGUE. Mr. Chairman, I do not intend to tire this House with figures or facts; I do not intend to delve into many figures I could present to the House; but I will ask to insert them in the RECORD, because I know that before this bill is passed you will have heard so much of figures that you will not care to go into them as we should. I do desire to state this: The foreign commerce of the port of Boston for the year 1915 was $290,516,803, a gain of $57,000,000 over that of 1914. New England manufactures one-seventh of the entire manufactured products of the Nation, and into the port of Boston and out of the port of Boston go the greater amount of these manufactures.

The United States has expended on Boston Harbor and its tributary rivers from 1825 to 1915, a period of 90 years, $12,668,000, or an average of $140,000 a year, while the State of Massachusetts in one-half of that time, from 1870 to 1915, 45 years, has expended the sum of $15,000,000, or $343,000 a year. The receipts from the customs at the port of Boston are over

$10,000,000 a year, and the income tax to the Government from the citizens of Massachusetts is $4,400,000 a year. I do not bring in these figures to show that any other part of the Nation or any other river or harbor is not entitled to consideration from this body, but I do contend, and I hope the members of this committee will agree with me, that when an expenditure is asked for that means so much to the State of Massachusetts and to all New England, which means the opportunity of enlarging the business of that section of the country, the expenditure of $400,000 at this time should not in any way deter the Members of the House from granting it to us. [Applause.]

Mr. ROBERTS of Massachusetts. Mr. Chairman, the amendment offered by my colleague from Massachusetts [Mr. TREADWAY] has another aspect than that of the purely commercial benefit to the port of Boston by a deepening of the channel. Preparedness is the watchword of the hour. In the harbor of Boston we have as fine a navy yard as you can find in the country, ample facilities for repairing battleships; and with the expenditure of a small amount of money that yard can be equipped to build battleships. We have, in addition to the navy yard, a new dry dock, mentioned by my colleague [Mr. TAGUE], which is being constructed under the direction of the directors of the port of Boston.

I want to say to this committee that battleships now under construction are practically twice the length of battleships built 12 or 15 years ago, and that we have not in this country to-day a dry dock that will accommodate the ships that the present Congress will probably authorize, because if we carry out——

Mr. HUMPHREY of Washington. Will the gentleman yield?

Mr. ROBERTS of Massachusetts. The presidential program. I yield.

Mr. HUMPHREY of Washington. Did I understand the gentleman to say we did not have a dock in a navy yard that would accommodate these vessels?

Mr. ROBERTS of Massachusetts. I said the ships we will probably authorize this year.

Mr. HUMPHREY of Washington. What is the size?

Mr. ROBERTS of Massachusetts. They are eight or nine hundred feet in length.

Mr. HUMPHREY of Washington. I think the gentleman is mistaken about that——

Mr. ROBERTS of Massachusetts. I am not mistaken on that proposition. I think the gentleman will find——

Mr. HUMPHREY of Washington. The gentleman is mistaken about there not being a dock to put them in.

Mr. ROBERTS of Massachusetts. The only docks under construction that will take in ships of that size are the dock at Boston, being built by the municipality, the dock being built by the Union Iron Works in San Francisco Bay, and the dock at Hawaii, being built by the Government. It is essential, if this plan of preparedness is to be a successful——

Mr. TREADWAY. Will the gentleman yield?

Mr. ROBERTS of Massachusetts. I do.

Mr. TREADWAY. Will the gentleman be kind enough to state the depth that these battleships will draw as at present contemplated?

Mr. ROBERTS of Massachusetts. That, of course, is a matter of conjecture, because, as I understand, the plans have not yet been made. Presumably, however, the draft will not exceed 31 feet. They may not be that draft, but if we are to have a successful plan of preparedness we must make it possible that these great battleships can come from the ocean into a dock or into a navy yard, and to do that we must provide a sufficient depth of water in the channels leading from the ocean to these docks and these navy yards. Hence, it is essential as a part of the broad plan of preparedness that this port of Boston and other ports of this country be provided with sufficient depth of water to take in these battleships. Now, that does not mean that there should be depth of water enough to take a battleship under normal conditions; you must have a sufficient depth of water to take a battleship to a dock or to a navy yard when she has been wounded in a fight and she is drawing from 5 to 10 or more feet, by reason of that condition, over the normal draft, otherwise you may lose your ship because you can not get her to a place of safety to make the repairs.

Mr. TREADWAY. Mr. Chairman, I occupied so much of the time of the committee yesterday in connection with the subject matter of the amendment now before us that I do not feel inclined to transgress too long upon the committee at this time. I agree most heartily with all the statements made by my two colleagues, the gentleman from Boston [Mr. TAGUE] and the other gentleman from our State [Mr. ROBERTS]. There is every argument possible to be made that the appropriation asked for by this amendment should go into the bill at this time. In conversation a short time ago with Admiral Benson, he told me that there was water enough now to get into Boston Harbor any ship at present in commission. He did say that the future would require more water to reach the dry dock now in process of construction, and I called his attention to the fact that the last improvement of Boston Harbor required 12 years to complete; that the dry dock in process of construction now would require about a year and a half to complete, so that if we are to have water enough to reach that dry dock we certainly must begin before the time of its completion. We can not afford to wait, Mr. Chairman, 12 years to secure sufficient water to reach the dry dock put at the disposal of the Federal Government, paid for by the State of Massachusetts, the largest dry dock on the Western Hemisphere, a dock which Admiral Benson testified before the committee will take in any vessel that can go through the Panama Canal. Now, the gentleman from Illinois [Mr. MADDEN] a few moments ago referred to the percentage between the amount contained in this bill for the various States and the amount that those States pay into the Federal Treasury in the way of income taxes.

I just wish to use the comparison to carry out the same idea as the gentleman from Massachusetts [Mr. TAGUE] did in these same figures. Massachusetts has in this bill to-day $315,000—$150,000 of it is for improvements and $165,000 of it is for maintenance of existing projects. Last year, Mr. Chairman, there was collected in the State of Massachusetts from the corporation income taxes, $1,853,157.41; from the individual income taxes, $2,683,084.53; making a total paid by citizens of the State of Massachusetts of $4,536,141.94. So that no Member of this House can claim that Massachusetts is asking anything unfair from the Congress of the United States when it affords a channel whereby its own vessels can reach the dry dock built by the money of the citizens of Massachusetts and which the State is glad to have the Federal Government use. Massachusetts has not only made this large contribution to the Federal Treasury, but has more than matched dollar for dollar in the development of the harbor. I submit, Mr. Chairman, that that is as fair a proposition as ever was put before this House.

Mr. SIMS. Will the gentleman yield for a question?

Mr. TREADWAY. I will.

Mr. SIMS. I hear this income-tax argument so often I would like to ask a question. Is it not a fact that in sections like this there is quite a percentage of people who own stock in corporations beyond the State from which they receive profit and pay taxes on?

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

Mr. ROBERTS of Massachusetts. Mr. Chairman, I ask unanimous consent that my colleague may have five minutes more.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. TREADWAY. I think the gentleman's question is rather beyond the point. It is a mutual business transaction. People get their money's worth for anything they buy in the Commonwealth of Massachusetts.

Mr. SIMS. I am not opposing the gentleman's amendment, but it is like talking about where the revenues are collected.

Mr. TREADWAY. I do not consider the argument I make as the sole basis on which I ask the appropriation.

Mr. SIMS. I have no doubt some of the investments in my own State pay some of that.

Mr. TREADWAY. The gentleman's people, then, have investments in good corporations.

Mr. HOLLAND. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Massachusetts yield to the gentleman from Virginia?

Mr. TREADWAY. Yes. If I get the time, I am perfectly willing to answer all questions, but I trust the chairman of the Committee on Rivers and Harbors will not cut me off in the matter of time.

Mr. SPARKMAN. I want a reasonable time to be allowed for this discussion.

Mr. HOLLAND. Would it not be a good plan to improve channels used by the Government for the Navy without deviating too much from the rule of the committee by including new projects?

Mr. TREADWAY. Yes. I am glad the gentleman brought up that question. I referred to it indirectly in my remarks yesterday. I think the approaches to our navy yards in this country are absolutely to-day in a class by themselves. There is no comparison between the merits of improvement of the approaches to any navy yard on the Atlantic or Pacific coast with the possibility of improving or maintaining some little

commercial channel, whether in New England or elsewhere in the country. That is where we want to spend our money. We want to spend it on just such propositions as this amendment calls for. It is an element of preparedness. It is what the people of our country demand to-day, and therefore I say we come right here absolutely on our merits asking, as one feature of the element of preparedness, that we deepen the channel so that battleships can get to the dry dock at Boston and to the Charlestown Navy Yard. I agree absolutely with the gentleman from Virginia [Mr. HOLLAND].

Mr. ROGERS. Mr. Chairman, will my colleague yield there?

Mr. TREADWAY. Certainly.

Mr. ROGERS. Is it not a fact that the port of Boston, in value of trade, is the second port in the United States?

Mr. TREADWAY. Yes; the second port in the United States and the fifth in all the world. I have all those statistics in the articles I inserted in the RECORD yesterday.

Mr. MOORE of Pennsylvania. Mr. Chairman, will the gentleman yield there?

Mr. TREADWAY. Yes.

Mr. MOORE of Pennsylvania. I hope the gentleman will make that statement with a reservation. Philadelphia is now the second port in the matter of collections.

Mr. TREADWAY. In what particular?

Mr. MOORE of Pennsylvania. In the matter of collections, and also in the matter of tonnage.

Mr. TREADWAY. Well, my authority is the document which I quoted from yesterday. If it is not up to date, I am very glad that occasionally the State of Pennsylvania is not so slow as our good, old, conservative New England. Certainly it would not be if all its citizens were like the gentleman from Philadelphia. [Applause.]

But, Mr. Chairman, in order that the gentleman may not have too exalted an idea of Philadelphia's greatness and as a matter of accuracy I will state the total value of imports for the Massachusetts district in 1915 was $159,917,216, whereas the value for the Philadelphia district was $67,913,141. Also, total number of trans-Atlantic passengers handled during 1913 out of Boston was 114,000 and out of Philadelphia 87,000.

Mr. MOORE of Pennsylvania. Well, Mr. Chairman, under those circumstances I will not press the fact so as to interfere with the gentleman's argument. [Laughter.]

Mr. TREADWAY. Now, Mr. Chairman, my argument for this amendment is based very largely on two factors. One is the article we find in the House document to which I referred when I offered my amendment—House Document 931, Sixty-third Congress, second session. It contains this statement from the Board of Engineers:

> The navy yard located at Charlestown is one of the most important in the country. The strategic conditions are such that in the event of a war with almost any European power of importance a naval battle may be expected off the New England coast. In such an event, however the battle might result, there would probably be a number of crippled ships of the first class coming into the yard for repairs, and some of these, on account of their condition, drawing more than their normal draft.

That is exactly the nature of the argument used by my colleague, Mr. ROBERTS, and it has the official backing of the Chief of Engineers. I am quoting directly from the language used in his report. Then again I referred yesterday to the annual report of the Secretary of the Navy which he made to this Congress on December 15 last.

The CHAIRMAN. The time of the gentleman from Massachusetts has again expired.

Mr. TREADWAY. I ask unanimous consent, Mr. Chairman, for five minutes more.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. TREADWAY. The Secretary of the Navy, in his report submitted to this very Congress on December 15, 1915, uses this language:

> It will be the greatest graving dock in the world. When completed it will readily dock the largest war vessels built or contemplated to be built for the future, sufficient in size to receive commercial vessels considerably larger than the giants in the trans-Atlantic Ocean trade.
>
> This monumental work, involving an expenditure by the State of Massachusetts of well over $3,000,000, while being constructed primarily for the commercial purposes of the port of Boston, will afford the Navy of dry-dock facilities in this most important harbor superior in extent and size to that available at any other American port, and by arrangement give the United States Government prior and paramount use of the dock in time of war.

I think I have quoted that section now three times upon this floor, and I shall be glad to quote it three times three if it will bring home to the minds of our Members here the importance of the proposition I am presenting.

Mr. BORLAND. Mr. Chairman, will the gentleman yield there?

Mr. TREADWAY. Yes.

Mr. BORLAND. I understand the gentleman is urging this improvement largely as an entrance to the dry dock at Charlestown Navy Yard?

Mr. TREADWAY. There are two facilities. Do not confuse them. There are two of them, the dry dock and the navy yard.

Mr. BORLAND. But in addition to that, it is also a commercial channel, used by the port of Boston?

Mr. TREADWAY. Certainly.

Mr. BORLAND. So that the use of it by the Navy is only one feature that the gentleman is laying some stress on, and in addition to that the port of Boston is largely benefited by the channel being open?

Mr. TREADWAY. Undoubtedly. I said yesterday, Mr. Chairman, that the argument at the present time is not based on the commercial interest. We have the argument for that; but we want here to-day to be put to the test, and the call of the hour is for better preparation all along the line. We must have a bigger Navy, we must have docks at which the vessels can be repaired, and we must have a yard where they can be equipped. Above all, we must have a sufficient depth of water to make use of these facilities. It all goes to make up a part of the preparedness program.

And it is, as I have said several times, largely on that score, rather than on the commercial side, that I present the claims of Boston to this House at this time.

Now, I want to add just one word more about the report of the Secretary of the Navy. Just what did he intend to convey to this House by the report he made to us on December 15? I recognize that it is perhaps not the means by which the executive departments ask for legislation. They go before our committees in the usual process of appropriating for various items. But it does carry with it the weight of the judgment of the Secretary of the Navy in calling to the attention of the House of Representatives various meritorious ideas which he wishes to impress upon the membership in view of their action. What other reason would there be for the Secretary of the Navy spending his time in writing a report if it was not that he wanted his opinion brought before Congress, with an idea of the influence that it would have on congressional action? So I am very willing indeed to leave this case in your hands, realizing what the views of the Secretary of the Navy are and the importance of the immediate adoption of this project for preparedness. [Applause.]

Under permission given to extend my remarks I append the report of the Chief of Engineers and the report of the Board of Engineers and a portion of the survey from the district engineer officer, Lieut. Col. W. E. Craighill:

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, April 25, 1914.

From: The Chief of Engineers, United States Army.
To: The Secretary of War.
Subject: Report on preliminary examination and survey of Boston Harbor, Mass.

1. There are submitted herewith, for transmission to Congress, report dated December 11, 1912, by Col. Frederic V. Abbot, Corps of Engineers, and report dated April 4, 1914, with map, by Lieut. Col. W. E. Craighill, Corps of Engineers, on preliminary examination and survey, respectively, authorized by the following item contained in the river and harbor act approved July 25, 1912:

"Boston Harbor, Mass., with a view to securing increased width and depth in the channel from President Roads to the sea; also with a view to providing deep-water connection with such suitable terminals as may be established by the directors of the port of Boston."

The act approved March 4, 1913, provides for an examination of "Boston Harbor, Mass., with a view to securing increased width and depth of channel from Mystic River to President Roads." As this locality is included within the scope of the investigation authorized by the act approved July 25, 1912, and is fully covered by the reports mentioned above, no separate report thereon will be submitted.

2. The existing project for improvement of the portion of Boston Harbor specified in the above-quoted items provides for channels 35 feet deep at mean low water, 1,200 feet wide from the navy yard at Charlestown and the Chelsea Bridge and Charles River Bridge to President Roads, 6 miles, and 1,500 feet wide from President Roads through Broad Sound to the ocean, 1½ miles, at an estimated cost in round numbers of $7,994,000. This project is nearly completed. The commerce of Boston Harbor is large and important, and a number of deep-draft vessels are engaged in its foreign trade. It appears that several large foreign steamship lines have recently entered the Boston service, and the further improvement of the entrance channels desired is largely to facilitate the movement of these vessels, the existing channel capacities being ample for all coastwise vessels and for the bulk of the foreign carriers. The district officer states that the most important desire of the Boston interests is that the large steamers may load to full capacity in the port itself and sail direct to their destinations abroad without regard to the tide and without touching at any other American port to complete their cargoes. Taking into account the low tides at certain times, the effect of the winds upon the water surface, the presence of ledge rock on the bottom, and the necessity for ample clearance for deep-draft vessels, he reaches the conclusion that the inner channel from the navy yard to President Roads should be given a depth of 40 feet at mean low water over a width of 600 feet, covering the southerly half of the present 1,200-foot channel.

This work is estimated to cost $2,300,000. For the outer or Broad Sound Channel he recommends a depth of 45 feet in the rock section and a nominal depth of 40 feet where the material can be dredged, this channel to be 900 feet wide and to be located along the southeasterly side of the present 35-foot cut, with a slight bend to the eastward at the entrance opposite Finns Ledge. The cost of this channel is estimated at $985,000. He proposes to do the bulk of the work by contract, but for the prompt and economical execution of the project and for its maintenance after completion he recommends the construction of a self-propelling seagoing ladder dredge, with seagoing tug and necessary dump scows, at an estimated cost of $560,000, making a total expenditure of $3,845,000 for work and plant, with $30,000 annually for maintenance. To this extent he believes the locality to be worthy of further improvement, and in this view the division engineer concurs.

3. These reports have been referred, as required by law, to the Board of Engineers for Rivers and Harbors, and attention is invited to its report herewith, dated April 22, 1914. In connection with its consideration of the subject, the board visited the locality and held a public hearing in Boston on March 19, 1913. For reasons fully explained the board considers it inadvisable to enlarge the present inner channels of Boston Harbor at this time, but it is of opinion that the general project for the harbor should be modified by providing a channel between President Roads and the sea, on the lines recommended by the district officer, 900 feet wide except at the outer end, where it is widened to 1,100 feet, 40 feet deep in general, but 45 feet deep through rock, and the building of a dredging plant, at a total estimated cost of $1,545,000.

4. After due consideration of the above-mentioned reports, I concur with the views of the Board of Engineers for Rivers and Harbors, and therefore report that the further improvement of Boston Harbor, Mass., is deemed advisable to the extent of providing a channel between President Roads and the sea, on the lines recommended by the district officer and indicated on the accompanying map, 900 feet in width, widening to 1,100 feet at the outer end, 40 feet deep at mean low water in general, but 45 feet deep through rock, and the construction of a dredging plant, at a total estimated cost of $1,545,000. The initial appropriation should be $400,000 in cash, with contract authorization for the remainder.

DAN C. KINGMAN,
Chief of Engineers, United States Army.

REPORT OF THE BOARD OF ENGINEERS FOR RIVERS AND HARBORS ON SURVEY.

[Third indorsement.]

BOARD OF ENGINEERS FOR RIVERS AND HARBORS,
April 22, 1914.

To the CHIEF OF ENGINEERS, UNITED STATES ARMY:

1. The act of July 25, 1912, provides for a preliminary examination of Boston Harbor, Mass., with a view to securing increased width and depth in the channel from President Roads to the sea; also with a view to providing deep-water connection with such suitable terminals as may be established by the directors of the port of Boston. The act of March 4, 1913, provides for an examination of Boston Harbor, Mass., with a view to securing increased width and depth of channel from Mystic River to President Roads. Both subjects are covered by the reports on preliminary examination and survey, submitted herewith, under the act of 1912.

2. The entrance channel to President Roads have been under improvement since 1867 under projects providing successively for depths of 23, 27, 30, and 35 feet. On these channels there had been expended to June 30, 1912, practically $11,000,000. The total expenditures for the harbor, including tributary streams and auxiliary works, have amounted to something over $12,000,000. The 23, 27, and 30 foot channels have been completed. The 35-foot project, which provides for a width of 1,500 feet in Broad Sound and 1,200 feet inside of President Roads, was adopted by the act of June 13, 1902, and is nearly complete, there being an available depth of 33 feet, although the work done has not included the removal of Finns Ledge, a detached 25½-foot ledge lying about a mile outside of but in line with the 35-foot channel. The district officer states that if a 40-foot channel is provided by Congress, the best method of disposing of Finns Ledge will be to use it as a foundation for a lighthouse. The range of tides at Boston Navy Yard is from 8.1 feet to 10.9 feet, the mean tide being 9.6 feet.

3. The foreign commerce reported herein has in recent years ranged from about 1,600,000 to 2,000,000 tons, valued at $190,000,000 to $200,000,000. There is also a very large coastwise commerce at Boston, but this is carried in moderate draft vessels and does not properly enter into the consideration of greater depths in the channels of approach to this harbor. Several large foreign steamship lines have recently entered the Boston service, and the further improvement of the entrance channels desired is largely to meet this condition.

4. The State of Massachusetts, through the directors of the port of Boston, is doing its part toward the development of the harbor by the creation of an anchorage basin, connecting channels, and extensive terminals, on which and for other improvements there has been expended nearly $8,000,000 up to the present time, and provision has been made for a further expenditure of about $7,000,000. It is in connection with the latter that the second item of the act is concerned.

5. The district officer's study of the needs of commerce in the inner harbor, taking into account the low tides at certain times, the effect of the winds upon the water surface, the presence of ledge rock on the bottom, and the necessity of ample clearance for deep-draft vessels, has led him to the conclusion that a depth of 40 feet at mean low water is essential. He has given consideration to a width of 1,200 feet, corresponding to that of the present channel, but concludes that a width of 600 feet will answer the needs of the port for many years to come. The survey covered a channel north of Governors Island, as suggested by the directors of the port of Boston, but the results show that to create a channel here 40 feet deep would be much more expensive than by following the present channel. Moreover, it appears that the proposed terminal developments at East Boston will not be available in the near future, and therefore the channel to the north of Governors Island is not urgently needed.

6. Various estimates are submitted for the outer or Broad Sound Channel covering widths of from 900 to 2,000 feet by slightly different routes and depths of 40 and 45 feet. The investigations of the district officer, which included consultations with experienced navigators, led him to the conclusion that a channel depth of 45 feet in the rock section and a nominal depth of 40 feet elsewhere, with a width of 900 feet, widened to 1,100 feet at the outer end where the channel bends to the eastward of Finns Ledge, will serve the needs of commerce for the present. For the prompt and economical execution of the project and its subsequent maintenance, the district officer believes a seagoing ladder dredge, with necessary floating plant, is desirable, and he submits an estimate therefor. He recommends the locality as worthy of additional improvement in accordance with the following estimates:

An inner channel 600 feet wide, 40 feet deep, from President Roads to the navy yard	$2,300,000
An outer channel from President Roads to the sea 900 feet wide, with a slight bend at the outer end, and 1,100 feet wide at the entrance east of Finns Ledge, 45 feet deep through rock and of sufficient depth to insure safe navigation at mean low water for vessels requiring 40 feet draft in the inner harbor	985,000
Dredge with seagoing tug and dump scows	560,000
Total	3,845,000

His estimate for the maintenance of the project is $30,000 per annum. The division engineer concurs in the views and recommendations of the district officer.

7. In addition to the information secured through the reports on preliminary examination and survey the board held a public hearing in reference to this subject in the city of Boston on March 19, 1913, which was largely attended by representatives of the principal interests concerned. It appears that the needs of the city of Boston have, up to the present time, outgrown successively the various projects adopted for the entrance channels, and arrangements have recently been made with some of the more important trans-Atlantic lines to engage in service at this port, using large and deep-draft vessels, for which an increase in depth is considered necessary. It is claimed that out of a total of 172 vessels in existence in 1911–12 having a length of 500 feet or over, 25 were in the Boston trade, and 4 others over 600 feet in length had been contracted for. These vessels draw from about 30 feet up to 34 feet. Stress was laid upon the fact that Boston has an advantage over New York in that it shortens the trip to European ports by 190 miles, a matter of particular importance to the passenger service.

8. It is quite clear from the data presented that the present entrance channels at Boston Harbor have ample width, and that the additional depth desired is merely to enable a few large trans-Atlantic passenger boats to sail fully loaded without reference to the tide. The European ports for these same boats do not generally have as great low-water depth as that already provided at Boston. A change of not exceeding three hours from a fixed time of departure would apparently enable the largest of these boats to sail without any difficulty. It is not believed that the resulting inconvenience would be sufficient to warrant the large initial expenditure of nearly $4,000,000 to prevent it.

9. On the other hand, it is apparent that on account of the exceptional exposure of this locality a somewhat greater depth is necessary in the outer channel from President Roads to the sea in order to give it a capacity equivalent to that of the inner channel, and the board believes that a depth of 40 feet is required for this purpose. Moreover, in giving the depth of 40 feet it is considered advisable to remove ledge rock to a depth of 45 feet, as the additional expense involved is not very large. The board therefore concurs with the district officer and the division engineer in recommending the outer channel proposed by the district officer, except that the general project depth should be limited to 40 feet. The board also concurs with the district officer and the division engineer in the opinion that it is of great importance to provide the Government dredge.

10. In conclusion, therefore, the board considers it inadvisable to enlarge the present inner channels of Boston Harbor at this time, but it is of opinion that the general project for the harbor should be modified by providing a channel between President Roads and the sea, on the lines recommended by the district officer, 900 feet wide, except at the outer end, where it is widened to 1,100 feet, 40 feet deep in general, but 45 feet deep through rock, and the building of a dredging plant, at a total estimated cost of $1,545,000. The initial appropriation should provide the sum of $400,000 in cash and contract authorization for the balance.

11. The board concurs with the district officer and the division engineer in the opinion that a lighthouse on Finns Ledge is essential to properly mark the entrance and give reasonable safety to navigation.

12. In compliance with law, the board reports that there are no questions of terminal facilities, water power, or other subjects so related to the project proposed that they may be coordinated therewith to lessen the cost and compensate the Government for expenditures made in the interests of navigation.

For the board:

W. M. BLACK,
Colonel, Corps of Engineers,
Senior Member of the Board.

* * * * * * *

SURVEY OF BOSTON HARBOR, MASS.

WAR DEPARTMENT,
UNITED STATES ENGINEER OFFICE,
Boston, Mass., April 4, 1914.

From: The District Engineer Officer.
To: The Chief of Engineers, United States Army
(Through the Division Engineer).
Subject: Survey of Boston Harbor, Mass.

1. In compliance with instructions in your letter dated March 27, 1913, the following report is submitted on the survey of "Boston Harbor, Mass., with a view to securing increased width and depth in the channel from President Roads to the sea; also with a view to providing deep-water connection with such suitable terminals as may be established by the directors of the port of Boston."

These instructions were accompanied by the following recommendations of the Board of Engineers for Rivers and Harbors of March 24, 1913:

"2. It is recommended that estimates be prepared for depths of both 40 and 45 feet, and widths of 1,200, 1,500, and 2,000 in the outer channel; and for a depth of 40 feet and widths as suggested by the district officer in the inner channel."

The Chief of Engineers directed that these recommendations be complied with.

2. The channel is divided into two parts, viz, from the bridges at the head of the harbor to President Roads, about 5½ miles, and from President Roads to the sea, which is, to the outer end near Finn's Ledge by the present deep-draft channel, about 3 miles. It is necessary first to consider and fix the depth required in the channel from the city to President Roads, which will be designated as the inner channel. Three controlling features are present, (a) the needs of deep-sea traffic using the port, (b) the new dry dock being built with

State funds and the State terminals at South Boston, and (c) the navy yard at Charlestown. On October 16, 1912, the Acting Secretary of the Navy advised the Secretary of War of the following recommendation of the General Board, which had been approved by the Navy Department:

"The General Board recommends that channels leading to all the first-class docking, repair, and supply yards be dredged to a depth of 40 feet at mean low water and to a least width of 750 feet, and greater if practicable."

(a) The needs of the deep-sea traffic would require the extension of the channel to the upper harbor, where are located the White Star, Allan, Red Star, and other trans-Atlantic lines. The expense to the United States to meet the needs of such commerce would be lessened by requiring all lines to establish themselves in one neighborhood, and efforts to this end are being made. For the present study, however, it is not a material matter, as if the channel is to go to the navy yard the commercial docks of deep draft at the upper end of the inner harbor would be similarly benefited. The most important desire of the Boston interests is that the large steamers may load to full capacity in the port itself and sail direct, without regard to the tide, to their destination abroad, without touching at any other American port to complete their cargoes. The advantages of this manifest and the commercial statistics indicate that full cargoes can be offered. A vessel capable of loading to 34 feet, which has to go to sea drawing only, say, 31 feet, loses the most profitable part of the voyage. The additional 3 feet draft in vessels of the type under consideration would carry practically one-third more cargo, with comparatively little increase of cost to the carrier. Boston is the commercial center of New England, and with proper facilities can draw both export and import business from and to the most important manufacturing States in the country, which are near it, without regard to its business with the Middle West. It has exceptionally good facilities at both State-owned and private terminals for transferring freight from rail to vessel and vice versa, as no lighterage is required. In this respect it is superior to New York, and I have been told by the Chicago agent of one of the most important trans-Atlantic lines that Boston is preferred by his company for this purpose. The largest class of steamers now coming to this port are capable of loading to depths of 33 to 34 feet; when under way in shallow water, even at the moderate speed required for steerageway, they no doubt settle as much as 3 feet more at the stern.

Twice a month, when the spring tides occur at the sailing hour, there may be 1 to 3 feet less than the present mean low-water depth. A list of predicted tides in excess of 1 foot below mean low water at Boston, from Coast Survey Tide Tables, 1913, is appended. (Not printed.) These do not take into account the effect of the wind, which at not infrequent intervals produces low tides in the inner harbor five-tenths to 1 foot below the predicted normal. This effect of the wind naturally grows less as we approach the open sea. My conclusion is that it is reasonable to say that 40 feet is desirable in the inner harbor for the commercial interests of the port, this margin being no more than is reasonable to allow under the ship's bottom to make her steer properly. Added to this are the uncertainties of maintaining any deep channel within a foot or two of the project, or even of knowing whether or not the depths exist to within this limit. The danger of too narrow a margin between a vessel's keel and the bottom is a more than usually serious consideration in Boston Harbor because of the presence of ledge rock bottom over large areas. The above remarks in this paragraph are based on vessels drawing 34 feet, the deepest draft now used or under contract for use in Boston Harbor, but many of the newer steamships are being built to load to as much as 37 feet. There is no reason why these steamers may not later come into Boston, if not within a few years on account of the commerce of the port, at least for dry-dock accommodation. I am informed that the *Aquitania, Mauretania, Lusitania,* and *Imperator* are unable to dock anywhere on this side of the Atlantic. Any one of them could readily be accommodated in the dry dock now building at South Boston.

(b) The dry dock is the nearest to the sea of the three points to be reached for the purposes named above. It is being built to have 35 feet on the sills, and could at normal high tide dock vessels of perhaps 43 feet draft. This indicates that they are providing for at least 40 feet draft. This is also the depth being provided at the State terminals at South Boston and Commonwealth Pier No. 1, East Boston, in the slips and approaches.

(c) The navy yard located at Charlestown is one of the most important in the country. The strategic conditions are such that in the event of a war with almost any European power of importance a naval battle may be expected off the New England coast. In such an event, however the battle might result, there would probably be a number of crippled ships of the first class coming into the yard for repairs, and some of these, on account of their condition, drawing more than their normal draft.

Mr. SPARKMAN. Mr. Chairman, I hope this amendment will not be adopted. There is really no excuse for it at this time that could not be urged in favor of many other projects that we are leaving for another bill. This is essentially a new project—one of a class that we have excluded from this bill, with one single, solitary exception. That exception is the East River project. I may say, further, that this project is not on all fours with that by any means. There was one overpowering reason for the insertion of that project in this bill, namely, the letter expressing the conviction of the President that it should go in as a part of the national-preparedness plans to come up before Congress at this session.

Mr. TREADWAY. I should like to ask the chairman of the committee whether, if a similar communication had been asked for and secured from the President in behalf of the Boston project, he would then consider it overwhelmingly necessary to put it in the bill?

Mr. SPARKMAN. If, in addition to such a request from the President, the proper naval officers had come before us, as in the East River project, or in any other way had assured us that they needed this improvement in the interest of the Navy, and that its improvement was urgent, of course, we would have included it in the bill.

But they have not done that; on the contrary, they have practically said it was not urgent. Admiral Benson, in speaking of the importance of Boston as a navy yard, says in a letter to myself:

Referring to our conversation over the telephone—

This letter was written on March 4—

and to more fully state the situation with regard to the navy yards and channels on the eastern coast of the United States, I think it well to inform you that the only navy yard on this coast now fitted for building battleships is the one at New York, which emphasizes the necessity for deepening the channel to that yard.

A little further on and with reference to the Boston yard he says:

The Boston yard has one building slip on which an 8,500-ton ship is being constructed and will be completed probably this year. It would be necessary, in order to build battleships at this yard, to construct an entirely new building slip, and it is not believed desirable to do this at that yard.

We therefore see that, so far as the Government dry dock is concerned, there is no necessity for its improvement. It is urged here, however, that, while it is not needed for that purpose, it is necessary on account of the fact that the State of Massachusetts proposes very soon to erect——

Mr. TREADWAY. Is erecting——

Mr. SPARKMAN. Is erecting and will have constructed within the next three or four years a dry dock capable of accommodating battleships. But that yard is not now ready, is only under construction, and will not be completed for three or four years. Now, if this Congress adjourns, we will say, on the 30th of June—I can not tell as to that——

Mr. TREADWAY. We will pray for that.

Mr. SPARKMAN. Or it may be in July or August, or whenever it is, only a very few months will elapse before we will have another river and harbor bill. Then this particular project can, no doubt will, come before the Committee on Rivers and Harbors, where it will be duly considered, and, if it has the merits that our friend from Massachusetts says it has, it will most assuredly be adopted. I am not, however, making any promises just now.

The CHAIRMAN. The time of the gentleman from Florida has expired.

Mr. SPARKMAN. I ask unanimous consent to proceed for five minutes.

The CHAIRMAN. The gentleman from Florida [Mr. SPARKMAN] asks unanimous consent to proceed for five minutes. Is there objection?

There was no objection.

Mr. SPARKMAN. I know something of this project, having read and studied it very carefully. The work recommended begins 6 or 7 miles from the city of Boston and covers the stretch of channel known as Presidents Roads, a channel about a mile and a half in length. It is the outer channel from Boston, leading into deep water in the Atlantic Ocean. They have 35 feet of water there now, with a 9 or 10 foot tidal rise, which affords 45 feet at high tide, or an available depth of 40 feet. That tide carries the same depth up to the city of Boston and to the navy yard they are now constructing there, so if the plant was finished and ready now I would not consider it as presenting an urgent case by any means; certainly not such a case as would justify an exception to our rule as to new projects. New York, with the greatest navy yard on the Atlantic seaboard, capable of accommodating the largest battleships that we propose to build, has only 30 feet of water.

Mr. MADDEN. Will the gentleman yield?

Mr. SPARKMAN. I yield to the gentleman from Illinois.

Mr. MADDEN. Is not the gentleman mistaken about the depth at New York. Is it not 40 feet?

Mr. SPARKMAN. Oh, no; not up to the navy yard. It is only 30 feet.

Mr. HULBERT. Twenty-six feet.

Mr. SPARKMAN. The gentleman from New York [Mr. HULBERT] says only 26 feet. Whatever the depth is, it is not sufficient to admit these large battleships to the navy yard except at high tide. But I am not going to discuss that particular feature now. We will reach that later.

Mr. MOORE of Pennsylvania. Will the gentleman yield?

Mr. SPARKMAN. Yes.

Mr. MOORE of Pennsylvania. Has the committee had before it any other new project like that at the port of Boston which it declined to consider?

Mr. SPARKMAN. We have had many projects before us, 150 in number.

Mr. MOORE of Pennsylvania. Were there any other navy-yard projects like that at Boston before the committee?

Mr. SPARKMAN. Yes; there was a navy yard brought to the attention of the chairman of this committee by the President some time ago, with the request that it be given consideration by the committee. That was the navy yard at Charleston, S. C.

Mr. MOORE of Pennsylvania. I want the gentleman to explain whether any other ports have made similar requests like that of Boston.

Mr. SPARKMAN. Yes; both Norfolk and Charleston. Now, Mr. Chairman, a word in regard to the work the State of Massachusetts is doing in the matter of developing her rivers and harbors. She is doing well along that line. Few, only two or three others, if any, are doing as well, and they are on the Pacific coast. But that should not influence us in this matter. The question here is whether we want to include in this bill another new project, one not in the same class with the ones we have included. There is no excuse and no reason for it, and I hope the amendment will not be adopted.

Mr. HUMPHREY of Washington. Mr. Chairman, this item under consideration differs from the New York item in one respect only, and the chairman of the committee has told you what that respect is. The only mistake the gentlemen from Massachusetts made who are in favor of this amendment was that they did not go to the White House and get its indorsement. In every other way it is equal with New York, except that it is better because they are going to have a larger dock. The truth about the matter is there is no emergency in either proposition. It is simply an attempt to take advantage of this general proposition of preparedness to get some money that otherwise they could not get. That is all there is in either one of the propositions. Notwithstanding what the gentleman from New York said, that I insinuated that he was playing politics, I assure the committee that I would not accuse the gentleman from New York under any circumstances of playing politics. [Laughter.]

Mr. FITZGERALD. Will the gentleman yield?

Mr. HUMPHREY of Washington. Yes.

Mr. FITZGERALD. The gentleman did not do me the honor to pay close attention to my remarks. I did not charge the gentleman with intimating that I was playing politics. What I resented was the intimation that the President of the United States, according to the gentleman from Washington, would stoop to request Congress for money for an improvement for national defense, merely as a subterfuge, when he was, according to the gentleman, seeking political advantage. I do not think it was worthy of the gentleman from Washington to make such a charge as that against the President, and to represent him to be doing an ordinary "fence-repairing job" that the gentleman from Washington and myself might indulge in without much criticism.

Mr. MANN. Which the gentleman from New York was, in fact, indulging in. [Laughter.]

Mr. FITZGERALD. Oh, no; I am a fence demolisher and not a fence repairer. [Laughter.]

Mr. HUMPHREY of Washington. Of course the gentleman from New York would not indulge in playing politics. I would not make that assertion on the floor of the House or anywhere else. If the gentleman from New York had read the rest of the report that he had in his hand——

Mr. FITZGERALD. I intend to put it all in the RECORD, as well as my letter from which the gentleman quoted one sentence.

Mr. HUMPHREY of Washington. That one sentence was enough; I did not want to incorporate the rest for fear that some one would accuse him of playing politics. If the gentleman had read a little further in the report, he would have found these words:

> It should, in fairness to the President, be stated that the presentation of the matter to him was entirely ex parte, and he was undoubtedly misled as to the facts and no doubt believed that an emergency really existed. But the majority of the committee can have no such excuse for their action. They had all the facts before them, and they knew that there was no existing reason justifying the inclusion of this item in the bill. In fact, the only defense made of the item was that the President desired it.

And that is the only defense made of it now. That was the defense that the chairman of the Rivers and Harbors Committee just made.

Mr. SPARKMAN. I want to say that that was the one proposition—not the overpowering reason, but the very great reason why we took it on, and I couple with that the explanation that Admiral Benson, from the navy yard, made as to the importance of the work.

Mr. HUMPHREY of Washington. The explanation Admiral Benson made absolutely demonstrated that there was nothing in the proposition at all.

The CHAIRMAN. The time of the gentleman from Washington has expired.

Mr. HUMPHREY of Washington. Mr. Chairman, I ask for five minutes more.

The CHAIRMAN. Without objection, the gentleman's time will be extended five minutes.

There was no objection.

Mr. HUMPHREY of Washington. Now, gentlemen of the committee, I am not saying anything that I think I ought not to say as to what occurred in the committee. I think it appears in the report, but the truth about it is that there is not a man on that committee that would have voted for this item except the gentleman from New York [Mr. HULBERT] if it had not been for the letter, not from the President, but from his secretary, and I would not accuse the secretary of playing politics any more than I would accuse the gentleman from New York.

Here is what happened: We went through the bill and took on no new items. The President had intimated that on account of the condition of the Treasury, as I understood it, we should not take on any new items. I was one of the Members who was in favor of taking on the new items. I believed this New York project ought to be put in the bill on a commercial basis, but it was no more emergency than many other items. But after we had done that, after we had gone through the bill, too late to get on any other item, then comes this letter from the President's secretary saying there was this emergency. I have respect for the President. We took it up, went into it and investigated it, and the investigation showed that there was no emergency whatever in regard to it. My distinguished friend from Missouri, Judge BOOHER, when Admiral Benson was before the committee, asked the question if there was not the same condition existing in all of the navy yards on the Atlantic coast, and his reply was substantially "yes." He said the same condition existed at Philadelphia and Norfolk and a worse condition at Charleston, S. C. So there was no emergency, and this talk that my friend from Massachusetts made——

Mr. HULBERT. Will the gentleman yield?

Mr. HUMPHREY of Washington. Yes.

Mr. HULBERT. Did not Admiral Benson state that there was sufficient water at Boston for the accommodation of the largest vessel of the United States Navy?

Mr. HUMPHREY of Washington. I do not know.

Mr. HULBERT. Did he not state that there was sufficient water in the Delaware River for the accommodation of the largest vessel in the United States Navy?

Mr. HUMPHREY of Washington. Yes. I do not want to be interrupted any more.

Mr. HULBERT. The gentleman yielded to me for a question.

Mr. HUMPHREY of Washington. Is the gentleman through with his question?

Mr. HULBERT. No; I am not.

Mr. HUMPHREY of Washington. Then state it.

Mr. HULBERT. What does the gentleman mean, then, by stating that the conditions at all of these navy yards along the Atlantic coast are the same?

Mr. HUMPHREY of Washington. I meant just exactly what Admiral Benson said, and I quote from the hearings:

> Mr. BOOHER. That navy yard is open at all times?
>
> Admiral BENSON. You would have to go up the Delaware, and you have to take it at practically high water. It is the same thing at Norfolk. You would want the high water, because the channel at Norfolk is very restricted, and at present it is too narrow to turn one of our big ships.
>
> Mr. BOOHER. Then the navy yards all along the Atlantic coast are practically in the same condition as the one at Brooklyn is—the harbor conditions are practically the same?
>
> Admiral BENSON. I do not know. I do not think so, sir.
>
> Mr. BOOHER. You say you have got to wait for high water if you take the Buttermilk Channel? What is the difference in the channel there and at the other navy yards?
>
> Admiral BENSON. The conditions are practically the same in that respect—that you have to wait for high water; but at Norfolk, for instance, I think the later ships coming out will have considerable difficulty in turning.

And that is the only thing that has ever been contended for the New York yard, that sometimes they have to wait for high tide in order to get in there. That is the testimony of Admiral Benson, and the testimony further shows that there are from 20 to 30 minutes in the day when they have extremely low water, and it is troublesome for a battleship to go up the channel. Not only that, but I call attention to the fact that Admiral Benson testified that during the year—now, listen to the great emergency for making the exception, the great exception—on an average 20 battleships go up to the New York Navy Yard, and the emergency is that there are 30 minutes in the day when these 20 battleships making these 20 trips could not get up to the channel.

Mr. SMALL. Mr. Chairman, this amendment putting in the bill a new project for Boston can not be adopted without doing a great injustice to a great many other projects throughout the country which have received favorable reports and which are also clamoring to be included in the bill. Boston is a great port for commerce and for other reasons, and the directors of the

port of Boston have constructed wonderful terminals and a great dry dock, but these are not decisive of the question. The amendment is to add a new project to this bill. What is the project? There was authorized by Congress in the act of 1912 an examination and survey with a view to increase the width and depth from President Roads to the sea, and also to provide deep water in connection with such suitable terminals as may be established by the directors of the port of Boston. Here is a project which was favorably reported, and I have the map before me. The report says that no further improvement is needed from the navy yard for 6 miles down the harbor to President Roads, but they do recommend that from President Roads to the sea, a distance of 1½ miles, they have an increased depth from 35 to 40 feet, and an increased width at the outer edge. That is the project which is sought to be included in the bill, so that if the project is adopted you get no deeper water from the navy yard to President Roads, a distance of 6 miles, than exists at the present time. Boston already has been generously provided for. They have 35 feet from Chelsea Street Bridge and Charles Street Bridge and from the navy yard down to the sea.

There is no other harbor in the United States which has a greater depth by improvement than 35 feet, except the harbor of New York, and that only on the North or Hudson River side. The navy yard is on the East River side, and the proposed East River project has reference to that.

Mr. TREADWAY. Mr. Chairman, will the gentleman yield?

Mr. SMALL. In a moment. When they get to this East River project, the project asked to be adopted is for 35 feet, the same as Boston has at the present time, leading up to the navy yard, and I may say at the same time that there is no harbor in the United States having a navy yard that to-day has a depth of more than 35 feet by improvement leading to it.

Mr. SULLOWAY. Mr. Chairman, will the gentleman yield?

Mr. SMALL. Oh, at Portsmouth the depth was natural and they did not get it by improvement. The same is true of Puget Sound. I am talking about channels improved by dredging. There is no improved channel leading to any navy yard in the United States that has more than 35 feet, and Boston has that depth already. So the chairman of the committee is right. There is no emergency about it. You can not adopt this project without doing a grave injustice to many other projects upon which favorable reports have been made.

Mr. BENNET. Mr. Chairman, without particular reference to this particular Boston project, I think it is due to my colleague [Mr. FITZGERALD] that the proposition that this is a political matter aimed at reconciling the Democratic Representatives from New York City with the President be refuted by a Republican from the city of New York.

Mr. HUMPHREY of Washington. The gentleman is the first one who has mentioned that.

Mr. BENNET. Oh, that is the report, and that is the purport very largely of the attack on my colleague. The facts are these, that at the beginning of the Congress two or three of us introduced bills covering this whole East River project, and along about the 1st of January we held a meeting of the delegation from New York City, to which the entire 24 were invited, which meeting was attended by more than a majority, irrespective of politics. Our colleague [Mr. FITZGERALD] was elected by the voice of his colleagues chairman of our city delegation, and while there was no formal vote taken, there was an expression of the sense of all of us that both he and Mr. HULBERT, who represented our city on the Committee on Rivers and Harbors, should use every reasonable effort to get this particular project in whole or in part in the bill. There were no politics in it. If any politics have been injected into it, I unwittingly am the guilty party.

Mr. LONGWORTH. Mr. Chairman, will the gentleman yield?

Mr. BENNET. Yes.

Mr. LONGWORTH. Is it the deliberate judgment of the gentleman that this is in the interest, necessarily and properly, of adequate national defense?

Mr. BENNET. Yes.

Mr. LONGWORTH. Then I am for it; I do not care how much Democratic politics there is in it.

Mr. TREADWAY. Does the gentleman from Ohio understand the project the gentleman is discussing? My amendment is for Boston Harbor.

Mr. LONGWORTH. I was talking about the New York project.

Mr. BENNET. It is in the interest of adequate national preparedness and adequate defense, and it seems to me that the President of the United States, as Commander in Chief of the Navy, is not at all to be criticized when he favors this exception to the rule at the request of the united voice of the Republican and Democratic Representatives from the city of New York.

We demand the whole project if we can get it, but we are glad to get part, if not more.

Mr. HUMPHREY of Washington. Will the gentleman yield?

Mr. BENNET. Yes.

Mr. HUMPHREY of Washington. The gentleman says this is in the interest of preparedness. I trust the gentleman will say why. Admiral Benson did not say.

Mr. BENNET. When we get to our amendment, if there is opposition, I do not want to take up the time on the Boston amendment to do that.

Mr. GILLETT. Will the gentleman yield for a question?

Mr. BENNET. Yes.

Mr. GILLETT. Will the gentleman say how many Republicans there were in the 24 Representatives from New York City?

Mr. BENNET. Oh, I regret there are not more.

Mr. GILLET. But how many are there?

Mr. BENNET. Out of 24 there are 7.

Mr. MOORE of Pennsylvania. They are united?

Mr. BENNET. Absolutely united.

Mr. MADDEN. The gentleman stated that a majority of the 24 were present. How large a majority of the Republicans were present?

Mr. BENNET. My recollection is every one of the 7 Republicans were there, and my recollection is there were something like 19 of the 24 present.

Mr. GREEN of Iowa. I would like to ask if there ever was a time when all of the Representatives of the two parties from the State of New York have not been able to unite on an appropriation for New York Harbor?

Mr. BENNET. Never, because the appropriations for New York Harbor have been always correct and proper.

The CHAIRMAN. The time of the gentleman has expired.

The question is on the amendment offered by the gentleman from Massachusetts.

The question was taken, and the Chairman announced that the noes seemed to have it.

On a division (demanded by Mr. TREADWAY), there were—ayes 29, noes 80.

So the amendment was rejected.

Mr. TREADWAY. Mr. Chairman, I desire to ask unanimous consent to extend my remarks.

The CHAIRMAN. Is there objection to the request of the gentleman from Massachusetts? [After a pause.] The Chair hears none.

The Clerk read as follows:

Merrimac River, Mass.: For maintenance, $10,000.

Mr. ROGERS. Mr. Chairman, I move to amend by adding the letter "k" to the word "Merrimac," in line 18.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 2, line 18, add the letter "k" to the word "Merrimac."

Mr. ROGERS. Mr. Chairman, I have been struggling since coming to Congress to have the name of the Merrimack River, on the banks of which I live, correctly spelled. The Government Printing Office seems to have a distinct aversion to spelling it as the Indians, who gave it its name, intended, and insists on habitually omitting the final "k." About three months ago the Geographic Board of the United States was asked for a ruling upon the correct spelling of the name of this river; under date of January 5 they handed down a ruling that it should be spelled with a final "k." The Geographic Board, as I need not remind Members of the House, is charged with the duty of passing upon the spelling of doubtful geographic names. I quote from the current Congressional Directory, page 340, a paragraph defining the duties of the board:

The board passes on all unsettled questions concerning geographic names which arise in the departments, as well as determining, changing, and fixing place names within the United States and its insular possessions, and all names hereafter suggested by any officer of the Government shall be referred to the board before publication. The decisions of the board are to be accepted by all the departments of the Government as standard authority.

I suppose there will be no disposition on the part of this House to question that ruling or to decline to acquiesce in saying that the word "Merrimack" shall hereafter always be spelled with the final "k." I am ambitious, Mr. Chairman, I will say, to be known in Massachusetts and New Hampshire as the man who anchored the "k" in the "Merrimack" River.

Mr. MANN. Has this amendment the approval of the simplified-spelling faddists?

Mr. ROGERS. If I can get their approval, I will place it in the RECORD. I ask the chairman of the committee if he will accept the amendment?

Mr. SPARKMAN. I will say that if that is the way this river ought to be spelled I have no objection.

Mr. SIMS. Mr. Chairman, I desire to oppose the amendment, unless the gentleman says it is done in the interest of national preparedness. We are not asking for anything that does not include national preparedness.

Mr. MANN. Does not the gentleman think it will be harder to get up the river if it has the "k" in it?

Mr. ROGERS. The change will make the river longer and bigger. It ought to help navigation on it. So the amendment comes within the requirements of the exacting gentleman from Tennessee [Mr. SIMS].

The CHAIRMAN. The question is on the amendment offered by the gentleman from Massachusetts.

The question was taken, and the Chair announced the noes seemed to have it.

On a division (demanded by Mr. ROGERS), there were—ayes 65, noes none.

So the amendment was agreed to.

Mr. GREENE of Massachusetts. Mr. Chairman, I desire to submit a few remarks in relation to an item which has been passed in reference to Pollock Rip Channel, Mass.

The CHAIRMAN. The gentleman asks unanimous consent to proceed for five minutes. Is there objection? [After a pause.] The Chair hears none.

Mr. GREENE of Massachusetts. Mr. Chairman, I did not obtain an opportunity to engage the attention of the Chair before the item had been passed.

The item in regard to Pollock Rip Channel is one that has been provided for by an appropriation in every river and harbor bill since 1911 but the item has been rejected in the Senate on account of some extraordinary demand from all-powerful Senators during 1914 and 1915. This matter of the improvement of Pollock Rip Channel is a subject that has been discussed by vessel owners and by maritime interests along the entire Atlantic coast for many years.

It had the opposition of engineers of the United States for several years, until finally, after the matter was presented before the Rivers and Harbors Committee and after a hearing at Newport, R. I., at which the maritime interests of the Atlantic coast were represented, reasons were given by master mariners, mates, and pilots who had traversed the coast on the southerly side of Cape Cod in Vineyard and Nantucket Sounds which convinced the engineers that there was an opportunity to make an improvement on the important shoals in the Pollock Rip Channel which would provide safety in the means of navigation, which would guarantee greater protection to human lives and better security to owners of vessel property and to the owners of valuable cargoes, which had long been menaced by lack of a direct channel of suitable width and depth through this important waterway. Pollock Rip Shoal is located about 60 miles from Boston. It has two distinct angles in it, and it is made very hard for navigation, one of them with 90 degrees radius and the other with 70 degrees radius, in line for a course that makes it distinctly dangerous for vessels navigating this most dangerous coast. Finally, after the presentations made at the hearing to which I have referred, the engineers made a preliminary examination in order that they might obtain information upon which they could make a report to the Congress as to the necessity of this important improvement to navigation. As a result of this examination and report an appropriation of $125,000 was made, which was included in the river and harbor act of 1912, and the appropriation of a second sum of $125,000 was included in the act of 1913.

The dredger *Navesink* was sent to Nantucket Sound for the purpose of demonstrating by means of a thorough examination and persistent work that two dangerous shoals, known as Bearses and Stone Horse Shoals, which had been referred to as an impediment in the channel, were assemblages of large-sized gravel stones, almost the size of paving stones, and that they could be removed and would be useful in defining definitely the line of the proposed channel. The proposed depth of the channel was to be 30 feet and the proposed length of it was to be 7 miles and the proposed width was to be 1 mile. Thus the usefulness and importance of the proposed improvement was made apparent.

There has been nothing done upon this important channel during the last two years, and it was thought by some of the engineers, before any work was begun, that it would be impossible to maintain a definite channel through that part of Vineyard Sound, which was so tortuous and which had so many sloughs and shifting sands in it, and that it would be impossible to maintain either a depth or width of channel urged by the proponents of the improvement; but the advocates claimed if the channel was made of suitable width and depth, and if it were constructed in the direction of the wind and tides passing through the channel the expense and improvement would be fully justified. It appears from the report made and submitted to Congress on the 21st of January of the present year that the work which was done two years ago has given a depth of 46 feet for a part of the channel and not less than 30 feet where the work has been completed. The fact that the work done has not deteriorated during the last two years clearly demonstrates the usefulness of the work done, the permanence of the channel and its importance to the maritime interests of the entire Atlantic coast.

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

Mr. GREENE of Massachusetts. Mr. Chairman, I ask unanimous consent that I may have five minutes more.

The CHAIRMAN. Without objection, it is so ordered.

Mr. GREENE of Massachusetts. Mr. Chairman, the importance of this channel that I call to your attention is emphasized in a report that is submitted here, showing the commercial statistics of the channel.

I want to say further that this channel has no local bearing. It is a channel that affects the commerce of the entire Atlantic coast. In fact, the map that was presented here by the gentleman from Pennsylvania [Mr. MOORE] this afternoon showed the entire Atlantic coast that would be benefited by the improvement of the Pollock Rip Channel that is proposed to be made. I will read a portion of the commercial statistics presented by the engineers. I read:

It is estimated that a commerce of over 20,000,000 short tons annually will be benefited greatly if it be practicable to construct and maintain the proposed channel. It is impracticable to estimate the value of the commerce passing through this locality. During the calendar year 1914 the following vessels are reported as having passed the Pollock Rip Slue Light Vessel: Steamers, 5,160; sailing, 4,380; barges, 7,698.

That makes in all 17,238 different vessels passing through that important channel during the year 1915. I think these facts alone clearly demonstrate the usefulness of the channel. I believe that it is a very wise appropriation, and I trust that the money will be expended, if this appropriation meets with the approval of the other branch of Congress, in such a way as will demonstrate more fully the real advantage which this channel, which has been such a menace to navigation for a very long period of time, will be to future ages. [Applause.]

Mr. Chairman, under authority granted me to extend my remarks, I append extracts from the reports of the United States Engineers which give useful information regarding this improvement:

POLLOCK RIP SHOALS, NANTUCKET SOUND, MASS.

Location: Pollock Rip Channel is the northerly passage through the shoals off the eastern entrance to Nantucket Sound, connecting the deep water of the sound with that of the ocean. It is about 26 miles east from the harbor of Vineyard Haven on the island of Marthas Vineyard, Mass., and 60 miles south from Provincetown Harbor, at the northern extremity of Cape Cod.

Present project: The present project, adopted by the river and harbor act of July 25, 1912 (H. Doc. No. 536, 62d Cong., 2d sess.), provides for experimental dredging on the shoals, using an available Government-owned plant under appropriations aggregating $250,000, with a view to determining the amount of improvement, if any, which may be advisable. The mean range of the tide is about 3.7 feet at Mononomy Point.

Conditions at the end of fiscal year: The present project, which provides for experimental dredging, is completed, and it has been demonstrated that a dredge of the type used is well adapted to the conditions that obtain in the locality and to the material to be handled. In the vicinity of Stone Horse Shoal the increased width of channel at a point where there is a sharp bend in the existing sailing course has been immediately beneficial to navigation. The increased depth obtained at the eastern end of the channel has not been utilized by commercial vessels, but would be of great importance in the event of further prosecution of this work. The total expenditures under the present project has been $220,431.42, all of which were for original work.

Local cooperation: None.

Effect of improvement: The effect of the improvement on freight rates, if any, will not be known until the improvement is completed, but the widening of the channel near the Shovelful Light Vessel has made the sharp turn in the sailing course somewhat easier.

Proposed operations: Further operations await the action of Congress.

Since the close of the last fiscal year, and on January 21, 1916, the Chief of Engineers has forwarded a report of the Board of Engineers for Rivers and Harbors in response to resolution dated January 18 of the present year, asking whether, in its opinion, any further improvement of the locality within the scope of the project contemplated in said report is justified by the commercial interests involved, and if so whether the results obtained by the work authorized by the river and harbor act approved July 25, 1912, have been sufficient to determine the extent and character of the improvement to be further undertaken. The report recommends legislation authorizing the permanent transfer of the dredge *Navesink*, or such other suitable dredge as may be available, and an annual appropriation of $150,000 for its operation and upkeep in carrying the improvement along the general lines indicated by the district officer. Following is the recommendation of the board and that of the district officer, to which reference is made.

Recommendation of the Board of Engineers for Rivers and Harbors:

"The board concurs in general with the views of the district officer and the division engineer, but it believes that the construction of a new dredge is not advisable, as it understands that the dredge *Navesink* can be spared permanently for this work and can perform the desired service effectively. The navigation interests involved are of great importance and they earnestly desire the continuance of the work. It is believed that the results have been sufficiently encouraging to warrant the expense involved. Experience indicates that with the dredge *Navesink* this work could be carried on at an annual cost of not exceeding $150,000. The board therefore recommends legislation authorizing the permanent transfer of the dredge *Navesink* or such other suitable dredge as may be available to this work without charge, and an annual appropriation of $150,000 for its operation and upkeep in carrying on the improvement along the general lines indicated by the district officer.

"For the board:

"W. M. BLACK,
"Colonel, Corps of Engineers,
"Senior Member of the Board."

Recommendation of the district officer:

"(a) That it is not practicable to produce and maintain by dredging operations the proposed mile-wide channel with a clear depth of 30 feet, as defined by the lines originally projected.

"(b) That it is doubtful if it will be found practicable to make and maintain a similar channel within modified limits in this locality as a permanent improvement, owing to the shifting nature of the material of the shoals, the effects of storms and currents, and the absence of natural material tendencies to preserve a channel of that depth and width.

"(c) That it will be practicable to render great assistance and benefit to a very large and important commerce by providing a suitable dredging vessel to be assigned to duty at the shoals for an indefinite period. The general duties of such a vessel would be to keep constantly in touch with the location of the best channel, the tendencies of changes in the effects of the natural scour and wave action, and to assist the natural agencies wherein their tendencies are favorable to improvements in the location and depth of the navigable channel. The regular presence of such a vessel would insure that passing ships would know where the best water is and would insure against disaster or accident resulting from rapid changes. She would show the way to passing vessels and contribute to the beneficial effects from increased scour which it is believed by those having local experience would result from regulated use of any new channel. Just at present, if the appropriation would permit, a dredger would render valuable service by assisting the natural tendency to scour in the east end of the new channel and in removing the extending shoal near buoy 3A.

"JOHN MILLIS, *Colonel, Engineers.*"

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Thames River, Conn.: For maintenance, $9,000.

Mr. FREEMAN. Mr. Chairman, I desire to offer the following amendment.

The CHAIRMAN. The gentleman from Connecticut offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. FREEMAN: At the end of line 25, at the bottom of page 2, add the following: "For improving the harbor at New London, Conn., in accordance with the report submitted in House Document 613, Sixty-third Congress, second session, and subject to the conditions set forth in said document, $170,000."

Mr. FREEMAN. Mr. Chairman, notwithstanding the untimely fate of the Boston project, I feel it my duty to offer this amendment. This amendment is identical with a provision in the bill of 1914, which was favorably reported by the Committee on Rivers and Harbors and successfully passed the House.

Only under a strict construction of the rule regarding new projects can this be considered a new project. But whether it is or not a new project, I hold that the good faith of the United States is involved in the passage of the amendment I have proposed.

At the very beginning of this matter, when the State of Connecticut took up the improvement of New London Harbor, she invited the cooperation of the Federal Government; but the matter did not go very far before the Federal Government demanded as a condition precedent the expenditure of $1,000,000 by the State of Connecticut. As I pointed out yesterday, various reports were made, and the proposition was approved by the division engineer, the district engineer, the Board of Engineers, the Chief of Engineers; submitted to the House, approved by the committee, and passed the House. Then the State of Connecticut began to expend this money. She has spent nearly all the $1,000,000. She has erected a modern pier 1,000 feet long. She has dredged the channel to a depth of 35 feet, to meet the Government channel, which still remains but 26 feet in depth. So that unless this amendment prevails, the sole object of the State of Connecticut in spending $1,000,000 for harbor improvements in order to accommodate ocean-going traffic is entirely lost.

No Member of the House, least of all the distinguished chairman of the Committee on Rivers and Harbors, has had aught to say save words of praise and commendation of the generous, energetic public spirit of the State of Connecticut in this enterprise. Not even the critical gentleman from Wisconsin [Mr. FREAR] could find any fault with a local expenditure of $1,000,000, coupled with the modest request for a Federal appropriation of $170,000 to be spent upon a real harbor, with an annual traffic of a million tons, of the value of $125,000,000. It meets every criticism raised by the gentleman from Illinois [Mr. MADDEN]. Connecticut has always been a dividend payer to the National Government. Whether you figure it in customs taxes, corporation taxes, or individual income-tax returns, Connecticut has always been in the front rank. This bill contains scarcely anything for the rivers and harbors of Connecticut. The State of Connecticut has erected this 1,000-foot pier and has dredged this channel. It has a pier equipped with all the modern conveniences, railroad tracks running upon it, with ample railroad connections; the Grand Trunk going through to the North and to the far West, and the New York, New Haven & Hartford going through all New England and to points beyond.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MANN. I ask unanimous consent that the gentleman may have five minutes more.

The CHAIRMAN. The gentleman from Illinois asks unanimous consent that the gentleman from Connecticut may continue for five minutes. Is there objection?

There was no objection.

Mr. FREEMAN. This magnificent natural harbor, within 15 or 20 minutes of the open ocean, open at all seasons of the year, free of all delay from fogs, with a saving of 6 hours and at times of over 24 hours, as compared with New York and the Ambrose Channel, with lower wharfage charges, and with a saving of 50 cents a ton, because of the direct unloading from the ship into the car or from the train into the ship, is a commercial proposition of benefit to every shipper and every consignee in the country.

I do not know that I ought to overwork the preparedness proposition, but it meets that test. If you assume that this is a new project and that new projects can come into this bill only in connection with national defense, I submit that this project completely meets that test. One hundred and twenty-five miles nearer Europe than New York, New London guards the eastern entrance to New York Harbor. Within 4 or 5 miles of New London are the strongest coast defenses in our Nation to-day, modern and up to date. You may have noticed on the map submitted by the gentleman from Pennsylvania [Mr. MOORE] the location of Fort Michie, Fort Terry, Fort Mansfield, and Fort Wright. Our fleet could retire behind these forts into the harbor of New London for necessary repairs, for coaling, and so forth. In the War of 1812 the fleet of Decatur found there a safe and secure retreat. With this appropriation to deepen this channel to 33 feet our fleet of dreadnaughts could find a safe and secure place of refuge in the harbor of the city of New London.

Now, gentlemen of the House, I believe that the project I have offered here meets every condition laid down by the advocates of this bill and every criticism advanced by its opponents. It seems to me, indeed, a strange situation if out of an appropriation of $39,000,000 for rivers and harbors you can not find $170,000 to make good an implied obligation of the Government of the United States which has cost the State of Connecticut $1,000,000 and which is an absolute waste—at least the interest on it—until you make good.

Mr. HUMPHREY of Washington. Will the gentleman yield?

Mr. FREEMAN. Certainly.

Mr. HUMPHREY of Washington. Have you a dry dock at New London?

Mr. FREEMAN. We have a navy yard with a base for submarines there. We built there a dock from which were built the *Minnesota* and the *Dakota*, two of the greatest cargo-bearing ships that were ever built.

Mr. HULBERT. Will the gentleman yield?

Mr. FREEMAN. I will.

Mr. HULBERT. Would it not shorten the distance of any vessel coming from the south and intending to make New London a port for a vessel to proceed through Hell Gate instead of going down around Rhode Island?

Mr. FREEMAN. I hardly agree to that, because I think the trip up through Ambrose Channel and through Hell Gate would be longer; but I am not sure of that.

Mr. HICKS. Does not the gentleman think it would be the shorter route for vessels to land at Fort Pond Bay, at the east end of Long Island?

Mr. FREEMAN. I think the railroad facilities there would hardly be sufficient.

Mr. MADDEN. Mr. Chairman, I think good faith requires affirmative action on the amendment offered by the gentleman from Connecticut. The State of Connecticut and the city of New London have expended a million dollars to build a great pier to accommodate incoming ships. Alongside this pier they have built the channel which will accommodate any

ships that float the seas, and only because of the fact that the Government of the United States has failed to deepen the outer harbor are they unable to use the channel on which they have spent a million dollars because of a tentative agreement between the people of the State of Connecticut and the people of the United States. It seems to me that there can be no more meritorious proposition embodied in the bill than the amendment now proposed and pending before the House, and if there is any merit in the bill at all that merit will be increased by the insertion of the amendment offered by the gentleman from Connecticut.

Why invite communities to invest vast amounts of money to furnish facilities which can not be used unless the Government does its part? The State of Connecticut can not be expected to deepen the outer harbor leading up to the channel on the edge of which they have built a great pier and in connection with which are the railroads leading east, west, north, and south, with all the facilities for loading and unloading vessels from the ship into the train and from the train into the ship without any cartage, with more economical methods of moving the cargoes than can be found anywhere else in the country. All these facilities can not be utilized simply because the Government of the United States refuses to appropriate $170,000 to deepen the channel which will enable the ships to reach the pier upon which the people of the city of New London have expended a million dollars with the distinct understanding that the Government of the United States would cooperate when that million dollars was expended. I hope the House will see the necessity, importance, and justice of adopting the amendment offered by the gentleman from Connecticut. [Applause.]

Mr. SPARKMAN. Mr. Chairman, I hope the amendment will not be adopted. It is true the item was inserted in the 1914 bill with 75 or 78 other items, but they all went out in the Senate. There are a lot of items in the same class with this. I would not like to throw any rocks at this particular project, but it is not as strongly urged by the engineers, even from a commercial standpoint, as some other projects that went into that bill. Still, unless the committee changes its mind from what it was two years ago, the chances are that it will be inserted in the next bill containing new projects. Until then it should wait with the others similarly situated.

Mr. MANN. Mr. Chairman, I move to strike out the last word. For years Congress has been endeavoring, where it was practicable, to induce local authorities to spend money in the improvement of rivers and harbors and to get local municipalities to provide docks and wharves.

Here is a case where this has been done under a practical agreement with the Government to construct a pier and channel. The local authorities have done in this particular case what we have been unsuccessfully trying to get other municipalities to do—the local municipalities have carried out their share of the agreement, spent a million dollars, but the technical rule of the committee is invoked to prevent the Government from in good faith carrying out its contract. I say contract because that was the agreement. I do not believe in violating contracts. There was an understanding that the Government would do the outer channel work, which would cost $170,000. The local people have gone ahead and constructed their pier and deepened the channel, at a cost of a million dollars. Now, the committee asks us to be too mean to complete our share of the understanding, in order to spend large sums of money at places where we are bearing all the expense and the local people are bearing not any of the expense, and where the commerce is not so important, whatever else may be said.

It will not do to say that there are 65 or 75 other cases like this, because it is not correct. There is no other case in the United States like this. There has been, so far as my observation goes, no other case where the local people have expended the same amount of money to do their share in order to get a little spent by the Government. As a rule, if anything of the sort was done it would be that the Government would spend a million dollars and the local people $170,000. I think we ought to encourage the local people who are willing to do more than their share, and that we may well keep our agreement, and at that we will continue to pay the most of the money out of the Federal Treasury and get very little of it from stingy municipalities. When a municipality or a State is generous, we ought to meet them—with a little stinginess, it is true, but we ought to meet them.

Mr. SPARKMAN. Mr. Chairman, the gentleman from Illinois [Mr. MANN] says that there is no other place in the country where the same amount of money has been offered or expended by local authorities, and he may be technically correct as to that. It may be that no other place has put up just a million dollars or proposed to put up precisely that sum of money, but there are several other places in the country where they are willing to contribute and are contributing large sums of money, some directly, for the improvement of a river or harbor, some by way of terminal building. I will mention one, the much-abused Trinity River. There local interests came forward and offered, if we would adopt the project, to put up dollar for dollar with the Government until $3,000,000 should have been contributed, but we could not meet their offer at this time, because a certain survey now under way is not finished, and, further, because it is a new project.

Mr. COOPER of Wisconsin. Mr. Chairman, will the gentleman yield?

Mr. SPARKMAN. Yes.

Mr. COOPER of Wisconsin. Did New London pay out this money under a law providing that if it would make that expenditure the Government would make this other expenditure?

Mr. SPARKMAN. Oh, nothing of that kind.

Mr. COOPER of Wisconsin. Then whence comes this statement that this was put up under an agreement?

Mr. MANN. I said a practical agreement.

Mr. SMALL. Then I will state that this money was put up by the State of Connecticut, not by the city of New London.

Mr. HUMPHREY of Washington. Mr. Chairman, in referring to the matter of contributions I think there are perhaps other localities that have made contributions equal to this, but there is one situation in regard to this particular item that does not exist in regard to any other, and I am surprised that the Secretary of the Navy has not sent some communication in regard to this particular item to the committee. Here is the situation at New London. Up at that great dock where the *Minnesota* and *Dakota* were constructed they have 35 feet of water. The localities have provided that depth of water. They have a channel there that is only 26 or 28 feet at high tide to reach this dock. If we would expend $330,000 we would have access to that great dock, and this is what the Government practically agreed to do, as I understand it. If there are any items in all this bill that are for preparedness, here is one of them. It is proposed to spend $700,000 on the East River where they can already get a battleship through, where they already have no trouble in taking her on either side of Governor's Island, at high tide, but here is an opportunity to secure the use of a great dock where they already have the water at the dock, at an expenditure of $330,000. This item ought to be made an exception, not only because the Government, to a certain extent, entered into a contract—I am not arguing that phase of it—but as a question of preparedness. Here is an opportunity for the Government to get into a dry dock for $330,000, and no such condition exists anywhere else in the United States. I think under the circumstances that this item ought to be adopted.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Connecticut.

The question was taken; and on a division (demanded by Mr. SPARKMAN) there were—ayes 28, noes 44.

So the amendment was rejected.

The Clerk read as follows:

Connecticut River, Conn.: Of the appropriation authorized in the river and harbor act approved July 25, 1912, so much as may be necessary may, in the discretion of the Chief of Engineers, be expended for maintenance dredging in said river above Hartford.

Connecticut River, Conn.: For maintenance below Hartford, $15,000.

Mr. TREADWAY. Mr. Chairman, I move to strike out the last word. These two items in reference to the Connecticut River bring up the very interesting subject of another important measure that is excluded from the present bill under the vote of the committee not to take on new projects. Long before my service in this body a very strenuous effort was made, and continued over a period of years, to secure navigation in the Connecticut River from Hartford to Holyoke. Finally a favorable report has been secured from the Board of Engineers, House Document 417, Sixty-fourth Congress, first session. This is a great step forward toward securing navigation to Holyoke. This project waits both the pleasure of Congress in adopting new projects and the possibility of cooperation between individuals or private corporations and the Federal Government in hydroelectric development. I therefore hope that the time is not far distant when we can have new projects in the river and harbor bill and also when a general dam act such as is probably the proposal of the gentleman from Georgia [Mr. ADAMSON] in this Congress may be adopted. We have conserved so strongly the natural resources of the country that we have wasted indefinitely the possibility of development of that

kind. Conservation has run riot, and it is time that we did conserve by saving the great waste that has been lost for all of these years. The Connecticut River is one of those projects, and therefore I am heartily in favor of such a proposition as will bring it before the House. I addressed the House at some length on the subject of Connecticut River navigation in the last Congress and so will not take up further time to-day. I ask unanimous consent to extend my remarks in the RECORD in order that I may incorporate in my remarks the recommendations of the engineers.

The CHAIRMAN. Is there objection?

There was no objection.

CONNECTICUT RIVER BETWEEN HARTFORD, CONN., AND HOLYOKE, MASS.

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, November 12, 1915.

From: The Chief of Engineers, United States Army.
To: The Secretary of War.
Subject: Preliminary examination of Connecticut River between Hartford and Holyoke.

1. There are submitted herewith for transmission to Congress reports, dated May 28, 1913, and April 15, 1915, with maps, by Maj. G. B. Pillsbury, Corps of Engineers, on preliminary examination and survey, respectively, authorized by the river and harbor act approved March 4, 1913, of Connecticut River from Hartford, Conn., to Holyoke, Mass.

2. The Connecticut River is under improvement from its mouth to Hartford, a distance of 52 miles, with a view to securing a channel 12 feet deep at mean low water and 100 feet wide. The project has not been completed, but a channel of sufficient depth to accommodate vessels having a draft of 10 feet has been provided and is being maintained. The stretch from Hartford to Holyoke is 34 miles long, and is naturally divided into three distinct sections. From Hartford to the foot of Enfield Rapids, 10½ miles, the river has a sandy, shifting bottom; from the foot to the head of Enfield Rapids, 5½ miles, the total fall of low water is 35 feet, and the bed of the river is largely rock; from Enfield Rapids to Holyoke, 18 miles, the river is of moderate width, gentle slope, fair depth, and stable bottom. From 1871 to 1883 a small amount of wing-dam work was done by the United States between Hartford and Enfield Rapids, and appropriations have been since made for maintenance of this work. Permanent benefit, however, can be secured only from a more radical and expensive form of improvement. Several examinations and surveys with this object in view have been made. The most recent of these prior investigations was made in 1909 and 1910, and the report is printed in House Document No. 818, Sixty-first Congress, second session.

3. To render the improvement of this section of the river commercially successful, having in mind the needed capacity of vessels and their suitability for navigation in Long Island Sound, the district officer believes that a depth of 12 feet at mean low water and width of 100 feet should be given. He submits a plan providing for a channel of these dimensions, to be secured by the construction of locks and dams at Hartford and at Enfield Rapids and by channel excavation and regulating works of limited extent, at a total first cost to the United States of $1,870,000, and $65,000 annually for maintenance and operation, this estimate being on the basis of the Enfield Lock and Dam being constructed by private interests. If this lock and dam is not constructed by private interests within a reasonable time, he believes the United States should undertake the entire work and lease the power created. On this basis, the cost to the United States will be increased to $3,950,000. He recommends, however, that the appropriation be made subject to the provision that no work be done by the United States until the Secretary of War is satisfied that adequate terminal facilities under municipal or other public control will be provided at the cities of Springfield, Holyoke, and Chicopee by the time the project is completed. The division engineer concurs in the main with the district officer, but believes that work should not be undertaken by the United States unless the lock and dam at Enfield Rapids are constructed by private, municipal, or State funds, and the use of all water needed for navigation purposes be deeded to the United States by the parties operating the dam for power purposes.

4. These reports have been referred, as required by law, to the Board of Engineers for Rivers and Harbors, and attention is invited to its report herewith, dated September 14, 1915, concurring in general with the views of the district officer and the division engineer.

5. After due consideration of the above-mentioned report, I concur in general with the views of the district officer, the division engineer, and the Board of Engineers for Rivers and Harbors, and therefore report that the improvement by the United States of the Connecticut River between Hartford, Conn., and Holyoke, Mass., is deemed advisable to the extent of providing a channel 12 feet deep at mean low water and 100 feet wide, under the plans proposed by the district officer (subject to such modifications as may appear advisable during construction), at an estimated cost of $1,870,000 for first construction and $65,000 annually thereafter for maintenance, subject to the following conditions:

(*a*) That water power or other interests will construct a new lock and dam at Enfield in accordance with the plans proposed by the district officer or such other modified plans as may be approved by the Chief of Engineers and the Secretary of War, under the general provision of law applicable to such cases;

(*b*) That the lock and such adjacent land as may be needed for its operation and care shall be deeded without cost to the United States, and sufficient power shall be supplied free of cost for its operation, but that otherwise the lock shall be maintained and operated at the expense of the Federal Government;

(*c*) That those constructing the lock and dam shall assume all responsibility for claims for damages that may arise from flowage rights, from injury to water power, or from any other source; and

(*d*) That the cities of Springfield, Holyoke, and Chicopee shall make suitable provision for terminal facilities satisfactory to the Secretary of War.

The first appropriation should be $520,000, with authority to enter into contracts to an additional sum of $300,000. Subsequent appropriations should be at the rate of $350,000 per year for three years.

DAN C. KINGMAN,
Chief of Engineers, United States Army.

REPORT OF THE BOARD OF ENGINEERS FOR RIVERS AND HARBORS ON SURVEY.

[Third indorsement.]

BOARD OF ENGINEERS FOR RIVERS AND HARBORS,
September 14, 1915.

To the CHIEF OF ENGINEERS, UNITED STATES ARMY:

1. The following is in review of the district officer's reports on preliminary examination and survey of Connecticut River from Hartford, Conn., to Holyoke, Mass., called for by the act of March 4, 1913:

2. The Connecticut River is under improvement from its mouth to Hartford, a distance of 52 miles, the project providing for a channel 12 feet deep at mean low water and 100 feet wide. The project has not been completed, but a channel has been provided and is being maintained of sufficient depth to accommodate vessels having a draft of 10 feet.

3. The city of Holyoke is situated about 33 miles above Hartford. The river between these cities is divided into three sections of different characteristics—(1) Hartford to Enfield Rapids, about 11 miles, having a navigable depth of 2 to 3 feet at mean low water. (2) Enfield Falls reach, 5.2 miles, total fall about 35 feet, surmounted by a privately constructed canal with locks about 18 by 80 feet, with 3.7 feet depth at mean low water on the lower sill of lower lock. The canal was nominally constructed for navigation purposes but is used mainly for supplying water power to manufacturing establishments at the town of Windsor Locks. The canal is owned by the Connecticut River Co., chartered by the State of Connecticut in 1828. (3) The pool formed by the Enfield Dam, extending to Holyoke, 16.5 miles, with navigable depth at mean low water of about 6 feet. Several towns of importance are located on this reach. A power dam at Holyoke prevents further navigation up the river, the locks and navigation canal at this place having fallen into ruin.

4. Until about 1882 there was a light-draft steamboat service up to Springfield, but for many years navigation has been confined to excursion and motor boats in the Enfield Dam pool. During the period 1871–1886 a small amount of wing-dam work was done by the United States between Hartford and the Enfield Rapids, but without lasting results.

5. Numerous plans for the improvement of the reach under consideration have been presented in reports referred to by the district officer. The last one, submitted in 1910, published in House Document No. 818, Sixty-first Congress, second session, recommends the improvement of the river by the United States under a project providing for a channel 7 feet deep and 100 feet wide at an estimated cost of $1,015,600, with the condition that a suitable lock and dam for surmounting Enfield Rapids shall be built by private or corporate interests, free of cost to the United States; that navigation shall be free from tolls; that those constructing the lock and dam shall assume all responsibility for damages; and that after construction the lock and dam shall become the property of and be maintained by the United States. No action by Congress has been taken on this report.

6. The population of the territory directly affected by the proposed improvement is reported as exceeding 200,000. The total freight tonnage is given as 2,977,900, the principal commodity being coal. What part of this commerce would be carried by water if adequate facilities were provided is speculative, but the district officer believes it would amount to as much as 700,000 tons annually and would effect a saving of from $200,000 to $300,000 a year, with a prospect of this amount being increased if the communities adjacent continue to grow.

7. The district officer discusses the question of the proper depth to be provided to meet the probable demands of commerce and, for reasons given, concludes that it should be 12 feet and the width generally 100 feet, so as to accommodate the vessels to be used on the enlarged Erie Canal and to permit such vessels as now go to Hartford to proceed to points on the river above without breaking bulk.

8. Plans with estimates are presented for improving the reach between Hartford and the Enfield Rapids both by open-channel improvement and by canalization by means of one lock and dam located 1½ miles above the Hartford Bridge, the respective estimates being $2,030,000 and $1,405,000, with $45,000 and $40,000 per annum for maintenance. Due to the lower cost of construction and maintenance and on account of other advantages, the district officer is of opinion that the canalization plan is the better.

9. In the upper reach the pool formed by the Enfield Dam gives generally a depth greater than proposed, and the only work required is some dredging and rock excavation, estimated to cost $465,000, and $15,000 annually for maintenance.

10. To complete the improvement and make it of value to navigation, as well as to water-power interests, will require a new lock and dam at the Enfield Rapids. It appears that private interests are ready to provide these structures without cost to the United States for the use of the power developed, if the necessary authority is given. Plans are presented for a dam and a lock having a chamber 310 by 45 feet in horizontal dimensions, estimated to cost $2,080,000, and $10,000 per annum for maintenance and operation. The cost of improvement to the United States will therefore be $1,870,000, if private interests construct the new lock and dam at the rapids, and $3,950,000 if the United States constructs the lock and dam in addition to the work required above and below. Maintenance and operation would amount to $65,000 a year.

11. The amount of water power that may be expected from the development in excess of that now used by the mills is computed by the district officer, on the basis of a 30,000-horsepower plant, at about 13,333 horsepower, which he states would have a leasing value estimated at $100,000, or $7.50 per horsepower per annum.

12. The district officer discusses the question of terminals and cooperation, and he believes that local interests and the State should cooperate by constructing suitable and adequate terminals at several points, which he estimates will represent a considerable sum when compared with the cost of the project.

13. In conclusion, the district officer expresses the opinion that the Connecticut River between Hartford and Holyoke is worthy of improvement by the United States, under a project providing for a channel 12 feet deep at mean low water and generally 100 feet wide, to be obtained by the construction of a lock and dam at Hartford and by channel excavation and regulating works of limited extent, at a total first cost of $1,870,000 and $65,000 annually for maintenance and operation, this estimate being on the basis of the Enfield Lock and Dam being constructed by private interests. If such lock and dam are not constructed by private interests within a reasonable time, he believes the United States should undertake the entire work and

lease the power created. On this basis the cost will be increased $2,080,000. He recommends, however, that the appropriations be made subject to the provision that no work be done by the United States until the Secretary of War is satisfied that adequate terminal facilities under municipal or other public control will be provided at the cities of Springfield, Holyoke, and Chicopee by the time the project is completed.

14. The division engineer concurs in the main with the district officer, but believes that work should not be undertaken by the United States, unless the lock and dam at Enfield Rapids is constructed by private, municipal, or State funds, and the use of all water needed for navigation purposes be deeded to the United States by the parties operating the dam for power purposes.

15. As stated by the district officer, favorable recommendation has been made for the improvement of this waterway at a cost to the United States of $1,015,600, provided, among other things, that private or cooperate interests construct a suitable lock and dam free of cost to the United States. The depth adopted at that time was 7 feet. In view of the prospective opening of the enlarged Erie Canal in the near future, the increasing size of vessels used in the Sound and tributary waters, and the continual growth of population and business adjacent, it appears that the proper depth of channel would now be 12 feet, which will necessitate a corresponding increase in cost. The present estimate is $1,870,000, aside from the Enfield Lock and Dam, which the board believes, in concurrence with the division engineer, should be constructed by water-power interests.

16. This increase in cost over the former estimates seems fully justified, and therefore the board recommends the adoption of a project for the improvement of the Connecticut River from Hartford to Holyoke, Mass., following generally the plans proposed by the district officer, at a cost to the United States of $1,870,000 for first construction and $65,000 annually thereafter for maintenance, provided (a) that water-power or other interests will construct a new lock and dam at Enfield in accordance with the plans proposed by the district officer, or such other modified plans as may be approved by the Chief of Engineers and the Secretary of War, under the general provision of law applicable to such cases; (b) that the lock and such adjacent land as may be needed for its operation and care shall be deeded without cost to the United States, and sufficient power shall be supplied free of cost for its operation, but that otherwise the lock shall be maintained and operated at the expense of the Federal Government; (c) that those constructing the lock and dam shall assume all responsibility for claims for damages that may arise from flowage rights, from injury to water power, or from any other source; (d) that the cities of Springfield, Holyoke, and Chicopee shall make suitable provision for terminal facilities satisfactory to the Secretary of War.

17. In compliance with law, the board reports that, except as contemplated by the above recommendations, there are no questions of terminal facilities, water power, or other subjects so related to the project proposed that they may be coordinated therewith to lessen the cost and compensate the Government for expenditures made in the interests of navigation.

For the board:

FREDERIC V. ABBOT,
Colonel, Corps of Engineers,
Senior Member Present.

Mr. HUMPHREY of Washington. Mr. Chairman, I would like to have the attention of the chairman of the committee for a moment. I think that as this is Saturday evening and we have now reached 5 o'clock I would suggest we have done enough work for this week.

Mr. DEMPSEY. Mr. Chairman, I have a short item to present——

Mr. HUMPHREY of Washington. If the gentleman wishes to offer an amendment, I will withhold the request.

Mr. SPARKMAN. I was going to say that I proposed to ask that the committee rise when we reached the East River project, if that is satisfactory.

Mr. HUMPHREY of Washington. I am not sure but there is going to be some debate provoked before that time. I will withhold the request for the present.

Mr. DEMPSEY. Mr. Chairman, I offer the following amendment.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 4, between lines 8 and 9, insert:
"Black Rock Harbor and Channel: To extend about 5,100 feet, the 23-foot channel, 400 feet wide, in Niagara River, to the Tonawanda Iron & Steel Co.'s plant, with a basin about 1,230 feet long and 1,050 feet wide (the extension and basin being shown in the map accompanying Doc. No. 658, 63d Cong., 2d sess.), $300,000."

Mr. DEMPSEY. Mr. Chairman and gentlemen, previous to 1913 there had been built up at Tonawanda two large businesses—a steel business and a lumber business. The lumber business is the second or third in the whole of the United States. The steel business was large enough so that the plant was installed at a cost of nearly $1,500,000. At the time when these industries were built up it was sufficient to have a depth in the river of 15 feet. Business has changed so that to-day the lumber business and the steel business can not be accommodated at that point with vessels of that draft. To-day we must have 23 feet of depth to float the vessels now in use. Now, the result of the situation that has existed is that Tonawanda is a city, with all the improvements that come with the growth of a city. It has a police force; it has streets and lights; it has the homes of the workers in the steel business and the lumber business. Yet to-day there has been built up, 5 miles in the country, above Tonawanda, a steel plant, known as the Wickwire plant, remote in the country, simply because they have a 23-foot channel to that point in the river, and down below, at Tonawanda, where there has been invested $1,300,000 in a steel plant, where millions of dollars have been invested in the lumber business, the steel plant has been nearly shut down and the lumber business is at a very low ebb because of the facts, first, that vessels of small type have largely gone out of existence, as they can not run profitably, and, secondly, because the larger draft vessels can not come down there at all. We have the report of the Army Engineers favoring this project. It was made after an investigation in 1913. It has been reported upon twice and the money was actually authorized, but it was diverted to other projects.

In the case of New London, it has been said here that the Government of the United States made a practical agreement with that city to make it possible for her to utilize the $1,000,000 which she had spent. I say to you that a great business center has grown up at the Tonawandas—they have grown from villages to cities, because those two great industries believed that they would be able to continue to have a depth in the river sufficient to bring the boats there, but that has not been done, and the result is that those businesses will perish unless this amendment is adopted. Why, to-day the laboring men are going from Tonawanda 5 miles into the country to the Wickwire plant. They have to go that distance, requiring an hour morning and night, whereas that can be avoided and these great industries maintained by the deepening of this river channel. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. DEMPSEY. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from New York asks unanimous consent to extend his remarks in the RECORD. Is there objection? [After a pause.] The Chair hears none. The question is on agreeing to the amendment.

The question was taken, and the amendment was rejected.

The Clerk read as follows:

East Chester Creek, N. Y.: Continuing improvement and for maintenance, $6,000.

Mr. SPARKMAN. Mr. Chairman, I move that the committee do now rise.

The CHAIRMAN. Pending that, the gentleman from Massachusetts [Mr. GREENE] asks unanimous consent to extend his remarks in the RECORD. Is there objection?

Mr. SMALL, Mr. HUDDLESTON, and Mr. BENNET made the same request.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

The committee rose; and the Speaker having resumed the chair, Mr. SHERLEY, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 12193 and had come to no resolution thereon.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Waldorf, one of its clerks, announced that the Senate had passed bill of the following title, in which the concurrence of the House of Representatives was requested:

S. 5270. An act for a public building at Paris, Tex.

SENATE BILLS REFERRED.

Under clause 2, Rule XXIV, Senate bills of the following titles were taken from the Speaker's table and referred to their appropriate committees as indicated below:

S. 4505. An act appropriating money to equip Puget Sound Navy Yard for battleship construction; to the Committee on Naval Affairs.

S. 5270. An act for a public building at Paris, Tex.; to the Committee on Public Buildings and Grounds.

ENROLLED BILL SIGNED.

The SPEAKER announced his signature to enrolled bill of the following title:

S. 4657. An act to authorize the Cincinnati, New Orleans & Texas Pacific Railway Co. to rebuild and reconstruct, maintain, and operate a bridge across the Tennessee River near Chatanooga, in Hamilton County, in the State of Tennessee.

HOUR OF MEETING MONDAY.

Mr. KITCHIN. Mr. Speaker, I would like to ask unanimous consent that when we adjourn to-day we adjourn to meet at 11 o'clock—no; I withdraw that.

Mr. MANN. Mr. Speaker, reserving the right to object, what is coming up Monday?

Mr. KITCHIN. I believe it is unanimous-consent day, and I therefore withdraw the request. I move that the House do now adjourn.

ADJOURNMENT.

The motion was agreed to; accordingly (at 5 o'clock and 10 minutes p. m.) the House adjourned to meet on Monday, April 3, 1916, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the chief clerk of the Court of Claims transmitting a copy of the findings of the court in the case of Aaron L. Abbey *v.* The United States (H. Doc. No. 971); to the Committee on War Claims and ordered to be printed.

2. A letter from the chief clerk of the Court of Claims transmitting a copy of the findings of the court in the case of Paralee Evans *v.* The United States (H. Doc. No. 972); to the Committee on War Claims and ordered to be printed.

3. A letter from the chief clerk of the Court of Claims transmitting a copy of the findings of the court in the case of Joseph V. Kendall *v.* The United States (H. Doc. No. 973); to the Committee on War Claims and ordered to be printed.

4. A letter from the chief clerk of the Court of Claims transmitting a copy of the findings of the court in the case of Lizzie W. Townsley *v.* The United States (H. Doc. No. 974); to the Committee on War Claims and ordered to be printed.

5. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of Nicholas C. Buswell *v.* The United States (H. Doc. No. 975); to the Committee on War Claims and ordered to be printed.

6. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of Orange Parret *v.* The United States (H. Doc. No. 976); to the Committee on War Claims and ordered to be printed.

7. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of Frank Winter and Walter C. Winter *v.* The United States (H. Doc. No. 977); to the Committee on War Claims and ordered to be printed.

8. A letter from the Acting Secretary of the Treasury, submitting estimates of appropriations for new boarding launches for quarantine stations at Cape Charles, Va., and Columbia River, Oreg. (H. Doc. No. 978); to the Committee on Appropriations and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. RAKER, from the Committee on the Public Lands, to which was referred the bill (S. 1351) providing for the discovery, development, and protection of streams, springs, and water holes in the desert and arid public lands of the United States in the State of California, for rendering the same more readily accessible, and for the establishment of and maintenance of signboards and monuments locating the same, reported the same with amendment, accompanied by a report (No. 460), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. SINNOTT, from the Committee on the Public Lands, to which was referred the bill (H. R. 10305) to grant certain lands to the State of Oregon as a public park, for the benefit and enjoyment of the people, reported the same with amendment, accompanied by a report (No. 461), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. COADY, from the Committee on Interstate and Foreign Commerce, to which was referred the bill (H. R. 721) to provide divisions of mental hygiene and rural sanitation in the United States Public Health Service, reported the same with amendment, accompanied by a report (No. 462), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. STEPHENS of Texas, from the Committee on Indian Affairs, to which was referred the bill (H. R. 10989) making appropriation for the preservation, improvement, and perpetual care of Huron Cemetery, a burial place of the Wyandotte Indians, in the city of Kansas City, Kans., reported the same with amendment, accompanied by a report (No. 463), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. SINNOTT, from the Committee on the Public Lands, to which was referred the bill (H. R. 393) to authorize an exchange of lands with the State of North Dakota for promotion of experiments in dry-land agriculture, and for other purposes, reported the same with amendment, accompanied by a report (No. 464), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. RAYBURN, from the Committee on Interstate and Foreign Commerce, to which was referred the bill (H. R. 12362) granting the consent of Congress to the Dallas & Southwestern Motorway Co. to construct a bridge across the Brazos River, in the State of Texas, reported the same with amendment, accompanied by a report (No. 465), which said bill and report were referred to the House Calendar.

Mr. CULLOP, from the Committee on Interstate and Foreign Commerce, to which was referred the bill (H. R. 13669) to authorize the county of Wabash, in the State of Indiana, to construct a bridge across the Wabash River, at the city of Wabash, Ind., reported the same with amendment, accompanied by a report (No. 466), which said bill and report were referred to the House Calendar.

Mr. CARAWAY, from the Committee on the Judiciary, to which was referred the bill (H. R. 11878) to amend section 99, chapter 231, of the act to codify, revise, and amend the laws relating to the judiciary, reported the same with amendment, accompanied by a report (No. 467), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. NICHOLLS of South Carolina, from the Committee on Military Affairs, to which was referred the bill (H. R. 13769) to authorize the Secretary of War to supply tents for temporary use of the sufferers from the recent conflagration in Paris, Tex., and for other purposes, reported the same with amendment, accompanied by a report (No. 468), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, committees were discharged from the consideration of the following bills, which were referred as follows:

A bill (H. R. 1996) granting a pension to Flora B. Warren; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

A bill (H. R. 9250) granting a pension to Sarah E. Dillon; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. LESHER: A bill (H. R. 14063) to authorize the Secretary of War to donate to Fort Augusta, in the town of Sunbury, in the State of Pennsylvania, two bronze cannon or field-pieces; to the Committee on Military Affairs.

By Mr. TIMBERLAKE: A bill (H. R. 14064) adding certain lands to the Colorado National Forest, Colo.; to the Committee on the Public Lands.

By Mr. STEELE of Iowa: A bill (H. R. 14065) to provide for the purchase of additional ground and for erecting an addition to and making alterations in the Federal building at Sioux City, Iowa; to the Committee on Public Buildings and Grounds.

Also, resolution of the Greenville Grange, of Greenville, N. H., favoring national prohibition; to the Committee on the Judiciary.

SENATE.

MONDAY, *April 3, 1916.*

(Legislative day of Thursday, March 30, 1916.)

The Senate reassembled at 12 o'clock m., on the expiration of the recess.

NATIONAL DEFENSE.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States.

Mr. UNDERWOOD. Mr. President, on Thursday last in the speech which I delivered in the Senate I made some statements about the Du Pont Powder Co. This morning I received a letter from Mr. du Pont, the president of the company, somewhat explaining in reference to the statements I made. I think it is fair to myself and fair to Mr. du Pont that I should have his letter read at the desk and my answer to it, so that the RECORD may show both statements.

The VICE PRESIDENT. If there is no objection, the Secretary will read as requested.

The Secretary read as follows:

E. I. DU PONT DE NEMOURS & CO.,
Wilmington, Del., April 1, 1916.

HON. OSCAR W. UNDERWOOD,
United States Senate, Washington, D. C.

MY DEAR SIR: After reading what you said in the Senate Thursday bearing on our nitric-acid proposition I have reached the conclusion that you do not understand the position of this company.

We regret to take exception to your statements on the floor that we had endeavored to influence Congressmen against the Muscle Shoals proposition. We have never in any way, either directly or through Mr. Cooper, who was especially mentioned, made any such endeavor, nor has it been our intention to do so.

We do not desire to keep the Government of the United States, or any individual or corporation, from building a plant for fixation of atmospheric nitrogen. Nor are we soliciting the business of manufacturing nitric acid for the Government.

The United States is to-day in a position never before known to any nation. Among the greatest, it is alone in a condition of peace. Magnificent in its financial and commercial development, power, and strength, it is weak to the despair of its citizens, be they rich or poor, in its preparedness against outside attack. Never has there been more willingness to do, coupled with less power for the doing, than now. Never has there been greater necessity for mutual faith and for cooperation. Let, then, each man bear his part of the burden as best he can in the cause of preparedness.

Those in charge of E. I. du Pont de Nemours & Co. have conceived it their duty in this crisis to be that of performance and not of influence. We, who of necessity must be prominent in military affairs, are not the unbiased judges of the question of preparedness, its character and extent. Whatever may be our personal conviction of the overwhelming advantages of peace to our large commercial business against the smaller advantages of war to our lesser military interest, we could not escape from the suspicion of our fellow men if we were to attempt to advise preparedness. These facts have led us to stand for absolute neutrality in this discussion. Those who are and feel themselves unbiased in this question must decide the amount and character of preparation. It is for us to take action under their decision.

The European war brought to our company calls for assistance that few organizations have been made to face. To the response that has been made we may refer with pardonable pride. In October, 1914, when the first demands for powder came from abroad, our company had capacity to manufacture military explosives amounting to 10,000,000 pounds per annum; of this capacity about 50 per cent had remained idle for five years owing to the activities in manufacture of our own Government. In fact this surplus capacity was about to be abandoned. To-day we are manufacturing at an output of 375,000,000 pounds per annum, and every pound of material necessary for this vast production finds its source in our own United States excepting one item alone, nitrate.

The possible failure of the Chilean nitrate beds, whose lifetime is measureable in a few decades, has long led consumers to think of other sources of supply. The formation of oxides of nitrogen and of nitric acid from the air through the electric discharge has been long known, but those who turned to that source of commercial supply met with long discouragement; though in recent years nitrates for use in fertilizers have been made commercially through the use of cheap water power, it was not until the year immediately preceding the European war that nitric acid was produced in quantity, quality, and cost to compete with that made from Chilean nitrate.

The activity of our company in examining all possible sources of fixed nitrogen led to a careful examination of the successful processes of the Norwegian Nitrate Co., and we have made purchase of the patent rights and accumulated the necessary drawings, data, and information for the immediate installation of a nitric-acid factory from designs which have been proved commercially successful. We believe that these are the only plans and processes in existence on which a factory on a large and commercial scale can be produced to-day. While it is true that nitric acid is being made in Germany by processes unknown, it is neither proved nor even supposed that these processes are commercially satisfactory; more likely they are devised and maintained under military necessity.

Since the acquisition of the above-mentioned patents we have failed to find a satisfactory water power in the United States that is privately owned, and we have recognized existing laws of the United States which make prohibitory the development of water powers now under governmental control. On this account we turned abroad for the purpose of finding suitable power for our uses, and had well-nigh closed a contract for the use of a Canadian supply when the European war drew attention to the necessities of the United States and its position of extreme weakness in event of war. Our company is in a position of unique usefulness to the United States Government on the question of nitric-acid supply. It is essential that any source of material be kept alive and in healthy development in times of peace for use in times of war; otherwise failure of operation and lack of trained workmen are quick to depreciate the value of any organization, no matter matter how perfect. Our company alone can consume in times of peace for commercial use the enormous quantity of nitric acid that the United States Government might require for military use in times of war. This fact makes it imperative that our supply should be made available to the United States. Whether other auxiliary sources of supply are obtained or not is entirely apart from the concerns of our company. On this account we have crystallized our ideas as quickly as possible and have presented to the Secretary of War and at his assent to the United States Senate, through Senator SAULSBURY, a bill, the sole object of which is to make it possible for the Secretary of War, in conjunction with a suitable board of engineers, to grant water-power rights for the production of nitric acid under certain conditions. The bill gives to our company no rights that are not open for acquisition by other citizens and does not make it mandatory for the Secretary of War to deal with us or any other individual; nor does the bill interfere with the development of any other source of supply of nitric acid, nor with any other project at hand now or in the future. As a further safeguard, the Government is to have a call for the product of factories licensed under this bill either in times of peace or times of war, and the profit allowed to the manufacturer is to be decided by the Government alone. Notwithstanding these full powers the licensee is to provide all funds for construction under plans to be approved by Government officials. It is inconceivable that a supply of nitric acid could be more favorably obtained.

You must appreciate that the above presentation of our case leaves little cause for an accusation of "lobbying"; that is, for underhanded promotion of individual interests. Our company has no desire other than to fully exploit the information which it has in hand and has no wish to influence the decision of a question in which it has no right to interfere.

In closing, I must ask pardon for making so lengthy an explanation of our affairs. I have thought it important that you should be relieved of a misunderstanding which evidently exists in your mind. If any further information can be rendered by this company we shall cheerfully accept any calls made upon us.

Very sincerely,

PIERRE S. DU PONT,
President.

Mr. UNDERWOOD. Mr. President, I ask that my letter in answer to Mr. du Pont's letter may be read at the desk.

The VICE PRESIDENT. The Secretary will read.

The Secretary read as follows:

APRIL 3, 1916.

Mr. PIERRE S. DU PONT,
President E. I. du Pont de Nemours & Co.,
Wilmington, Del.

MY DEAR MR. DU PONT: I received your letter of the 1st of April to-day in reference to the speech I made on last Thursday in the United States Senate in reference to the Government of the United States building a nitrate plant.

Your letter says, "I regret to take exception to your statement on the floor that we had endeavored to influence Congressmen against the Muscle Shoals proposition." I made no such statement. I recognize that the possible water-power development at Muscle Shoals on the Tennessee River is very great and can be used by the Government or private individuals to great advantage, but not once since this question has been pending before the Congress have I advocated the proposition that the Government should go to Muscle Shoals for the development of its power or that Muscle Shoals should be turned over to any private corporation or individual for the development of that power. I have contended from the beginning that the Government of the United States should thoroughly investigate the question of the most available power for its own use and the most available methods for the manufacture of nitrogen, and that when it reached a conclusion through a board to act for the Government that then the facts in reference to the case should be laid before the Congress for its determination, so that you are edivently building a straw man at which to shoot when you assert that you have made no effort against the Muscle Shoals proposition. I am sure that you have not, as there has been no such proposition pending before the Congress.

The House bill and the proposals before the House committee sought to give the Government of the United States an opportunity to act in this matter after investigation and consideration. What I charged against your company was that it opposed the House proposals and the efforts being made to develop one or more of our great waterways for the use of the Government and for the Government to establish its own plant for the manufacture of nitrogen or nitrate acid.

I am glad to have the opportunity to give you the reasons why I made this statement. I have been advised by men whose credibility there is no reason whatever to doubt that Mr. Hugh L. Cooper, whom I have been informed has been in your employ and acting for you, stated that he was opposed to the House provisions relating to this subject and that he intended to defeat them. I have also been informed that Mr. Charles B. Landis, an employee of your company, has been in Washington and exerted his influence against the proposals in the House bill looking to the Government securing a supply of nitrogen. I have also been informed that you had other agents fighting the proposition when it was pending before the House. I do not know whether these agents are opposing the amendment that I have offered in the Senate or not, and so stated in my speech on last Thursday. If Mr. Cooper was not in Washington opposing the provisions of the House bill, and if Mr. Charles B. Landis was not in Washington opposing the provisions of the House bill, and they will write letters to me to that effect, I will be glad to publish them in the RECORD. If you have had no agents opposing the House proposals on this subject and you will write a letter making that statement clearly and distinctly, I will be glad to have your letter published in the RECORD and will endeavor at the same time to get a statement from the gentlemen who advised me in reference to the situation as to their information in reference to the subject.

You state in another paragraph of your letter, "You must appreciate that the above presentation of our case leaves little cause for an accusation of 'lobbying'; that is, for underhanded promotion of individual interests." In my speech in the Senate I do not think that I said anywhere in the speech that you were "lobbying" or in any way reflected on the methods used by your company except in so far as the statement of fact that I made may have been a reflection on them. If you had agents in Washington opposing the House bill, then the statement contained in my speech is justified by the facts. If you did not have them in Washington and will furnish me with letters stating that fact under their own signatures and a statement from yourself, I will publish them in the RECORD on my own motion.

As to the second proposition, I stated in my speech on Thursday that I thought the Government of the United States should develop sufficient horsepower to be controlled by it to assure at all times an adequate supply of nitrogen in this country for governmental purposes, and I also stated that if the Government would not take the initiative in the matter I did not believe in obstruction and that I thought that the private corporations in the United States ought to be given an opportunity to do so. I have no objection whatever to your company developing a nitrogen supply for itself or securing available water power to do so, but I believe, first, that the Government of the United States ought to have the first opportunity to select from the available water powers of the United States to develop them for governmental uses, and, second, I do not know of any reason why your company or private corporations seeking to produce nitrogen for their personal profit should have any advantage over other business corporations in the United States.

The general dam bill has passed the Senate with certain restrictions to guard the public interests. I am in hopes that the bill will pass the House, and that before this Congress is over we will have legislation on the statute books that will authorize the development of the water power in this country in such a way that the interests of the public will be safeguarded and at the same time the terms may be sufficiently reasonable as to invite private capital to invest its money in this line of development. If this is done, you will have the same opportunity that your competitors or other business interests in the United States will have.

The bill that you propose to the Congress does not have the limitations in it nor does it guard the public interests in the way that the general dam bill does that recently passed the Senate.

As to the development of your process for making nitrogen, I am advised that it is not economical and available process for making nitric acid for powder and nitrogen for fertilizer both at the same time. Personally I am as much interested in the development of plants for the manufacture of nitrogen to develop fertilizer for the farmers of this country as I am in the manufacture of nitrate acid to furnish us our powder supply, although, of course, I recognize the powder supply is our first patriotic duty and first governmental obligation.

As to the pending legislation, the amendment I have offered to the Senate bill in no way advocates the cause of any corporation or individual, in no way proposes the development of any particular water power, in no way seeks to advance any particular process for the making of nitrogen. I merely propose to investigate as to what is the best process and as to what is the best water power that can be used. As to the lines on which the Government can avail itself of the use of a nitrogen process, and as to the cost of development and place of location of a hydroelectric plant, if this resolution becomes a law it will be open for your company to present your case to the Board of Army Engineers. If your company has the best one, I have no doubt that it will be adopted. If your plan is not practicable and feasible, and there is another plan which is more meritorious, I have no doubt that will be adopted, and I can not see where there can be any particular objection on the part of your company to the plan I have proposed, unless you are opposed to the proposition because you do not desire the Government to go into the business of developing its own water power or making its own nitrogen.

I am not one of those who indulge the habit of abusing private corporations. I have not the slightest desire or intention of dealing unfairly with your company. What I stated in my speech I then believed, and believe now, to be justified by fact. They were facts that the Congress of the United States and the public at large were entitled to know. If I have been mistaken in my statement of facts and you furnish me with the evidence to that effect, I shall be glad to correct it.

With kindest regards, I have the honor to be,

Very truly, yours,

O. W. UNDERWOOD.

Mr. UNDERWOOD. Mr. President, I do not intend to discuss the question further at this time. I merely felt that it was justice to the Du Pont Powder Co. to publish their statement, and also to publish my answer to their letter.

I have not charged this company with any improper motive. I charged that its agents were endeavoring to defeat the legislation that was before the House looking to the Government of the United States establishing a water-power and a nitrate plant for the Government's own use.

The statements I made were based on statements coming from reputable men. I have stated in my letter to Mr. du Pont that if the men whom I have named on the floor of the Senate and in those letters will write letters over their own signatures and deny the facts to me I will present their letters at the desk and have them read in justice to them. If they do not write such letters and deny the facts that I have stated, it will be a

confession on the part of the Du Pont Co. that the facts I stated in my speech on last Thursday are true.

The VICE PRESIDENT. The Chair begs the indulgence of the Senate for one moment. The present occupant of the chair recognizes the fact that the Senate is a self-governing body, and that the rules are most generally "more honored in the breach than the observance"; but the Chair is about to assume that the Senate would like the following rule enforced:

No Senator shall interrupt another Senator in debate without his consent; and to obtain such consent he shall first address the presiding officer. And no Senator shall speak more than twice upon any one question in debate on the same day without leave of the Senate, which shall be determined without debate.

In the consideration of the pending bill in the last week that rule has been constantly violated. It has been done through what is known as senatorial courtesy, and the Senator holding the floor has been compelled to have his remarks interrupted by another Senator speaking upon an entirely different subject. The Chair is going to enforce the rule which he has just read until the Senate informs the Chair that it shall not be done.

Mr. CHAMBERLAIN. Mr. President, so far as I am personally concerned, I should like to see the rule enforced in order that we may expedite the business of the Senate if we intend to get through this summer.

Mr. President, the pending amendment is that offered by the Senator from Iowa [Mr. CUMMINS] proposing to add five officers of the National Guard to the General Staff of the Army. I feel that it is my duty, as the temporary spokesman for the Committee on Military Affairs, to oppose this proposed addition to the General Staff. I want to call the attention of the Senate to the fact that this same proposition was involved in the bill that was reported to the House of Representatives by the House Committee on Military Affairs; it was involved before the Committee on Military Affairs of the Senate; and both of those committees reported adversely to the adding of the officers of the National Guard to the General Staff of the Army.

Mr. President, I want to say in the outset that I am not unfriendly to the National Guard. I served four years as an officer in the National Guard, and I have always felt deeply interested in the work of that splendid and patriotic organization in my State, and in all of the States of the Union, as a matter of fact. It is true, as has been a number of times stated upon the floor of the Senate, that they have given their time without pay, and have diligently undertaken to fit themselves for the service of their country, sometimes at very great sacrifice, and nobody realizes that more than do I because of my association with that organization for a number of years.

So our committee, Mr. President, approached the discussion of this subject in no unfriendly way. But the discussions on the floor of the Senate have convinced this body that the status of the National Guard under the Constitution of the United States has never been determined, and there is nearly as great contrariety of opinion upon the subject as there are Senators. Some, like the distinguished Senator from Idaho [Mr. BORAH], than whom there is no abler exponent of the Constitution in this body, insists that it is impossible practically to nationalize the National Guard so as to bring it under the control of the Central Government. I state that as a general outline of the Senator's claim. On the other hand, the Senator from Iowa [Mr. CUMMINS], who is also a very distinguished and learned lawyer, claims that it is possible to so federalize the National Guard of the country as to make them a Federal force almost as immediately subject to the control of the War Department as are the regular forces themselves. I am rather in line with the view of the Senator from Iowa. I think if the Congress of the United States will exhaust the powers it has under the Constitution, that we can very nearly approximate a federalization of the National Guard; but I realize that that is a very debatable question.

Able lawyers have insisted that the National Guard might be federalized in everything except the appointment and control of the officers of the National Guard, it being insisted that such officers must be appointed by the governors of the States, and that Congress can not interfere to control the appointment of officers.

Mr. BRANDEGEE. Mr. President, I wish to ask has the Senator from Oregon heard any lawyer claim that Congress can authorize the President to order the militia of the States into the service of the United States for the purpose of training?

Mr. CHAMBERLAIN. No; I do not believe I have.

Mr. BRANDEGEE. So that it is not simply that the Federal Government can not appoint the officers of the militia of the States, but that the Federal Government can not constitutionally compel the State militia to enter the service of the United States to train them; and the power of training them is reserved to the several States under the same clause of the Constitution by which the power to appoint the officers is reserved to the several States.

Mr. CHAMBERLAIN. Mr. President, I do not propose to enter into the discussion of the constitutional question at all, because it has been so ably discussed by others. I am going to address myself more particularly to the pending question, leaving, for the present at least, the constitutional question to be discussed by Senators on the floor of the Senate; but I will say, in answer to the Senator from Connecticut, that it is contended by many Senators, and by the Senator from Iowa amongst others, that the training to which the Senator refers is training by the States under the discipline prescribed by the Congress itself, so that, if that contention be carried to its farthest limits, it is a part of the discipline that Congress has power to prescribe that the States must pursue in training the militia. I do not know how far Congress can go in this behalf.

Mr. BRANDEGEE. Mr. President, I observe what the Senator from Oregon says, but right at that point—and I shall not interrupt the Senator again—I desire to state that, in my opinion, the discipline——

The VICE PRESIDENT. We are starting in wrong now, in that the Senator from Connecticut is expressing his views instead of asking a question.

Mr. BRANDEGEE. If it is so that a Senator can not make a statement in the process of making an inquiry, I shall put it in this form: I will ask if the Senator from Oregon will yield for that purpose?

Mr. CHAMBERLAIN. I yield to the Senator.

Mr. BRANDEGEE. Does the Senator from Oregon think, from the fact that the Constitution uses the word "disciplining" and also uses the word "training," that there is a distinction between those things? And does the Senator think that "the discipline" to be "prescribed by Congress" is a statement of the kind of training that the National Guard shall have but is not at all the process of training?

Mr. CHAMBERLAIN. If Congress undertakes to lay down a rule for the discipline of the State militia and they are to be trained pursuant to that regulation, whatever it may be, great or small, it seems to me that they might have the power practically to lay down rules for the training of the troops in the States themselves. But I do not intend to discuss that question, Mr. President.

I want to express very great regret that the National Guard of the several States, after having been patiently heard, through its representative officers, in the committees of the House and Senate, and after a most painstaking hearing on the part of these committees, has seen fit to inject itself into the Halls of Congress, until now it looks very much as though it were a fight between the Regular forces of this country or, rather, those who believe in maintaining a Regular Establishment for the defense of this country, and the National Guard, as to which is to be considered in legislation which affects the whole country. I am not going to limit that criticism, Mr. President, to the National Guard. I want my position to be fully understood about this matter. I have with the Military Affairs Committee devoted nearly three months of my time to working just as hard as I know how, and this bill, as I have explained heretofore, has run the gamut of the department here in Washington, including the General Staff, the War College, and all the other military departments of the Government. We have had the views of the representative men of these bodies, and after we have undertaken to formulate a bill which seemed, in the committee at least, to meet pretty generally the approval of the authorities, we find that not only the National Guard and its officers—and I sometimes fear a lobby is maintained for that purpose—but we find officers of the Army around the Halls of the Senate and House of Representatives interfering with this legislation instead of leaving the matter to Congress, who have the matter in hand and are responsible for the legislation affecting the Army, until, Mr. President, the work is like Pelion on Ossa piled. The work of the committees of this Congress amounts to nothing if men representing the National Guard and men representing the different branches of the Army as well are to be permitted to come here and interfere with the due course of legislation. I do not mean to say that it is a dishonest interference, but it certainly is impeding and interfering with legislation. I regret very much this condition. I have sometimes felt that I ought to call the attention of the War Department to the situation here, and I may do so later.

With reference to the representation of the National Guard on the General Staff, I hope the amendment will not be adopted; because, as I said a while ago, the status of the National Guard from a constitutional viewpoint is undetermined. The committee, feeling friendly to the National Guard, has gone the limit—and I sometimes fear has trod upon the heels of the Constitution—in undertaking to make it a federalized force. We

have not only undertaken to make it a Federal force, but we have undertaken to limit the power of the appointment of officers by the governors of the States, requiring that selections for appointment shall be made under rules determining the capacity of these men. Whether that can be done or not I do not pretend to say with certainty, but we have tried it.

Mr. SUTHERLAND. Mr. President——

Mr. CHAMBERLAIN. If the Senator will pardon me a moment, we have tried it for the purpose of enabling the National Guard to have its status determined as a dependable force in time of emergency.

The VICE PRESIDENT. Does the Senator from Oregon yield to the Senator from Utah?

Mr. CHAMBERLAIN. Yes.

Mr. SUTHERLAND. If the Senator will permit me to interrupt him, I desire to ask him a question; but it is necessary that I should say a single word as a foundation for the question.

I sympathize with the views expressed by the Senator from Idaho [Mr. BORAH] as to the interpretation of the Constitution, but I also sympathize with the amendment proposed by the Senator from Iowa [Mr. CUMMINS] with reference to providing representation on the General Staff for the National Guard. Now, I want to ask the Senator from Oregon whether he sees any constitutional difficulty in the way of the amendment which the Senator from Iowa proposes.

Mr. CHAMBERLAIN. Frankly, I do not. I think it might be constitutionally done; but I am going to show, Mr. President that it ought not to be done, in view of the recognition which is now given by the laws of Congress to the National Guard, and I am going to address myself to that subject for a few moments.

Mr. SUTHERLAND. I shall listen to the Senator with much interest, because that is a matter about which I am very much concerned.

Mr. CHAMBERLAIN. What are the functions of the General Staff? From a compilation of the laws and regulations governing the General Staff, I find that the general staff of all armies is composed of military experts in various lines, whose duty it is to make studies on military subjects, to examine projects and proposals for the improvement of the army in all lines, to plan for the instruction of the forces, to recommend upon questions of military policy, to make plans for possible military exigencies, to study geography and various areas in our own and other countries, and to collect and arrange military information concerning foreign countries.

It has been the practice of all governments to select their best military experts for service on the general staff. Our General Staff is a mere bagatelle in numbers as compared with some of the general staffs of the armies now engaged in the war in Europe. Not only are they advised as to conditions in their own country from a military standpoint, but they are advised about the conditions in our country; and newspaper discussion and some discussions on the floor of the Senate have convinced me that they know more about our own Military Establishment and our military conditions than our people do themselves.

It will be seen from an examination of the duties of the General Staff that they are all technical and require to the highest degree a knowledge of the military art. If this proposed amendment is passed, it will inject into the General Staff a body of men whose knowledge of military matters must be small, because the study of the military art has been an avocation with them and not a vocation, as is the case with the professional soldier. Their usefulness will be, in the very nature of things, limited; and the committee could not see that the services returned to the Government would be at all commensurate with the cost involved in their pay and allowances. The General Staff is not a partisan body nor a political body, and to detail a certain number of officers from the militia, with the avowed intention of giving them representation, would be to inject a new principle into the General Staff and would constitute a most unfortunate precedent.

There are apparently, as I suggested a while ago, some erroneous views in regard to the General Staff and its duties; for the distinguished Senator from Maryland [Mr. LEE] seemed to think that if they had a fixed status on the General Staff, information which was sought by him from the War Department might have been furnished very much more quickly than he was able to get it. The fact that the Secretary of War prevented the War College from giving out certain information is a matter of policy to be determined by that official, and has nothing to do with the General Staff.

Judging from his address the other day, the Senator from Maryland seemed to be under a misapprehension as to the functions of the General Staff as to mobilization, and appeared to think, if I did not misconstrue what he said, that having certain members of the National Guard on the General Staff would facilitate these plans. Mobilization consists in the transformation of the Military Establishment from its status of peace to that of war, and has to do with the formation of the field army recruited to full strength, armed, quipped, and provided with transportation for field service, the formation of reserves to reinforce it, the formation of depots of recruits to replace its losses, the plans for the occupation of vacated garrisons, and the organization of the auxiliary service necessary to maintain the combatant force in a high state of efficiency. This mobilization is effected without loss of time if a proper plan of mobilization has been prepared in advance; and I will say, Mr. President, that the general staff corps of other armies, in addition to the work that they have done at home, have maps and plans and diagrams and everything formulated for the future in case of conflict with some other power. I may say that information has recently come to me to the effect that the general staff of a certain one of the belligerents has every bit of the information, diagrams, and plats necessary for the movement of troops in case we happened to have any differences with that particular belligerent.

So that the duties of the general staff of an army are of the highest technical importance, and ought not to be considered except by the best experts that an army can furnish. Let me say here that in the organization of our General Staff, so jealous have they been with reference to the naming of men on the staff that the Secretary of War details five general officers who act under oath and select men for the General Staff—the experts of the Army, not below the rank of captain. These experts are the men who are selected for General Staff duty; and they are chosen for their peculiar fitness for any particular branch of the service.

Mr. BRANDEGEE. Mr. President, will the Senator allow me to ask him a question there?

The VICE PRESIDENT. Does the Senator from Oregon yield to the Senator from Connecticut?

Mr. CHAMBERLAIN. Certainly.

Mr. BRANDEGEE. Does the Senator understand that if officers of the State militia or of the so-called National Guard—and I believe the Dick Act provides that all these organizations, by whatever name they have been previously known, shall in the future be known officially as the Organized Militia—if officers of the Organized Militia are made members of the General Staff by act of Congress, would that subject them to the military discipline of the United States Regular Army as to court-martial, and the entire regular military discipline?

Mr. CHAMBERLAIN. I think the purpose of the Senator from Iowa [Mr. CUMMINS] was distinctly to have that done, because he feels that it can be done; but there is a difference of opinion amongst the Senators about that, and that is one of the reasons why I say that this amendment ought not to be adopted—because of the difference of opinion, not only amongst the Senators, but among the courts of the country as well.

Mr. CUMMINS. Mr. President, may I ask the Senator from Oregon a question?

Mr. CHAMBERLAIN. Certainly.

Mr. CUMMINS. Does not the bill that he has reported so provide?

Mr. CHAMBERLAIN. It does. We have tried to do it.

Mr. CUMMINS. I have therefore simply proceeded upon the basis of the bill which the committee has reported.

Mr. CHAMBERLAIN. I realize that. I am not criticizing the Senator's position, as I am largely in accord with him; but my difference with the Senator grows out of this fact: He would put on the General Staff, which has for its purpose all of these plans that I am discussing, representatives of the National Guard, who in the very nature of things have not been in a position to learn how to do this work that is required of the General Staff in any army. I say that without intending to discredit these gentlemen. As I say, I was a member of the National Guard myself; but I realize, as most of the Senators here realize, that it is a physical impossibility for members of the guard, in the short time they have, to learn as much about all of these questions as those who make the Army a profession in life from the time they leave the Military Academy until they retire for old age.

Speaking of the other duties of the General Staff, the mobilization to which I referred a while ago is effected without loss of time if a proper plan of mobilization has been prepared in advance; but the preparation of this plan deals entirely with technical subjects and not at all with the class of soldiers composing the Army. Each man, each company, and the regiment is a unit, and merely considered as a unit, and not as to whether it is a Regular unit, a National Guard unit, or a Volunteer unit. It is not apparent how the acquaintance of the National Guard

officers with their peculiar organizations—for that is the argument that is made here—would be of any benefit in the preparation of a plan for mobilization.

One of the Senators insisted that if the National Guards were represented on the General Staff many of the difficulties which attend the transportation of troops from one point to another would be avoided. I do not understand that that is a part of the general plan of the General Staff. It is their duty to say where troops should be mobilized and not how the mobilization should be effected. That is done through other instrumentalities than the General Staff. If they say, from the plans they have worked out as affecting the war, that the troops should be mobilized at a certain point along the Mexican border, that is the thing that is done and accepted as a part of the program of the War Department. How to get them there does not necessarily come within the general scope and purpose of the General Staff, except in so far as they have formulated maps and plans showing the railroads, the methods of reaching certain points where mobilization is to be had, and so forth. The only necessary thing is that the individuals on the General Staff should have a thorough knowledge of the military art and not that they should come from any particular source.

The distinguished Senator from Maryland [Mr. LEE] speaks about the mobilization of the Swiss forces in 10 days, and says that her mobilization was more prompt than that of Germany. This is undoubtedly a fact; but it must be remembered that the principal reason therefor is that Switzerland is a country about the size of Vermont and New Hampshire, whereas Germany and France are each about the size of Texas and the United States stretches as far as from Portugal almost to Siberia and from England to Persia.

On questions affecting policies regarding the treatment of the National Guard and for presenting their views to the Secretary of War, the National Militia Board already exists, and will remain in existence under the terms of the bill. The questions that come up for the consideration of its members are few in number, and they can always be called together by the Secretary of War to advise on such matters.

I am going to call attention to that now, Mr. President. I want to show that the National Guards of the country have representation now for all purposes required to bring them in touch with the War Department and the General Staff.

Section 1337 of the military laws of the United States provides:

> The Secretary of War is hereby authorized to appoint a board of five officers on the active list of the Organized Militia, so selected as to secure, as far as practicable, equitable representation to all sections of the United States, and which shall from time to time, as the Secretary of War may direct, proceed to Washington, D. C., for consultation with the Secretary of War respecting the condition, status, and needs of the whole body of the Organized Militia. Such officers shall be appointed for the term of four years, unless sooner relieved by the Secretary of War.

Mr. President, pursuant to that, this board of National Guard officers has been appointed, and acts in conjunction with the Secretary of War. There is not a single need of the National Guard that can not be brought immediately to the attention of the Secretary of War just as effectively, if not more effectively, than it would be possible to bring it to his attention through the instrumentality of representatives of the National Guard on the General Staff. In other words, Mr. President, until the status of the National Guard has been determined beyond any question of doubt, it seems to me that they ought not to be added to a board which has peculiar functions of a technical nature to perform, and which, in the very nature of things, officers of the National Guard are not in a condition to perform.

I attained the rank of a captain of the National Guard. The lowest grade of the General Staff Corps is that of captain. I am frank to say that after four years of service as a member of the National Guard—and I think I had ordinary intelligence in undertaking to learn the duties of an officer—I would have been powerless to master the technique necessary to say where the troops of the United States should have been mobilized and mass in a given emergency for the purpose of a proper defense of this country. In the very nature of things, Mr. President, practicing law, as I was, engaged in the civil walks of life, I could not devote to the duties of that place the time required to master the details of all of these great questions.

Let me say here that Gen. Mills—who is at the head of the Division of Militia Affairs, and in holding that office a member of the General Staff, and a very painstaking man—has gone into all this subject very fully, and I invite the attention of Senators to his report. I want to say here, Mr. President, because the suggestion has been made in two or three quarters that the Army is opposed to the National Guard, that I have never at any time found a disposition upon the part of any Army officer to attempt to discredit the National Guard, or to do anything that would make it less effective. On the contrary, my experience is that they have tried to bring it into closer touch with the regular forces of the United States, so that in case of emergency it could be readily made available and efficient. I do not know what the experience of others may have been. We had a distinguished officer of the Engineer Corps detailed with us by the War Department to assist us in the use of the proper technical language in framing this bill, and we had with us a distinguished retired officer of the United States Army; and I have never seen two gentlemen of any body of men listen more patiently to the suggestions of the National Guard and try harder than these gentlemen did to assist in carrying out the wishes of the National Guard and making it an effective body under the control of the War Department. The only questions that ever arose in the minds of these gentlemen were the same questions that have arisen in the minds of the distinguished Senators here, and they were discussed without prejudice, and fairly. That was the fact about it. And so, whenever I have called into requisition the services of any Army officer in the preparation of this bill, they were all anxious to do what? To create a force, first, of the Regular Army, and then an efficient force of National Guardsmen or Volunteers that might be drawn upon whenever the emergencies of the country required some force to be called upon—and, God knows, we all realize the necessity of it.

Mr. OVERMAN. Mr. President, may I ask the Senator a question?

Mr. CHAMBERLAIN. Certainly.

Mr. OVERMAN. Was there any demand before the committee on the part of the National Guard that they should have representation on the General Staff?

Mr. CHAMBERLAIN. Oh, yes. Both committees passed on it—the committee of the House and the committee of the Senate.

Mr. OVERMAN. And both declined?

Mr. CHAMBERLAIN. Both declined. We passed on nearly every question that is going to be submitted here, Mr. President. After having given patient attention to the hearings that were had before those committees and having undertaken impartially to reach a conclusion that would be best not for the National Guard and not for the Army, but for the country, we find all of these men and branches of the different services here beseeching the Congress to undo what the committee has done and to formulate a piecemeal statute that will be ineffective in time of stress and storm. The purpose of the committee has been—and I hope the purpose of the Senate will be—to ignore the demands of special interests, whether in the Army or in the National Guard, and undertake to reach a conclusion which will help our country rather than individuals.

Mr. President, I am going to ask to have inserted in the RECORD a diagram that has been prepared with great care to show the peace organization and administration of the office of the Chief of the Division of Militia Affairs. It shows, Mr. President, briefly and succinctly, just exactly how the National Guard, under the present system, is brought in touch with the Regular Establishment and exactly what are the functions that are to be performed; and it shows further that under the system as it now exists the National Guard is just as nearly in touch with the War Department as is possible to make it by placing members of the National Guard on the General Staff not to benefit the General Staff, but to impair the efficiency of the work of the General Staff.

I ask that this statement may be printed in connection with my remarks.

The VICE PRESIDENT. Without objection, it will be so ordered.

Mr. CHAMBERLAIN. Then, too, I desire to insert in the RECORD from the Congressional Directory, under the head "Department of War," a short statement in regard to the Division of Militia Affairs. It is a compact statement of the duties of the Division of Militia Affairs and will save the Members of the Senate time in trying to trace them up. The rules and regulations governing the Militia Board are quite long. I call the attention of the Senate to the Organized Militia Regulations of the War Department, an authoritative publication issued by the War Department, article 8 of which sets out the rules and regulations governing the National Guards of the country. But the statement that I desire to have inserted in the RECORD is found at page 301 of the Congressional Directory:

DIVISION OF MILITIA AFFAIRS.

> The Division of Militia Affairs is vested with the transaction of business pertaining to the organized and unorganized militia of the United States, its jurisdiction embracing all administrative duties involving the armament, equipment, discipline, training, education, and organization of the militia; the conduct of camps of instruction and

PEACE ORGANIZATION AND ADMINISTRATION OF THE OFFICE OF THE CHIEF, DIVISION OF MILITIA AFFAIRS.

Chief of division.

Brigadier General, General Staff.

In charge of all business of the War Department pertaining to the organized and unorganized militia of the United States, embracing all administrative duties involving the armament, equipment, discipline, training, education, and organization of the militia, the conduct of camps of instruction, the participation of the Organized Militia in field exercises and maneuvers of the Regular Army, mobilization and relations of the militia to the Regular Army in time of peace, and all other matters pertaining to the militia which do not, under existing laws, regulations, orders, or practice, come within the jurisdiction of the General Staff or any division or bureau of the department. Is responsible for the records of all matters pertaining to the militia when not in the military service of the United States and is the channel of communication between the Secretary of War and the adjutants general of the States, Territories, and the District of Columbia, in relation to business pertaining to the militia when not in the military service of the United States.

Principal assistant to Chief of division.

Colonel, Infantry.

Assistant and executive officer of the division, in charge of the general subject of organization.

Assistant to the chief of division.	*Assistant to the chief of division.*	*Assistant to the chief of division.*	*Assistant to the chief of division.*	*Assistant to the chief of division.*	*Assistant to the chief of division.*	*Assistant to the chief of division.*	*Assistant to the chief of division.*	*Assistant to the chief of division.*
Lieutenant colonel, Infantry.	Major, Medical Corps.	Major, Field Artillery.	Major, Corps of Engineers.	Captain, Coast Artillery Corps	Captain, Quartermaster Corps.	Captain, Cavalry.	Captain, Infantry (Signal Corps).	First lieutenant, Infantry.
In charge of matters pertaining to the organization and instruction of the Infantry personnel of the Organized Militia.	In charge of matters pertaining to the organization and instruction of the sanitary personnel of the Organized Militia.	In charge of matters pertaining to the organization and instruction of the Field Artillery personnel of the Organized Militia.	In charge of matters pertaining to the organization and instruction of the Engineer personnel of the Organized Militia.	In charge of matters pertaining to the organization and instruction of the Coast Artillery personnel of the Organized Militia.	In charge of property and financial matters pertaining to the Organized Militia, the equipment of organizations of all arms, and issues to States.	In charge of matters pertaining to the organization and instruction of the Cavalry personnel of the Organized Militia.	In charge of matters pertaining to the organization and instruction of Signal Corps and machine-gun organizations of the Organized Militia and matters of personnel relating to sergeant-instructors.	Assistant to the officer in charge of matters pertaining to the organization and instruction of the Infantry personnel and in charge of matters pertaining to target practice of the Organized Militia.

Chief clerk of the division.

In general charge of all clerical work of the division and responsible to the chief of the division for the general character and quantity of the work performed.

Assistant chief clerk.

In the absence of the chief clerk he will perform the duties assigned to the latter; will examine all papers prepared for the action of the chief of the division which are checked to his basket by the chiefs of section and check them to the chief clerk's basket; and will perform such other work in connection with the general work of the office as may be assigned to him by the chief clerk.

Correspondence section.	*Record section.*	*Financial section.*	*Property section.*	*Statistical section.*	*Blank room.*
One chief of section (assistant chief clerk) and six clerks. Will perform such stenographic work as the business of the office may demand under the supervision of the chief of section and chief clerk.	One chief of section and five clerks. The work of this section consists of the receiving and mailing of all correspondence of the office, the searching of records for previous correspondence or relevant cases; the briefing, indexing, and filing thereof.	One chief of section and two clerks. Will keep books of accounts between the War Department and the Organized Militia; draw requisitions for funds; examine and record the accounts of disbursing officers, and check auditor's settlement thereof with the accounts and books of the office.	One chief of section and two clerks. Will act on all requisitions for supplies received from the several States, including the preparation of correspondence relating thereto.	One chief of section and five clerks. Will examine reports of inspections, of small-arms firing and annual returns of strength; will prepare statistical matter for the annual report of the Chief of the Division of the Organized Militia; make requisitions for supplies for the division, and examine and act on survey proceedings and property accounts and returns.	One clerk and one messenger, who will make distribution of general orders, bulletins, circulars, blank forms, etc., to the Organized Militia.

participation in the field exercises and maneuvers of the Regular Army; the mobilization and relations of the militia to the Regular Army in time of peace; the preparation of annual returns of the militia required by law to be submitted to Congress; and all matters pertaining to the militia not herein generically enumerated which do not, under existing laws, regulations, orders, or practice, come within the jurisdiction of any other division or bureau of the War Department. It is the central office of record for all matters pertaining to the militia not in the military service of the United States.

Now, so much for that.

Mr. President, I am not going to indulge in any severe strictures of the National Guard, because I can not repeat too often that I feel friendly to them and I want to see them made a strong and effective force, and I have attempted to do all in my power to make them so.

Some National Guards of this country are splendid bodies of troops. Take the New York National Guard, for instance. I have never seen them in action, but they are under the control of Maj. Gen. O'Ryan, a very distinguished and a very able gentleman, a man who is paid a good salary by the State and who is to all intents and purposes a professional soldier, because he makes that his business. He is trying to make the National Guard a strong force, a commanding force, and he has come as near doing it as almost any man in the United States. He was before our committee and testified not only as a soldier but as a constitutional lawyer, and he has been of great assistance in preparing a bill. I might speak in the same way about other guardsmen and guards, but I individualize for the purpose of illustration.

Mr. DU PONT. I should like to ask the Senator from Oregon if it is not a fact that a large portion of the provisions in the bill with respect to the militia were suggested or certainly approved by Maj. Gen. O'Ryan?

Mr. CHAMBERLAIN. Oh, yes; I think probably it is safe to say that nearly all of them have been approved by representatives of the National Guard. But they do not stop with

those; they want more. I think I heard the Senator from Mississippi [Mr. WILLIAMS] speak once about a man who on a certain occasion, familiar to us all, called for "beef! beef! more beef!" Our friends of the guard are not satisfied with what we have attempted to do for them to carry out what they profess to want, federalization, Federal control, but they want more. They want more than the safety of this country would warrant Congress in giving them. Now, I am not going, as I said a while ago, to call attention to the delinquencies of the National Guard. They are not professional soldiers. But I do ask Senators to read the impartial statement of Gen. Mills in the House hearings, volume 2, at page 187. I am not going to discuss it. I merely want the Senate to read it and be advised from authoritative sources, and I call the attention of Senators to the report of Gen. Mills.

In the very nature of things these distinguished gentlemen of the guard, however honest they may be and however capable in their ordinary avocations of life, are not competent to handle these technical questions as to the duties of the soldier in the time they devote to training themselves for the service of their country.

Mr. President, without having the figures right before me, I call your attention to the fact that over a million dollars' worth of property that has been turned over by the General Government to the National Guard has been lost. Scandals have grown out of the handling of it. It has been charged that uniforms condemned by officers of the National Guard have been sold for the troops of other countries.

I am not impeaching the general personnel of the National Guard, but I am calling attention to conditions which have grown out of the policy in dealing with the National Guard and the properties of the Government turned over to them. Yet it is proposed to transfer these patriotic and distinguished gentlemen from places where there have been abuses to higher places where still other and greater and higher trusts might be abused.

Not only that, but in the adoption of plans for the mobilization of troops and other matters in time of emergency, not only is the property of the Government at stake, but the lives of the men of the Army as well. Shall we place upon the General Staff men who lack experience in the details necessary to successfully work out these great questions and problems?

Mr. President, there are a number of other questions that have been discussed here. I shall take them up as we reach them. One of these is the volunteer force that my distinguished friend from Illinois [Mr. LEWIS] spoke of as an intermediary force slipped into this bill for some sinister purpose. I shall discuss it when we come to it and show the genesis of that provision. It is not true, as the Senator said, that it had its suggestion in some unpatriotic suggestion of anybody. It was recommended by Washington and by nearly every general who has had anything to do with the organization of troops. I shall call the attention of the Senate to that when we reach it, but the matter now before the Senate is the amendment proposed by the Senator from Iowa to add to the General Staff of the Army five officers of the National Guard.

Mr. President, I do hope that the Senate will not adopt that amendment. We have increased the General Staff from 34, I believe, to 88 officers. Still it is small as compared with the general staff of the German Army; it is small as compared with the general staff of the French Army; it is small as compared with the general staff of the British Army; and if there is anything that Britain has been brought to realize in the terrible struggle going on in Europe it is the necessity of a general staff of long-established reputation to arrange for the future plans for mobilization and other kindred subjects for the conduct of her armies.

Mr. President, I call the attention of the Senate to some of the work that is being done by the General Staff, the purely technical character of work that that body is doing.

The War College division of the General Staff is at work all the time studying not only international questions in connection with the Army, but the War Establishment locally as well. I have in my hand some of the papers that have been prepared by the Army War College division of the General Staff discussing questions like these, for example:

The militia as organized under the Constitution and its value to the Nation as a military asset.

Study on places of origin and ability to procure supplies needed in vast quantities in time of war.

Personnel versus matériel in plans for national defense.

The pension roll as affected by the War with Spain in 1898.

Outline of plan for military training in public schools of the United States.

Organization, training, and mobilization of Volunteers under the act of April 25, 1914.

Organization, training, and mobilization of a reserve for the Regular Army.

1. Organization, training, and mobilization of a force of citizen soldiery. 2. Method of training a citizen army on the outbreak of war to insure its preparedness for field service—

And papers on many other kindred subjects. I will not read further, but they all cover technical questions, and they ought not to be intrusted to men who have not had military education and training such as is necessary to make them efficient and proficient in the discharge of these highly important duties.

It would very much weaken the Army, Mr. President, I think, to go further than the Senate committee has attempted to go in the preparation of this bill with respect to the National Guard. It would very much weaken the Army, it seems to me, to elevate gentlemen from the National Guard into positions on the General Staff, and I do hope that the Senate will vote down the amendment proposed to the bill as reported by the committee.

Mr. BRANDEGEE. Mr. President, I rise for the purpose of making a parliamentary inquiry, which is this: The Chamberlain bill, so called, which is now under consideration, is reported, as I understand it, as a substitute for the so-called Hay bill, which came over from the House. Certain committee amendments to the Chamberlain bill have also been recommended by the committee. Are those committee amendments, which have been recommended, themselves subject to amendment during the consideration of the Chamberlain bill as a substitute for the Hay bill?

The VICE PRESIDENT. There is not any doubt in the mind of the Chair as to what the rules are and as to the status. The Senate committee has moved to strike out the entire Hay bill and substitute another bill in its place. The other day, by a motion made directly in violation of the rules of the Senate, which are that when there is a pending question to strike out and to insert each is subject to amendment, but that the portion to be stricken out is first to be amended and the portion to be substituted is thereafter to be amended, it was decided that the substitute was to be first amended. On that question the Chair cares nothing whatever, but when amendments are submitted by the committee to the committee amendment the Chair has no doubt that each Senator may offer to amend the amendment.

Mr. BRANDEGEE. That answers my question. I asked it because I had introduced a proposed amendment to a committee amendment, and if the ruling of the Chair was to be otherwise I desired to redraft it or to withhold it.

The VICE PRESIDENT. The question is on the amendment of the Senator from Iowa [Mr. CUMMINS].

Mr. CUMMINS. Mr. President, I am not surprised to know the attitude of the Senator from Oregon [Mr. CHAMBERLAIN] upon the amendment which I have offered, for I was entirely aware that he did not regard it as wise. I am surprised, however, to hear my right to offer the amendment challenged. There is but one conclusion that can be drawn from the statements of the Senator from Oregon, and that is that it is impertinent for any Senator to offer an amendment concerning a subject that has been considered by the committee. I am entirely willing that he shall criticize the officers of the National Guard; I am entirely willing that he shall criticize anybody else who may be in favor of this amendment; but I am not willing to hear it suggested that a Senator may not question, without offense to the committee, a bill that has been reported.

Mr. CHAMBERLAIN. Let me interrupt the Senator there. I want to disclaim any such intention as that, Mr. President. If I said anything that led the Senator to infer that, it was the farthest from my intention to question the right of any Senator. What I was referring to was what had transpired outside of the Senate.

Mr. CUMMINS. I am very glad to hear the Senator say that, because I could put no other construction upon his observation than that such amendments as this, which are intended to promote the interests of the National Guard and to make it more secure as a part of the Military Establishment of the United States, should not be seriously considered because they had been presented to the committee and there denied or refused.

This is not a new subject with me. I was in favor of the proposition that is contained in this amendment before I became a Senator, and I am in favor of it still. I am in favor of it because I think it is a valuable change in the direction of preparedness. I am not in favor of what is called the Volunteer Army, but I am not opposed to it because it adds to the preparedness of the United States; I am opposed to it because I think it will destroy in part the preparedness of the country in the event of war. But I shall argue that question when we reach that part of the bill.

I sincerely hope that the Senator from Oregon and the committee will not look upon the amendments that may be offered, especially those that I may offer, as a disparagement of the

work which the committee has done. I understand perfectly the long, weary toil which has been expended in the preparation of this bill, and, as I said the other day, I think it is by far the most complete and the most effective disposition of this very difficult subject that has been proposed to the American people. I am heartily in favor of the bill generally. I am not hostile to the Regular Army, because I look upon it as the great source of defense in our land forces, and I want no one to infer from anything that I have said that I question its place in the establishment of the country.

I have already remarked that whereas there is or has been some difference of opinion with regard to the extent to which we should increase the Regular Army, I intend to stand with the committee in its proposals in that regard. I would support the committee in the proposed organization of what is called the Volunteer Army if I did not thoroughly, profoundly believe that if the plan there suggested is put in operation it will result in the destruction of the National Guard without substituting in its stead any real training force for our young men who now compose the National Guard.

I know, and Senators I think must all feel, that when peace comes, when our minds are no longer distracted with the conflict going on not only in Mexico but across the sea, and Congress comes to consider the wisdom of appropriating annually something like $30,000,000 or more for the maintenance of the Volunteer Army for purposes of training only, and something like $40,000,000 or $50,000,000 for the maintenance of the National Guard, it will not do it, and one or the other of these organizations will be dismissed, and one or the other of them will disappear so far as congressional legislation is concerned.

I am opposed to the volunteer organization simply because I believe that but one organization will be supported by the Congress of the United States, and it is my judgment, and this is a subject upon which I have reflected a great deal, that the most effective body for training, for getting ready to be a soldier, is the National Guard and not the Volunteer Army.

I wanted that to be fully understood in this early part of the discussion because it is so easy to misunderstand one who is insisting upon the interests of the National Guard and its place in the military affairs of the country and to infer that because I am for the National Guard in this respect therefore I do not desire efficient general military discipline and education and training.

So, if war should fall upon us, we would have a great body of men between the ages of 18 and 30 who could be called quickly into the service of the country and could quickly become efficient soldiers. I recognize that the question I have just discussed does not inhere in the amendment which is before the Senate, but it has been brought forward. I have no objection to that, and I wanted my views about it to be known.

Some question has been made with regard to our constitutional power over the National Guard. I am rather sorry that the argument has taken place on either side at this time, although it is not useless, because every word that has been said will become pertinent at some time during the consideration of the bill. In offering this amendment I have taken the bill which has been presented by the committee; I have accepted its view of the relation which should exist between the National Guard and the General Government. I for one do not ask that Congress shall go one step, constitutionally speaking, beyond the bill as it is now before the Senate. I would be, indeed, less than frank if I were not to state that in one particular the bill goes further than I would have gone if I had been composing it myself; in one respect it takes a position which I look upon as somewhat doubtful, and it takes it in behalf of the federalization of the National Guard. This amendment assumes, however, that the report of the committee with regard to the National Guard and the provisions it has embodied in the bill are sound and will be accepted by the Senate. The amendment simply says that if the bill is sound, if the National Guard ought to sustain toward the National Government the relation which is there established, that then at least five officers of the guard should become members of the General Staff.

It is impossible for me to conceive how the federalized National Guard can accomplish all the purposes that this bill seeks to accomplish unless it has representation upon the General Staff. I assume that the President of the United States, to whom is given the power of detail or appointment, will select from among the officers of the National Guard the men most distinguished for their military learning, who have given sufficient study to military science to have mastered it, in so far as it can be mastered. It is unthinkable that the presence of these 5 officers in a General Staff that will be made up of 92 officers could impair the efficiency of the officers of the Regular Army. The very utmost that can be said is that these 5 officers on the General Staff will add nothing to the learning, the accomplishments, and the skill of the 92 officers of the General Staff. But who dare assert that? Who is willing to say that these 5 officers, selected by the President from all the States of the Union and gathered together with the General Staff, will not be able to add something to the efficiency of that staff?

It occurred to me during the progress of the argument of the Senator from Oregon [Mr. CHAMBERLAIN] that some one had thought—although I do not think he intended to convey it as his meaning—that the secrets of the General Staff might not be safe if five citizens of the United States, who had been commissioned as officers of the National Guard, who had taken exactly the same oath to support the Constitution, to protect and defend it, and to obey the orders of the President of the United States which the regular officer takes, would disobey or be false or treacherous to their country and impart the secrets of that body to anyone not entitled to know them.

Mr. POMERENE. Mr. President——

The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from Ohio?

Mr. CUMMINS. I yield for a question.

Mr. POMERENE. If the position is sound that no man should be on the General Staff who belongs to the National Guard because he did not have the professional skill of the Regular Army officer and might disclose secrets which the Regular Army officer would not disclose, might not that same argument apply with equal force to the Secretary of War himself, who is usually taken from civil life?

Mr. CUMMINS. Undoubtedly so; but I do not say that the Senator from Oregon made any such suggestion as that. It seemed to me, however, to glimmer through some suggestion that may have been made to him. I know that he would be the first to repudiate any such want of fidelity on the part of the officers of the National Guard. Moreover——

Mr. POMERENE. Mr. President——

Mr. CUMMINS. Just a moment. This amendment provides that no officer of the National Guard who has not been in continuous service for 10 years shall be eligible for the detail. If you will find me an officer of the guard who has been willing to give, without substantial compensation, his service to his country for a period of 10 years in connection with the National Guard, I will show you a man who, in many respects at least, is the equal of any officer of the Regular Army in point of study and general accomplishment. I now yield to the Senator from Ohio.

Mr. POMERENE. Mr. President, I want to assure the chairman of the committee that I did not even mean to suggest that he himself entertains that view with respect to the disclosing of secrets by an officer of the National Guard or anything of that sort. I was simply following out what I believed to be the radical consequences which might follow the argument against placing National Guardsmen upon the General Staff.

Mr. CUMMINS. Mr. President, if I were in favor of the volunteer section of the bill instead of being opposed to it, and knew that the 260,000 or 270,000 men who may be enlisted under it were to go into the service, I would think it all the more necessary that five officers of the National Guard should be connected with the General Staff, for the volunteer army will be in all essential respects a part of the Regular Army. Their officers are Regular Army officers, and they will be represented on the General Staff by men who command them in a military way.

Now, why should not the National Guard have a representation of the character provided in the amendment? We are all trying to reach the same object; we all want the National Guard to be just as efficient, just as real a strength to the country in time of war as legislation can make it. I hope that those who believe with me that the guard ought to play the part which is assigned to it in this bill will also see the high necessity of giving its officers some relation to the General Staff.

Mr. MARTINE of New Jersey. Mr. President, I have no knowledge of or taste for military matters. I might enjoy the pomp and parade of well-drilled troops, with all their fine discipline and display, could I rid my mind of the fact that it means in the final analysis the slaughter of mankind.

Mr. President, I hate the very thought of war. To my mind, it is a step backward in our civilization. It is a reflection upon our boasted advance and our claimed religion. Were I the means, through my act or vote, of bringing on war, whereby homes should be devastated and my fellowman maimed and slaughtered simply for glory, so called, or for the acquisition of territory, I feel that my slumbers would be but a continuous nightmare. I will never vote one dollar for a war waged for territory or any form of aggrandizement under any name. Our

policy in this fair land should ever be a policy simply of defense and protection.

I approach this military measure with much hesitancy. I realize that conditions in the world have much changed in the past few years; that we are confronted by a situation that demands on our part action for the defense of our country. Mr. President, our National Guard has been as our right arm in the past, and I should hesitate to support any legislation that would tend to disintegrate and destroy its splendid service. In New Jersey we have tested it, and well know its value. I am impressed with the thought and I believe that if the pending bill should pass, it would be the death knell of that great arm of our service for protection. I submit that any legislation that should tend to impair or in any way detract from the splendid spirit and ardent patriotism of our National Guard would be a calamity.

The National Guard in New Jersey have acquired armories to the value of over $3,500,000; in the United States to the value of $35,000,000. Almost in every instance great sacrifices have been made by the individual members of the companies for the erection and maintenance of these structures. With the destruction of the National Guard they would become but empty barracks. Do the advocates of this measure desire such a result? Deeply impressed with the belief that such will be the result if this bill shall pass unamended, I shall move to strike from the measure section 56. This I shall do in a spirit of patriotism and kindliness, thoroughly appreciating the unselfish zeal and thought given this great problem by the committee. I trust, in the interest of my Commonwealth, in the interest of our country, in the interest of the splendid National Guard this land over, that this particular section may be stricken out. Better results will come and the protection and safeguarding afforded our institutions will be more efficient with the National Guard in existence under the present plan than with the National Guard disintegrated and overwhelmed by the overbearing forces of national power.

The PRESIDING OFFICER (Mr. HUGHES in the chair). The question is on the amendment proposed by the Senator from Iowa [Mr. CUMMINS] to the amendment reported by the committee.

Mr. CHAMBERLAIN and Mr. CUMMINS addressed the Chair.

Mr. CHAMBERLAIN. Does the Senator from Iowa desire to address the Senate?

Mr. CUMMINS. I was about to ask for the yeas and nays on the amendment.

Mr. CHAMBERLAIN. I suggest, first, the absence of a quorum.

The PRESIDING OFFICER. The Senator from Oregon suggests the absence of a quorum. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Harding	Martine, N. J.	Simmons
Bankhead	Hitchcock	Myers	Smith, S. C.
Beckham	Hollis	Nelson	Smoot
Brady	Hughes	O'Gorman	Sutherland
Brandegee	Husting	Overman	Swanson
Broussard	Johnson, Me.	Page	Thompson
Burleigh	Jones	Phelan	Townsend
Catron	Kenyon	Pittman	Underwood
Chamberlain	Lane	Poindexter	Vardaman
Clapp	Lee, Md.	Pomerene	Wadsworth
Clark, Wyo.	Lewis	Ransdell	Warren
Clarke, Ark.	Lippitt	Robinson	Weeks
Cummins	Lodge	Saulsbury	Williams
Curtis	McCumber	Shafroth	Works
du Pont	McLean	Sheppard	
Gore	Martin, Va.	Sherman	

Mr. HUSTING. I desire to announce that the Senator from South Dakota [Mr. JOHNSON] is necessarily absent on business.

The PRESIDING OFFICER. Sixty-two Senators have answered to their names. A quorum of the Senate is present.

Mr. WORKS. Mr. President, up to the present time I have taken no part in this somewhat extended discussion of the amendment now before the Senate. I am only going to say a few words now, in order to make my own position clear, if I can.

I look upon the National Guard as an excellent organization in its place, but I regard it as a State institution and not Federal. The fact that the State is entitled to select the officers and authorized to do so, and to train the National Guard, is evidence to my mind that it was intended by the framers of the Constitution that the State should have absolute control over this force. The State may prevent the calling out of the militia by refusing to appoint officers or refusing to train them and make them efficient soldiers, and I think it is entirely proper that that should be so. It was not only the intention, but I think it was an entirely proper thing to do.

I think, taking that view, that it would be a mistake to undertake to mingle the Federal branch of the military service and the State branch, and simply for that reason—not because I have any animosities or any objections to the National Guard—I am opposed to this amendment, and shall, for that reason, and that alone, vote against it.

The PRESIDING OFFICER. The question is on the amendment offered by the Senator from Iowa [Mr. CUMMINS].

Mr. CUMMINS. On that I ask for the yeas and nays.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. BRADY (when his name was called). I have a general pair with the senior Senator from Florida [Mr. FLETCHER] and therefore withhold my vote.

Mr. BURLEIGH (when his name was called). I have a pair with the junior Senator from Tennessee [Mr. SHIELDS]. I therefore withhold my vote.

Mr. CLARK of Wyoming (when his name was called). I have a general pair with the senior Senator from Missouri [Mr. STONE], who is absent from the Chamber, and therefore withhold my vote. If I were at liberty to vote, I would vote "yea."

Mr. HUSTING (when the name of Mr. JOHNSON of South Dakota was called). I desire to announce that the junior Senator from South Dakota [Mr. JOHNSON] is absent on important business. I ask to have this announcement stand for the day.

Mr. REED (when his name was called). I transfer my pair with the Senator from Michigan [Mr. SMITH] to the Senator from Florida [Mr. BRYAN] and will vote. I vote "yea."

Mr. SAULSBURY (when his name was called). I have a general pair with the junior Senator from Rhode Island [Mr. COLT]. I transfer that pair to the senior Senator from Texas [Mr. CULBERSON] and will vote. I vote "nay."

Mr. SMITH of Maryland (when his name was called). I have a general pair with the senior Senator from Vermont [Mr. DILLINGHAM]. In his absence I withhold my vote.

Mr. LEWIS (when Mr. TILLMAN's name was called). I desire to announce the absence of the senior Senator from South Carolina [Mr. TILLMAN], who has been suddenly called to his State, and to announce that he has a pair with the junior Senator from West Virginia [Mr. GOFF].

Mr. TOWNSEND (when his name was called). I have a pair with the junior Senator from Florida [Mr. BRYAN]. The junior Senator from Missouri [Mr. REED] has a pair with my colleague [Mr. SMITH of Michigan]. In talking with the junior Senator from Missouri we have concluded to transfer our pairs, thus allowing each of us to vote. I vote "yea."

Mr. WEEKS (when his name was called). I have a general pair with the senior Senator from Kentucky [Mr. JAMES]. I transfer that pair to the junior Senator from Nebraska [Mr. NORRIS] and will vote. I vote "nay."

Mr. WILLIAMS (when his name was called). I transfer my pair with the senior Senator from Pennsylvania [Mr. PENROSE] to the junior Senator from Arizona [Mr. SMITH] and will vote. I vote "nay."

The roll call was concluded.

Mr. ASHURST. I wish to announce that my colleague [Mr. SMITH of Arizona] is unavoidably detained from the Chamber.

Mr. CHILTON. I desire to announce that the senior Senator from Indiana [Mr. KERN] is absent on official business. I also desire to announce that my colleague [Mr. GOFF] is absent on account of illness. I transfer my pair with the senior Senator from New Mexico [Mr. FALL] to the senior Senator from Indiana [Mr. KERN] and vote "nay."

Mr. SHAFROTH. I desire to announce the absence of my colleague [Mr. THOMAS] on account of business of the Senate. He is paired with the senior Senator from North Dakota [Mr. MCCUMBER].

Mr. SMITH of Maryland. I transfer my pair with the senior Senator from Vermont [Mr. DILLINGHAM] to the junior Senator from South Dakota [Mr. JOHNSON] and will vote. I vote "yea."

Mr. CURTIS. I have been requested to announce the following pairs:

The senior Senator from North Dakota [Mr. MCCUMBER] with the senior Senator from Colorado [Mr. THOMAS];

The junior Senator from West Virginia [Mr. GOFF] with the senior Senator from South Carolina [Mr. TILLMAN]; and

The junior Senator from North Dakota [Mr. GRONNA] with the senior Senator from Maine [Mr. JOHNSON].

Mr. CHILTON. I wish to announce the absence of the senior Senator from Florida [Mr. FLETCHER] on account of official business.

The result was announced—yeas 35, nays 30, as follows:

YEAS—35.

Ashurst	Jones	Pomerene	Sterling
Bankhead	Kenyon	Reed	Sutherland
Clapp	Lane	Robinson	Swanson
Clarke, Ark.	Lee, Md.	Shafroth	Thompson
Cummins	Lewis	Sheppard	Townsend
Curtis	Martin, Va.	Simmons	Underwood
Harding	Martine, N. J.	Smith, Ga.	Vardaman
Hardwick	Myers	Smith, Md.	Wadsworth
Husting	Poindexter	Smith, S. C.	

NAYS—30.

Beckham	Gallinger	Nelson	Sherman
Borah	Gore	O'Gorman	Walsh
Brandegee	Hitchcock	Oliver	Warren
Broussard	Hollis	Overman	Weeks
Catron	Hughes	Page	Williams
Chamberlain	Lippitt	Phelan	Works
Chilton	Lodge	Pittman	
du Pont	McLean	Saulsbury	

NOT VOTING—31.

Brady	Fletcher	Lea, Tenn.	Smith, Ariz.
Bryan	Goff	McCumber	Smith, Mich.
Burleigh	Gronna	Newlands	Smoot
Clark, Wyo.	James	Norris	Stone
Colt	Johnson, Me.	Owen	Taggart
Culberson	Johnson, S. Dak.	Penrose	Thomas
Dillingham	Kern	Ransdell	Tillman
Fall	La Follette	Shields	

So Mr. CUMMINS's amendment was agreed to.

Mr. LEWIS. Mr. President, on Saturday last I addressed the Senate upon what I regarded as the wisdom of striking out section 56 of the bill, but it appears that I did not tender my amendment. I wish to ask if there is any parliamentary rule against my amendment being considered as having been offered at the time? I thought I had tendered it, but it appears that I had not.

Mr. CHAMBERLAIN. I will state to the Senator from Illinois that I think there is another amendment pending for the same purpose which has been submitted by the Senator from New York.

Mr. WARREN. The amendment offered by the Senator from Iowa was to strike out section 56, if that is the one to which the Senator refers.

Mr. LEWIS. Yes. I should like, however, to have my amendment considered as having been tendered at that time. Do I understand that it is consented that my amendment may be considered as having been tendered on Saturday last when I addressed the Senate?

The PRESIDING OFFICER. So far as the Chair is concerned, he is perfectly willing to have the amendment considered as pending, since the Senator assures the Chair that he has such an amendment.

Mr. LEWIS. It was my intention to offer it at that time. I presented the matter to the Senate in my argument, but did not tender the amendment formally. I think it was generally understood by Senators.

The PRESIDING OFFICER. Where is the amendment?

Mr. GALLINGER. It could not have been accepted at that time, another amendment being under consideration.

The PRESIDING OFFICER. The Chair would like to know where the amendment is.

Mr. LEWIS. I have discovered that the amendment had not been tendered to the clerks; it is not in their possession; and I desire now, nunc pro tunc, to supply it.

Mr. SMITH of Georgia. There is certainly, however, an amendment pending to strike out section 56; and I rise for the purpose of suggesting to the chairman of the committee and to the Senate that it would be of great help to us in the study of the other provisions of the bill to know at once what we are going to do with section 56. If we should strike out section 56, our votes might be different with reference to other matters in the bill.

Section 56, providing practically for the continental army, involves an appropriation of between twenty and twenty-five million dollars a year. I am, for one, very much opposed to section 56. I hope we will strike it out. I hope we will undertake to develop our forces through the Regular Army and the Regular Army reserve, through the National Guard, and the National Guard reserve. I wish to suggest to the chairman of the committee that if we could take up the motion to strike out section 56 next, and find out what the Senate will do with that motion, it will put us in better shape to know what we wish to do upon other parts of the bill, because many of us would be ready to be more liberal as to the Regular Army if section 56 should be done away with.

Mr. LEE of Maryland. Mr. President, I simply desire to state that I offered some amendments on Saturday, and they were pending when the Senator from Illinois spoke. The very first one of them was to strike out all of section 56. I should like to add that the Volunteer Army appears also, in line 10 of section 1, and I believe it appears somewhere else in the bill; I am not quite sure; but, of course, section 56 is the main section providing for a volunteer army.

Mr. SMITH of Georgia. The Senator's motion is to strike out section 56?

Mr. LEE of Maryland. I submitted that motion on Saturday.

Mr. SMITH of Georgia. I suggest that the Senator present it formally as an amendment.

Mr. LEE of Maryland. If there is no objection on the part of the chairman, I call up the motion to strike out all of section 56, providing for a volunteer army, and, as I have it in this statement, in time of peace, and in opposition to the Organized Militia.

The PRESIDING OFFICER. The question is on the amendment offered by the Senator from Maryland.

Mr. GALLINGER. Let the amendment be read.

The PRESIDING OFFICER. The Secretary will state the amendment.

The SECRETARY. The Senator from Maryland proposes to strike out, on page 160, lines 9 to 25, both inclusive, and on page 161, lines 1 to 9, both inclusive, including the proviso at the end of line 2 heretofore agreed to, in the following words:

SEC. 56. The Volunteer Army: The President is hereby authorized, at any time, to organize, maintain, and train, under the provisions of sections 3 to 12, both inclusive, of an act entitled "An act to provide for raising the volunteer forces of the United States in time of actual or threatened war," approved April 25, 1914, volunteer forces, not exceeding an average of 600 officers and enlisted men for each congressional district. The term of enlistment, which shall in no event be greater than that of the Regular Army, the period of service with the colors and with the reserve, and the period of training shall be as the President may prescribe, those passing to the reserve to have the status and obligations prescribed for reserves of the Regular Army. Officers and enlisted men of the volunteer forces raised under the provisions of this section shall be entitled to the pay and allowances of officers and enlisted men of corresponding grades in the Regular Army during periods of training only: *Provided*, That without the consent of Congress such volunteer force shall not be called out for field service for more than a total period exceeding 30 days in any one year.

Temporary appointments and promotions of officers of the Regular Army arising from the operation of this section may be terminated at the discretion of the President.

Officers of the Regular Army who receive commissions in the Volunteer Army herein authorized shall in time of peace receive the pay and allowances of their respective grades in the Regular Army, and no more.

Mr. LEE of Maryland. Mr. President, I wish to state very briefly why I offer an amendment to strike out this section. The development under this section 56 is left wholly a matter of policy with the department, and there is nothing in the section to provide a definite action. This section, therefore, provides in the first year for a limited number of troops, and for 261,000 if desired and obtainable at the end of four years.

In connection with the suggestion to strike this section out, I have incorporated with other amendments here an amendment to raise the limit that is put by this bill upon the number of the National Guard; and the number suggested will be such that, if the Senate approves, it will make possible a defensive force for this country of 125,000 men more than is provided by this section for the volunteers and the National Guard now in existence.

The real objection to this volunteer section, Mr. President, is that it is a delusion, that it will not give preparedness to this country, and can not give it. If there is anything upon which the experts who testified so extensively before the committees of the House and the Senate did agree, the thing they agreed on was that there can be raised in this country, with extraordinary effort, not more than 50,000 regular soldiers in the course of a year. Of course it may be suggested that as to this volunteer force, who are to be regulars in all respects and purposes so far as compensation is concerned, that the department may provide for them a different status, such as will make the status of volunteers more acceptable, such as will give some incentive to the average man who might enlist, but it is altogether problematical what the department will do and what will be the real result of their action.

This in substance is nothing more than the old Garrison plan of a continental army revived with a little new clothing upon it. I believe the best experts in the War Department have testified as to there being very great doubt as to there being any sufficient enlistments under the Garrison continental army plan. If this volunteer is substantially a regular soldier, according to the compensation of a regular soldier, you can get no more of the volunteers than you can get in the Regular Army to-day.

This is therefore to say the best of it experimental. Yet this proposition is put up in opposition to and for the purpose undoubtedly of beating down the one great force of soldiers who are in sight in this country.

Mr. WARREN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Maryland yield to the Senator from Wyoming?

Mr. LEE of Maryland. I do.

Mr. WARREN. Do I understand the Senator correctly? Does he claim that this plan is to beat down the National Guard and is intended to be such?

Mr. LEE of Maryland. That is what I intend to suggest, and that I think is the inevitable consequence of the adoption of this volunteer-army plan.

Mr. WARREN. It is going a long way, I think, to impugn those who may think differently. I will say that so far as I know there is not a friend of that measure who is not a friend of the National Guard, and probably as good a friend of the National Guard as is the Senator from Maryland.

Mr. LEE of Maryland. I am very glad to hear that, because if that is the case some of them will be more easy of persuasion than I think they are. But however that may be, the availability for purposes of defense of any reasonable number of troops along these lines is certainly very doubtful. If we can take the unvarying testimony of competent officers of the Army, such as Adjt. Gen. McCain, they can enlist only 50,000 men a year for the Regular Army under present conditions, and I doubt if they will get many more under this volunteer proposition.

The real army that is in sight, the actual body of soldiers that are available, are these 144,000 National Guardsmen of this country.

Mr. President, I am going to send to the desk and ask to have incorporated in the RECORD a list of the National Guardsmen of the country, totaling on the last of December, 1915, 134,692 officers and men.

The list referred to is as follows:

Strength of the Organized Militia, commissioned and enlisted, Adjutant General's report, Dec. 31, 1915.

1. Alabama	2,968
2. Arizona	931
3. Arkansas	1,652
4. California	3,681
5. Colorado	1,059
6. Connecticut	3,821
7. Delaware	430
8. District of Columbia	1,891
9. Florida	1,505
10. Georgia	3,045
11. Hawaii	2,066
12. Idaho	931
13. Illinois	6,914
14. Indiana	2,810
15. Iowa	3,507
16. Kansas	2,032
17. Kentucky	2,583
18. Louisiana	1,098
19. Maine	1,522
20. Maryland	2,346
21. Massachusetts	6,633
22. Michigan	3,638
23. Minnesota	3,224
24. Mississippi	1,471
25. Missouri	3,493
26. Montana	839
27. Nebraska	1,525
28. Nevada	
29. New Hampshire	1,300
30. New Jersey	4,428
31. New Mexico	872
32. New York	17,013
33. North Carolina	3,203
34. North Dakota	719
35. Ohio	7,526
36. Oklahoma	1,330
37. Oregon	1,559
38. Pennsylvania	10,910
39. Rhode Island	1,519
40. South Carolina	1,411
41. South Dakota	925
42. Tennessee	1,926
43. Texas	2,878
44. Utah	544
45. Vermont	852
46. Virginia	3,279
47. Washington	1,308
48. West Virginia	1,756
49. Wisconsin	3,290
50. Wyoming	595
Total	134,692

Mr. LEE of Maryland. There is something actual, there is something real, there is something substantial. Yet this bill comes in and proposes to cut that force down by putting in a minimum of 106,000 men. The present law authorizes 153,000 or 154,000 militia National Guardsmen in this country. Why change the law? Why cut down the number of the Organized Militia?

The Senator from Wyoming suggested just now friendliness on the part of the committee to the National Guard, yet they come in with estimates that inflate the cost of the National Guard for the first year $19,000,000 and with a measure that cuts down the actual authorized strength of the National Guard of this country from 153,000 to 106,000.

Mr. WARREN. May I ask where the Senator gets those figures?

Mr. LEE of Maryland. The National Guard is limited to 200 to each congressional district and to each Senator. That may not be strictly the provision in this law as proposed by the committee, but I have gone over that section with a competent officer of the Army, and while, in my judgment, it was not absolutely mandatory upon the War Department under the section to limit the numbers of the National Guard to 106,000, yet that officer, reading that section, construed it as the inevitable purpose of Congress, if the section was passed in the words in which the Senate committee reported it, that the National Guard would be cut down to 106,000 officers and men. The department estimates would be based on 106,000——

Mr. WARREN. That may be the idea of the Senator, but I differ with the Senator. It is not my idea.

Mr. LEE of Maryland. The Senator knows there is a limitation there of 200 men. I will be very glad to read that section to the Senator if there is any doubt in his mind.

Mr. WARREN. There is not a line such as that contained in the bill relating to the National Guard, I will say to the Senator.

Mr. LEE of Maryland. Unquestionably there is. I do not need to go on with this matter. I think the country wants substantial preparation and I think the country demands substantial preparation. The worst thing we can do is to go ahead with the unwise policy, so to speak, of setting up one kind of soldier against the other. We had better take the Regular Army of the United States and do for it whatever we can do for it and then take the great Army of the Constitution, that Gen. Washington and all the fathers stood for, and do for that what we can do to make it a great, harmonious whole, a well-prepared, thoroughly equipped, and highly disciplined force for the defense of this country. The introduction of this third element here is for nothing but to produce confusion and for no other purpose in the world but to keep up a method of retarding real preparation, that, I regret to say, has been the policy of some officers in the War Department for many years in the past.

But, Mr. President, I believe that there is a larger element of officers in the Regular Army who realize the greatness of this country, realize the marked economy that there is in the citizen soldier, in training him, in supporting him, in keeping him in the industries of the country while he is being trained and while he is being made into a soldier; realize the continental size of this great country and its obligation to the world; and who add to this realization a high sense of loyalty to the Constitution of the United States. There are a great many officers in the Army who would accept with joy and gladness anything that can be done to make the National Guard of this country the proper defensive force it should be and should have been during all of these years past.

Mr. President, it is high time this jealousy of the citizen soldiery of the United States should be brought to a close and that Congress should take firm hold of this question and carry it through to a successful termination.

The Senator from Oregon [Mr. CHAMBERLAIN] the other day said this bill exhausted the powers of Congress on the subject of handling the National Guard and developing the militia. Quite the contrary, Mr. President. I hope to be able to show the Senate a little later that this bill avoids some of the real questions that are involved. The House bill certainly did settle the main questions. The House bill was evidently considered from the standpoint of men who actually wanted to take hold of this question and settle it once for all. But this bill is drawn more upon lines of avoidance of the main questions of law as well as the actual reduction of numbers of men authorized to be in the National Guard of the country from 154,000 to 106,000.

Mr. CHAMBERLAIN. Mr. President, I wish to correct a statement of the Senator from Maryland. I assume he wants to be fair.

Mr. LEE of Maryland. I certainly do, Mr. President.

Mr. CHAMBERLAIN. I want to repeat that the bill reported by the committee embodies nearly all the recommendations of the National Guard of the country that the Senator speaks of. Of course we did not give them all they asked, and I do not think Congress is going to give them all they asked, neither did the committee attempt to give the regular forces all they asked, or the several branches of the Army Establishment what they asked. I do not think this Congress will do it either. But the Senator says that the effect of this is not only to reduce the number of the present National Guard but to render it less efficient than it is now.

Mr. LEE of Maryland. I beg the Senator's pardon. I made no suggestion or intimation that the reduced number would be less efficient relatively than the present number, so far as discipline is concerned.

Mr. CHAMBERLAIN. In the very nature of things if you reduce the strength you make them more inefficient.

Mr. LEE of Maryland. With the permission of the Senator, you can reduce the strength of a number of men and at the same time by increasing their discipline make them more efficient. This bill reduces the strength and provides pay, and other methods, ascertaining the fitness of officers for the discipline and development of the National Guard. I think this bill will improve the discipline of the reduced number of National Guardsmen which it seems to leave as a remnant, but what I object to is that you do not take the whole present existing or authorized guard and go on and make it the great citizen army that it can be made and should be made by the Congress of the United States exercising the powers given in the Constitution.

Mr. CHAMBERLAIN. I do not care to go into a discussion as to the efficiency of the guard. I think the history of this country is pretty well understood about that. If anyone has any doubt, I simply ask him to read some of Washington's letters to the Continental Congress, and later to read Gen. Upton's Military Policy of the United States, and ascertain what he says about it. He goes into the subject very fully. But I am not going to discuss that. I want to say that there is no provision in the bill that reduces the National Guard to 106,000. On the contrary, the National Guard is to be increased by increments until it reaches about 265,000 in four years. The bill particularly provides that the present organization shall be maintained; that is, the bill is to perfect the present organization.

Mr. BORAH. May I ask the Senator to state again to what extent the number is increased under the bill?

Mr. CHAMBERLAIN. There is a possible increase to about 265,000.

Mr. BORAH. The present membership of the National Guard is about 129,000.

Mr. CHAMBERLAIN. It is about 129,000. Section 62 of the bill provides that—

> The number of the National Guard to be organized under this bill within one year shall be for each State in the proportion of 200 for each Senator and Representative in Congress from such State, and a number to be determined by the President for Territories and the District of Columbia, and may be increased each year thereafter in the proportion of 50 per cent until a total peace strength averaging 500 for each Senator and Representative in Congress has been reached—

This is the proviso—

> *Provided*, That this shall not be construed to prevent any State, Territory, or the District of Columbia from organizing the full number of troops required under this section in less time, or from maintaining existing organizatons if they conform to such rules and regulatons regarding organization, strength, and armament as the President may prescribe.

That protects the present organization if they propose to pay any attention whatever to any rules that may be prescribed for their conduct and control. I do not think the position of the Senator is well taken as to that amendment.

Mr. CURTIS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Oregon yield to the Senator from Kansas?

Mr. CHAMBERLAIN. I yield.

Mr. CURTIS. What effect does the bill have upon the existing National Guard? It does not increase it, but under the bill you limit the number to 106,200. There are already 134,000. Are they to continue under the State laws or will they be brought in under this section of the law?

Mr. CHAMBERLAIN. I was trying to show in my feeble way that the provision of the bill I have just read preserves the present organizations as they are notwithstanding the limitations in the previous part of the section to which I referred. If the contention of the Senator from Maryland is correct then 106,000 would be the number to be raised according to the senatorial and congressional representation, if there were not the further proviso that the present organization shall remain intact. At least that was the intention of the committee in reporting the bill.

Mr. LEE of Maryland. Will the Senator from Oregon yield to me for a moment?

Mr. CHAMBERLAIN. Certainly.

Mr. LEE of Maryland. What I alluded to was the requirement in line 9 of section 62, that the number should be in the proportion of 200 for each Senator and Representative in Congress. Of course, if it had been stating the mere proportions you might have said in proportion of 100 to each Senator and each Member of the House, and you would have gotten your proportion just that way and just as well. You said 200, and the only inference that can be drawn from that 200 is that you propose to start with 200 for each Senator and Member, because it is wholly unnecessary to use the figures 200 to give a proportion.

Mr. CHAMBERLAIN. Of course what the Senator says is true, if it were not for the proviso. The proviso particularly maintains the present organization, notwithstanding the portion of the section to which the Senator refers. It is true, as I stated a while ago, that under the proportion of 200 for each Senator and Representative in Congress the first increment would raise the National Guard to 106,000, practically, as the Senator says; and if the proviso maintains the present organizations as they are, in the course of the second year or the third year or the fourth year the National Guard will be raised to a force of 265,000, in round numbers, exceeding the present organization of 129,000, which remains intact until all the organization is completed under the bill.

Mr. LEE of Maryland. I will ask the Senator just one question in conclusion. In view, therefore, of the uncertainty produced upon the minds of the very men who have to administer this law by its language, would it not be better to put in 350,000 as a sufficient proportion? Then you would be sure not to reduce your militia.

Mr. CHAMBERLAIN. I think the judgment of the committee is very different from that of the Senator, and it is just as good as the opinion of some Army officer the Senator has evidently been consulting, or at least he so states. I think the bill is not susceptible of the construction the Senator places on it.

Mr. WEEKS. Mr. President, I hope the motion to strike out section 56 will not prevail. This bill is the first attempt made in this country with which I am familiar to build up from a proper foundation an efficient and homogeneous Army. It has been considered for three months. The chairman of the committee and those veterans of the committee who have been associated with military legislation, like the Senator from Wyoming [Mr. WARREN] and the Senator from Delaware [Mr. DU PONT], have given it the most intelligent consideration. Consideration has been given to every means which would add anything to the efficiency of the Army. There has been no prejudice whatever against the militia, against any body of Volunteers, or against the Regular Army.

Everyone who knows anything about an Army agrees that the nearer we can come to a regular force serving with the colors the more efficient the Army is going to be, but it is not possible for a nation in time of peace to maintain an army sufficient for its purposes in time of war, and therefore it is necessary to prepare some kind of a supplemental force, a reserve of some kind.

If it were possible to have enough men who had served with the colors and who were then transferred to the reserve to make up such a supplementary force, that would be the most effective way to provide for it, in which case it would be unwise to spend money to maintain a volunteer force or for the National Guard. But that is not possible. We can not get men enough to serve with the colors and then transfer them into the reserve, at least for several years, to properly equip us for our necessities in time of war. Therefore it is necessary to provide an additional force, and the National Guard is the first one to which we naturally turn, because the National Guard is an institution as old as the Government itself. It can not be said, even by the greatest friends of the National Guard, that it has always been an efficient force. It can not be said that it has ever been a thoroughly efficient force, but it is better equipped and drilled to-day, in my judgment, than it has ever been. The Government has in recent years been giving it more intelligent assistance than ever before, and I believe it can be used in the emergency which exists to good advantage.

The War Department came to Congress with a proposition for a continental army of 500,000 men, a proposition which was originally recommended by Maj. Gen. Emory Upton, one of the greatest military experts we have had in the United States. In the intervening years it has met the approval of a great many military men, including that of our General Staff and War College. Yet after giving careful consideration to the arguments in its favor, it did not seem to me it could be adopted and put into effective operation within a reasonable time, and it did seem to me that if an army of anything like 500,000 men were provided in this way it would have a material influence in destroying the National Guard. Therefore I did not think the proposition in that form was practicable.

But we have developed a great deal of military enthusiasm in the past year, and a great many men have become sufficiently interested so that they are willing to give their time and their efforts to assist in building up this supplementary force of

which I have spoken. They are generally men who prefer to perform their service at one time rather than to drill weekly as is done by the National Guard. It is claimed by those who hold themselves as the specially ordained protectors and defenders of the National Guard that if such men want to serve at all they ought to serve in the National Guard.

I have served both in the regular service and in the National Guard a great many years, and I think I am familiar with the reasons why men go into the National Guard and why they go into the regular service. A college man, for instance, may be willing to give a month or even two months of his vacation to military service when it would be exceedingly inconvenient for him to give one or two nights a week to drills, taking time which he should devote to his academic studies. Are we going to say to that young man who can serve in one way but can not in another, "You can not enlist at all unless you serve in a certain prescribed way"? I think such action would be distinctly unwise, and would prevent the Government from getting the benefit of the service of a great number of patriotic young men.

The Military Committee was told by the young men who went to the Plattsburg camp last year and who are going again this year, as well as those who are to go to other camps which are to be established, that they are confident that from thirty to fifty thousand men will be willing to enlist as reserves in the Regular Army, including a willingness to serve whatever time the Government determines is necessary, either one month or six weeks or two months, as the case may be, to qualify themselves to act as reserves until we have enough men who have served with the colors and passed into a reserve to make a suitable military establishment.

If we strike out section 56, we are going to say to these men, "You must either come into the service as National Guardsmen or we do not want you at all." In this emergency why not make provision for both classes, by so doing much more expeditiously and effectively providing for our universally recognized requirements?

I think we are in a position of wanting to get every patriotic man we can into the military service at this time until we have even up to an Army of 500,000 men in all serving under the colors; 500,000 men who can be called on at a moment's notice; 500,000 men who will be sufficiently trained so that they will be efficient when they are called into the service; and it is going to take us a long time to do this unless we adopt every means we can find in order to get men into the service.

Mr. President, I am not saying anything against the National Guard; I want every man who is serving in the guard to be satisfied with that service; but when we look at the report which this committee has made, can it be said that there could be any antagonism to the guard? We are increasing the amount of money which shall be appropriated for its purposes from $8,000,000 to between $40,000,000 and $50,000,000, and I do not hesitate to say that if that amount of money could be devoted to men serving under the colors, serving for one year and then transferring them into the reserve, in my judgment, it would be better expended than it will be.

I do not expect marvels from men serving in the guard. I have served too many years with them to expect anything in the way of a marvel. I know how difficult it is frequently for them to get to their drilling points—to get to their armories—because it conflicts with other engagements. I know how soon the enthusiasm ebbs away after a man has enlisted, and how difficult it is for his officers to get him to drill and to perform necessary military functions. All those prevent a thorough, efficient military force. We must depend on the guard. We ought to federalize it as far as possible. I do not myself know a single thoroughly equipped military officer in it who does not want it to become a part of the National establishment rather than a part of the State establishment.

I am not going to discuss any constitutional question, because I am thankful to say I am not a constitutional lawyer, and I will leave that to the ninety-odd constitutional lawyers in the Senate, but I want to say as a practical proposition the nearer we come to getting away from the 48 armies we have in this country and getting to 1 national army, creating a national spirit in the country and in the men who are serving, the nearer we are going to come to efficiency and good results, and as far as possible we have done that. We have gone perhaps further than we can under strictly constitutional limits. As far as possible we have provided for that in this bill. Let us not throw away the opportunities which we can see by striking out of the bill a proposition which will give us some additional men whom we otherwise would not get.

I do not believe, Mr. President, that it will make any difference in the enlistments in the National Guard. I do not think any man who will take this camp training would go into the National Guard under ordinary circumstances. Under the new conditions, if the bill is adopted as it is now before the Senate, I expect the guards to be kept at as full strength as in the past, but I think we will get some men whom we could not get under other circumstances, and therefore that it would be weakening our position to strike out section 56 from the bill.

Mr. SMITH of Georgia. Mr. President, I agree with much that the Senator from Massachusetts has said, and yet I reach very different conclusions from the Senator. I hope we shall strike out section 56. I am opposed to section 56, because I have no faith in the value as soldiers of a body of men who simply go out 30 days each year, principally for a frolic, on a camping expedition.

We have been told over and over again that it takes at least half the time of a private soldier for two years to make a soldier of him. If it takes half the time of a private soldier for two years in a fort, regularly at work, to make a soldier, how are you to make a soldier out of a business or a professional man who goes into camp for 30 days? If the extent of the drill is only 30 days each year, if the length of time that the camp is to last is only 30 days annually, it is to cost us over $20,000,000. That was the statement and those are the figures in the exhibits to the report of the committee; and the estimate for this camp is, I think, $21,000,000.

Mr. SUTHERLAND. Mr. President——

The PRESIDING OFFICER. Does the Senator from Georgia yield to the Senator from Utah?

Mr. SMITH of Georgia. I do.

Mr. SUTHERLAND. Where does the Senator from Georgia find the provision which limits the training to 30 days a year?

Mr. SMITH of Georgia. I am not finding any such provision. I said the estimate was that, with a limit of 30 days, we should spend $20,000,000. If we continued the encampment for 60 days, it would cost $40,000,000. I am giving an estimate of the expenses in connection with the estimate of the time.

Mr. SUTHERLAND. For how many men would that be?

Mr. SMITH of Georgia. I think that was for 200,000 men, or perhaps 260,000.

Mr. WEEKS. Mr. President, I think the Senator from Georgia is doing the military camps which we had last year and those which are to be provided for this year an injustice in the rather flippant, I think, suggestion which he has made, that the men went into camp for a month for a frolic. There is no testimony before the Military Committee that the men did anything other than hard work in those camps. I think, if the Senator will investigate, he will find that as vigorous military service was performed there as is ever performed by men collected for that purpose.

Mr. SMITH of Georgia. Yet I have no doubt that the men go into the camps for a frolic. I do not believe that there can be less pleasure because there is a good deal of work. Idleness never brings pleasure. It will be the frolic and the excitement of the camp, accompanied no doubt with considerable military work. But I have simply no faith in making soldiers out of any such enterprise, and I am backed in my opinion by the evidence we have from those who are our officers, who have told us a number of times that they must have a private two years, working half his time, to make a soldier of him.

I do not believe there is any merit in section 56. I do not believe we shall get any soldiers out of section 56. I would vastly rather spend the money in a more practical and, I think, more useful way.

I have no great confidence in the National Guard as an immediately effective force. I think, however, it is the very best second line of defense that we can establish. It is recognized by our Constitution and it is already organized in the respective States. I have no doubt the National Guard, to become hardened soldiers, would be compelled to work from 90 days to 6 months after they had been called out by the President before they would be really effective for first-line defense; but they are vastly better than the 30-day excursionists; they are really organized; they are really trained; they really, to the extent of the training which they have had, are good soldiers. I am not in favor of yielding to any reckless demands of expenditure on the National Guard. I think this bill is liberal to them so far as expenses go. I would be willing to vote for less.

The real defense of the country—the first line—must be made from the Regular troops and the reservists, and I think we should aim in the Regular troops and the reservists to be prepared to call into action in 30 days a substantial army.

I am not against national defense; I am cordially in favor of preparing for national defense, and it can be done without any great increased outlay of money. If we will make the place of the private in the Regular Army something fit for civil life, if

we will make it a preparation not alone for war but for his work at home after his two years' enlistment with the colors has expired, if we will put half his time during those two years in a substantial, intelligent preparation for the work of the citizen when he goes back to the farm or when he goes back to the store or goes back to the shop, there will not be any trouble about volunteers; there will not be any trouble about getting 100,000 men a year to enter the Regular Army if we want them.

It is the place which the private soldier now occupies that prevents enlistments, and it ought to prevent them. We must greatly change the life and work of the private soldier if we desire to promote enlistment by men as privates in the Regular Army. If we will put an end to the extreme caste that exists; if we will require of the officers a little more decent treatment of the men; if we will put a stop to some of the cruel and barbarous sentences that are put upon the private for trivial offenses; if we will organize a system of devoting one-half the time of the private to preparation for life; if we will introduce into the camp instruction which will give the private soldiers an opportunity to grow mentally and on vocational lines, we can make the Regular Army a place into which boys will be glad to go as privates to develop for the work of civil life.

The Secretary of the Navy two or three years ago directed a system of instruction to private sailors, and he was criticized and ridiculed by certain admirals for doing it; yet while the enlistment in the Navy for the four years prior to his administration never brought the men up to within 8,000 of the allotted number, to-day it is full; to-day there is no difficulty about obtaining regular sailors in number up to the quota allowed by law. During the four years preceding his administration only 3 men were promoted from the ranks to ensign, while during the past three years, under this system of training men in the ranks, 13 have stood the examinations for ensign. With the system introduced of requiring instruction to be given to the men on boats with a view of developing them mentally and of preparing them better for life at home when they have returned home, a substantial improvement has taken place in the character of the men. Thirteen stood examinations for the Naval Academy, and far more numerous promotions have been made from the ranks to paymasters' places and to the clerical force. As I said before, with an 8,000 shortage at the beginning, with this new plan of caring for the men, of treating the men humanely, of regarding their future, the numbers filled up, and there is now no difficulty to get a full quota of men to man the Navy. Yet, Mr. President and Senators, vastly better is the opportunity on land for the development of the private soldier than it is on the water; vastly broader is the opportunity to give them vocational and general instruction.

It is true that we have a little school in some of the forts to which men who desire can go, which is conducted by the chaplains; but it is also true, as I have been assured by a number of chaplains who have sought to do good along these lines, that officers frequently sneer at the men who attend the schools.

I am in favor of putting the stamp of our legislative will, speaking for the people, upon the treatment that is to be given to the private soldier; I am in favor of making the training for civil life by congressional direction a part of the life of the private soldier. Then you will see a change of conduct in the force.

Mr. President, this subject has been one upon which an elaborate report has been made by an officer of the War College. I hold in my hand the report of Col. John Biddle, which is also signed by Brig. Gen. Liggett. The report is upon the advisability of "Instruction of enlisted men in clerical work and in some of the mechanic arts." He says he will take it up in a broad way and that the matter shall "be considered from the standpoint of its effect on the Nation, the Army, and the individual." The report contains the following:

> The nation: The security of a nation rests on its military strength, and where, as in our case, this strength, represented by its Regular Army, is so small as not to secure its safety, the Army should be used in time of peace in the creation of a war reserve. We recognize that we need a reserve large enough to raise our Army immediately to war strength and to fill the vacancies caused by the first six months of active operations.

He then takes up the subject of vocational training as it would affect enlisted men, and he reaches the conclusion that if you will introduce educational work for the privates, if you will devote a reasonable portion of the time of the privates to preparing them for civil life, in two years' time you can make them fit soldiers, and yet send them back to their homes wonderfully improved and strengthened for civil life.

Mr. VARDAMAN. Mr. President, I was not in the Chamber when the Senator from Georgia began to read, and I ask from whom he is quoting?

Mr. SMITH of Georgia. I am quoting from a report of Col. John Biddle, of the General Staff, Chief of the War College Division, made October 27, 1913. He approves thoroughly of the introduction of vocational training as an inducement for enlistment.

> The hope in offering this is that a new class of young men may be reached. There can be no doubt that the thoughtful young man will hesitate and think a long time before exchanging three or four years of the formative period of his life for a certain training that, at its end, will find him where he started plus certain qualifications that are not generally recognized in the commercial world as increasing his earning capacity.
>
> On the other hand, if this same service will discharge him with some training of a clerk or an artisan the case will be very different, and he will doubtless be willing to be a member of the reserve for a period in exchange for the training. If we are exhausting the resources of the classes now attracted to the Army, we must reach other classes in the building of a reserve. The requirements should not be made less, so that a lower class of men, now barred, may enter; but a larger high class must be reached. A great obstacle, in the form of the popular idea of what constitutes a soldier, intervenes.

He then goes on to say that if in the Army during the two years of enlistment we provide a school of instruction partly along vocational lines and we offer to the young men and to the grown boys two years' service, part of which is to develop them for life and train them to return to their homes and fill better the position that may be theirs, then we may expect a higher order of enlistments; and he adds that, with a higher order of enlistments, the length of time it will take to train them for soldiers will be much less.

Mr. VARDAMAN. And they will render a higher order of service.

Mr. SMITH of Georgia. And a higher order of service will come from the men who enlist.

> Unless some better plan than vocational training can be offered to stimulate enlistment—and none has yet been found—such training will soon have an important effect on the welfare of the Nation.

His final conclusion is:

> If it be the purpose of the Army to spread military training through the Nation, to create an adequate reserve, to break down the popular prejudice against the Army, to fill our ranks with men who later will be a valuable class of citizens, vocational training is an advisable measure to adopt toward this end.

I ask, Mr. President, that at the close of my remarks the entire report of Col. Biddle be printed in the RECORD.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. SMITH of Georgia. Now, what does this mean? Our reservists after two years' service with the colors are to receive only $24 a year. I believe that the way to build up our national defense in the first line is from the Regular Army and through the regular reservists. The hesitation on the part of some officers about pressing reliance upon the Regular Army and the reserve from the Regular Army has been the fear of enlistments, and some have actually talked about conscription. Ah, Mr. President, it is a reflection on the treatment of the privates when any thought of conscription is suggested. Give them what they are entitled to, give them what we can give them, and they will beg for the opportunity to enlist, instead of resisting it. Under the two-year system—because under this bill any private at the end of two years may retire to the reserve—we will in a short time transfer to the reserve a splendid body of young men who have had two years' thorough training and are thorough soldiers. They will go back to their homes with their buttons as members of the reserve army of their country. They will be an inspiration because of the knowledge they will be able to furnish to their fellows as to the treatment they have received and as to the instruction they have received as private soldiers.

We ought to build in a few years a reserve of 400,000 men not only fit for soldiers but prepared for citizenship, to do their part at home.

This can be done with nominal additional expense if we will require half the time of privates with the colors devoted to study and instruction, coupled with vocational training.

Mr. VARDAMAN. Mr. President, if the Senator will permit me, I will suggest, in this connection, that anything that equips the citizen to meet the duties of life, that enables him to contribute something to the well-being of his Government and makes him a useful factor, is one of the largest contributions to this thing we call "preparedness." Instead of being a mere machine, he becomes a factor in the Government, and, instead of being a consumer, which the Regular Army soldier is, he contributes something to the total wealth of the country. It is an investment when you equip him in the Army for the duties of life.

Mr. SMITH of Georgia. And, Mr. President, that will be equally true when we say to our graduates of West Point, "We are not preparing you simply to be soldiers; you are to be citizens also; you are to carry in your forts and in your barracks part of the responsibility of training men for civil life; you are

to train the boys; we trust to you; you are to help build up the boys who are permitted by their parents to leave their homes and to enter as privates in the Regular Army. We trust you, officers, to take these young men and, by example and by instruction, build them into a substantial part of our national citizenship." By such a course you will make the officers grow; they will be better men and bigger men; they will be bigger officers when they carry part of the responsibility of preparing the boys of the country to be better citizens; and the horror we have of militarism will be gone, for the officer, while prepared to defend his Nation in case of war, will be contributing all the time to strengthen his Nation by adding to the power of these young men in times of peace.

Mr. President, I am opposed to section 56. I am opposed to that section because I do not believe we will get any real effective Army out of it. I believe that we should eliminate that paragraph, and we should turn our attention to the reserves that we are to obtain from the Regular Army, and we should so frame the measure that in a few years we may have as many as 500,000 men, partly with the colors and partly in reserve, who, in 30 days, could be called to the colors, ready for immediate and efficient service.

With such a body of men prepared to meet an enemy at our coast, no nation in the world would undertake to land troops upon our shores. I am not seriously afraid of that contingency, anyhow. I do not believe we are in great danger of war; but if we can build up in the line of preparedness a reserve to preserve peace, if we can insure preparedness against a possible enemy, and at the same time add to the power of our young men in civil life, if we can strip the system of waste and make it a dynamic force for civil life, the objection to it is gone. I think the money proposed to be spent upon the 30-day excursions would be vastly more useful if spent in employing teachers, in addition to the officers of the Army, to train the boys who enter the Regular Army. I am not opposed to preparedness, but, because I wish real preparedness, I am opposed to section 56.

APPENDIX.

[Memorandum for the Chief of Staff.]

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF STAFF,
Washington, October 27, 1913.

Subject: Instruction of enlisted men in clerical work and in some of the mechanic arts.

Herewith is a memorandum from the Chief of Staff, dated September 17, 1913, calling for an opinion as to the advisability and practicability of establishing certain classes of instruction for enlisted men in clerical work and in some of the mechanic arts. In considering this subject, the Secretary of War desires that the matter be gone into carefully, and that the report submitted be not limited to the subjects indicated but that it be as full as practicable.

I. PREVIOUS CONSIDERATION OF THIS SUBJECT.

1. This matter has been considered on two previous occasions. Some two years ago Chaplain John A. Randolph, United States Army, submitted a plan with a view to instructing enlisted men by means of the several correspondence schools operating in this country. In War College memorandum, September 7, 1911 (6031–4), the plan was adversely reported, it being deemed impracticable by reason of the expense involved.

2. Consideration was next given to a plan, proposed by Mr. Wilson L. Gill, in which civic and industrial training was to be made a leading feature of Army instruction, but which required the use of so much time as to interfere with military training. This also was adversely reported upon and the plan was not put into effect, the decision being based solely on military expediency (WCD. 6845–3, Nov. 3, 1911).

II. ADVISABILITY.

3. In considering the advisability of introducing this system the War College argument against it is as potent to-day as it was two years ago, but the changes that have occurred since then, the development of our military policy, and the awakened interest of the public in the Army, all indicate that the matter may need reconsideration.

To take as broad a view as possible, this matter should be considered from the standpoint of its effect on the (a) Nation; (b) the Army, and (c) the individual.

4. (a) The Nation: The security of a nation rests on its military strength, and where, as in our case, this strength, represented by its Regular Army, is so small as not to secure its safety, the Army should be used in time of peace in the creation of a war reserve. We recognize that we need a reserve large enough to raise our Army immediately to war strength and to fill the vacancies caused by the first six months' of active operations.

In this connection it may be accepted that a maximum army of 100,000 men, in time of peace, is all that the Nation will allow. To create an adequate force in time of peace a system must be adopted by which a large number of men may be enlisted to serve with the colors only long enough to train them into soldiers, and then pass into the reserve, and their places to be filled by new men. As it is now it is only with considerable difficulty that an army of some 80,000 can be kept recruited; how, then, can the voluntary enlistment of a vastly greater number be secured? Obviously by offering inducements greater than now offered and large enough to accomplish the object sought. Increased pay allowances have been suggested as such inducements, but this may be dismissed, as the classes of men that can be reached by pay are now being enlisted, except those who may be induced by pay so great as to be prohibitive. Shortening the term of service has also been suggested, but the length of term of service must be based on the time required to make a soldier, and moreover must be determined mathematically by the size of the Army and the required reserve.

5. A third suggestion is that of offering vocational training as an inducement for enlistment. The hope in offering this is that a new class of young men may be reached. There can be no doubt that the thoughtful young man will hesitate and think a long time before exchanging three or four years of the formative period of his life for a certain training that, at its end, will find him where he started plus certain qualifications that are not generally recognized in the commercial world as increasing his earning capacity. On the other hand, if this same service will discharge him with some training of a clerk or an artisan, the case will be very different, and he will doubtless be willing to be a member of the reserve for a period in exchange for the training.

6. If we are exhausting the resources of the classes now attracted to the Army, we must reach other classes in the building of a reserve. The requirements should not be made less, so that a lower class of men, now barred, may enter, but a larger high class must be reached. A great obstacle in the form of the popular idea of what constitutes a soldier intervenes.

According to popular belief, give a man a rifle and a uniform, teach him enough to march in a parade, and you have a soldier, and in a collection of such an army. There is nothing that the public can then see for the rest of the soldier's enlistment, but idleness and its attendant evils, and self-respecting parents oppose the entrance of their sons in such a life. The prejudice of the better class of people must be overcome, and when they are convinced that the Army is spending what they now believe to be idle time in industrial training, we may expect such magazine articles as "The Army—an idle man's job," to disappear.

7. Unless some better plan than vocational training can be offered to stimulate enlistment, and none has yet been found, such training will soon have an important bearing on the welfare of the Nation.

8. (b) The Army: When those who have been engaged in the training of enlisted men for some years are brought in contact with the results accomplished at educational institutions where officers of the Army are on duty, they can hardly, at first, believe it has been possible to accomplish in weeks what the enlisted man requires months to master. It is soon apparent that the superior intelligence of the student, combined with his purpose to do, places him in a class apart. It is believed that the inducement of vocational training will bring to the Army a class of intelligence that will not only permit of soldiers being made in less time, but will make a better, more contented, and more valuable Army. This, then, would indicate that a shorter term of enlistment is necessary before this class may pass to the reserve.

9. The individual: The offering of this training is rather to the enlisted man whom it is expected will be obtained under the new policies than to the majority of the present enlisted force. The Army now consists largely of two great classes—the professional soldier, whose business it is to be a soldier and who consequently is not seeking other training, and the man whose purpose in life was not formed before he enlisted and who for the present is contented with what he has. The latter man, if they be young, as is generally the case, have never been provident, have never tried any occupation seriously, and will be extremely difficult to interest in any; and, if they be older—that is, past 30—they have failed to establish themselves in anything, and are past the age when they may be trained along a particular line. There are also a few—it may be said a very few—men in the Army whose enlistments were prompted by other motives, such as patriotism, or a desire for travel, and in almost every company to-day there are from one to three men who are following a correspondence school course. All these latter classes, together with the men of the other classes whose interest can be aroused, would welcome an opportunity for clerical or manual training.

Certainly the introduction of this training will place a different aspect on Army service from the viewpoint of those who will accept the training. They will have an occupation for their leisure time, they will be made more content, and will be given a purpose in life.

10. Conclusion: If it be the purpose of the Army to spread military training through the Nation, to create an adequate reserve, to break down the popular prejudice against the Army, to fill our ranks with men who later will be a valuable class of citizens, vocational training is an advisable measure to adopt toward this end.

III. PRACTICABILITY.

11. In considering this subject it will be well first to examine what is now being done along this line in the Army. There is conducted at every post a school for enlisted men where the ordinary school subjects are taught. Attendance on the part of the enlisted men is voluntary, but when once accepted the course becomes a military duty for that school year. The attendance is usually very small, the school not being favorably regarded. The chaplain, where there is one, is in charge of the school, and where successful it is due to his personal fitness for the work and his standing with the men. The schools for cooks and bakers are open to all enlisted men, and in a course of some four months make of an intelligent man who tries a competent cook or baker. It is frequently difficult to find men to volunteer for this instruction. The other schools pertain to particular branches of the service, in which instruction is given as follows:

12. Hospital Corps: Trains in nursing, sanitation, and pharmacy, and has afforded opportunities for X-ray and laboratory work, which have been embraced by some enlisted men to their subsequent advantage in civil life.

13. Signal Corps: Trains in several branches of electricity, in telegraphy, telephony, and aviation. Maintains one Signal Corps school. Discharged soldiers of this corps are now filling many positions in civil life by reason of this training.

14. Engineer Corps: During the season of indoor instruction "trade schools" are maintained at all posts and subjects such as surveying, drafting, photography, carpentry, pipe fitting, cement and masonry work, and lithography are taught. Such progress is made that upon discharge the average man has a vocation.

15. Mounted service: Schools for saddlers, blacksmiths and farriers, and a school of equitation have, together with the daily work, produced a great many trained men.

16. Coast Artillery Corps: The training of the indoor season is largely along lines which will fit a man for a civil occupation. Posts have power plants, and much of the training is in their operation and in the development of engineers (steam, oil, and gas), firemen, mechanics, and electricians. Selected men are sent to the school for enlisted specialists, where the training in certain of the mechanic arts is quite complete.

17. Infantry: Training, except as cooks and bakers, is only in military matters. Enlisted men, from time to time, at the post shops pick up more or less of a trade by assisting those regularly employed.

18. The foregoing shows that in those corps—Medical, Signal, Engineer, and Coast Artillery—where the work pertains to certain of technical lines of civil life, the enlisted man is receiving vocational training, while in the mobile branches, where the work is essentially military, he generally is not receiving such training.

19. The pursuits of civil life qualify men to fill many of the positions in the technical corps of the Army in event of war, but not so in the mobile Army. It is here that the reserve is principally needed, that the greatest inducements to promote enlistment must be made, and that the proposed inducement of vocational training now exists the least.

20. To what extent can vocational training be introduced in the mobile Army without sacrificing the first essential of military training and efficiency?

21. The year for the mobile Army is divided into two periods of training—field and garrison. During the field-training period there is little time available, and on some days none, as during the target practice. During the garrison-training period the garrison-school course of five months, beginning November 1, is held, and most of the period is of necessity given to indoor work largely theoretical. The time that can be given to this kind of instruction is limited by the time the man's attention can be held, his intelligence, and the extent to which it is desirable that a subject be carried. This season is characterized by confinement to barracks and consequent idleness on the part of the enlisted man, but the officer, with his administrative work, boards, courts-martial, noncommissioned officers and garrison schools, and post-graduate work, with all the study, reading, and research these call for, finds this his busiest time, in which he can hope to do but little more. During this period the average enlisted man, not a noncommissioned officer, could give one hour in the morning and three in the afternoon to civil training. When the tactical instruction is properly conducted, it can and should be completed ordinarily by noon, which leaves little but certain routine work, such as stables, for the afternoon. To prevent idleness or to improve the looks of the reservation, it has been a practice on the part of some post commanders to impose excessive fatigue and to have much time spent in nonmilitary labor of no practical value.

22. Many a post commander who has been complimented for the appearance of his post should have been censured for imposing upon his command hours of needless drudgery that lowered the military value of his command and caused discontent and desertion. Time that has so often been put to such purpose as this will give a good many hours of vocational training, with excellent results.

23. It must be concluded that we can give some time in summer and more in winter without encroaching on the time usually given to military training, and if vocational training does take some of the military time, we can in the six months of outdoor work do more intensive training.

If the European soldier can be made in 14 months, as it is agreed, we can certainly in two or three years, in each of which six consecutive months entirely and a small part of each day of the other six are available, accomplish the same and more with the American.

24. Conclusion: The practicability of introducing this training is apparent, but such practicability should not be destroyed by the application of an impracticable system. The whole question will be solved successfully or otherwise by the methods employed.

IV. ADOPTION OF A SYSTEM OF VOCATIONAL TRAINING.

25. If it be decided to introduce this as a feature of Army training, care must be taken not to so introduce it as to have it meet with opposition in the Army. The training of an Army officer makes him cautious. His profession teaches him to adhere to tried principles and to view innovations with distrust. The officer of long service has seen too many changes, too many schemes introduced that amounted to naught and those that have survived; he has seen come in one at a time, with a rush, until the service was dominated by this one thing; then he has seen it collapse and recover or begin a retrograde movement until a successful equilibrium was finally attained. If this plan be put in effect simply by a peremptory order, it may be taken for granted that there is going to be some opposition and lack of cooperation, for every officer believes it is his duty to make the best possible soldier of the enlisted man and to oppose any plan he thinks might prevent the most complete attainment of this purpose. On the other hand, if the officer learns that this is not a visionary scheme thrust upon him which after a time will be allowed to drop into oblivion, but is a vital issue; if he is made to understand the greater purpose, why this is being done and what it is hoped to accomplish thereby, his loyal cooperation is a certainty and the success of the plan assured.

26. The past furnishes some examples, and the study of some scheme carried to a successful conclusion will afford some precedents that may prevent a false start now being made. Consider military education, for instance, a subject closely allied to the one being studied. The excellence and great value of our garrison and service schools were not speedily attained. Orders were issued, but the idea, while received with enthusiasm by the younger officers, was generally opposed.

27. For years the schools, although the subject of some elaborate orders and reports, produced no practical results. There was no General Staff, no one in particular to push this work forward and to be responsible for its development. It required nearly the growth of a new generation to make this a vital matter. Had there then been a committee of the General Staff, as there now is, directly charged with the coordination, fostering, and developing of this matter, years of failure might have been avoided.

28. All of the foregoing, then, suggests a plan of procedure as follows:

The 1st of November, the opening of the school training period, is the natural date for beginning the system, which for the first year should be tentative and put in effect at a few selected posts. The posts selected should be garrisoned by each arm of the mobile army, be widely separated in climatic conditions and surroundings, large enough in size to afford enough volunteers for the purpose, garrisoned by organizations not apt to be moved during the time of the trial, and preferably be in different departments. Posts that meet these requirements are suggested as, in the Eastern Department, Fort McPherson, Ga., a post well equipped with post shops, and where this plan has already received favorable comment, and at Fort Ethan Allen, Vt.; in the Central Department, Fort Riley, Kans., garrisoned by Field Artillery, and about the only post now available in that department, and, moreover, the site of two schools for enlisted men; in the Southern Department garrisons are now too much occupied by the border patrol to be considered; and in the Western Department, Vancouver Barracks, Wash.

29. The posts having been decided upon, the next step will be for an officer who thoroughly understands the purpose, who believes in it and its successful culmination, to visit the selected posts in turn. Here a conference will be held with the officers, explanations made, and their cooperation secured. With the enlisted men who then volunteer a school will be established to fit that particular locality and to utilize local facilities.

30. The three or four schools, once established, will by the end of six months furnish information and experience on which to base future plans. It should then become the duty of the committee of the General Staff charged with educational matters to take charge of this as an educational matter and prepare the general plan to go into operation on the following November 1.

31. There will then be a nucleus of experienced officers whose services will be available in starting the training. In the meantime the General Staff committee mentioned will have time to make a detailed study, with a view to profiting thereby, of the experiences of several countries that since 1906 have done more or less along these lines.

V. COURSE OF INSTRUCTION.

32. It is advisable to begin with the means at hand and to avoid expenditures wherever possible and not to seek congressional aid. The following course is suggested as of practical operation at the posts considered, and involves slight expenditure. Textbooks, as heretofore, will be supplied by the Quartermaster Corps, as well as stationery and other simple supplies.

33. The plan proposed with which tentatively to start the work is as follows:

1. Course in electrical work:
   1. Stenography
   2. Typewriting
   3. Bookkeeping and penmanship

   } Spelling.
2. Course in telegraphy and telephony:
   1. Operation of the central energy system
   2. Operation of the local battery system

   } of telephones.
   3. Overhead and underground lineman.
   4. Telegraphy.
3. Course as clerk in grocery business:
   1. { Handling of wholesale groceries. / Weighing and sale of retail groceries.
   2. Meat cutting.
4. Course in hospital work:
   1. Nursing.
   2. Pharmacy.
5. Course as janitor:
   1. { Care and cleaning of buildings, windows, floors, etc. / Care of plumbing and electric lighting systems. / Operation of steam and hot-water heating plants.
6. Course as stationary engineer:
   1. Operation of stationary engines and pumps.
   2. Fireman.
7. Stable course:
   1. Stableman: Grooming, feeding, and care of horses; care of stable; care of harness.
   2. Driver: Same as above; harnessing, driving.
   3. Delivery man: Same as 2; care of delivery wagons.
8. Course in cooking.
9. Course in baking.
10. Course in mechanic arts:
    1. Carpentry and building.
    2. Blacksmithing and horseshoeing.
    3. Saddlery and harness making.
    4. Painting.
    5. Masonry, plastering, cement work.
    6. Printing, typesetting.
11. Course as barber.
12. Course in surveying and mechanical drawing:
    1. Use of transit, level, stadia, and plane table.
    2. Drawing, blue-print reproduction.
13. Garrison school course:
    1. Common-school branches.
    2. Advanced work.
    3. Languages.
14. Special courses.

DISCUSSION OF COURSES.

Course 1: The teaching of stenography might require a civilian instructor. If so, the hire of a clerk could be authorized, who would be required to teach in the afternoon and evening. The other courses under this heading will require no expenditures.

Course 2: To be under the signal officer, who, with the Signal Corps men at the post and the means at hand, can conduct the course. The number of telegraph instruments at the post might have to be increased.

Course 3. To be given at the commissary. There is generally one man on duty as butcher. If no enlisted man, who is an expert meat cutter, is available, the hire of a competent civilian to perform this duty and teach the enlisted men should be authorized. The sale of meat is now part of almost every retail grocery, and a man capable of working in each department is much sought.

Course 4: To be under the surgeon. The demand for competent male nurses always exists. Men could be prepared for examination for registered pharmacist.

Course 5: Needs no discussion.

Course 6. Can be carried on in the post pumping plant.

Course 7: The post stables and the services of civilian employees and veterinarians to be utilized.

Courses 8, 9: Best conducted at the regular schools. Men so desiring, be allowed to attend.

Course 10: The post shops; civilian and enlisted employees to be utilized.

Course 11: There is much demand for this instruction, and many barbers in every command. There will be difficulty in establishing this instruction, which must be solved according to the local circumstances surrounding the question.

Course 12: Any graduate of the Military Academy can conduct this instruction.

Course 13: To be extended, made liberal, and attendance encouraged. Night classes to be held, without exception, in addition to those in the daytime.

Course 14: By this it is intended to cover special cases. For instance, should an electric line run into the post, it will probably be possible to arrange for the training of conductors, motormen, etc.; also, the company that lights the post would probably assist in the instruction

of men in the various duties of their employees. Nothing definite can be laid down in this matter, but officers interested can accomplish much.

Lectures: By officers, on subjects of general interest, should be given frequently. Local educators, ministers, professional men, and mechanics would probably respond to an invitation to address the garrison or the special classes.

Agriculture: The Army does now, and always will, draw largely from the rural districts. The average young man from the country who enlists, giving his occupation as a farmer, can plow, sow, and perform the other work incident to the farm, but of scientific agriculture, horticulture, dairying, breeding, poultry raising, and similar subjects he knows but little The establishment of these courses is most desirable and most difficult of all, as there are no instructors available, generally speaking. Land and many farming implements are available. There is in every State a Government-supported agricultural college. Most of these maintain a six-months' winter course, to be held when outdoor work on the farm is suspended. These institutions are those where Army officers conduct, by law, a course in military science and tactics. A reasonable number of enlisted men could be sent to these institutions for the short course. Doubtless free tuition could be arranged in return for their services as assistants to the Army officer on duty there. Their pay and a 50-cent per day commutation of rations would doubtless meet all their expenses. As the short-course students take the military course, the presence of a few enlisted men would be the greatest aid in the training of this class.

Possibly the Department of Agriculture could and would lend aid in establishing this course. The bulletins and literature of this department, at least, are available.

EXPENSE TO THE ENLISTED MAN.

At first nothing. A study to be made of the experiences of foreign services, where a charge has been made, under the supposition that, if paid for, more attention will be given by the student than he would give to free instruction.

VI. PRACTICABILITY OF INTRODUCING VOCATIONAL TRAINING IF THE ENLISTMENT PERIOD BE REDUCED.

34. The reduction of the enlistment period from the present four years to two years or so, as the policy of the War Department, will not, it is thought, affect the above conclusion.

While, of course, the training during that short time is presumed to be intensive, in order to secure the highest results within that time, nevertheless, it is believed that there will be many hours, especially during the winter, when the soldier can not be engaged in actual military training, and during that time it would seem proper that he should be offered opportunities to improve himself in other ways. The vocational training suggested is not intended in any way to take the place of military training. If there is no time for the purpose, then the men would not be able to have this vocational instruction.

It is not the intention to establish schools which will take up time of the enlisted man to the detriment of his military training, but simply to give him occupation for his spare time, making him better suited to follow a civil pursuit on discharge, and thus to attract to the service a larger class of men who look beyond their time of enlistment. This is especially true in the short-time service with reenlistment not permitted, where a good man must consider his future after discharge.

VII. RECOMMENDATION.

1. That the instruction of enlisted men in clerical work and in some of the mechanic arts be adopted tentatively as a part of Army training.
2. That the plan outlined herein be put into operation.

JOHN BIDDLE,
Colonel, General Staff, Chief of War College Division.

H. LIGGETT,
Brigadier General, United States Army.

Mr. CHAMBERLAIN. Mr. President, I desire to refer to one or two statements of the Senator from Georgia [Mr. SMITH] as to section 56. The Senator refers to the annual encampments as being in the nature of picnics, and intimates that the training the men get in such encampments is wholly insufficient to fit them for the Army. Mr. President, the Senator has evidently not used a pencil in his calculations, but I ask him to take a pencil and use it just a little bit in reference to the National Guard, and to compare the results obtained with the results that he would obtain by making an estimate as to the 30-day "picnics" of which he speaks. Under the practice usually followed now by the National Guard of the country they usually meet once a week; there may be exceptions to the rule, but I think pretty generally they meet once a week and drill in their armories from one and a half to two hours. With 52 weeks in a year and placing the number of drill hours at the outside limit of 3 in each week there is a maximum of about 156 hours of drill a year.

If you will add to that the time spent at the annual encampments, where they engage in maneuvers, sometimes in connection with the Regular Army, you will have 24 days longer of training. Twenty-four days, say, at 8 hours a day, will make about 192 hours more that they would drill in a year. That, added to the drills in the armories, will not make over 348 hours of drills in a year. Now, take this bill, which specifies how much time shall be spent by the National Guard in drilling, and we find the following provision:

SEC. 91. Training of the National Guard: Each company, troop, battery, and detachment in the National Guard shall assemble for drill and instruction, including indoor target practice, not less than 48 times each year, and shall, in addition thereto, participate in encampments, maneuvers, or other exercises, including outdoor target practice, at least 24 days each year, 5 of which shall be in rifle practice, unless such company, troop, battery, or detachment shall have been excused from participation in any part thereof by the Secretary of War.

And further:

Provided, That such enlisted man shall receive the compensation herein provided if he shall have attended not less than 48 regular drills of not less than 1½ hours each during any one year, and a proportionate amount for attendance upon a lesser number of such drills, not less than 24: *Provided further*, That the compensation provided herein shall be computed for semiannual periods, beginning the 1st day of January and the 1st day of July of each year, in proportion to the number of drills attended; and no compensation shall be paid to any enlisted man for the first semiannual period of any year unless he shall have attended during said period at least 24 drills, but any lesser number of drills attended during said period shall be reckoned with the drills attended during the second semiannual period in computing the compensation, if any, due him for that year: *And provided further*, That when any man enters into an enlistment he shall be entitled to proportional compensation for that year if during the remainder of the year he shall attend a number of drills whose ratio to 24 is not less than the ration of the part of the year so served to the whole year; and when any man's enlistment shall expire the compensation, if any, to which he may be entitled shall be determined in like manner: *And provided further*, That periods of any actual military duty equivalent to the drills herein prescribed, except those periods of service for which under existing laws members of the National Guard may become entitled to the same pay as officers and enlisted men of the corresponding grades in the Regular Army, may be accepted as service in lieu of such drills when approved by the Secretary of War.

Forty-eight times, with one hour and a half spent at each drill, amounts to 72 hours of drill that they will have to engage in. Add to that the 24 days, if you please, when they are out in the field, and put it at the highest limit—8 hours a day—and you have 192 hours more, which added to the 72 hours, makes 264 hours, for which we will pay a large sum of money, as disclosed by the estimates.

Mr. SMITH of Georgia. How much?

Mr. CHAMBERLAIN. Look at the estimate here—over $40,000,000.

Mr. SMITH of Georgia. Is it proposed that we pay that much?

Mr. CHAMBERLAIN. It is proposed that we pay that much to the National Guard.

Mr. SMITH of Georgia. If the Senator will allow me, I am not urging that we pay them that amount. I myself said that I did not know that I would vote for that increase of pay to them.

Mr. CHAMBERLAIN. I want to find out what the Senator does want.

The Senator charges that these volunteers go out on a picnic once a year. If they go out on a picnic once a year, the National Guard go out on a picnic once a year, because they indulge in exactly the same maneuvers and the same kind of practice and under the same kind of officers and for a less time. So that the National Guard under this bill—and I am not criticizing them, but I think Senators ought to be fair when they come to talk about this bill—the National Guardsmen under this bill, for which they are getting paid, drill 264 hours in a year. Under the same bill, the men at these encampments that the Senator says are simply engaged in summer picnics go out and drill 30 days—8 hours a day—and putting it at the same limit that was given the National Guard, they drill 240 hours; and it is consecutive training—30 days of absolutely consecutive training. So that there is only 24 hours difference in a year between the volunteers provided here and the National Guard, the members of which are getting paid for their services. That is a fair statement of it, Mr. President.

Mr. SMITH of Georgia. Then, Mr. President, let us cut the others down half.

Mr. CHAMBERLAIN. I am not proposing—the Senator is——

The VICE PRESIDENT. The Chair might as well settle this question now. The rules require that after two speeches have been made by a Senator on any one day on the same subject, there must be consent of the Senate to make any further one.

Mr. CHAMBERLAIN. I am perfectly willing to comply with the rule. The motion now is really to strike out section 56, although the Senator has discussed another feature of the bill, which I assume will come up a little later. I am not going to address myself to that now. I am talking about the striking out of section 56, which provides for the Volunteer Army. You see, then, the unfairness of the Senator's criticism in talking about the volunteer system as a "picnic," when they drill 240 hours a year, and the National Guard, which pretends to drill for a whole year, indulges in drilling for 254 hours. That is just the difference between the two systems.

As to the efficiency of the volunteer system, I want to ask the Secretary to read a letter received by me from the Secretary of War under date of March 28, inclosing to me a letter written to him by the Secretary of the Governing Committee of the Military Training Camps Association of the United States, which was referred to by the Senator from Massachusetts.

The VICE PRESIDENT. Is there any objection? The Chair hears none.

The SECRETARY read as follows:

WAR DEPARTMENT,
Washington, March 23, 1916.

Hon. GEORGE E. CHAMBERLAIN,
Chairman Committee on Military Affairs,
United States Senate.

DEAR SIR: I am inclosing herewith a copy of a letter addressed to me from the secretary of the Governing Committee, Military Training Camps Association of the United States. As this letter gives a brief review of the results obtained from the training-camp movement and the importance of the legislation now pending in reference thereto, it occurred to me that it would be of value to your committee.

Sincerely, yours,

NEWTON D. BAKER,
Secretary of War.

MILITARY TRAINING CAMPS ASSOCIATION
OF THE UNITED STATES,
31 Nassau Street, New York City, March 18, 1916.

To the Hon. NEWTON D. BAKER,
Secretary of War, Washington, D. C.

DEAR MR. SECRETARY: I want to thank you most sincerely for the letter you gave us on March 16, indorsing the work of the Military Training Camps Association. We are sending a copy to all of the 4,200 men who have attended Regular Army camps of instruction, and I can assure you that your words of encouragement will mean a great deal to the many civilians throughout the country who, at considerable personal sacrifice, are working to promote the training-camp idea.

There is one phase of the movement I did not touch upon at our conference the other day to which I would respectfully invite your attention. Heretofore, owing to the absence of legislation, these camps have had no definite legal status and no appropriation to support them. Consequently we have, unfortunately and much against our will, been compelled to limit our recruiting to men who could afford to pay their own way, which, including uniform, rations, transportation, etc., averages nearly $60 per man. It is obvious that these camps can never be thoroughly democratized unless they are thrown open to every able-bodied citizen of the United States who desires to take the training. No movement of this character could be either permanent or of real benefit to the Nation unless it is placed upon this democratic basis.

It has been and will be the policy of this association to refrain from any attempt to influence legislation and to confine its activities solely to recruiting. To that end we consulted with Mr. Garrison last autumn and were advised that he would do his best to see that legislative provision be made for the training camps. On his resignation we were thrown back upon our own resources and felt it necessary to send a delegation to appear before the House Committee on Military Affairs on the last day of their hearings. The committee has made provision for the camps in section 83 of the bill H. R. 12766, recently reported by Mr. HAY and now before the House.

The hearings of the Senate committee had closed, but we addressed a letter to the Senate Committee on Military Affairs, in which we asked for the legislation embodied in section 83 of the House bill, not being then aware that the Senate committee proposed to provide for a force of Federal volunteers. It now appears that the training camps can readily be merged with the Federal volunteer system provided for by section 58 of the Senate bill and can be carried on to greater advantage under that bill than under the House bill, section 83.

A comparisen of the two sections will indicate that, while section 83 of the House bill furnishes legal authority for the future conduct of the camps, it contemplates an appropriation covering only a small portion of the individual's expenses, namely, his rations, while section 58 of the Senate bill embraces a far more comprehensive scheme looking to the establishment of a real Federal volunteer force. Under the provisions of section 58, which entirely eliminates the matter of expense to the individual, a really democratic citizens' force can be established.

The section very wisely leaves the question of enlistment to the discretion of the President, and we can not too emphatically urge that this be done, for in building upon the volunteer sentiment it is essential that the Secretary of War have wide latitude in devising forms of enlistment to men of various ages and groups (such as married and unmarried), so as to tap all sections of the population of military age. A drastic and inflexible enlistment provision at the outset might seriously endanger the whole movement for raising citizen reserves under the volunteer system, whereas a liberal and flexible policy in this regard is capable of far-reaching results.

For the reasons stated it is our hope that when the two bills go to conference section 83 of the House bill will give way to section 58 of the Senate bill, and that the latter will become law. But the absolutely essential point for us is that the training camps shall obtain some reasonable legislative recognition and appropriation.

We can assure you of the existence of a strong Federal volunteer sentiment that is abroad in the country, a sentiment that has sought and will continue to seek expression through the training-camp movement. We conservatively estimate, on the basis of reports from our committees and offices throughout the country, that 30,000 men will attend the camps this summer. This enrollment is being made on the basis of each man paying $50 to $60 for expenses and transportation, and it is obvious that the numbers would be multiplied if the camps were opened to all able-bodied citizens, irrespective of their ability to pay their own way. This Federal volunteer sentiment, if wisely conserved and administered. will, we believe, lead to a citizenry trained to arms.

I venture to inclose a file of papers which, if you find time to read, will give you pretty much the whole story of this movement. I particularly direct your attention to the copy of my letter to the Senate committee.

Respectfully, yours, GRENVILLE CLARK,
Secretary Governing Committee,
Military Training Camps Association of the United States.

Mr. CLAPP. Mr. President, will the Senator permit some inquiries at this point?

Mr. CHAMBERLAIN. Yes, sir.

Mr. CLAPP. I have not had time to examine the law referred to in section 56. I see it provides that "the President is hereby authorized, at any time, to organize, maintain, and train, under the provisions of section 3 to 12," and so forth. Can the Senator briefly state the concrete effect of those sections?

Mr. CHAMBERLAIN. I will say to the Senator that that was an act passed for raising a volunteer army in time of war, approved April 25, 1914. It is quite long, but it was embodied in the RECORD the other day. It is Public Document No. 90.

Mr. CLAPP. Does that or this contemplate that these men shall pass an examination such as they would have to pass if they were being enlisted for war?

Mr. CHAMBERLAIN. Oh, yes. They can not go into that service unless they are physically and morally fit.

Mr. CLAPP. They have to be physically fit?

Mr. CHAMBERLAIN. Yes.

Mr. CLAPP. Then what provision, if any, does it make to meet their expenses?

Mr. CHAMBERLAIN. It is found on page 160 of the bill:

Officers and enlisted men of the volunteer forces raised under the provisions of this section shall be entitled to the pay and allowances of officers and enlisted men of corresponding grades in the Regular Army during periods of training only.

Mr. CLAPP. Is it expected that that will cover the actual expense? What I am getting at is this: This letter states that these men would be willing to contribute $50 or $60 a year. Now, if this section is to remain in the bill, I think it ought to be so worded that a man could show his patriotism and obtain the training that this is supposed to give, even though he might not be able to make that contribution.

Mr. CHAMBERLAIN. The bill covers the expenses of the men who participate in these encampments. The letter that was just read calls attention to the fact that heretofore they have been participating in the drills and paying their own expenses.

Mr. CLAPP. I know; but I was asking whether this bill contemplated covering the expenses, so that, if a man felt the promptings which would move one in this matter, he could participate in this drill, even though he was not able to stand any of the expense himself?

Mr. CHAMBERLAIN. It does. It intends to cover that, I will say to the Senator, and the letter which was read here shows that the bill will do it.

Mr. CLAPP. One other question: I have heard a good deal of reference here to 30 days' training under section 56. As I read the section, that is left entirely with the President. I was wondering how it came about that we heard so much reference to it.

Mr. CHAMBERLAIN. Mr. President, the Senate a few days ago adopted as a committee amendment a proviso, to be added at the end of line 2, page 161, reading as follows:

Provided, That without the consent of Congress such volunteer force shall not be called out for field service for more than a total period exceeding 30 days in any one year.

Mr. CLAPP. That was adopted at a time when I was absent from the Chamber.

Mr. CHAMBERLAIN. Yes; but, of course, that is subject to amendment, and I understand that some of the Senators will propose an amendment aimed at that.

Mr. President, I had not quite finished addressing myself to some of the remarks of the Senator from Georgia [Mr. SMITH]. I want to call the Senator's attention to the fact that if the reserve force attempted to be created here is the subject of ridicule because it is out on a "holiday trip," the same criticism will apply with equal force to the National Guard, for whom the Senator stands here as the sponsor.

I hope that provision will not be stricken from the bill. It has been stated more than once, in Congress and out of Congress, that the greatest piece of constructive military legislation that ever passed the Congress of the United States was that volunteer act approved April 25, 1914, applicable only to the raising of a volunteer force in time of war. It was along the lines of recommendations that have been made by very distinguished officers of the Army, and civilians as well, if you please. We have simply adapted to a time of peace several provisions of an act which was intended to be utilized only in time of war, for the purpose of undertaking to raise a volunteer force; and it seems to me that it ought to be attempted, because even the Senators who criticize this proposition talk about the difficulty of raising a volunteer force. I want to do as much as the Senator from Georgia to make easier the position of the private soldier; but I do not like to hear the Army criticized as it has been, and to hear the officers of the Army criticized as a lot of military martinets. There is not any reason in the world why they should be so termed and so treated.

Why, take it in my own State: I have lived there for 40 years, and I have seen the young men go from the field, the factory, and the workshop to West Point. They have graduated there, and have simply undertaken to follow arms as their profession in life. Now, why should the fact that these sturdy young men have gone to West Point from every walk of life cause them to graduate into a caste that are determined to exer-

cise arbitrary and unjust authority over the young men who come under them? I do not think that condition exists at all, Mr. President.

The Senator from Georgia talks about the vicious and humiliating treatment to which the private soldier is subjected. I wish the Senator would give some instances of that. I have heard that statement made here before. I am sorry the Senator from Georgia did not stay here, because I should like to have him give instances of that treatment. As a matter of fact, it does not exist. There may be individual instances where cruelty is practiced toward the private soldier, just as there are instances where the employer practices acts of cruelty toward the employee; but as a general rule the officer of the Army is a kind, considerate, and humane man. Further than that, the law provides against using the enlisted man in menial service, and he does not perform it, or, if he does, he gets paid for it and adds a little to the salary which the Government pays him. Mr. President, I do hope that the gentlemen who criticize the officers of the Army for the treatment of the private soldier will particularize and show wherein that condition exists. I promise, if they do, our committee will investigate the charges and report conditions.

Mr. HARDWICK. Mr. President, as I understand, the pending proposition is to strike out section 56 of the bill.

The VICE PRESIDENT. That is the pending motion.

Mr. HARDWICK. I desire to state that I am in hearty sympathy with that motion, and hope it will prevail. I think I can demonstrate to the Senate that there is no necessity whatever for the retention of that section in the bill if the Senate will take just one action further on in respect to the creation of a reserve force.

The creation of a volunteer national reserve is of course an act of great importance, and the establishment of such a system as would provide an effective reserve force for our Army is most difficult if the plan recommended by the committee is followed; but it seems to me that if the Government of the United States would utilize the schools and colleges of this country, and the vast number of boys who are attending those schools and colleges, for the purpose of creating a reserve force, there would be no necessity whatever for having anything like a continental army, or anything like a voluntary army as provided in section 56.

We have already determined that we will greatly enlarge the standing army of the United States. I am in hearty accord with the provisions of the bill in that respect. We have already determined, or I think most of the Senators have, that we will increase our aid to the National Guard, and will do all that we can, considering constitutional limitations, to make those organzations as nearly as can be a part of our national Army system. But, Mr. President, those constitutional limitations can be neither forgotton nor ignored. In spite of what some Senators say, the fact remains that these State troops are primarily the troops of 48 separate subdivisions of our Government; and unless we change the present Constitution of the United States there is no way in which these forces can be used as really a first line of reserve.

I thoroughly favor and entirely sympathize with a movement to render service in these organizations more popular, to do what we can in the way of furnishing more arms and more equipment and more financial aid, so that service in these organizations can be made more popular, and will be more generally rendered by the citizens of the 48 States; but, after all, even when that is done, we are going to find ourselves up against this proposition: We will have no real reserve army of the United States; we will have no real force unless we adopt some different plan from any suggested in this bill, because my honest judgment is that section 56, even if it could receive the approval of this body, would never raise a really effective reserve force. Now, how can we raise such a force?

Mr. LIPPITT. Mr. President, would the Senator care to yield?

Mr. HARDWICK. Yes, sir; I yield to the Senator, with pleasure.

Mr. LIPPITT. I presume that the feeling of the Senator is very much in accordance with the feeling of most of the other Senators here—that in this Army bill we want to give as wide an opportunity as possible for the different classes of patriotic American citizens to participate and to prepare themselves to participate in the defense of the country if any unfortunate necessity of that kind should arise.

The Senator has very truly said that some training of that kind can be given to the young men in our schools. The militia affords an opportunity for another class of men—older men, more seasoned men. But there is a third class of men who are not students at the public schools, who are not able to join the militia on account of their employment and on account of their affiliations in other ways, but who nevertheless would be glad in some way to prepare themselves to take part in the defense of the country.

As I understand, this volunteer army opens an opportunity for those men. For instance, take the case of a traveling salesman. It is impossible for him to join the militia, because the militia requires two or three nights a week of each man's time to be given to it. The salesman is away from home a week at a time, or two or three weeks at a time, perhaps; but he can take concentrated time of two weeks or a month, perhaps, in the summer, to train himself to play a proper part if the occasion arises.

Why is it not wise for Congress to open the door as wide as possible to the patriotic American citizens who want so to prepare themselves? It seems to me that that is the argument that is behind this volunteer army force; and I must say that as I have studied this bill, it appeals to me very strongly indeed.

Mr. HARDWICK. There is force, of course, in the Senator's suggestion, as there usually is in the suggestions of the Senator; but at the same time, in most cases, men even of the kind that the Senator has referred to can join the National Guards and can drill as much as once a week; and the provisions of this bill do not require drilling by the National Guard more than once a week.

Mr. LIPPITT. As a matter of fact, Mr. President, a well-drilled National Guard does drill oftener than once a week. I know that the mounted artillery in my own State, which is a very efficient and enthusiastic organization of young men, gives much more time than that to it. In fact, it is so exacting that a great many of the young men who are anxious to join it have been unable to do so on account of the time it takes. The Senator does not mind my breaking in upon his remarks?

Mr. HARDWICK. Oh, no.

The VICE PRESIDENT. We are drifting back to just the statement of the rules that the Chair made this morning, and the Chair is going to enforce the rule.

Mr. LIPPITT. I beg the pardon of the Chair.

Mr. HARDWICK. I did not understand——

The VICE PRESIDENT. The Chair announced this morning that if a Senator yielded for anything except a question he yielded the floor.

Mr. HARDWICK. I would not care to do that.

Mr. LIPPITT. I do not care to ask it.

The VICE PRESIDENT. The rules say that no Senator shall make more than two speeches on any one question without the consent of the Senate.

Mr. GALLINGER. On the same day, of course.

The VICE PRESIDENT. On the same day.

Mr. LIPPITT. Then may I ask the Senator if he has also considered the fact that these Plattsburg camps have demonstrated that there is a large body of men who are anxious to take military training, but who could not or did not feel disposed to join the National Guard, and if this volunteer army is not in itself an extension of a system that has already proven its effectiveness?

Mr. HARDWICK. Mr. President, I am still where I was when I started on this question in spite of the Senator's observations. The crack military organizations to which he has referred undoubtedly do drill oftener than once a week, and there are many such throughout the country, but they are the exception rather than the rule. You will find that the military organizations in the State militia, called National Guards in this bill, do not drill on an average more than once a week. I served many years in that organization in my State, and was a captain of the State troops for quite a while; and I know it is quite difficult, with an ordinary military company, to get them to drill as often as once a week. But most of the men in civil life who want the benefits of military training can undoubtedly secure it in these different companies in the State militia, or in the National Guard, if you prefer that term. If there are some instances of men who do not feel that they can belong to the National Guard or to any troop of cavalry or company of infantry or of artillery in that body, provision might well be made for summer training camps along the line of the Senator's suggestion, and in accordance with some experiments already made by this Government. But after all, Mr. President, it seems to me to be almost demonstrable that we can not rely on this system to furnish any considerable number of soldiers, to furnish anything that would do for a real first reserve if this country had to face war with a real power.

Besides that, Mr. President, we do not need to rely on such a plan. There are in this country nearly 2,000,000 boys from 15 to 21 years of age attending the schools, a large majority of whom, in my judgment, would be not only willing but anxious to receive this training. They could receive it in times of peace

without any interference with or disturbance of the business and commercial interests of this country. They could receive it at the time of life when it is most valuable to them. They could receive it at the time when it is most important that they should receive it, because these very young men are the men who would constitute our first battle line if we engaged in a war.

Mr. GALLINGER. Mr. President——

The VICE PRESIDENT. Does the Senator from Georgia yield to the Senator from New Hampshire?

Mr. HARDWICK. I yield to the Senator if he wants to ask me a question and if I may do so without yielding the floor.

Mr. GALLINGER. That is all I will do. I wish to ask the Senator how these boys will be equipped and from what source and in what way they will be drilled?

Mr. HARDWICK. I shall be very glad to answer the Senator's question. I have proposed a bill, which is pending before the Committee on Military Affairs—and I propose to put the proposition in the shape of an amendment to this bill, a very short one—which answers the Senator's question. I would arm them, equip them, and supply them at the expense of the Government of the United States; I would instruct them through commissioned officers detailed for that purpose by the Government of the United States; and I would require of these young men, when they receive these benefits from the Government, simply that they enlist as a part of the reserve forces of the Army of the United States, to be called on for actual military service only in the event that this country should become engaged in war.

Mr. GALLINGER. Mr. President, a further question. Does the Senator think that we could spare a very sufficient number of officers to go to the hundreds and thousands of schools throughout the country to instruct the boys?

Mr. HARDWICK. I answer the Senator's question with pleasure. If we have them not already, my proposition provides that we shall create additional officers. I know of no way which would be so fruitful in results as this plan would be. It is recommended by the experience of other countries; it is recommended by the highest military and civic authorities in this country. It seems to me that in the schools and colleges of this country where the young men are of the right age to receive this training with beneficial results to themselves and with the very best results to the country, military instruction ought to be given, and if we will adopt that system instead of the volunteer plan we will not need any volunteer army. We will have the greatest reserve army that this country has ever seen, without the slightest disturbance to the ordinary business and the ordinary industries of the Republic.

Mr. President, the bill contains in sections 42 to 55, inclusive, a plan somewhat along that line, a plan reported by the committee, and yet not the work of the committee, because they have adopted it bodily from a report made by the General Staff and without the slightest change from the report made by the General Staff of the Army.

Mr. SMITH of South Carolina. May I ask the Senator from Georgia what provision is made for binding these boys, trained by officers detailed to drill them, that they would respond to a demand for their services.

Mr. HARDWICK. I will answer the Senator. My idea would be not to establish a reserve company in any school or college except where the authorities of that school or college requested it and except where the parents or guardians of these young men agree to it, in each individual case where they are minors. These young men would be required to sign a statement that they would become members of the reserve forces of the United States, subject to the rules and regulations laid down by law.

Mr. President, as I was going on to say when the Senator from South Carolina interrupted me, the committee has taken bodily a report from the General Staff of the Army and has provided for a somewhat more general utilization of the schools and colleges of the country than at present by providing that these schools and colleges shall be used under certain terms and regulations prescribed in the bill for the training of reserve officers. So far as it goes the proposition is a good one, and I shall support it most heartily, but it does not go half far enough, because it does not utilize the abundant material we have in the schools for the solution of the most difficult part of this problem. If it is a good thing to train officers in the schools and colleges by the detailing of Army officers to drill them and train them and by equipping them, why is it not also a good thing to train privates in the same way for that reserve? Why should we make at the schools and colleges all officers and no privates? Of course officers are very useful as well as ornamental.

Mr. NELSON. Will the Senator allow me a question?

Mr. HARDWICK. I yield.

Mr. NELSON. Is there not great danger that all these college students when war broke out would want to be officers and none of them privates?

Mr. HARDWICK. I think so, if the Senator will pardon me, if we follow the bill laid down by the committee, because the bill seems to provide for nothing but officers from this source; as I was starting to observe, while officers are not only entirely ornamental and are possibly partially useful, it seems to me privates are just about as useful and fully as necessary if we are going to have any real trouble. If these schools and colleges and high schools throughout the land can be utilized, as the committee contends and as the General Staff recommends, for the training of officers of the reserve corps, then I want to know why is it that 2,000,000 American boys can not also be utilized by training privates, who are fully as necessary if not quite so ornamental as officers?

Mr. DU PONT. Mr. President——

The VICE PRESIDENT. Does the Senator from Georgia yield to the Senator from Delaware?

Mr. HARDWICK. I yield for a question.

Mr. DU PONT. I understood the Senator from Georgia to say that the officers are of no more use than privates.

Mr. HARDWICK. No; not exactly. I said that officers are useful as well as very ornamental, but we will always find it necessary to have a few privates if we have any real trouble.

Mr. DU PONT. I simply want to call the Senator's attention to the fact that it takes a much longer time to train an officer than it takes to train a private soldier.

Mr. HARDWICK. Undoubtedly. The Senator and I are in no disagreement about that. My point is that with material like the 2,000,000 American boys of ripe age in the schools and colleges of this land, why should we utilize such a tremendous source of military strength only to train officers? Why not train a few privates, too? Why not have your real reserve there? And if we do have our real reserve there we will need no volunteer arm or anything else. Even if 25 per cent—aye, if 10 per cent—of the American schoolboys throughout the United States enlist in this reserve force that my amendment provides for, it does not differ materially from the principle of the provision advanced by the committee and we will have this most splendid reserve that any Republic ever had.

Mr. WARREN. Would they not be volunteers?

Mr. HARDWICK. Undoubtedly; and I would give the schoolboys, volunteers in companies of 50, wherever they are, in town or country, in whatever State, all the necessary equipment, instruction, and everything necessary in order to train them to be soldiers who could render real service to the country if danger arose.

Mr. KENYON. Does the Senator's amendment cover high schools?

Mr. HARDWICK. Yes.

Mr. KENYON. Is there any limit as to the number of students in a school who shall have training?

Mr. HARDWICK. The amendment proposes, of course, an arbitrary one. I had to fix the figure somewhere, and I provided that wherever a school may give 50 or more of these reserve students an officer shall be detailed.

Mr. KENYON. How many officers does the Senator think it would require? Could one officer attend a number of schools?

Mr. HARDWICK. No; I think not.

Mr. KENYON. Would not that be practicable in some cases?

Mr. HARDWICK. That is a question of detail about which the Senator might find himself in agreement with me, but I rather think there should be at least one officer to each school that can furnish as many as 50 or more reserve students.

Mr. KENYON. I am very much interested in the question.

Mr. HARDWICK. I am glad the Senator is. I will say if Senators on both sides of the Chamber will study this question, and if they will not object to the amendment simply because the committee has not proposed it in the exact form in which I have presented it, I believe it will get the votes of two-thirds of the Senators.

Mr. JONES. Does the Senator contemplate that the students in the schools shall, for instance, drill every day?

Mr. HARDWICK. Yes; every day. It would be a part of the regular school training. On Saturdays they would have more extended drill; they could drill out in the country; it may be do rifle practice and such things as that. On vacations, according to the terms of my amendment, they would be mobilized in regiments or brigades or even divisions, if you want to. That is the only time we pay anything for the service. They will not want any pay except for that service. It will do the boys of this country a great deal of good to assemble in brigades

and divisions during the summer vacation and let them camp and drill and see something of real soldiering.

Mr. JONES. If they should be required to drill, however, only two or three times a day, it seems to me one officer could take care of two or three schools.

Mr. HARDWICK. Of course, those are matters of detail that we might agree about.

Mr. CLAPP. Will the Senator allow me to ask him a question?

Mr. HARDWICK. Certainly.

Mr. CLAPP. I shall transgress the rules slightly by prefacing the question with the statement that I am heartily in favor of some such plan as the Senator suggests. What I want to ask the Senator is how section 56 would interfere with the plan outlined by the Senator?

Mr. HARDWICK. In answer to the Senator's question I will state that it does not interfere with it except in this way and in this view: If you adopt the plan I have suggested, you have no need of section 56. There is absolutely no necessity for any further reserve force than you will get under the plan I have offered to the Senate. You will not need the other. If any Senator thinks we would need the other, too, I do not care particularly about it one way or the other. I shall vote to strike out section 56, as far as my own vote is concerned, because I regard it as entirely unnecessary if we are going to adopt anything like the plan I have suggested.

Mr. CLAPP. The Senator has little thought that these boys under his plan would ever go to the battle front. I will put it in the form of an inquiry. Is his suggestion not based upon the fact of the benefit it would be to the citizenship of the country to give the boys this training, and is not that equally true of the younger manhood of the country that has passed the school age?

Mr. HARDWICK. I think so; but answering the Senator frankly, as I answered the Senator from Rhode Island just now, I do think in the large majority of cases at least the younger manhood of the country, out of schools to which the Senator refers, would get the training in connection with the State troops or the National Guard.

Mr. CLAPP. Is not the Senator aware that there is a large proportion of our people who from their vocation and their condition do not find it convenient to be in the National Guard? In other words, dealing now with citizenship and not with war, is it not our duty to carry to the entire younger portion of our citizenship at least that inspiration, that development of ideals and physical advantage of training which would come from the National Guard, the volunteer army, and the school plan outlined by the Senator?

Mr. HARDWICK. I do not find myself in violent disagreement with the Senator on that proposition. I agree with him thoroughly in this view of the matter, that the training—mental, moral, and physical—that American schoolboy would get though this discipline would be available to him in peace as well as in war; it would make a better citizen of him as well as a more efficient soldier, if we needed him for the latter purpose.

Mr. DU PONT. May I ask the Senator a question?

Mr. HARDWICK. Certainly; I yield.

Mr. DU PONT. The young men the Senator proposes to instruct in the manner he has stated, I understand, could not be organized permanently into the establishment. They would be simply military assets to be used in case of war in the formation of new units or new organizations. Is not that it?

Mr. HARDWICK. No; that is not the plan I have in mind at all.

Mr. DU PONT. What is it?

Mr. HARDWICK. The plan I have in mind is that wherever you can get a company of as many as 50 of these young men from 15 years of age upward you form them into a company, and during school term itself you could not have a larger unit probably than these companies, except in the larger schools, like the public schools of New York, or it may be the public schools of Atlanta or Chicago or some other larger cities of the country, but during the vacation of about three months of every year you can form larger units, brigades, divisions.

Mr. DU PONT. I understand.

Mr. HARDWICK. In the corps of these reserve forces these young men are trained to act together.

Mr. DU PONT. I understand that.

Mr. HARDWICK. Of course it might not be the precise unit in which you would use these reserve soldiers in case war broke out, although as far as possible the organization already made during times of peace and in vacation and the units already employed during those times ought to be followed in time of war.

Mr. DU PONT. The Senator would take a school and organize it every year in this way? A certain number of them would every year leave the school and disappear, would they not?

Mr. HARDWICK. Undoubtedly.

Mr. DU PONT. The Senator's idea would be, in case of war, to call out the schoolboys representing these units? Is that the idea?

Mr. HARDWICK. Undoubtedly, to some extent.

Mr. DU PONT. Then you would have an army composed to a large extent of young men between 15 and 20 years of age who enlisted in the service of the United States with the consent of their parents and guardians. Is that the idea?

Mr. HARDWICK. Yes, sir; that is it exactly.

Now, Mr. President, there are other advantages which the Senator's question suggests. It is true that these boys are going out into civil life every year, and they go out with some training; and that, as a Senator suggests to me, is one of the strongest virtues of the plan. As they go out their places will be taken by younger boys, and year after year in this country you will have a constantly increasing force of young men who do know something about military affairs, who could render efficient service to this country in time of danger, and at the same time, as they went out into civil life, class after class of younger men coming would take their places, so that we would have a reserve force, constantly expanding in numbers, without a constantly expanding increase.

Mr. WARREN. Mr. President——

Mr. HARDWICK. I yield to the Senator from Wyoming.

Mr. WARREN. I agree with very much the Senator has said about universal military education, but I want to ask the Senator, if I understood him correctly, to say that he thought there are some constitutional difficulties to get over in regard to the National Guard? I assume that he meant to ask whether the guards could be used in an adjoining country. The Senator believes that they could not under the Constitution.

Mr. HARDWICK. Yes, sir.

Mr. WARREN. Very well. At the present time, as the Senator knows, and he will correct me if I am wrong, we have no reserves.

Mr. HARDWICK. The Senator is right.

Mr. WARREN. We are providing for reserves in this bill. It takes two years to accomplish it. We hope to have them. What would the Senator do, if matters which I hope may not terminate so but I believe the chances are 4 to 5 they will so terminate, about being compelled to go into an adjoining country to pacify conditions? Where would we get the forces.

Mr. HARDWICK. Of course, I can see only one answer to the Senator's question. As far as the reserves are concerned—troops outside of the Regular Army—we would have to depend on the enlistment of the militia into the Federal force. You could not take them as militia; but brigade after brigade, and regiment after regiment, and company after company they may enlist, and they would be used to fight.

Mr. WARREN. And thus they would become United States Volunteers.

Mr. HARDWICK. Yes; they would. I think that is what would happen.

Mr. WARREN. In the meantime, following exactly the Senator's question, is it not safer to have a force of volunteers who, for reasons of their own, are not going into the National Guard or the Regular Army and are in some manner trained and organized in troops and in companies, so that they may be called immediately, rather than to depend at the present time upon the youth the Senator mentions, none of whom, if their parents objected, could enlist? Would it not be better to not depend entirely upon the National Guard, as the Senator knows many of those could not go?

Mr. HARDWICK. Answering the Senator's question, I beg to say that I very much doubt, under the present condition, whether you would get anything like an efficient reserve force from this volunteer provision known as section 56. I do not believe you would get it. I do not believe you would get enough men to even hunt down a bandit in Mexico under such a provision.

Mr. WARREN. Does the Senator mean that they would not enlist or that having enlisted they would not go?

Mr. HARDWICK. I do not mean to imply that the people, after they once assumed the obligation, would fail in patriotism, but I do not think the system is attractive to the business men of the country or that any considerable number would be willing to embrace it.

Mr. WARREN. Yet, if the Senator will permit me, many may want to go who, being instructed, would become volunteers in the Regular Army.

Mr. HARDWICK. If the Senator will permit me, I spoke just now about these camps. How many really have been to these camps?

Mr. WARREN. In the various camps probably 10,000 or 12,000 out of an organization of 60,000, all of whom are represented as anxious to join such a force.

Mr. HARDWICK. As far as these camps are concerned, I believe they are a good thing. I am perfectly willing to join the Senator to an extent that would result in an improvement in that direction. So far, the encampment of 12,000 or 15,000 men of all the millions in this country does not indicate any general desire on the part of a large number of our citizens to embrace that opportunity.

Mr. WARREN. I answer the Senator that it is in its incipiency. Last year was the first, and it was the opinion of the committee that if we were to provide means for support during the time of training we had better do it, and there would be a dependable force, one that by obligation places itself at the command of the Government as volunteers. We might start with 30-day camps at half a dozen places. They have an association of sixty-odd thousands, and it is only a matter of one or two months once a year. Is it not fair to presume that there would be a very much larger number in following seasons and finally a very considerable force, compared with the little Regular Army we have now?

Mr. HARDWICK. I do not know whether there has been any difference owing to this reason. Those encampments have been held at a time when the minds of the people of the country were greatly excited by the talk of war and rumors of war all over the world, and it looks to me like if the scheme was ever going to appeal to the American citizen in large numbers this is particularly the time of all times when it would appeal to them and that even the first year we would have had better results than we did under the experiment so far.

Be that as it may, however, I am perfectly willing to have summer camps. I am perfectly willing to have the Government establish and maintain them wherever American citizens want to avail themselves of the advantages they offer. The Senator can not rely, however, on a volunteer force made up under existing circumstances and conditions in this country of these business men.

In every country in every age the very flower of the country's soldiery has come from the young men of the country, from 16 to 21 or 22 years of age. If we had a war in this country tomorrow with a power of first magnitude, so that American patriotism was stirred to its very depths and so that the resources as well as the patriotism of this country were taxed, you would find it would be these young boys out of the schools who would do our fighting; that they would be the first to volunteer and the first in battle when it came to defending this country.

Mr. WARREN. Mr. President——

Mr. HARDWICK. I yield to the Senator.

Mr. WARREN. The Senator, I think, is right, so far as the young men being ready. I think boys are more enthusiastic than are men. An observation was made as to the laboring men. The Senator knows whether we want to discuss that question or not. He knows the laboring people do not go into the National Guard to any great extent under the present plan; that there is a widespread prejudice against the National Guard because of possible local or police duties they might be called upon to perform.

Mr. VARDAMAN. Pardon me, that is not true of Mississippi.

Mr. WARREN. I presume you do not have those large united communities of laboring people who make known their wants as organizations.

The VICE PRESIDENT. Again Senators are paying absolutely no attention to the rules.

Mr. HARDWICK. Mr. President, since the Chair has called attention to it, I do not yield the floor until I have concluded.

The VICE PRESIDENT. The Senator from Georgia has yielded three or four times.

Mr. HARDWICK. I will yield altogether if the Chair so rules.

The VICE PRESIDENT. The Chair simply wants to place this discussion in a shape so that the rule may be obeyed by the Senate.

Mr. HARDWICK. Mr. President——

The VICE PRESIDENT. The Senator from Georgia.

Mr. HARDWICK. Now, I had very nearly finished what I want to say about this measure. Anyway, I think I can sum it up in just a few sentences.

I have no objection to these military camps. I have no serious objection to this section 56 providing for a volunteer force. The main objection I have had is because I believe it will not accomplish much. I believe if we are to have a real reserve army in this country we shall have to rely upon our schools and colleges to furnish its very backbone and its flower.

So far as the proposition presented by the committee, or rather by the General Staff, is concerned, I want to say here and now that I am going a little later to request the vote of the Senate on why it is if the schools and colleges can be utilized to furnish officers for the reserve corps of the Army that they can not also, and ought also as a matter of fact to some extent, be utilized to furnish privates for the reserve corps. Why should we not use every resource in this country in the most sensible and the most economical and the most practical way in our attempt to solve this vexatious and troublesome question? Therefore I say instead of this volunteer army, instead of this reserve corps of officers, in connection with the schools and colleges of this country, at the proper time and as soon as we vote on this motion, if I may then have the opportunity, I propose to offer as a substitute that we shall establish a reserve force of the Army of the United States in every school and college in this country where both students and school authorities favor the establishment and are willing to take the benefit of the training, the equipment, and the instruction that the Government of the United States shall provide.

Mr. WILLIAMS. Mr. President, there has been very much, indeed, in what the Senator from Georgia [Mr. HARDWICK] has said, nor is it altogether a new thing. The thought has been entertained by a great many people who have stood very high in leadership in America. I can see, however, no conflict between what he desires to do and section 56 of the bill. They aim to accomplish different purposes, and each of them can be left to accomplish its purpose in its own way. There is no reason why the people who are willing to go out and be trained for 30 or 60 or 90 days every summer should be shut out because there is a desire to make a reserve force of the students of the country between 15 and 21.

Mr. President, I rose simply to say this: Something has been said about training officers, and there seems to be an idea that it is just as important to train privates as it is to train officers. That is absolutely unfounded, because you can train a private in very much less time, and you require a very much less broad field of preparation to make a good private than to make a competent officer.

If this war in Europe has proved anything at all, it has proved the necessity of such a provision as sections 48 up to 50, I believe, in the bill, inclusive. The Russians and the English both have found that much out. The English Government had to turn its corporals and its sergeants into commissioned officers to train troops. Then it had to look elsewhere for noncommissioned officers. There is very little doubt about the fact that the Russian Army was beaten back just as much by the lack of officers to train their privates, who came by the million, but who had no one competent to train them and no one competent to lead them, as it was at first defeated by the lack of munitions of war.

Mr. President, everybody seems to be using this bill as a vehicle whereby to transport into the public attention some favorite idea of his own. I also want to bring out one of mine. I think that every State university in this Union can be turned into a West Point for the purpose of training officers at an expense of not over twenty to thirty thousand dollars a year for each State university. The State universities already contain as a rule everything taught at West Point except two things. They have an engineering course, which might perhaps in many cases be made better. They have an electrical engineering course, nearly all of them, if not every one. They have the ordinary course in history and literature and modern languages, which West Point has. They have the ordinary course in pure and applied mathematics, which West Point has.

Now, if the Government of the United States were to detail to each one of the 48 State universities two professors, one of tactics and drill and the other of strategy and military history, they would thereby build up a military curriculum akin to that existing at West Point, and it would cost them nothing to detail the officers. All the Federal Government would have to spend for the students of the State universities, which are public institutions, where for the most part in nearly all the States the students get their schooling without paying a dollar for tuition, and the students therefore owe something to the country, would be enough money to equip them with their uniforms, their guns, their artillery, and in certain cases their horses, where they were going to have cavalry companies.

Mr. KENYON. Mr. President——

Mr. WILLIAMS. In one moment. Take some of the great universities out West and the large universities in Wisconsin and Illinois.

Mr. CLAPP. And Minnesota.

Mr. WILLIAMS. And Minnesota and Iowa. There the number of students runs up into the thousands.

This is not a new idea. Mr. Jefferson, in founding the first university in this country, wanted the university to provide a professor in military science, as he called it, so that all the boys at the university who volunteered for that purpose should have the advantage of taking military science as one of their studies, along with the other studies which they took, and taking a degree at the end of their course in military science as well. Of course, the degree in military science would carry not only tactics and strategy, but military history, engineering, and the things that are absolutely necessary to equip an officer, the only difference being that, under his idea, the State of Virginia was to pay for it all, of course, and not the Federal Government; but the State was never rich enough to do so. The university even yet has no such school; but his idea was that 100 or 200 students would volunteer every year, or, since the university has grown to larger proportions, I dare say 500 now would volunteer, receive this excellent training, and form a reserve corps of trained officers learned in military science, educated and equipped to lead and to train men.

Mr. President, if you take the ordinary American citizen, and you put him through an intensive course of drill, you could make a pretty well-equipped private soldier of him, I believe, in six months. They talk about two years being a short period of enlistment. With intensive drill you can make of that man a good soldier, toughened, hardened, ready for almost any test, because he is highly intelligent, highly initiative and enterprising, and you can make a good noncommissioned officer out of him.

Mr. President, it seems to me that some of the most valuable parts of this bill are section 48 and the sections following it. I hope that if the Senator from Georgia does offer his amendment he will offer it in such a way as not to cancel those sections but to coordinate his amendments with them. I see no reason why there should be any conflict between his idea, as he expressed it a moment ago, and section 56.

Mr. POMERENE. Mr. President——

The VICE PRESIDENT. Does the Senator from Mississippi yield to the Senator from Ohio?

Mr. WILLIAMS. I will yield for a question.

Mr. POMERENE. Senators were referring to sections of the bill from 48 to 52. I want to call the attention of the Senator from Mississippi to sections 42, 43, and 44, which provide for extending facilities to different classes of universities. Section 42 calls attention to what are known as the land-grant colleges, section 43 to such institutions as are organized under State laws, and section 44 to other established institutions of learning.

Mr. WILLIAMS. Yes, I understand; but that does not quite go as far as my idea. I want to detail not only drill masters, but I want to detail professors, or men who shall go there as professors, of strategy and of military science, and professors of military engineering, and that the Federal Government could do. After it did that by furnishing from two to three men at each State university—at the utmost three—you would have a full faculty for military training at each State university, just as you have at West Point, because the State universities already have all the other branches.

Mr. CLAPP. Mr. President, I think it was unfortunate that section 56 was entitled "The Volunteer Army." It in no sense creates any army. It simply provides for there existing among the body of our citizenship men who by previous training, and having already taken the oath, may be organized into an army at any time when needed. I regret that there has grown up here any difference between the different forces that might constitute the fighting force of this country in time of war. It seems to me, as a people and as a deliberative body, we have too much fallen into the habit of taking it for granted that we must have this or that particular thing, and that everything else must be rejected.

I am a believer in and would be the last man to strike a blow at the National Guard. As it is growing and developing, it would be our main reliance aside from the standing army in case of a war of any magnitude. I have long believed that this Government could well afford to make a large contribution annually to the National Guard, not primarily for war purposes, for there is slight prospect of war, although it would be there if needed, but that it might take the young men who would join the National Guard and give them the benefits of out-of-door camp life; give them the benefits of the discipline, which every young man ought to have; and, at the same time, keep alive the symbol of patriotism, which, in a Republic, must be the military thought, more especially the military tradition.

I do not believe in a large standing army, and I think the committee is to be congratulated at the result of its labor and deliberations, in view of the pressure that has been upon them, in bringing to the Senate such a moderate bill as this as to that part which relates to the standing army; but I do believe that we can well afford to devote a certain amount of public funds to the development among our people, especially among our young men, of that spirit out of which would come the soldier, if there ever comes a time—which God forbid—again in our history when any considerable number of soldiers will be required.

The National Guard exists year after year. Out from its ranks, year after year, go drilled men, with 10, 15, or perhaps 20 years of their life left within that active period where, if they were required, they could serve in the Army. Believing in that principle, I believe, after making provision for the standing army that is provided for, that the next question that should be considered at every point is where will the money that we propose to collect by taxation and appropriate do the greatest good, combining the thought of a citizenship, qualified to fight, if ever the time to do so should come, but in the meantime the development of the citizen himself along mental, physical, and moral lines. This is accomplished by the creation and development of the National Guard. If we have not made ample provision therefor, it should be made. We have already amended this bill to put officers from the National Guard upon the General Staff.

For the very reason that I have always believed that we should expend money upon the National Guard I believe in the provisions of section 56. It ought to have been entitled "The annual training camp" or some term like that. To call it a volunteer camp is misleading, for it provides for no army. It simply provides for making the material out of which, if occasion ever arose, an army could be created.

We know that there are in this country men who for various reasons can not join the National Guard, but who can give a reasonable amount of time each summer to an encampment, and that is really what section 56 provides for, that encampment resulting along the same lines of good that service in the National Guard does; in other words, it gives them an out-of-door experience; it gives them discipline, and keeps alive in them that patriotic spirit that comes, in the last analysis, much as we mght be prone to regret it, from military traditions. Nor do I think, perhaps, we should regret it. Our achievements in the past have been military achievements, and they are the inspiration to a free people for the ideals and standards of citizenship in time of peace.

Why should there be any conflict between these two? Why should there be any conflict between either of these and the school proposition advocated by the Senator from Georgia [Mr. SMITH]? I think, Senators, if we would get out of the thought that we must always have this thing or nothing, that what we advocate is the sole thing, and that what some one else advocates is full of danger and harm, and recognize that there is a broad equation to be served, we would make much headway toward wiser and more permanent legislation. I therefore felt that it was only proper that I should make these few brief remarks.

I found my support of section 56 upon the same broad principle that I found my support of the school training and of the National Guard, namely, that we are developing in the youth of our country those traits, that physical, moral, and mental training, which will fit them alike for civil or military duties, if the occasion ever requires; and the more thoroughly a man is fitted for that occasion, if it ever comes, the better fitted he is, in my judgment, for the duties and the experiences of civil life.

Mr. WADSWORTH. Mr. President, I desire to ask the Senator from Oregon a question with respect to one of the terms of section 56. On line 21, referring to the men who are expected to enlist in the so-called volunteer army, this language occurs:

> Those passing to the reserve to have the status and obligations prescribed for reserves of the Regular Army.

In another part of the bill it is provided that the Regular Army reserves are to be paid $24 a year. Does the language in section 56 indicate that the reserves of the volunteer army for four years are to draw the $24 a year from the Federal Government?

Mr. CHAMBERLAIN. I do not think the committee so intended.

Mr. WADSWORTH. It is rather an important matter, Mr. President.

Mr. CHAMBERLAIN. It may be that some provision might have to be made to more clearly express the intent, but I think

that the $24 per annum was intended for the Regular Army. I will ask the Senator from Wyoming if that is not his understanding?

Mr. WARREN. Yes.

Mr. WADSWORTH. The language is:

Those passing to the reserve to have the status and obligations prescribed for reserves of the Regular Army.

Mr. CHAMBERLAIN. I think the committee intended that they should have the military status, being subject to the call of the President, but we did not intend to have the $24 per annum paid to those men.

Mr. WADSWORTH. Is the Senator from Oregon confident that under that section those men will not be able to claim that amount?

Mr. CHAMBERLAIN. I would not say that without examining the language a little more critically than I have done. The Senator from New York is the first person who has suggested the matter to me. I will say, however, that was not the intent of the committee. It was only intended that that language should apply to those men who had served out their enlistment under the colors and had gone into the reserve.

Mr. WADSWORTH. Will the Senator, with his usual generosity, yield for another question on the general purpose of this section? Am I to understand that this volunteer army, to be composed of 260,000 troops, is to be actually a force in being?

Mr. CHAMBERLAIN. I so understand.

Mr. WADSWORTH. A force in being?

Mr. CHAMBERLAIN. Yes, sir.

Mr. WADSWORTH. Organized, then, into brigades, regiments, battalions, squadrons, companies, troops, and batteries?

Mr. CHAMBERLAIN. If enough men enlist; yes.

Mr. WADSWORTH. Well, Mr. President——

Mr. WEEKS. Mr. President——

Mr. WADSWORTH. I am glad to yield to the Senator from Massachusetts.

Mr. WEEKS. I was going to ask the chairman of the committee if it is not a fact that this provision is experimental in its character? No one knows that 260,000 men can be obtained, or 100,000 or 50,000. We had assurance from those largely interested in the camps last year that there would probably be from thirty to forty thousand men who would come into a service of this kind in this way; but I do not think there is any assurance that there will be a greater number at this time, and it may not be possible even to get that many.

Mr. CHAMBERLAIN. The Senator is correct about that. It is experimental, but it is along the line of the recommendations of men who have had more or less experience in this service. The committee has had to meet the question of how best to create some sort of reserve, and met it with this experimental provision, adopting in times of peace provisions which had been enacted to apply to times of war.

Mr. WEEKS. Mr. President——

Mr. WADSWORTH. I very gladly yield again to the Senator from Massachusetts.

Mr. WEEKS. I do not think it violates the committee's secrets in any way to say that the general proposition of a volunteer army was not perhaps favorably considered by the committee until there was an assurance that the men who had attended the volunteer camps would be willing to enlist, become volunteer reserves, and serve as the Government required in that capacity.

Mr. CHAMBERLAIN. That is true. It was a question whether the men who had been taking part in these encampments would enlist so that they would be subject to the call of the President. The matter was taken up with men who were interested in the movement in different parts of the country, and they expressed a perfect willingness to have the bill so framed that they should really become a part of the enlisted strength of the United States Army.

Mr. DU PONT. Mr. President, will the Senator from New York yield to me for a moment?

Mr. WADSWORTH. I yield to the Senator from Delaware for a question.

Mr. DU PONT. I merely wish to say, Mr. President, that this assurance came from the Volunteer Training Camps Association. They have formed a national organization, and their officers were believed to represent all those who were interested in the training camps throughout the country. So, the assurance was official, and, to the committee at least, of a satisfactory nature.

Mr. WADSWORTH. Mr. President, the point of my inquiry was not to develop how many men were to be recruited or whether it would be possible to recruit 260,000; the point of my inquiry was to ascertain, if possible, whether it was intended to maintain these men in organizations, fully equipped and ready to take the field at the outbreak of war. The inquiry has some importance, I think, in connection with the estimated cost. It is proposed that these men shall attend training camps 30 days in the year. I am fairly familiar with "the Plattsburg idea," so-called. It is a most excellent idea, but no one can contend that the 1,200-odd men who attended the camp at Plattsburg for five or six weeks last summer have been maintained, or could be maintained, for the succeeding 11 months in a regimental organization. To begin with, they have no place whatsoever to store their equipment; and the impedimenta of a regiment of Infantry is a very sizable thing to take into consideration. At least 24 great army wagons are necessary for the transport train of one regiment of infantry. My inquiry is to that point. Is this to be an army, or is it not to be an army, but simply a group of men in training and not organized into units? The Senator from Minnesota, as I gather, understands it in the latter sense.

Mr. CLAPP. Certainly.

Mr. WADSWORTH. But the Senator from Oregon, the chairman of the committee, replies that it is to be a force in being; and there is a very grave distinction between the two. One might go on for some time indicating the amount of work, the amount of money, the amount of building necessary to house the equipment for an army of 260,000 men; likewise the number of headquarters that would have to be maintained, the number of officers who must be permanently detailed to those regiments or brigades or squads or battalions or companies or troops, for it must be understood, of course that, in any such recruiting, the units will be scattered all over the United States; and yet each unit must have quarters at some place in which to store its material and equipment.

Mr. DU PONT. Mr. President, I should like to say, if the Senator will pardon an interruption, that the bill provides that there is to be one Regular Army officer detailed in each congressional district to look out for all those things.

Mr. WADSWORTH. Mr. President, it is exceedingly easy to detail an officer to take charge of men recruited in a given congressional district, but what I am endeavoring to find out is whether there will be, we will say, the Tenth United States Volunteer Infantry, ready to take the field, or the Fifteenth United States Volunteer Cavalry, ready to take the field, trained, it is true, for only 30 days, but in possession of headquarters, in possession of buildings in which their impedimenta may be stored and protected from the weather and from fire risk, buildings in which the men can gather and take possession of their equipment in time of war on the outbreak of hostilities—headquarters at which they can mobilize? Are these units to have continuous life through the years, or are the men simply to attend 30 days training camps and then disperse and return to civil life, with no permanent organization and with no control over them during the other 11 months of the year?

When we come to consider the matter of supplies and impedimenta we must also understand that animals must be had for the equipment of this great army, and if it is to be an army—and I am trying to develop that fact—it is going to take thousands of horses, and what is to happen to the horses for the other 11 months? Who is to feed them?

I do not believe that that item is contained in the estimate of $25,000,000 as the cost of this force; and if these things have not been considered, if these units of the Volunteer Army are not to be placed on the basis of a permanent organization, with appropriate headquarters, a place for storing material and at which the men may gather, then it is not an army.

Mr. LEE of Maryland. Mr. President, in connection with what has just been said by the Senator from New York [Mr. WADSWORTH] I wish to call the attention of the Senate to the fact that amongst the valuable assets that this genuine American institution, the citizen soldiery or the National Guard, have is the support, the liberal support, of the States. The amount appropriated—and this is official information—by the States for the construction, upkeep, and repair of armories for the last fiscal year was $1,942,780; for rentals of armories, $740,817; for caretakers for armories, $704,000; making a total for armories annually appropriated by the States of $3,387,733, and not including new armories being annually provided for.

Mr. President, the points made by the Senator from New York are absolutely apposite to this situation. Now comes this proposition to improvise a volunteer army, so called, to compete with and to overthrow, if possible, the old and established form of citizen soldiery in this country. Instead of perfecting the one, which should be done, this bill aims to undermine the large existing investment in the National Guard and to interfere with the purpose of our country with respect to its citizen soldiery, the power to arm, organize, and discipline the militia, long a dormant power, but now it is hoped to be effectively exercised.

In this connection I want to call attention to the fact that the amendment which I have in contemplation does not propose to reduce the forces available for preparedness, but would strike out and then double the limitation which the committee has put upon the number of National Guard. This limitation they have placed at 500 for each Senator and Member of the House of Representatives. I would make the limitation 1,000, giving a substantial increase in probable troops over and above the number of the experimental volunteer army.

In that connection also the House bill made the limitation of the National Guard 800, whereas the Senate committee has brought in a limitation of 500. That can not be out of friendliness to the National Guard. The committee must have realized the inconsistency between the National Guard and the volunteer type which they propose, and must have contemplated a reduction of the National Guard to that extent.

Mr. President, the idea of multiplying types is an unsound military proposition. We have two types. We have the Regular soldier. Do what you can for him; make him as good as possible; pay him as much as you can; discipline him as highly as you can; pay his officers as much as you can afford; and give him every convenience of education which has been suggested. Then, you have the other type—the citizen soldier mentioned in the Constitution. Stick to that. Do not multiply types. In Army affairs it is always well to have uniformity; have guns that shoot the same cartridge; have a type of citizen soldier that will meet the requirements; but do not give the crustacean Army officer an opportunity to play two types of citizen soldiery against one another. There are some crustacean Army officers. The Army officers of this country as a class are as brave, as honest, as loyal, and as faithful professional men as any other professional men in the country; yet they have their crustacean types, and that type of officer has an undue power by reason of the reverence which the Army pays to seniority. It would be unwise to afford an opportunity to retard a great movement or to curb the citizen soldier's development by a privileged or to be petted volunteer-army proposition.

Mr. President, I have another amendment in contemplation which I wish to discuss very briefly in connection with what was said by the junior Senator from Georgia [Mr. HARDWICK]. He suggested a volunteer system for schools. I propose to add a new section to come in after section 98, and to read as follows:

SEC. —. National Guard units at civilian schools: At colleges and schools approved by the President, and under such special regulations as he may provide (applicable or not applicable to other units of the National Guard), there may be organized and composed, in whole or in part of the students of such schools or colleges, specified units of the National Guard—

Why have them volunteers? Why get another type? Can they not enlist and become National Guardsmen in the community where the school is located?

Mr. HARDWICK. Mr. President, will the Senator yield for a question?

Mr. LEE of Maryland. Certainly.

Mr. HARDWICK. Does not the Senator regard it as desirable for the United States to have some reserve force——

Mr. LEE of Maryland. That is the idea exactly——

Mr. HARDWICK. Just a moment; let me finish—which is not subject to any constitutional limitations as to the manner in which they may be employed in the service of the Government even in time of war?

Mr. LEE of Maryland. Well, the three great purposes mentioned in the Constitution—to repel invasions, suppress insurrections, and enforce the laws—are pretty much everything that I want to see soldiers used for, with very few exceptions.

Mr. HARDWICK. That may be true; but the Senator can very readily understand that the country might be involved in many troublesome situations where we would have to go further than that.

Mr. LEE of Maryland. We would have no difficulty in getting the men if the situation were serious.

Mr. HARDWICK. But we have got to provide some proper method of meeting that situation, have we not?

Mr. LEE of Maryland. Unquestionably. We are increasing the Regular Army up to 250,000 men, and we are doing other things that will increase the forces of this country. We are proposing to increase the naval force; and then there is the Marine Corps, which is now really our over-seas diplomatic force in one sense. But to go on with the suggestion of National Guard units at civilian schools, my proposed amendment continues—

and whose term of enlistment and manner of service may be arranged in relation to the scholastic year or course of study in such schools or colleges.

The commissioned officers of such specified units shall be entitled to one-fourth of the pay of an officer in the Regular Army; those detailed from the Regular Army to receive all the pay and allowances of their rank; and the enlisted men while in actual service, and as may be provided by such special regulations, to receive the pay of enlisted men in the United States Army with a ration or commutation therefor, or such part of such pay or ration as the President may direct.

Thus, Mr. President, there would be no trouble about an army. There is a legitimate opportunity for the youth of this country of the age to become soldiers to enlist and to receive the pay and rations, or such part of the pay and rations as the President may see fit under regulations to give them. You can attach that unit to any school in this country, have the unit large or small as you like, and at the same time preserve uniformity in military matters, have this military unit subject to the provisions and regulations that apply to the National Guards of the several States, and do away with the disadvantageous condition that is necessarily incident to setting up a different type of soldier, available under different conditions, and to be, perhaps, the petted favorite of some military clique, or, if not, to be of a type that will not enlist and follow the colors of his country with the average of his countrymen.

We want to have the youth of this country follow the flag. The suggestion that has come here from the secretary of this association that these summer camps will democratize a certain type of youth is a manifest error, Mr. President, except with reference to a very limited class of youth. If you want to democratize your youth, let them enlist and follow the flag as National Guardsmen of the several States, or let them enlist and follow the flag as enlisted soldiers of the United States; and if there is any limitation upon their means to get an education or opportunities to serve full enlistments when at schools or colleges, that can be recognized by the regulations of the President, and due consideration shown under those circumstances.

Mr. DU PONT. Mr. President——

The VICE PRESIDENT. Does the Senator from Maryland yield to the Senator from Delaware?

Mr. LEE of Maryland. Certainly.

Mr. DU PONT. I should like to ask the Senator from Maryland how the youth of the country who had enrolled themselves in the National Guard could make themselves useful in case of operations in foreign countries?

Mr. LEE of Maryland. That was suggested by the Senator from Georgia [Mr. HARDWICK], but in view of the fact that this bill gives us 250,000 regular soldiers for overseas operations how many more does the Senator want?

Mr. DU PONT. Not 250,000.

Mr. LEE of Maryland. That is the maximum possible number in the bill which the committee has just reported. In addition to that there would be added the marine and naval resources the United States.

Mr. DU PONT. Oh, that is in time of war—yes.

Mr. LEE of Maryland. Certainly.

Mr. HARDWICK. But, Mr. President, if the Senator will yield to me for a question——

Mr. LEE of Maryland. Certainly.

Mr. HARDWICK. If we got into a war with a power of first magnitude, a real power—something other than a Mexican war, or something like that—we would need a great many more than that, as the Senator very well knows.

Mr. LEE of Maryland. Certainly.

Mr. HARDWICK. Does the Senator agree to that?

Mr. LEE of Maryland. I should say so.

Mr. HARDWICK. Therefore, why not have your school reserves free from these constitutional difficulties that hedge about the State troops? Of course the Senator will understand that I am in favor of doing everything we can for the National Guard. I am not opposing any of his propositions for them; but I see no reason for taking your school reserves, that ought to be the real flower of your Army, and putting them under the same constitutional limitations and inhibitions that the National Guard rest under.

Mr. LEE of Maryland. The inhibitions and limitations of the National Guard are extremely small, and apply only to these over-sea operations, and yet in that case there would be little or no difficulty, in the very twinkling of an eye, in changing these forces by an universal enlistment to just the types of volunteer forces that are provided for under existing law. This very section 56 applies to existing law, and makes that existing law, which was never operative in this country before except in time of war, operative now in time of peace, and adds a centralized force in excess of anything that was contemplated by Gen. Emory Upton as a reformer of the military policies of this country.

Gen. Upton's suggestions, if applied to the population of this country to-day, would give us 206,000 men in the Regular Army.

His theory was 1,000 men for every million population in the Regular Army, and, I think, 200 for every Congressman and Senator, which would be 100,000, and 106,000, or a total of 206,000 men in the Army subject to the orders of the President of the United States. That was his conception, and at a time when the power of the disciplined and equipped soldier was much less, relatively to unarmed population, than that power is now. The provision of the bill, with 250,000 Regular Army in time of war and 261,000 volunteers, or over 500,000 National Guard, if these amendments are adopted, would recognize to some extent the larger masses in modern war and improved means of ocean transportation not available when Gen. Upton wrote, and when we were less exposed than now to foreign attack.

Mr. President, I certainly hope that we will not multiply types, but that we will go on and increase the National Guard to the degree that it ought to be increased for the protection of this country, especially from invasion. We have to harmonize many thoughts and many ideas in this legislation, and I hope that behind a genuine citizen soldiery there will be no lack of congressional unanimity or of appropriation to make those soldiers fit in every particular.

Mr. BRANDEGEE. Mr. President, I hardly think the Senator from Maryland, on second thought, would say that section 56 would increase the number of types of soldiers contemplated. Neither do I think he would, upon reflection, consider that a man who might volunteer in the service of his country under section 56 would do so in contemplation of being the "gilded pet of some clique of Army officers," as he expressed it.

Any force organized under section 56 would, under the terms of the section, be organized under the provisions of sections 3 to 12 of the act approved April 25, 1914, which provides for exactly the same type of soldier for which section 56 provides. The type of soldier which the Senator from Maryland thinks is to be newly created and organized is already provided for under this act, and the only thing section 56 does is to make the act approved April 25, 1914, apply during times of peace as well as during times of war and when war is imminent.

For the benefit of those who are interested in seeing what are the provisions of the act of April 25, 1914, that being existing law, I will say that it is printed on page 5829 and the following page of the CONGRESSIONAL RECORD under date of March 29, 1916.

Mr. President, I think section 56 of this bill is one of the most valuable parts of the whole bill—valuable in that I think in time emergency there is at least a possibility that some good might come out of it.

The Senator from Maryland [Mr. LEE] and other Senators have taken occasion to say that we can rely, in case of emergency, to augment our first line of defense—which, in case of an invasion of this country by the veteran troops of other countries, the General Board has estimated would take a force of about 500,000 men—upon the militia of the several States, who, commendable as they may be and efficient as they may be in the several States, train, as has been described here, on an average of one night a week in an armory under shelter. These gentlemen who want to rely upon separate organizations in the several States of the State militia, under the officers appointed by the governors of the States, to form an efficient aid to the Regular Army of the United States to repel an invasion or to conduct one, seem to me to be basing their hopes upon something that in the past has always met with disaster; and, in my opinion, unless in some way, under the constitutional authority granted, the State troops can be drilled and trained efficiently to the approval and satisfaction of the commander-in-chief, will in the future prove to be a broken reed.

Mr. President, the Senator from Maryland skips very lightly over the constitutional inhibitions against the successful use of the State troops in the first line of defense. What we want in this country, if I correctly apprehend the situation and the feeling of the people, is an effective, well-drilled, well-trained Army in time of emergency. It is not sufficient, in my opinion, after the emergency is upon us in time of war that then the President may call into the service of the United States the troops of the several States and commence to train them and discipline them and give them the necessary endurance to act with the Regulars. I do not think the people will be satisfied with that kind of preparedness. Mr. President, that is no preparedness at all.

I admit freely that the State troops—their efficiency varies in the several States—are, so far as they go and to the extent to which they are trained and to which they are competent, of course in advance of any green volunteers that could be raised on the spur of the moment; and they have some equipment, and that could all be availed of. But one of the purposes and objects of section 56 is that in time of peace the President, if he apprehends an emergency and desires to call upon the country for volunteers, may obtain a supply of men that he can put into camp and discipline and train in the field, and not in armories, to supplement the Regular force of the United States.

Mr. CURTIS. Mr. President——

The PRESIDING OFFICER [Mr. SAULSBURY in the chair]. Does the Senator from Connecticut yield to the Senator from Kansas?

Mr. BRANDEGEE. I yield to the Senator.

Mr. CURTIS. I desire to call the Senator's attention to section 91, which provides for the training of the National Guard and provides that they "shall, in addition thereto, participate in encampments, maneuvers, or other exercises, including outdoor target practice, at least 24 days each year."

Mr. BRANDEGEE. I thank the Senator for calling my attention to the section. The trouble is that the provisions of the committee bill and of the Hay bill which are mandatory in tone are not mandatory in fact, and can not be made so under the Constitution of the United States.

The militia need not, in time of peace, come out at the call of the President. The attempt of this bill, and of the Hay bill, is to induce the militia to participate in these trainings, and so forth, for the purpose of getting the pay provided in the bills for so doing. Any State militia that is willing to forego the pay provided for in this bill need not come in response to the call; so that it is impossible for the Federal Government, although we call it federalizing the State militia, to impose over the militia of the several States that degree of military discipline which is necessary to make an effective Regular.

Section 56 would allow that to be done. It would also do this, Mr. President: If the President of the United States is proposing some diplomatic course with some foreign power and we have not yet gone to war, but the President is apprehensive that ultimately we may get into it, although war may not be imminent under the language of the act of April 25, 1914, and he desires to prepare himself and the country for eventualities if he has to enforce his policy, or if some foreign nation is making demands upon him which he can not then disclose to the country, but which he thinks may result in an emergency, he can call for 100,000 volunteers or 200,000 volunteers, and state that, in his opinion, it is necessary under section 56 for him to do so. Everybody will then know that, in the opinion of the President, it is desirable that there should be 100,000 or 200,000 volunteers put into the field and trained. I am rather inclined to think that might have some effect in making some diplomacies more successful than the mere conducting of literary correspondence on the subject.

I want to see an army in this country that is an army and an effective one. If we can not have an army as well as a navy that can transact the business for which it exists, we ought to abolish both branches of the service and cease making any pretenses that we are doing anything to prepare this country for eventualities.

Mr. President, I was extremely sorry to hear to-day what I learned for the first time—that there had been put on the other day, as an amendment to section 56, at the end of line 2, of page 161, an amendment providing that field service under that section should only last for 30 days in any one year. Why, Mr. President, if the desire is to hamstring the section and, under color of giving the President authority to call for volunteer forces and put them into the field and train them, to pretend that they have given it when they say he can not do it for more than 30 days, of course I admit there is no use in adopting section 56 under those circumstances. The volunteers provided by that intelligent action of this body would not be nearly as well qualified to meet the emergency as the militia of the several States, for they, all parties agree, are trained at least 52 nights in the year, which would be an equivalent of 52 days' training, and this section is now limited so that these men can get only 30 days' training. They could hardly get into camp and pitch their tents and make a few evolutions before they would be required to go back home.

Mr. WILLIAMS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Connecticut yield to the Senator from Mississippi?

Mr. BRANDEGEE. I do.

Mr. WILLIAMS. In that connection, I want to ask the Senator if he is not mistaken. I agree with him that the 30-day limitation ought not to be there. I think the least limitation that ought to be there is 90 days. I had contemplated offering a substitute for that provision later. I think it would be still better if the bill had been left as the committee brought it in. But does not the Senator think he is mistaken in his calculation?

The National Guard is required to meet only once a week, and it generally drills from one to one and a half hours. If you multiply whichever that is by 52, you get your result. Now, these men who will meet under section 56 have been doing very intensive work while they have been at it. They have been working not less than eight hours a day. So that when you reduce it to hours, instead of days, the Senator's calculation is wrong.

Mr. BRANDEGEE. I think plainly the Senator is right and I am wrong about that; that while they were in the field 30 days they would be devoting their entire time to it, and their training would be much more intensive. But it would not be enough at all, as everybody knows, to put men into condition to do what our troops are called upon to do in Mexico now—to endure the grueling marching and countermarching day and night, the loss of sleep, the enduring of a tropical sun, the going without food, the being inured to hardship. No 30-day training could do that; and if I understand the object of this section, it is to put in the President's hands in time of peace, in case emergency comes, the possibility of developing a force which will be in training and fit to do the duty which they are called upon to perform.

Mr. STERLING. Mr. President——

The PRESIDING OFFICER. Does the Senator from Connecticut yield to the Senator from South Dakota?

Mr. BRANDEGEE. I do.

Mr. STERLING. The Senator refers to this section as not authorizing the President to make a call for volunteers in time of peace but when some emergency occurs. The bill, in its terms, authorizes the President to make the call for volunteers at any time.

Mr. BRANDEGEE. It does.

Mr. STERLING. Does not the Senator think it is in contemplation that the call may be made for volunteers who may be put in training now, although there is no emergency, or although war is not imminent?

Mr. BRANDEGEE. Mr. President, of course I do not know what the committee intended by the use of the language. What I assume is that the President would not call for a number of volunteers, in addition to the Regular Army provided for in this bill, and in addition to what he could get if we got into war from the militia of the several States, unless there was some emergency. For the purpose of my remarks, and the purpose of establishing what section 56 proposes, as far as I am concerned, I would be perfectly willing to write into the section the words "the President, whenever in his opinion any emergency shall exist." I had not any idea but that it would never be exercised except under those conditions, although the bill does say that the President is authorized at any time to do it.

Mr. STERLING. I will simply say, Mr. President, that I inferred that that was largely the object of section 56—that we might have a large force in training, or a trained force to meet any emergency that might come hereafter, and that that was was the purpose in providing for this so-called volunteer army.

Mr. BRANDEGEE. I am perfectly willing that it should stand just as it is; and I will trust the President of the United States, whatever political party he may belong to, to defend the country if the section is passed as it stands. If that were done, and the President wanted to avail himself of this authority in order to prove what the country could do, if he simply did it as an experiment to find out, in case an emergency should come where he would be compelled to call for volunteers, how quickly they could be volunteered and mobilized and trained, to see what the difficulties to be encountered were, I would be willing to let him call for 50,000 volunteers and see what happened. I would like to test the sentiment of the country on that question.

A great deal has been said about our not being able to get volunteers. A great many people assume that the volunteer system would utterly break down. Others insist that the militia system would break down if called upon. I should like to see it tried. I have no doubt that if the President called for volunteers we could raise three or four regiments in the city of Chicago alone.

Another feature about this section is that these men would be enlisted for such times, and so forth, and under such conditions, as the President might prescribe. I have heard it stated, and I think it is probably true, that volunteers could be secured in the large cities for one period of enlistment and under certain conditions, and I think that in country places and in other sections of the country they could be secured for other terms and under other conditions. I see no reason why the recruiting officers of the United States, under the orders of the department, might not vary the conditions of volunteering to suit the needs of the people in the several parts of the country.

It is said that this is an experiment. It is no more of an experiment, of course, than the act approved April 25, 1914, which has never been operated under. The Senator from New York [Mr. WADSWORTH] suggests what of course would occur to any thoughtful man: "How about the headquarters? How about the encampments? How about furnishing the equipment and supplies and wagons and tentage, and so forth, for these troops?"

Mr. President, how about doing it anyway? Suppose the President calls for volunteers under the existing law. Those problems will have to be met, of course, as they arise. I assume that when Congress has authorized a thing to be done, any contracts made by the President or by the War Department for the necessary equipment would be legal, and would have to be appropriated for by Congress. They certainly would have to be provided; but the whole thing is experimental.

The Senator from New York inquires: "Is this to be a permanent army, a volunteer army, and kept up year after year, or are these men simply to be called into the service as volunteers for a year or two years or six months?"

I do not know. I do know that section 56 provides that those things are to be decided by the President of the United States.

Mr. STERLING and Mr. DU PONT addressed the Chair.

The PRESIDING OFFICER. Does the Senator from Connecticut yield, and to whom?

Mr. BRANDEGEE. I yield to the Senator from South Dakota.

Mr. STERLING. I should like to ask the Senator if the omission of section 13 from the provisions of section 56 would not, in a sense, answer the question as to whether or not this was to be a permanent volunteer army?

Mr. BRANDEGEE. Sections 3 to 12, inclusive?

Mr. STERLING. Yes. If the Senator will observe, it is provided that the provisions of the act of 1914 from sections 3 to 12, inclusive, are to govern the volunteer army proposed to be raised under this act; but section 13 of the act of 1914 provides as follows:

> That all officers and enlisted men of the volunteer forces shall be in all respects on the same footing as to pay, allowances, and pensions as officers and enlisted men of corresponding grades in the Regular Army.

Would not the omission of that section from the provisions of the present act indicate that it was not to be a permanent Army force?

Mr. BRANDEGEE. Well, Mr. President, I had not given that question consideration, and I am not quite clear about it. It may be that the Senator is right about that.

Section 56, line 13, then provides as follows:

> The term of enlistment, which shall in no event be greater than that of the Regular Army, the period of service with the colors and with the reserve, and the period of training shall be as the President may prescribe, those passing to the reserve to have the status and obligations prescribed for reserves of the Regular Army.

So I think the President could maintain it for years, if he wanted to, during his term, or I think he could limit it to a shorter time. However, I have not given that sufficient consideration.

Mr. President, there need be no attempt to misrepresent this question at all. There is no use in attempting to raise on the floor of this body the idea that anyone is hostile to the militia of the States. This question is before us now because the country has been clamoring for preparedness to protect the country in case it was attacked. Under the Constitution of the United States, which places the officering and the training of the militia in the States under the control of the States, I do not think in an emergency they can be successfully called upon by the President to cooperate with the Regular Army against veteran troops. When I say that I do not think I have said anything hostile to the militia of the States. They are very good bodies undoubtedly for the purposes which they are accomplishing. It may be that the kind of training they keep up and the kind of physical condition they preserve are sufficient for them to perform their duties in the States, and with the additional training they could get in being put into the service of the United States, or if they were relinquished from their daily employments as business men, bank clerks, and professional men, merchants, and storekeepers, and could have 60 or 90 or 120 days, they could very likely get in a condition for hard field service.

But the trouble is that this bill and the Hay bill contemplate treating them as though they were regular, hardened, disciplined troops, and as though they could over nightfall be called upon to cooperate effectively and efficiently with the Regular Army of the United States in competition and conflict with veteran troops, and that, in my opinion, is the deadly de-

fect of both the Hay bill and the Chamberlain bill. Excellent as I think the Chamberlain bill is in many other respects, it is absolutely fatally defective in relying upon the State militia as the first line of defense. They could with a few months' training be made a most excellent second line of defense.

So I hope most sincerely that section 56 will be retained in the bill, and I hope as fully and sincerely that the amendment which the Senate added the other day, which restricts the good it may accomplish, may be reconsidered and defeated.

Mr. REED obtained the floor.

Mr. CHAMBERLAIN. With the permission of the Senator from Missouri, I move that the Senate proceed to the consideration of executive business.

Mr. SIMMONS. Before the Senator makes that motion I wish to inquire of the Senator if he has any purpose of holding night sessions for the consideration of this bill?

Mr. CHAMBERLAIN. I will say to the Senator that unless we make rapid progress I shall probably try to have the Senate hold night sessions after to-morrow, at least.

Mr. SIMMONS. I asked the question, because I had some reason to believe it was the Senator's purpose to begin holding night sessions to-morrow night, and I thought it would be well for him now to give that notice.

Mr. GALLINGER. Mr. President, would it not be better for us before we commence night sessions to try the experiment of earlier sessions in the daytime? I think there would be very little objection to meeting at 11 o'clock.

Mr. SIMMONS. We would probably find objection to meeting earlier than 11 o'clock, and meeting at 11 would add only one hour, and it would not amount to very much.

Mr. GALLINGER. It would amount to one hour each day.

Mr. SIMMONS. By holding night session we could add three or four hours.

Mr. SMOOT. Mr. President, I wish to suggest to the Senator from North Carolina that so far most of the time has been taken up in what may be called set speeches, and I think when the question of the militia is settled there will not be so very much discussion in that way upon the bill. I thought we were getting along with the bill pretty well, and I believe myself that we shall get through with the bill within a reasonable time.

Mr. SIMMONS. What does the Senator call a reasonable time?

Mr. SMOOT. I think by the end of this week the greater part of the bill will be decided upon.

Mr. SIMMONS. I want to say to the Senator that I think every Senator here will recognize the necessity of taking up and disposing at a very early date of the so-called sugar bill.

Mr. SMOOT. Yes; I hope that will be disposed of.

Mr. SIMMONS. It is necessary that that bill should pass before the 1st day of May. Senators know that there is a sharp difference between the House bill and the substitute brought out by the Committee on Finance of the Senate, and by reason of that difference if the report of the Committee on Finance should be approved by the Senate there would be in conference a sharp disagreement between the two Houses. I can see how that may result in a settlement that would subject the conference report to a somewhat extended discussion in this body.

Mr. SMOOT. I realize that what the Senator says is true, and I sincerely trust that nothing will stand in the way of the passage of that bill, so that it may become a law before the 1st day of May. I myself think that if it should go over one day, instead of millions of dollars going into the Treasury of the United States it would go into the treasury of the Sugar Trust.

Mr. SIMMONS. The Senator is absolutely right as to the importance of passing the bill before the 1st of May.

Mr. SMOOT. I trust the bill will be passed and become a law before the 1st day of May, but I do not see any danger of its not passing by that time, even though we did not hold night sessions on this bill, because I think we have been proceeding rather rapidly with the bill.

Mr. SIMMONS. I am not agreeing to the statement made by the Senator from Utah, but I do agree to the statement that if we should allow the duty to lapse there would be a large influx of free sugar.

Mr. REED. Mr. President, I rise to a point of order. I observe that several Senators are sitting down. I think they ought all to stand up.

Mr. GALLINGER. I ask for the regular order, and then I will sit down.

The PRESIDING OFFICER. It is moved——

Mr. SIMMONS. Before we leave this subject I wish to ask the Senator from Oregon if it should develop that we can not dispose of the pending bill within a reasonable time whether he would yield for the purpose of putting the sugar bill upon its passage? I think, from the intimations I have received, it will take a very short time to pass that bill in the Senate.

Mr. CHAMBERLAIN. I would be unwilling to concede that any bill could pass through the Senate in a short time. So far as I am concerned, I agree with the Senator from Utah that this bill is making fairly good progress. After the discussion of the National Guard situation I do not believe there will be very much discussion of the bill. I think Senators ought to be able to finish that discussion to-morrow, or the next day, at the latest, and then we can very quickly dispose of the bill. It seems to me that we ought to be able to dispose of it this week.

Mr. SIMMONS. Does the Senator propose to give notice of a night session to-morrow?

Mr. CHAMBERLAIN. I hardly think it necessary to commence to-morrow. My experience here is that we do not gain much by trying to force Senators to come here at night. If I thought there was a disposition to filibuster on the bill and delay the enactment of the measure, I would feel differently about it; but I think Senators have shown a reasonable desire to get this measure out of the way, and I do not feel that we ought yet to ask the Senate to hold night sessions.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by J. C. South, its Chief Clerk, announced that the House had passed the bill (S. 4671) to exempt from cancellation certain desert-land entries in Riverside County, Cal.

ENROLLED BILL SIGNED.

The message also announced that the Speaker of the House had signed the enrolled bill (S. 4657) to authorize the Cincinnati, New Orleans & Texas Pacific Railway Co. to rebuild and reconstruct, maintain, and operate a bridge across the Tennessee River near Chattanooga, in Hamilton County, in the State of Tennessee, and it was thereupon signed by the Vice President.

PETITIONS AND MEMORIALS.

Mr. PHELAN presented petitions of sundry citizens of Berkeley, Alameda, and Oakland, all in the State of California, praying for the enactment of legislation to prohibit interstate commerce in the products of child labor, which were referred to the Committee on Interstate Commerce.

He also presented a memorial of Local Grange No. 369, Patrons of Husbandry, of Cotati, Cal., remonstrating against any change being made in the parcel-post law, which was referred to the Committee on Post Offices and Post Roads.

He also presented a petition of the congregation of the North Congregational Church, of Berkeley, Cal., praying for the enactment of legislation to prohibit the exportation of alcoholic liquors to Africa, and also for prohibition in the Hawaiian Islands, the Philippine Islands, and Porto Rico, which was ordered to lie on the table.

Mr. JONES presented memorials of sundry citizens of Toppenish, Anacortes, Carrolls, Granger, North Yakima, and Wapato, all in the State of Washington, remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which were ordered to lie on the table.

He also presented a petition of the St. Urban Booster Club, of Winlock, Wash., praying for the creation of a system of rural credits, which was ordered to lie on the table.

He also presented memorials of sundry citizens of South Bellingham, Cloverland, Pipestone, and Bayview, all in the State of Washington, remonstrating against any change being made in the parcel-post law, which were referred to the Committee on Post Offices and Post Roads.

He also presented memorials of sundry citizens of the State of Washington, remonstrating against the enactment of legislation to limit the freedom of the press, which were referred to the Committee on Post Offices and Post Roads.

Mr. TOWNSEND presented petitions of sundry citizens of Michigan, praying for national prohibition, which were referred to the Committee on the Judiciary.

He also presented memorials of sundry citizens of Michigan, remonstrating against the enactment of legislation to prohibit interstate commerce in convict-made goods, which were referred to the Committee on Education and Labor.

Mr. BURLEIGH presented petitions of sundry citizens of Maine, praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. POINDEXTER presented memorials of Mrs. Elva Harrington and sundry other citizens of North Yakima, Wash., remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which were ordered to lie on the table.

He also presented a memorial of Local Grange No. 248, Patrons of Husbandry, of Sauk, Wash., and a memorial of Local Grange No. 204, Patrons of Husbandry, of Wiser Lake, Wash., remonstrating against an increase in armaments, which were ordered to lie on the table.

He also presented petitions of sundry citizens of Ione, Carrollton, Sauk, Wiser Lake, and Custer, all in the State of Washington, praying for Government ownership of telephone and telegraph systems, which were referred to the Committee on Post Offices and Post Roads.

He also presented the memorial of Archie Spence and sundry other citizens of Kennewick, Wash., remonstrating against the enactment of legislation to limit the freedom of the press, which was referred to the Committee on Post Offices and Post Roads.

He also presented the petition of E. E. Reynolds and sundry other citizens of Vancouver, Wash., praying for the creation of a system of rural credits, which was ordered to lie on the table.

He also presented a memorial of Cedar Grange, No. 534, Patrons of Husbandry, of Maple Valley, Wash., remonstrating against the passage of the bill (S. 2986) to provide capital for agricultural development, to create a standard form of investment based upon farm mortgage, to equalize rates of interest upon farm loans, to furnish a market for United States bonds, to create Government depositaries and financial agents for the United States, and for other purposes, which was ordered to lie on the table.

Mr. GALLINGER presented a petition of the Humane Society of Mansfield, Ohio, praying for an investigation into the practice of vivisection, which was referred to the Committee on Agriculture and Forestry.

He also presented a petition of the New England Society, of Portland, Oreg., praying for the enactment of legislation to grant to the public-school system of Oregon 40 per cent of the proceeds from the sale of forfeited Southern Pacific grant lands, which was referred to the Committee on Public Lands.

He also presented a petition of the board of governors of India House, New York City, N. Y., praying for an increase in armaments, which was ordered to lie on the table.

Mr. TILLMAN presented a petition of sundry citizens of Philadelphia, Pa., praying that the prices of food be regulated by law, which was referred to the Committee on Interstate Commerce.

THE LIGHTHOUSE SERVICE.

Mr. NELSON, from the Committee on Commerce, to which was referred the bill (S. 4425) to provide for the retirement of officers and employees of the Bureau of Lighthouses and the Lighthouse Service, reported it without amendment and submitted a report (No. 322) thereon.

BILLS AND JOINT RESOLUTION INTRODUCED.

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second, and referred as follows:

By Mr. JONES:

A bill (S. 5363) granting an increase of pension to Solomon Terpenning (with accompanying papers); and

A bill (S. 5364) granting an increase of pension to Roxey Pierce (with accompanying papers); to the Committee on Pensions.

By Mr. CHAMBERLAIN:

A bill (S. 5365) granting an increase of pension to J. Augustus Thilman (with accompanying papers); and

A bill (S. 5366) granting an increase of pension to Ira Chamberlain (with accompanying papers); to the Committee on Pensions.

By Mr. OWEN:

A bill (S. 5367) to reimburse the Women's Board of Domestic Missions, Reformed Church in America, for buildings on the Fort Sill Military Reserve, Okla.; to the Committee on Claims.

By Mr. TOWNSEND:

A bill (S. 5368) granting a pension to William M. Hammond (with accompanying papers); to the Committee on Pensions.

By Mr. HARDING:

A bill (S. 5369) for the relief of sundry building and loan associations of the State of Ohio; to the Committee on Claims.

By Mr. BURLEIGH:

A bill (S. 5370) granting a pension to Edith A. Grover; to the Committee on Pensions.

By Mr. BORAH:

A bill (S. 5371) to provide for the procuring of rights of way for the construction of an electric power transmission line upon the Nez Perce Indian Reservation for the service of the town of Fort Lapwai and its inhabitants and the Nez Perce Indian Sanatorium; to the Committee on Indian Affairs.

By Mr. O'GORMAN:

A bill (S. 5372) granting an increase of pension to Terrence Dobson (with accompanying papers); to the Committee on Pensions.

By Mr. CURTIS:

A bill (S. 5373) for the relief of Charles Dade (with accompanying papers); to the Committee on Military Affairs.

By Mr. CUMMINS:

A bill (S. 5374) granting a pension to Jonah B. Eaton (with accompanying papers); to the Committee on Pensions.

By Mr. HUGHES:

A joint resolution (S. J. Res. 118) authorizing the Postmaster General to provide the postmaster of Newark, N. J., with a special canceling die for the Newark Two Hundred and Fiftieth Anniversary Celebration; to the Committee on Post Offices and Post Roads.

NATIONAL DEFENSE.

Mr. SMOOT submitted an amendment intended to be proposed by him to the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States, which was ordered to lie on the table and be printed.

Mr. OLIVER submitted an amendment intended to be proposed by him to the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States, which was ordered to lie on the table and be printed.

Mr. WADSWORTH submitted an amendment intended to be proposed by him to the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States, which was ordered to lie on the table and be printed.

AMENDMENTS TO APPROPRIATION BILLS.

Mr. CURTIS submitted an amendment intended to be proposed by him to the river and harbor appropriation bill (H. R. 12193), which was referred to the Committee on Commerce and ordered to be printed.

Mr. STERLING submitted an amendment providing for the promotion of 5 per cent of the letter carriers in second-class offices from the fifth to the sixth grade, etc., intended to be proposed by him to the Post Office appropriation bill (H. R. 10484), which was referred to the Committee on Post Offices and Post Roads and ordered to be printed.

EXECUTIVE SESSION.

Mr. CHAMBERLAIN. I renew my motion.

The PRESIDING OFFICER (Mr. SAULSBURY in the chair). The Senator from Oregon moves that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session, the doors were reopened, and (at 5 o'clock and 20 minutes p. m., Monday, April 3, 1916) the Senate took a recess until to-morrow, Tuesday, April 4, 1916, at 12 o'clock meridian.

CONFIRMATIONS.

Executive nominations confirmed by the Senate April 3 (legislative day of March 30), 1916.

UNITED STATES DISTRICT JUDGE.

Joseph W. Woodrough to be United States district judge, district of Nebraska.

POSTMASTERS.

IOWA.

Lester R. Hudgel, Anthon.
W. H. Ward, Ryan.

KANSAS.

John C. Jones, Kanorado.
Bessie Young, Dighton.

LOUISIANA.

Jonas Rosenthal, Alexandria.

MISSOURI.

William M. Brown, Polo.

PENNSYLVANIA.

Josiah Cole, Slatington.
Joseph C. Luman, Hyndman.
John A. McGinley, Bristol.

TEXAS.

Abundio Contreras, Riogrande.

WYOMING.

A. F. Scott, Douglas.

HOUSE OF REPRESENTATIVES.

MONDAY, *April 3, 1916.*

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

Infinite, Eternal Spirit, whom we have been taught to call Our Father, an appellation which brings us close to Thee, and makes the whole world akin, in the simplicity of children we pray for our daily needs; wisdom, that we may comprehend somewhat of life and its far-reaching purposes; truth, which shall lift us out of the transient into the eternals, that our work may have a deeper significance and our life a fuller sweep in all that pertains to the now and the then; the sublime, the beneficent, in the thought and purpose of Thy love and will, that our longings, hopes, and aspirations may be satisfied in the fullness of joy. In Christ Jesus our Lord. Amen.

The Journal of the proceedings of Saturday, April 1, 1916, was read and approved.

UNANIMOUS CONSENT CALENDAR.

The SPEAKER. The Clerk will call the first bill on the calendar.

ADDITIONAL TERM OF COURT AT SACRAMENTO, CAL.

The first business on the Calendar for Unanimous Consent was the bill (H. R. 6099) to amend section 72 of an act entitled "An act to codify, revise, and amend the laws relating to the judiciary," approved March 3, 1911.

The SPEAKER. Is there objection?

There was no objection.

The SPEAKER. This bill is on the Union Calendar.

Mr. FOSTER. Mr. Speaker, I ask unanimous consent that the bill be considered in the House as in Committee of the Whole.

The SPEAKER. The gentleman from Illinois asks unanimous consent that the bill be considered in the House as in Committee of the Whole. Is there objection?

There was no objection.

The SPEAKER. The Clerk will report the bill.

The Clerk read the bill, as follows:

Be it enacted, etc., That section 72 of the act entitled "An act to codify, revise, and amend the laws relating to the judiciary," approved March 3, 1911, be, and the same is hereby, amended so as to read as follows:

"SEC. 72. The State of California is divided into two districts, to be known as the northern and southern districts of California. The southern district shall include the territory embraced on the 1st day of July, 1910, in the counties of Fresno, Kern, Kings, Madera, Mariposa, Merced, and Tulare, which shall constitute the northern division of said district; also the territory embraced on the date last mentioned in the counties of Imperial, Los Angeles, Orange, Riverside, San Bernardino, San Diego, San Luis Obispo, Santa Barbara, and Ventura, which shall constitute the southern division of said district. Terms of the district court for the northern division shall be held at Fresno on the first Monday in May and the second Monday in November; and for the southern division, at Los Angeles on the second Monday in January and the second Monday in July, and at San Diego on the second Monday in March and September. The northern district shall include the territory embraced on the 1st day of July, 1910, in the counties of Del Norte, Siskiyou, Modoc, Humboldt, Trinity, Shasta, Lassen, Tehama, Plumas, Mendocino, Lake, Colusa, Glenn, Butte, Sierra, Sutter, Yuba, Nevada, Sonoma, Napa, Yolo, Placer, Solano, Sacramento, El Dorado, San Joaquin, Amador, Calaveras, Stanislaus, Tuolumne, Alpine, and Mono, which shall constitute the northern division of said district; also the territory embraced on the date last mentioned in the counties of San Francisco, Marin, Contra Costa, Alameda, San Mateo, Santa Clara, Santa Cruz, Monterey, and San Benito, which shall constitute the southern division of said district. Terms of the district court for the northern division of the northern district shall be held at Sacramento on the second Monday in April and the first Monday in October, and at Eureka on the third Monday in July; and for the southern division of the northern district at San Francisco on the first Monday in March, the second Monday in July, and the first Monday in November. The clerk of the district court for the northern district shall maintain an office at Sacramento, in charge of himself or a deputy, which shall be kept open at all times for the transaction of the business of the court."

With a committee amendment, as follows:

Amend, page 2, line 1, by inserting after the word "Fresno" the word "Inyo."

The SPEAKER. The question is on agreeing to the amendment.

The amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. STEELE of Pennsylvania, a motion to reconsider the vote whereby the bill was passed was laid on the table.

The SPEAKER. The Clerk will report the next one.

ADDITIONAL JUDGE IN THE DISTRICT OF NEW JERSEY.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 538) to appoint an additional judge in the district of New Jersey.

The SPEAKER. Is there objection?

Mr. MANN. Mr. Speaker, I suppose that if the bill comes up at all the gentleman from New Jersey [Mr. EAGAN] wants to take up the Senate bill.

Mr. EAGAN. Yes; I shall ask to take up the Senate bill.

Mr. MANN. The Senate bill is No. 66 on the Unanimous Consent Calendar.

Mr. EAGAN. Mr. Speaker, I ask unanimous consent to substitute the Senate bill 1809 for the House bill.

The SPEAKER. The gentleman from New Jersey [Mr. EAGAN] asks unanimous consent that the Senate bill of the same tenor be considered in lieu of the House bill just reported. Is there objection?

There was no objection.

The SPEAKER. Is there objection to the consideration of the Senate bill at this time?

Mr. MANN. It is on the calendar as No. 66.

The SPEAKER. The Clerk will report the Senate bill.

The Clerk read as follows:

A bill (S. 1809) to create an additional judge in the district of New Jersey.

Be it enacted, etc., That the President of the United States be, and he hereby is, authorized and directed, by and with the advice and consent of the Senate, to appoint an additional judge of the district court of the United States for the district of New Jersey, who shall reside in said district, and whose term of office, compensation, duties, and powers shall be the same as now provided by law for the judge of said district.

SEC. 2. That this act shall take effect immediately.

The SPEAKER. Is there objection? This bill is on the Union Calendar.

Mr. STAFFORD. Reserving the right to object, Mr. Speaker, I would like to inquire whether any consideration was given to the desirability of holding court in the southern district of New Jersey? At present, as I understand it, there are two district judges, who hold court, respectively, at Newark and Trenton. A number of us are acquainted with the large volume of work arising in the southern district of New Jersey. I want to know whether the bar has petitioned the Committee on the Judiciary concerning terms of court to be held, for instance, at Camden or in some other portion of the State?

Mr. STEELE of Pennsylvania. No such matter was presented to the committee. The matter was not taken up for consideration by the committee.

Mr. STAFFORD. It is rather novel to have three judges without the State being divided into districts. The additional judge is because of the increased volume of business, as the two judges are not able to take care of it. I wanted to inquire whether any recommendations had been made by the bar of southern New Jersey as, for instance, for holding court at Camden?

Mr. EAGAN. Not to my knowledge.

Mr. STAFFORD. I think there is occasion for having an additional court for the convenience of the practitioners of southern New Jersey.

The SPEAKER. Is there objection?

There was no objection.

The SPEAKER. This bill is on the Union Calendar.

Mr. EAGAN. Mr. Speaker, I ask unanimous consent to consider the bill in the House as in Committee of the Whole.

The SPEAKER. The gentleman from New Jersey [Mr. EAGAN] asks unanimous consent to consider the bill in the House as in Committee of the Whole. Is there objection?

There was no objection.

The SPEAKER. The question is on the third reading of the Senate bill.

Mr. EAGAN. Mr. Speaker, there is an amendment, to insert, on line 9, page 1, after the word "therein," the following:

Provided, however, That the President shall make public all indorsements made in behalf of the person appointed as such district judge.

The SPEAKER. The Clerk will report the amendment.

The Clerk read as follows:

Amend the bill by inserting, in line 9, page 1, after the word "therein," the following:

"*Provided, however*, That the President shall make public all indorsements made in behalf of the person appointed as such district judge."

Mr. MANN. Where does this come in?

Mr. EAGAN. On line 9, page 1.

Mr. STAFFORD. Mr. Speaker, may we have the amendment reported again? I could not quite follow it.

Mr. MANN. There is no such word as "therein" in the bill.

The SPEAKER. Without objection, the Clerk will again report the amendment.

The amendment was again read.

Mr. STAFFORD. There is no such word in that line, Mr. Speaker.

Mr. MANN. There is no such word as "therein" in the bill, either in line 9 or anywhere else.

The SPEAKER. Where does the gentleman want the amendment to come in?

Mr. MANN. It should come in after the word "district," on line 9.

Mr. EAGAN. It should come in after the word "district," on line 9; yes.

The SPEAKER. The Clerk will again report the amendment.

The Clerk read as follows:

At the end of line 9, after the word "district," insert the following: "*Provided, however,* That the President shall make public all indorsements made in behalf of the person appointed as such district judge."

Mr. GARNER. Mr. Speaker, will the gentleman from New Jersey yield?

Mr. EAGAN. I yield to the gentleman from Texas.

Mr. GARNER. Do I understand the gentleman from New Jersey to say that this is a committee amendment?

Mr. EAGAN. No.

Mr. GARNER. This is an amendment offered by the gentleman from New Jersey on his own behalf?

Mr. EAGAN. No. The question came up in the last House, and objection was made because we had not agreed to such an amendment.

The SPEAKER. The question is on the amendment.

The question being taken, on a division (demanded by Mr. CULLOP) there were—ayes 20, noes 61.

Accordingly the amendment was rejected.

The bill was ordered to a third reading, and was accordingly read the third time and passed.

On motion of Mr. STEELE of Pennsylvania, a motion to reconsider the last vote was laid on the table.

By unanimous consent the corresponding House bill was ordered to lie on the table.

HOMESTEAD OF ABRAHAM LINCOLN.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 8351) to accept a deed of gift or conveyance from the Lincoln Farm Association, a corporation, to the United States of America, of land near the town of Hodgenville, county of Larue, State of Kentucky, embracing the homestead of Abraham Lincoln and the log cabin in which he was born, together with the memorial hall inclosing the same; and, further, to accept an assignment or transfer of an endowment fund of $50,000 in relation thereto.

The Clerk read the title of the bill.

The SPEAKER. Is there objection?

Mr. MANN. Reserving the right to object, the Committee on the Library will very shortly be reached on Calendar Wednesday, probably on next Wednesday. There are some amendments that ought to be made to this bill. I hope there will be no objection to letting it go over until it is reached on Calendar Wednesday.

Mr. JOHNSON of Kentucky. There are only two amendments, and they are very simple. One is the change from the Secretary of State to the Secretary of War and the other is a short amendment putting the Secretary of War in control of the property.

Mr. MANN. I think it is a matter that ought to go over, inasmuch as it will be reached anyhow this week.

Mr. JOHNSON of Kentucky. I hope the gentleman will let the matter be considered now. I do not think there is any serious objection.

Mr. STAFFORD. I think there will be some debate on the proposition, and as we have had no Unanimous Consent Calendar for a month for the hearing of bills on that calendar, no harm can be done by letting this go over until Wednesday, when it can be brought up under the call of the committee.

Mr. MANN. I wish the gentleman would ask to have it passed by unanimous consent.

Mr. JOHNSON of Kentucky. I do not like to do that, unless the gentleman proposes to object to its consideration now.

Mr. MANN. I would object to its consideration to-day, Mr. Speaker.

Mr. JOHNSON of Kentucky. Under those circumstances I ask unanimous consent that the bill be passed without prejudice, with the understanding that it is to hold its present position on the Unanimous Consent Calendar.

The SPEAKER. The gentleman asks unanimous consent to pass the bill without prejudice. Is there objection?

There was no objection.

THE CORBETT TUNNEL.

The next business on the Calendar for Unanimous Consent was the joint resolution (S. J. Res. 51) appropriating money for the payment of certain claims on account of labor, supplies, materials, and cash furnished in the construction of the Corbett Tunnel.

The Clerk read the title of the joint resolution.

The SPEAKER. Is there objection?

Mr. STAFFORD. I object.

Mr. MONDELL. Will not the gentleman withhold his objection?

Mr. STAFFORD. I will reserve the objection at the request of the gentleman from Wyoming.

Mr. MANN. The bill will have to be read.

Mr. MONDELL. Will the gentleman withhold his objection?

Mr. STAFFORD. Mr. Speaker, I am quite positive that there will be nothing developed that will change my opinion on this bill.

Mr. MONDELL. I think it is possible that something might develop.

Mr. STAFFORD. I will withhold my objection out of courtesy to the gentleman from Wyoming.

Mr. MONDELL. I want to state to the gentleman that something ought to be done with regard to this matter. It has been pending a long time. A number of years ago Congress made an appropriation of $42,000 to pay certain claims. Recently the Secretary of the Interior has been enjoined from the payment of those claims. The people to whom these moneys are due are all of them people who are needing the money very badly, most of them people of very limited means, and they have already waited a long time for their money.

Mr. STAFFORD. Will the gentleman yield?

Mr. MONDELL. Yes.

Mr. STAFFORD. Does the gentleman consider that it is good governmental policy to pay a definite amount, as is provided in this bill, to a certain lobbyist, and thereby establish as a precedent of the House that we will pay those who try to obtain the payment of claims against the Government?

Mr. MONDELL. That depends. Congress has appropriated hundreds of thousands of dollars that have been paid to people who have prosecuted claims against the Government.

Mr. STAFFORD. If the gentleman will permit, I do not believe there has ever been an instance where we have separately recognized a lobbyist who has generated such claims as this bill provides.

Mr. MONDELL. I do not think the party who would be a beneficiary under this provision ought to be called a lobbyist. I would not be in favor of the passage of the bill as reported by the committee. I do not think that ought to be done, but I think the Senate bill ought to pass, and I want to make this suggestion with regard to what the effect of the Senate bill would be: In order to bring these claims within the $42,000 appropriated by Congress it became necessary for the Secretary of the Interior to cut down the amount of the claims. This was done by the action of one of the claimants, who agreed to accept about $3,000 less than the amount of his claim in order to bring about a settlement. Now, in addition to a little over $45,000 that is actually due there is a claim for something more than $3,000, which was not covered by the original appropriation, which is for work done on the spillway. So as a matter of fact there are claims for over $6,000 which would not be paid if there were no further legislation and the $42,000 were distributed. If we pass the Senate bill, it would pay those additional claims and would leave something over $8,000, which, under the terms of the Senate bill, the Secretary could pay, or a reasonable amount of it, to the person through whose services said claims were presented to the attention of Congress.

Mr. McLAUGHLIN. Will the gentleman yield?

Mr. MONDELL. Yes; but just let me conclude this sentence. The effect of the passage of the Senate bill would be to pay all the claims, including the spillway claim, and leave something over $8,000, which the Secretary could pay in whole or in part to Mrs. MacDonald. There is no question but what Mrs. MacDonald did a great deal of work in connection with securing the legislation for the payment of these claims, and while I do not think it would be right to scale down, as is proposed in the House amendment, the sums already appropriated, it does seem to me that it would be entirely proper to provide the additional appropriation, which will pay all additional claims, and leave, as I said, about $8,000, a part of which the Secretary could pay to Mrs. MacDonald if he felt it proper to do so.

Mr. McLAUGHLIN. The gentleman says that the bill ought to be passed promptly because the amount is going to persons in great need of the money. Is it not a fact that a very large part of these claims involved, a large part of the appropriation to be made, is in the hands of those who did not do the work, in the hands of others by assignment?

Mr. MONDELL. That is not entirely true. As a matter of fact Mrs. MacDonald, who did have an assignment of quite a

number of claims, found when she came to present the claims to the Interior Department that the assignments were not all of a character they could accept. My understanding is that the claims which she holds amounts to less than $6,000 in all. I understand the gentleman from Montana to say that is correct. She is the largest holder, and practically the only holder, of assigned claims, if I am rightfully informed, otherwise the payments will be made directly to the parties who did the work or furnished the material.

Mr. STOUT. The assigned claims were stricken out by the department.

Mr. McLAUGHLIN. All the assigned claims have not been stricken out, and a large part of the money will go to the assignees.

Mr. MONDELL. I thought I had stated that to the gentleman. I understand that Mrs. MacDonald has in the neighborhood of $6,000 of claims. She actually put in more than $6,000.

Mr. McLAUGHLIN. By the purchase of claims by others.

Mr. MONDELL. No; only where she received them in payment of sums due. The department has not accepted any of those assignments except where it was very clearly shown that the assignment was made for value received. Outside of that one case, so far as I am informed—and I am fairly familiar with this matter—the original claimants still hold their claims.

Mr. McLAUGHLIN. This claim, or one similar to it covering the same matter, has been before the House before, and objected to largely because the claims were not in the hands of those who performed the work and to whom the debts were originally due.

Mr. MONDELL. I think the gentleman is mistaken about that. Objection has been made to paying Mrs. MacDonald money which she claimed for bringing the matter to the attention to Congress.

Mr. McLAUGHLIN. Is not her claim now largely in excess of the amount she paid for the claims?

Mr. MONDELL. No; that has not developed. So far as the department has proof of her claims, and they do not amount in all to more than $6,000, they are all for value received. She is making nothing out of them, I understand. So if Mrs. MacDonald gets anything for her time and trouble it will be by providing in the appropriation that she may be paid. Now, if we pass the Senate bill it will pay certain claims that were not included in the $42,000 of approved claims, and will leave about $8,000, which the Secretary could distribute under the terms of the bill to those who had been instrumental in securing the passage of the legislation.

Mr. McLAUGHLIN. In other words, the Government puts a premium on, and pays for the services of those who work up claims against the Government.

Mr. MONDELL. I think that is hardly a fair statement of the matter.

Mr. McLAUGHLIN. I think it is a fair statement, because the money will be paid.

Mr. MONDELL. For bringing claims to the attention of Congress. I am not interested in Mrs. MacDonald's claim, but I am interested in having people who furnished these supplies paid for them.

Mr. HAMILTON of Michigan. Will the gentleman yield?

Mr. MONDELL. Yes.

Mr. HAMILTON of Michigan. Mrs. MacDonald was boarding the men employed?

Mr. MONDELL. Yes; some of them.

Mr. HAMILTON of Michigan. And she never received pay for the board?

Mr. MONDELL. She did not in all cases.

Mr. HAMILTON of Michigan. And these claims that these men had for services were assigned to her to compensate her for the obligations that they were under to her?

Mr. MONDELL. That is it, and I will say that it is my understanding that not only have none of her claims been approved, except where it was clear that they were transferred to pay for board or supplies, but the department has not accepted, and will not accept, some of the transfers made, because they are not made in a way that the department considers regular. I am told that so far as Mrs. MacDonald is concerned she would not be repaid for the money she has actually spent and for the food subsistence she has furnished as matters now stand.

Mr. HAMILTON of Michigan. And I assume that she became active in the presentation of the claim inspired by her desire to get pay for what she had actually furnished.

Mr. MANN. And now she wants $7,000 to $10,000 in addition.

Mr. HAMILTON of Michigan. I am not discussing that.

Mr. MANN. That is the very thing we are discussing.

Mr. HAMILTON of Michigan. As to the assigned claims, it seems to me that it is only fair that she should be paid.

Mr. MANN. She would have been paid the money long before this if she had not filed injunction proceedings to prevent the Government paying it over—a proceeding which was valueless—and if the Government had attended to its business the suit would have been dismissed.

Mr. MONDELL. In the meantime these people who can not afford to wait are kept out of their money. They are writing continuously in regard to the claims and wanting to know when they will be paid. I am not interested in compensating Mrs. MacDonald, except as I am in favor of having the fair and just thing done, but I am interested in having the money paid to some of my constitutents who have waited for it for years.

Mr. MANN. The gentleman knows that in the last Congress, Congress was prepared to appropriate the money, but the one who held it up was Mrs. MacDonald, or those seeking to protect her rights, to prevent Congress appropriating sufficient money to pay the claims unless they included a large sum to pay her over and above her claim. It will be a long time before they get the money on those terms, in my judgment.

Mr. MONDELL. Is not the gentleman willing to leave it to the Secretary, as the Senate bill does, to determine that matter?

Mr. MANN. The Senate bill in effect directs the Secretary to pay Mrs. MacDonald in the neighborhood of $10,000 over and above the amount of her claims, because she claims she was instrumental in bringing the claims to the attention of Congress.

Mr. MONDELL. And she was. There is no doubt about that.

Mr. MANN. Oh, she is not the only one. We might as well treat them all alike—double the amount of their claims, because they had a claim against the Government and got it allowed, because they called it to the attention of Congress, when the whole thing was a gratuity. There was no legal claim against the Government.

Mr. MONDELL. There should have been.

Mr. MANN. But there was not.

Mr. MONDELL. If there was no legal claim against the Government, it is the fault of Congress, and we certainly ought not to have a condition in which there is no claim against the Government for material furnished for Government work. If we have so neglected our duty here that we have not provided for a legal claim in such cases, then the fault is ours and not that of the people who furnished the material.

Mr. MANN. There is no fault about it. It was the deliberate intention of Congress.

Mr. FORDNEY. Mr. Chairman, will the gentleman yield?

Mr. MONDELL. Yes.

Mr. FORDNEY. Is it not true that those claims are the ones that were really the course of the breach between Mr. Pinchot and Secretary of the Interior Ballinger, for this reason, that when Mr. Ballinger was appointed Secretary of the Interior it was found that those in charge of the construction of these irrigation projects out there had run out of money, there was no more money in the fund to carry out the work, and due-bills or those receipts were given to the people who had settled on the lands that were likely to be irrigated by these projects, squatted on the land before they had the right to take up the land, and had gone to work for the Government on these projects——

Mr. MANN. Oh, the gentleman is as far from the facts in this case as the sun is from the moon.

Mr. MONDELL. The gentleman is barking up the wrong tree.

Mr. FORDNEY. Are not those receipts that were issued to those men made transferable?

Mr. MONDELL. What the gentleman is talking about has nothing to do with this matter at all.

Mr. FORDNEY. If I am wrong about it, I desire to be set right.

Mr. MONDELL. There is no connection at all between the matter the gentleman has in mind and the things here involved.

Mr. FORDNEY. What were those receipts issued for?

Mr. MONDELL. There were some due bills issued, but not upon this project or anywhere near it.

Mr. FORDNEY. I refer to the whole 32. Testimony of that kind came before the committee.

Mr. MONDELL. I am talking from knowledge, and I am afraid the gentleman has been misinformed.

Mr. FORDNEY. That was the testimony before the committee.

Mr. MANN. Not these claims.

Mr. MONDELL. None of these claims had anything to do with that situation. Mr. Speaker, it seems to me it would be fair to pass this Senate bill and settle this matter which has been hanging up for so many years.

Mr. MADDEN. Mr. Speaker, I demand the regular order.

The SPEAKER. The regular order is demanded. Is there objection?

Mr. MANN. I object.

The SPEAKER. The gentleman from Illinois objects, and the bill is stricken from the calendar.

EXCHANGING CERTAIN LANDS IN WYOMING.

The next business on the Calendar for Unanimous Consent was the bill H. R. 177, authorizing the Secretary of the Interior to accept the relinquishment of the State of Wyoming to certain lands heretofore certified to said State, and the State of Wyoming to select other lands in lieu of the lands thus relinquished.

The SPEAKER. Is there objection?

Mr. FOSTER. Mr. Speaker, I reserve the right to object.

Mr. STAFFORD. Let the bill be reported.

Mr. FOSTER. The bill has been reported by title and the Speaker asked if there is objection. I notice that this bill provides that the State of Wyoming shall have the right to select other lands of approximately equal acreage. There is nothing said about the value of the land at all.

Mr. MONDELL. Mr. Speaker, I will say, if the gentleman will permit, that a number of years ago the State of Wyoming selected, on the application of one of its citizens, 320 acres of land, this man desiring to lease the same. While he had the land under lease, but had not cultivated or improved it in any way, an ambitious young woman came from the State of Michigan into the State of Wyoming looking for a homestead. She saw this particular tract of land, and while it was not much better or very different from the surrounding lands she concluded it would make a good homestead and she settled upon these lands and built her house upon them, understanding they were public lands subject to entry. A few months later she discovered that these lands belonged to the State. The State was willing to go out of the way in order to aid this young lady in her laudable ambition to secure a home, and all that the State asks is authority to select another 320 acres of land which they could have selected when they selected these, the same character of lands.

Mr. MANN. Mr. Speaker, will the gentleman yield?

Mr. MONDELL. Yes.

Mr. MANN. In order to assist this young lady in her laudable ambition to have a home, why does not the State give her title to the land?

Mr. MONDELL. The State can not do it, because under our law and constitution the State can not part with title to its lands except in exchange with the Government or on payment of $10 an acre.

Mr. MANN. They do not seem to be very anxious in the State to get settlers out there.

Mr. MONDELL. They are very anxious, and the State land board went to the trouble of passing a resolution asking that this be done, and agreeing to take other lands in lieu of these lands.

Mr. MANN. They are very anxious to get settlers on Government lands, but not on the State lands.

Mr. MONDELL. This young woman can not afford to pay $10 an acre to the State for these lands; they are not worth that amount, anyway, in their natural state.

Mr. MANN. The State could afford to give the lady land as well as the Government, worth just as much whether owned by the State or the Government.

Mr. MONDELL. The State can not under its constitution give this young lady this land.

Mr. MANN. But it does not do for a new State to hide behind a constitution in dealing with settlers, because they made the constitution.

Mr. MONDELL. I trust the gentleman from Illinois will not urge, as some others have, that a constitution is not worthy of consideration and should be ignored.

Mr. MANN. No; but it comes with poor grace for the people in a new country to adopt a constitution which is against the settlers and those coming in and say that the General Government ought to be generous because we can not; we prohibited ourselves from doing it.

Mr. MONDELL. I will tell the gentleman how we came to adopt that provision. Gentlemen like the gentleman from Illinois said at one time and another that the Western States were wasting their lands, were frittering them away, and were not getting much of anything for them. So the people of Wyoming said, "Very well, we will agree that we will not sell any land unless we get $10 an acre for it." We did that because certain gentlemen in Congress insisted on having it done. We are not, however, especially regretting it.

Mr. MANN. I think probably that was a good thing.

Mr. McLAUGHLIN. Will the gentleman yield?

Mr. MONDELL. The lady in question comes from the State of my distinguished friend.

Mr. McLAUGHLIN. I should think there would have to be ample inducement to offer to citizens of Michigan to go to Wyoming and settle. [Laughter.] There is nothing in here that gives any assurance that the title to the land after it is vested in the State of Wyoming will be transferred to this woman, in whom, of course, I am very much interested.

Mr. MONDELL. If the gentleman will read the report, he will find the young lady has been living on this land for some time, and, being a resident upon the land, she has the preference right to enter the land when transfer shall be made.

Mr. McLAUGHLIN. I will say to the gentleman a number of bills of this kind come before the House and a number of them of similar import have come before the committee of which I am a member—that is, providing for transfers—and no bill of the kind now receives favorable consideration unless the value of the land to be exchanged is taken into consideration. Now, then, the land described here may be of little value and it will be possible for the State of Wyoming to select land of similar quantity but of higher value. That would not be right, would it?

Mr. MONDELL. If the gentleman will listen for a moment, I will show him how little there is in his contention. At the time the State of Wyoming selected this land it could have selected any vacant land subject to homestead settlement in the entire State. That was a number of years ago. That is all it can do now. It does not have nearly so wide a selection now as it had then, because in the meantime a lot of lands have been homesteaded. The State can not take an acre now it could not have taken at the time it took this land. They are lands of approximately the same character, nonmineral lands, subject to homestead settlement.

Mr. McLAUGHLIN. I am disposed to do anything that will help this young woman.

Mr. MONDELL. Then help us pass the bill and give the young lady the homestead.

Mr. McLAUGHLIN. Because I think it is evident the Land Department made a mistake in permitting her to settle on land not subject to homestead entry, and Congress is so lax in making provision for those who are the victims of mistakes of that kind. In my district a few years ago a woman settled on a piece of land which she understood from the Land Department was subject to entry as a homestead. She settled and made improvements to the extent of $2,500, as appears by the testimony before the Committee on the Public Lands of this House. The committee accepted that statement on her part and proof she submitted as correct, that she laid out $2,500. Later it became known that an error had been made in the Land Office and the land was not subject to homestead. She lost the land and all she put in, and the Land Office refused to reimburse her in any respect whatever, and in the last session when a bill for her relief came up I am ashamed to say to this House it was objected to and it was defeated. If there is any way to penalize the Government and make this grant clear, I will be glad to see it done. As far as I can see, this land would go to the State and the woman could not get anything.

Mr. MONDELL. I desire to say to the gentleman from Michigan that if this bill passes the young lady in question will get the land. It is simply an effort to give to a young lady who has already established her residence upon it a tract of ordinary bench land and give to the State, which now owns it, authority to take another piece of land.

Mr. CANNON. If that is so, had not we better stand by the girl?

Mr. McLAUGHLIN. As before, the girl will have to take her chances.

Mr. FOSTER. Mr. Speaker, in view of the fact that this young lady was willing to go from the State of Michigan out into Wyoming, I believe she is entitled to consideration, and for that reason I will make no objection.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none. This bill is on the Union Calendar.

Mr. MONDELL. Mr. Speaker, I ask that the bill may be considered in the House as in the Committee of the Whole.

The SPEAKER. The gentleman from Wyoming asks unanimous consent that the bill be considered in the House as in the Committee of the Whole. Is there objection? [After a pause.] The Chair hears none, and the Clerk will report the bill.

The Clerk read as follows:

A bill (H. R. 177) authorizing the Secretary of the Interior to accept the relinquishment of the State of Wyoming to certain lands heretofore certified to said State, and the State of Wyoming to select other lands in lieu of the lands thus relinquished.

Be it enacted, etc., That the Secretary of the Interior is hereby authorized to accept the relinquishment of the State of Wyoming to the east half of the northwest quarter, southwest quarter of northeast quarter, northwest quarter of southeast quarter, south half of southeast quarter of section 19, township 53 north, range 103 west of sixth principal meridian, which lands were certified to the State of Wyoming in Lander Clear List No. 6, approved March 10, 1910; and the State of Wyoming is hereby authorized to select, and the Secretary of the Interior is authorized to certify to the State of Wyoming, an approximate equal acreage of lands subject to selection under the terms of the grant under which the lands herein described were selected.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

TITLE TO CERTAIN LANDS IN COLORADO.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 2744) to correct the title to certain lands in Colorado.

The SPEAKER. Is there objection to the consideration of the bill?

Mr. MANN. Mr. Speaker, I would like to have the bill read.

The SPEAKER. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Interior be, and is hereby, authorized and directed to issue a patent conveying to the Lily Park Stock Growing Association, a corporation of Colorado, all of lots 2 and 4 in section 23; lots 7, 9, and 11 in section 24; lots 3, 4, 5, 6, 7, 8, 12, 13, 14, 15, 17, and 19 in section 25; lots 1, 2, 7, 8, 9, 10, 15, and 17 in section 26, township 6 north, range 99 west, sixth principal meridian, Colorado, containing 639.14 acres, according to resurvey made in pursuance of the act of April 28, 1904 (33 Stat. L., p. 519), being the same land transferred to the said Lily Park Stock Growing Association by the State of Colorado by patent dated September 6, 1894, and filed for record August 15, 1901, in book 37, page 18, one of the land records for Routt County, Colo., and described in said patent from the State as section 36 of said township.

Also the following committee amendment was read:

Page 1, lines 4 and 5, strike out the words "Lily Park Stock Growing Association, a corporation of Colorado," and insert "State of Colorado and its assigns."

The SPEAKER. Is there objection to the consideration of the bill? [After a pause.] The Chair hears none. This bill is on the Union Calendar.

Mr. TAYLOR of Colorado. Mr. Speaker, I ask unanimous consent that the bill may be considered in the House as in the Committee of the Whole.

The SPEAKER. The gentleman from Colorado asks unanimous consent that the bill be considered in the House as in the Committee of the Whole. Is there objection? [After a pause.] The Chair hears none.

The question is on agreeing to the committee amendment.

The amendment was agreed to.

The SPEAKER. The Clerk will report the next committee amendment.

The Clerk read as follows:

Amend, on page 2, line 3, by inserting after the word "acres" the words "more or less."

The amendment was agreed to.

Also the following committee amendment was read:

Page 2, at the beginning of line 7, strike out the word "said."

The amendment was agreed to.

Also the following committee amendment was read:

On page 2, line 7, insert the words "a corporation of the State of Utah."

The amendment was agreed to.

Also the following committee amendment was read:

Page 2, line 13, after the word "township," insert:

Provided, That the State of Colorado and the said Lily Park Stock Growing Association, its successors or assigns, if any, shall relinquish to the United States any and all claims to section 36 of said township and range, as shown by the survey made in pursuance of said act of April 28, 1904, which survey was approved August 14, 1907.

The amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

NATIONAL PARK, TERRITORY OF HAWAII.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 9525) to establish a national park in the Territory of Hawaii.

The SPEAKER. Is there objection to the consideration of the bill?

Mr. FOSTER. I object.

Mr. AUSTIN. Will the gentleman from Illinois withhold his objection?

Mr. FOSTER. I am going to object, Mr. Speaker, but I will reserve it for a few minutes.

Mr. AUSTIN. I think you are probably subject to conversion on the proposition.

Mr. FOSTER. We are going to object.

The SPEAKER. Is there objection?

Mr. FOSTER. I object.

The SPEAKER. The gentleman from Illinois objects, and the bill will be stricken from the calendar.

BRIDGE ACROSS THE MISSOURI RIVER.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 9909) to authorize the Chicago, Milwaukee & St. Paul Railway Co. to construct a bridge across the Missouri River.

The SPEAKER. Is there objection?

Mr. STAFFORD. Reserving the right to object, Mr. Speaker, I would like to have the bill reported.

The SPEAKER. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Chicago, Milwaukee & St. Paul Railway Co., its successors and assigns, are hereby authorized to construct, maintain, and operate a bridge, and approaches thereto, across the Missouri River at a point suitable to the interests of navigation, said bridge to extend from a point on the west bank of said river in the county of Lyman to a point in or near the city of Chamberlain, in Brule County, in the State of South Dakota, in accordance with the provisions of an act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906.

SEC. 2. That the act of Congress approved February 9, 1905, which granted to the White River Valley Co., its successors and assigns, the right to construct and maintain a pontoon and pile bridge across said Missouri River from a point on the west bank of said river in the county of Lyman to a point on the east bank of said river in or near the city of Chamberlain, in Brule County, in the State of South Dakota, is hereby repealed, but permission is hereby granted to maintain the present pontoon and pile bridge for one year from and after the date of this act: *Provided*, That if, on or before one year from and after the date of this act, it shall be shown to the satisfaction of the Secretary of War that actual construction of the bridge herein authorized has been commenced, then the said company, its successors or assigns, is hereby granted permission to maintain said pontoon and pile bridge during the period of construction of the bridge herein authorized, but in no case is said company granted permission to maintain said pontoon and pile bridge for a period longer than three years from and after the date of this act.

SEC. 3. That the right to alter, amend, or repeal this act is hereby expressly reserved.

The SPEAKER. Is there objection?

Mr. STAFFORD. Reserving the right to object, this bill is different from the ordinary bridge bill. It is the first bridge bill to my knowledge in which an attempt is made to repeal a prior bridge act and force the railroad company to build a bridge of a different character from that now existing. I would like to inquire of the gentleman who has reported the bill whether the railroad company was granted a hearing or whether they appeared before the committee as to their wishes in the matter and as to the need of having a permanent bridge substituted for this present pontoon bridge.

Mr. DILLON. I will say to the gentleman that this pontoon bridge has been maintained for about nine years. It goes out from one to four times every year; usually whenever the spring snows melt the pontoon bridge and the piles of the bridge are carried out, and there is no service there for a period of from two to four weeks. And then, again, when the June rise comes it takes out the pontoon bridge and the piles. And you have the same thing of no service for about a month. And then, again, in July we usually have the same result; and in the fall of the year, when the ice begins to freeze, we also have a similar condition. Now, the railroad company has made constant assurances to the people along the line that they will put in a permanent bridge. The railroad commission of the State has frequently requested the company to put in a permanent bridge and had hearings on the matter, and the company promised to put in a permanent bridge.

Notice of this matter has been published in all the papers of South Dakota, and the committee has not heard one word of opposition, and we understand that the company is satisfied with it.

Mr. STAFFORD. On what does the gentleman base his position that the company has no opposition to the repeal of the present act authorizing the pontoon bridge and the substitution under this act of a permanent bridge instead?

Mr. DILLON. We base it on the theory that they have a representative here, and that it is a matter of general publicity, and that they have assured these people for the last five or six years that they would construct this permanent bridge.

Mr. STAFFORD. Has any notice been given to the company or its officials that there is a proposal to do away with the

pontoon bridge and require the company to erect a permanent bridge, as is proposed by this act?

Mr. DILLON. I do not know as to the notice, but it is a matter of general publicity. They know all about it, and they have assured our people from time to time that they would construct this permanent bridge.

Mr. STAFFORD. Who has assured you?

Mr. DILLON. The company officials.

Mr. STAFFORD. Assured whom?

Mr. DILLON. They have assured our railroad commissioners and the people along the line.

Mr. STAFFORD. There has been no assurance given to any person connected with the National Government?

Mr. DILLON. Not so far as I know, except as they have representatives in the city.

Mr. STAFFORD. Are you sure they have representatives in the city?

Mr. DILLON. Yes; I so understand. Mr. Charles McCoy represents the company.

Mr. STAFFORD. Although I come from a city where this railroad had its headquarters, I never knew that it had a representative here.

Mr. MADDEN. Was he sent for when this bill was under consideration?

Mr. DILLON. Not to my knowledge.

Mr. MADDEN. Ought he not to have been?

Mr. DILLON. Mr. Speaker, I will yield to my colleague Mr. GANDY, who has special knowledge of the subject.

Mr. STAFFORD. I believe I have the floor. I will yield to the gentleman in a minute.

Mr. HAMILTON of Michigan. How does the gentleman from Wisconsin happen to have the floor?

Mr. STAFFORD. I reserved the right to object, and I yielded the floor temporarily to the gentleman from South Dakota [Mr. DILLON].

Mr. ADAMSON. Mr. Speaker, I wanted to ask a question of the gentleman from Wisconsin and make a suggestion or two, and then, I think, the other gentleman from Wisconsin [Mr. ESCH] will say something valuable concerning this matter. In the first place, my recollection is that the author of the bill, Mr. GANDY, stated that it had been a matter of frequent statement and correspondence, and that the attorney for the railroad had conversed with him about it, and that it was always understood that this permanent bridge would be built.

Mr. DILLON. That is my understanding.

Mr. ADAMSON. The next suggestion I have to make is that the act of 1905, which we undertake to repeal by section 2, expressly provided for the modification and repeal of that act, and we are now repealing it, as we have the right to do.

Mr. DILLON. Yes. The bridge is wholly unsafe as it is.

Mr. HAMILTON of Michigan. I wanted to suggest to the gentleman from Wisconsin that the railroad company was put upon notice by the passage of the original act, which reserved the right to amend, alter, and repeal.

Mr. STAFFORD. Oh, every bridge act reserves that right.

Mr. HAMILTON of Michigan. Certainly.

Mr. STAFFORD. But here is a new proposition entirely.

Mr. HAMILTON of Michigan. Not at all.

Mr. STAFFORD. In a case where you would compel the railroad company to go to an expense of possibly several million dollars it is well to know whether they have been given notice of this bill before they shall be forced to discontinue their train service across the Missouri River without knowledge of this new obligation, and the question is whether the railroad has received notice of this proceeding before we take this action.

Mr. ESCH. Mr. Speaker, will the gentleman yield?

Mr. STAFFORD. Yes; I yield.

Mr. ESCH. The Legislature of the State of South Dakota on March 17, 1915, passed a resolution as follows:

A joint resolution memorializing Congress and our Senators and Representatives in Congress to use all honorable means to compel the Chicago, Milwaukee & St. Paul Railway Co. to construct a permanent railway bridge across the Missouri River at the city of Chamberlain.

Be it resolved by the Senate and House of Representatives of the State of South Dakota:

Whereas, about the year 1905, the Chicago, Milwaukee & St. Paul Railway Co., as the parent corporation of the White River Valley Railway Co., entered upon the construction of a line of railway commencing at the east bank of the Missouri River at the city of Chamberlain and extending westward through Lyman, Stanley, and Pennington Counties to the city of Rapid City, and as a part of said line of railway constructed a pontoon bridge across the Missouri River at Chamberlain; and

Whereas the said Chicago, Milwaukee & St. Paul Railway Co. has taken over the property of the White River Valley Railway Co., including the pontoon or pile bridge at Chamberlain, but has never constructed a permanent railroad bridge; and

Whereas the said pontoon or pile bridge goes out at least from one to four times each year when there is any unusual condition of the Missouri River at Chamberlain; and

Whereas said pontoon or pile bridge is unsafe and dangerous to the traveling public, and by reason of the maintenance of said bridge in its unsafe condition a railway train, either passenger or freight, is liable at any time to be precipitated in the Missouri River, especially during the early spring of the year when the ice is going out and during the June rise, and in the fall of the year and when the ice is formed or floating in said river, it is impossible to operate the draw in said bridge, and the maintenance of said bridge by the said railway company is inimical and dangerous to the public health and safety of the traveling public generally as well as to shippers; and

Whereas, by reason of the fact that all traffic to points west of the Missouri River when said bridge is out or the draw open must be sent via the lines of the Chicago Northwestern Railway Co. via Wolsey and Rapid City to consignees between Chamberlain and Rapid City, and passengers, mail, express, and freight are thereby greatly delayed and the development of said country deterred and the business interests of the people located between Chamberlain and Rapid City jeopardized: Therefore be it

Resolved by the Legislature of the State of South Dakota, That the Congress of the United States and our Senators and Representatives in Congress be, and hereby are, urged to use all honorable and lawful means at their command to compel the Chicago, Milwaukee & St. Paul Railway Co. to erect at the earliest possible date a good, safe, permanent railway bridge across the Missouri River at Chamberlain; and be it further

Resolved, That a copy of this resolution be sent to the Congress of the United States and to our Senators and Representatives in Congress and to the Secretary of War.

That would be considered sufficient notice, would it not?

Mr. STAFFORD. No; it would not be sufficient notice that the matter would be brought up in Congress. It might be sufficient notice of the agitation in the State, but as the gentleman knows, we often receive memorials to which we do not give attention, because we know the signers or originators are not conversant with the facts.

The question is a larger one than that. What will be the cost to the railroad company of this bridge? And, further, in case the railroad company does not think it is financially warranted in going ahead at this time to erect a permanent bridge, the question arises whether it should discontinue the present train service. The gentleman knows that between Baltimore and Philadelphia the Pennsylvania Railroad maintained for many years pile bridges across Gunpowder Creek and adjoining bights of Chesapeake Bay, and only recently did it erect permanent structures. But here Congress, without calling upon the railroad company, is proposing that the company shall erect a permanent structure, when, perhaps, the structure is very expensive and its finances will not warrant the railroad company in expending millions and millions of dollars on such a permanent structure.

Mr. ESCH. When Congress passed the original grant in 1905 to build a bridge across the Missouri River Congress had the right to assume that the railroad company would fulfill its obligations and put a structure there that would not at all obstruct the passage of mails and passengers.

Mr. STAFFORD. You might as well say that when Congress granted the right to the Pennsylvania Railroad Co. to erect a pile bridge across Gunpowder Creek Congress had the right to assume that ultimately a permanent structure would be erected. The Pennsylvania Railroad Co. did in due time erect a permanent structure. I want to know whether the railroad company, which has some rights that are proper to be considered, have had a hearing on this proposition.

Mr. GANDY. Will the gentleman yield?

Mr. STAFFORD. I yield to the gentleman from South Dakota.

Mr. GANDY. I want to say to the gentleman that since this bill was introduced in this Congress one of the men from the head offices of the Milwaukee Railroad system, Mr. Harry Hunter, who for years has been one of their publicity men and one of their field men out of the Chicago office, talked about this bill with me in this city, and he and the company have full notice of what is going on. This matter has been mentioned time and again in the newspapers in South Dakota. Every Milwaukee superintendent and agent and employee knows what is going on, and so far as the temporary bridge is concerned, not a vestige of that bridge remains this day except a few piles sticking out of the water.

Mr. STAFFORD. Will the gentleman yield?

Mr. GANDY. Yes.

Mr. STAFFORD. Will the gentleman inform the House who this Mr. Harry Hunter is, and what is his representative capacity, and whether he has authority to represent the railroad in this particular matter?

Mr. GANDY. I can not say as to that. He has been connected with the Milwaukee general offices, and appeared for the company before committees of the Legislature of the State of South Dakota at the time when I was a member of that body, and he seems to represent them in field matters.

Mr. DILLON. In all legislative matters.

Mr. STAFFORD. Out in South Dakota.

Mr. DILLON. He lives in Chicago.

Mr. GANDY. His home is in Chicago.

Mr. STAFFORD. Does not the gentleman think that in a matter of this importance to the Chicago, Milwaukee & St. Paul Railroad Co., or any railroad company, involving the expenditure of how much——

Mr. GANDY. I do not know. Less than a million dollars.

Mr. STAFFORD. That some information should be given to the representatives of the company that it is pending, so that they may be heard?

Mr. GANDY. I mailed a copy of this bill to the head office of the Chicago & Milwaukee Railroad Co.

Mr. STAFFORD. When did the gentleman do that?

Mr. GANDY. About two months ago.

Mr. MANN. I received a protest, I think from the counsel of the Chicago, Milwaukee & St. Paul Railroad, against the repeal of the act authorizing them to construct a pontoon bridge, and requiring them to construct a new bridge which they say will cost a million dollars and which they say they are not able to finance at this time. I know nothing about that, but it seems to me that where we propose to repeal a bridge act, which we have the power to do, although I am not certain that we can do it without making recompense for the damage—we insert a repealing clause in all the bridge bills that we pass—if the company desires to be heard before the committee, it ought to have that opportunity. I do not know whether the company were neglectful about appearing or not, but we all know that these bridge bills are usually passed through the committee without very much special consideration, because they are largely formal matters. I hope the gentleman will let this go over until there is some consideration by the committee.

Mr. ADAMSON. I want to assure the gentleman from Illinois that every question raised by him and by the gentleman from Wisconsin [Mr. STAFFORD] was raised by me as chairman of the committee. We postponed the hearing several times to secure the attendance of the author of the bill and examined him about every one of these questions, and by his statement he satisfied the committee that the railroad company had had full and ample knowledge of the pendency of the bill.

Mr. MANN. The committee may have secured the presence of the author of the bill, which, I take it, was not hard to do——

Mr. ADAMSON. It was a little difficult in this case.

Mr. MANN. But it seems to me if the company desire to be heard before you repeal an act giving them rights you ought to give them an opportunity to be heard.

Mr. ADAMSON. We had no protest. If there had been any protest it would have been regarded.

Mr. MANN. Doubtless the committee would have regarded it if they had received it, and it ought to have been presented to them.

Mr. ADAMSON. If the railroad company want to be heard they can be heard.

Mr. HAMILTON of Michigan. I want to ask the gentleman from Illinois [Mr. MANN] whether it does not raise a fair presumption that the railroad company did have notice, when their agent called upon the Representative from that district and discussed the matter with him, and thereafter failed to send anyone to appear before the committee.

Mr. MANN. I do not know whether it was thereafter. The gentleman from South Dakota did not say thereafter.

Mr. ADAMSON. Gentlemen state that protests have reached them which did not reach the committee, and so I do not think we ought to pass the bill without giving the railroad company an opportunity to be heard. I ask unanimous consent that the bill be passed without prejudice, in order that between now and the next unanimous-consent day the railroad company may be heard before the committee.

The SPEAKER. The gentleman from Georgia asks unanimous consent to pass this bill without prejudice. Is there objection?

There was no objection.

NEW ORLEANS, BATON ROUGE & VICKSBURG RAILROAD CO.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 540) for the relief of settlers within the limits of the grant to the New Orleans, Baton Rouge & Vicksburg Railroad Co.

The Clerk read the title of the bill.

The SPEAKER. Is there objection?

Mr. MADDEN. Reserving the right to object, I think this bill covers such important questions that it ought not to be considered on the Unanimous Consent Calendar. I have been trying to get some information in connection with just what it does. It is not clear in the bill what it does, though there is a letter here from some one to the chairman of the Committee on the Public Lands.

Mr. FERRIS. Does not the gentleman think it is fairly clear that it only authorizes a readjudication by the department?

Mr. MADDEN. That may be, but it takes away certain rights from private individuals.

Mr. FERRIS. It might result in that, but not without a hearing.

Mr. MADDEN. I think the bill is so important that it ought not to be considered by unanimous consent. I am perfectly willing, however, if the gentleman from Louisiana prefers to do it, to have the matter go over without prejudice. I would not object to that; but unless he is willing to do that I shall feel constrained to object.

Mr. FERRIS. Will the gentleman yield for a suggestion? Of course the bill, as the gentleman knows, was up last year and had great consideration. The witnesses for the lumber people and the railroads were before us, and the settlers were before us, and heard at great length. The hearing is voluminous; it is all printed and preserved. The bill went through here by almost unanimous consent, and this year, rather than bring the old settlers up here again, the committee reported the bill out, and it was passed without prejudice two or three weeks ago because the gentleman from Michigan, Mr. FORDNEY, was absent. It has been kicked and cuffed around a good deal, and would not the gentleman be willing to let us consider it and have it out of the way. Unanimous consent for consideration does not mean that the bill will necessarily be passed; but let us debate it and have a chance.

Mr. MADDEN. I would like to have an opportunity to read the hearings.

Mr. FERRIS. Does the gentleman think he will read them now? They have been printed, I think, for two years.

Mr. LENROOT. If the gentleman will permit me, the reading of the report on the bill, I do not think, would give anybody a correct idea of what the bill itself does do. The report deals with the merits of the question involved. The bill itself does nothing more than direct the Interior Department to take up the question and deal with the merits under the law as it may exist. I am frank to say that the reading of the report is in favor of the contention made by the constituents of the gentleman from Louisiana, Dr. ASWELL, but the bill itself does not in any way attempt to decide anything.

Mr. ASWELL. It merely puts the question up to the Land Office, and there are only a few people to be considered under the bill. We have had altogether five hearings on this bill.

Mr. MADDEN. Will not the gentleman let it go over without prejudice?

Mr. ASWELL. I would like to have it taken up and considered now.

Mr. MADDEN. I want to read the hearings before the committee.

Mr. ASWELL. Would not the gentleman be willing for it to come and be debated and discussed? The gentleman and others can vote against it.

Mr. MADDEN. No; I shall object to the bill unless it goes over without prejudice.

Mr. ASWELL. We have had so many hearings and so many discussions that I would like to have it considered now.

Mr. MADDEN. As I say, I have not read the hearings, but I will do so between now and next unanimous-consent day.

Mr. ASWELL. All this bill does is to put the matter up to the Land Office.

Mr. MADDEN. I must insist that unless it goes over without prejudice I shall object.

Mr. FORDNEY. Mr. Speaker, I object.

The SPEAKER. The gentleman from Michigan objects, and the Clerk will report the next bill.

BRIDGE ACROSS THE MONONGAHELA RIVER, FAIRMONT, W. VA.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 10139) to authorize the city of Fairmont to construct and operate a bridge across the Monongahela River at or near the city of Fairmont, in the State of West Virginia.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none.

The Clerk read the bill, as follows:

Be it enacted, etc., That the city of Fairmont, a municipal corporation under the laws of the State of West Virginia, is hereby authorized to construct, maintain, and operate a bridge and approaches thereto across the Monongahela River at or near the city of Fairmont, in Marion County, W. Va., at a point suitable to the interests of navigation, in accordance with the provisions of an act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906.

SEC. 2. That the right to alter, amend, or repeal this act is hereby expressly reserved.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. ADAMSON, a motion to reconsider the vote whereby the bill was passed was laid on the table.

COLLECTION OF ADDITIONAL STATISTICS ON COTTON.

The next business on the Calendar for Unanimous Consent was House joint resolution 103, authorizing and directing the Director of the Census to collect and publish additional statistics.

The SPEAKER. Is there objection?

Mr. STAFFORD. Reserving the right to object, this resolution is under consideration by the House on Calendar Wednesday, and it will require some little further consideration.

Mr. HEFLIN. Will the gentleman withhold his objection?

Mr. STAFFORD. I will gladly withhold.

Mr. HEFLIN. I will say that this measure is very important. The Director of the Census is anxious to have it enacted at the earliest moment. I thought if we could consider it to-day we could get it over so much earlier to the Senate.

Mr. STAFFORD. The gentleman realizes that it is now under consideration on Calendar Wednesday. We have not had unanimous consent for a month, and as this would require some time for consideration I think it would expedite business to have it considered on Calendar Wednesday, and so I will object.

The SPEAKER. The gentleman from Wisconsin objects, and the Clerk will report the next bill.

BRIDGE ACROSS SUSQUEHANNA RIVER, MILTON, PA.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 9666) to authorize the Catawissa Railroad Co., its lessees, successors, and assigns, to construct a railroad bridge across the west branch of the Susquehanna River from the borough of Milton, Northumberland County, Pa., to the borough of West Milton, Union County, Pa.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none.

Mr. ADAMSON. Mr. Speaker, I expected the gentleman from Pennsylvania to be here and attend to this matter, but I understand that he is ill. There is a Senate bill of identical character on the calendar, and I ask unanimous consent that the Senate bill be considered in lieu of the House bill.

The SPEAKER. The gentleman from Georgia asks unanimous consent to consider the Senate bill in lieu of the House bill. Is there objection?

There was no objection.

The Clerk read the Senate bill, as follows:

An act (S. 3978) to authorize the Catawissa Railroad Co., its lessees, successors, and assigns to construct a railroad bridge across the west branch of the Susquehanna River from the borough of Milton, Northumberland County, Pa., to the borough of West Milton, Union County, Pa.

Be it enacted, etc., That the Catawissa Railroad Co., its lessees, successors, and assigns be, and they are hereby, authorized to construct, maintain, and operate a railroad bridge and approaches thereto across the west branch of the Susquehanna River, at a point suitable to the interests of navigation, from the borough of Milton, county of Northumberland, State of Pennsylvania, to a point about 1,700 feet south of West Milton Station, in the borough of West Milton, in the County of Union, in the State of Pennsylvania, in accordance with the provisions of the act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906.

SEC. 2. That the right to alter, amend, or repeal this act is hereby expressly reserved.

The following committee amendment was agreed to:

In line 5, page 1, strike out the word "railroad."

The bill as amended was ordered to be read a third time, was read the third time, and passed.

The title was amended so as to read: "An act to authorize the Catawissa Railroad Co., its lessees, successors, and assigns, to construct a bridge across the west branch of the Suquehanna River from the borough of Milton, Northumberland County, Pa., to the borough of Wet Milton, Union County, Pa."

The bill H. R. 9666 was laid on the table.

BRIDGE ACROSS SUSQUEHANNA RIVER AT SUNBURY, PA.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 9667) to authorize the Shamokin, Sunbury & Lewisburg Railroad Co., its lessees, successors, and assigns, to construct a railroad bridge across the Susquehanna River from the borough of Sunbury, Northumberland County, Pa., to Monroe Township, Snyder County, Pa.

The SPEAKER. Is there objection to the consideration of the bill?

There was no objection.

Mr. ADAMSON. Mr. Speaker, there is an identical Senate bill, S. 3977, Calendar No. 79, on the calendar, and I ask unanimous consent that it be considered in lieu of House bill 9667.

The SPEAKER. The gentleman from Georgia asks unanimous consent that an identical Senate bill be considered in lieu of the House bill. Is there objection?

There was no objection.

The SPEAKER. The Clerk will report the Senate bill.

The Clerk read as follows:

Be it enacted, etc., That the Shamokin, Sunbury & Lewisburg Railroad Co., its lessees, successors, and assigns, be, and there are hereby, authorized to construct, maintain, and operate a railroad bridge and approaches thereto across the Susquehanna River at a point suitable to the interests of navigation, at or about 560 feet north of Sunbury Station, county of Northumberland, State of Pennsylvania, to a point at or near the existing bridge south of Clement Station, in the township of Monroe, in the county of Snyder, in the State of Pennsylvania, in accordance with the provisions of the act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906.

SEC. 2. That the right to alter, amend, or repeal this act is hereby expressly reserved.

With the following committee amendment:

Page 1, lines 5 and 6, strike out the word "railroad."

The SPEAKER. The question is on agreeing to the committee amendment.

The committee amendment was agreed to.

The SPEAKER. The question is on the third reading of the Senate bill.

The bill was ordered to be read a third time, was read the third time, and passed.

On motion of Mr. ADAMSON, a motion to reconsider the vote by which the bill was passed was laid on the table.

The title was amended so as to read: "An act to authorize the Shamokin, Sunbury & Lewisburg Railroad Co., its lessees, successors, and assigns, to construct a bridge across the Susquehanna River from the borough of Sunbury, Northumberland County, Pa., to Monroe Township, Snyder County, Pa."

BRIDGE ACROSS FLINT RIVER, GA.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 9923) granting the consent of Congress to the county of Mitchell, or to the county of Baker, both of the State of Georgia, acting jointly or separately, and their successors and assigns, to construct a bridge across the Flint River.

The SPEAKER. Is there objection?

There was no objection.

The SPEAKER. The Clerk will report the bill.

The Clerk read the bill, as follows:

Be it enacted, etc., That the consent of Congress is hereby granted to the county of Mitchell, or to the county of Baker, both of the State of Georgia, acting jointly or separately, and their successors and assigns, to construct, maintain, and operate a bridge and approaches thereto across the Flint River at a point suitable to the interests of navigation, at or near Newton, in the county of Baker, in the State of Georgia, in accordance with the provisions of the act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906.

SEC. 2 That the right to alter, amend, or repeal this act is hereby expressly reserved.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. PARK, a motion to reconsider the vote by which the bill was passed was laid on the table.

WESTERN AND EASTERN JUDICIAL DISTRICTS OF OKLAHOMA.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 11148) transferring the counties of Osage and Pawnee from the western judicial district of the United States court, in the State of Oklahoma, to the eastern judicial district of said court in said State, for judicial purposes.

The SPEAKER. Is there objection?

Mr. STAFFORD. Mr. Speaker, I reserve the right to object.

Mr. THOMPSON. Mr. Speaker, I object.

Mr. DAVENPORT. Mr. Speaker, I will ask the gentleman to reserve his objection.

Mr. THOMPSON. I reserve the objection.

Mr. DAVENPORT. Mr. Speaker, I ask the gentleman to reserve his objection, for the reason that I desire to present to the House a letter from the trial judge of the eastern judicial district and also from the Department of Justice saying that they do not raise any objection to the passage of this bill, and also telegrams from the members of the bars of those two counties affected by this legislation. The truth is that the Osage County line runs down and corners in the city of Tulsa, where the Federal court is held in the eastern judicial district, within half a mile of where the court sits, and people living in that county must go all of the way from 75 to 150 miles to court when they could go this short distance if this legislation were passed. Pawnee County corners on a direct line of railroad within 14 miles of the city of Tulsa, in the eastern district, and

there are railroads coming into Tulsa from all sections of the two counties, as the trial judge says, making it more convenient to attend court at Tulsa than any other point where the court is now held, and while he says it will increase his work, he states if Congress passes this legislation he will have no objection to it.

Mr. THOMPSON. Mr. Speaker, is it not a fact that the United States court for the eastern district of Oklahoma, to which the gentleman is trying to attach these counties, is something like two and a half to three years behind with its docket, and that in the western district they are now about up with the docket?

Mr. DAVENPORT. That is not the fact. It is a fact that the docket at Muskogee in the eastern judicial district is behind, but the docket that is tried at Tulsa is not behind, and they never sit there the full length of time that is assigned for that docket. A copy of the docket for the April term, 1916, is as follows:

UNITED STATES DISTRICT COURT FOR THE EASTERN DISTRICT OF OKLAHOMA—ASSIGNMENT FOR APRIL TERM, 1916, AT TULSA.

MOTIONS AND DEMURRERS.

Monday, April 3.

2169E. United States *v.* W. E. Privett et al.: Motion to strike answers of John O. Mitchell and J. E. Crosbie.
2253E. The Fred W. Wolf Co. *v.* Weleetka Light & Water Co. et al.: Motion of Irrigation Loan & Trust Co. to dismiss.
2255E. United States *v.* Canoe Jimsey et al.: Motion of Roma Oil Co. et al to dismiss.
2267E. United States *v.* Henry Hornecker: Motion to dismiss.
2269E. The Uncle Sam Oil Co. *v.* The City of Tulsa et al.: Application for temporary injunction; motion to dismiss.
2333. Golda Buxton, administratrix, *v.* Receivers St. Louis & San Francisco Railroad Co.: Motion to strike amendment to petition.
2341. William B. Mars *v.* Receivers St. Louis & San Francisco Railroad Co.: Demurrer to petition.
2345. United States *v.* Charles Price: Motion to make more definite and certain.
2359. Receivers St. Louis & San Francisco Railroad Co. *v.* G. S. Straughber: Demurrer to petition.
2377. Smith Barnes & Strohber Co. *v.* The Tulsa Music Co. et al.: Demurrer to petition.
2378. C. A. Smith *v.* The Tulsa Music Co. et al.: Motion to make more definite and certain.
2390. Anna Haley *v.* Receivers St. Louis & San Francisco Railroad Co.: Motion to quash service.
2393. George W. Summers *v.* The Hubert Mining Co.: Motion to strike parts of petition; motion for costs.

CRIMINAL ASSIGNMENT.

Tuesday, April 4.

1144. Martin F. Witte, introducing.
1661. W. R. Sanders, retail liquor dealer.
1971. Clarence Nail, forgery of money order.
1965. John P. Matthews, embezzlement of mail matter.
1890. John Scruggs, introducing.
1802. Algie Baldridge and Bolin Reed, introducing.

Wednesday, April 5.

2018. John Foley, ratail liquor dealer.
2020. W. G. Holleman, retail liquor dealer.
2064. Grant Gordon, introducing.
2073. Ike Reynolds, introducing.
2074. Cam Finley, introducing.

Thursday, April 6.

2088. Aaron Paxton, introducing.
2098. Oscar Sauls, introducing.
2007. Etta Tweedy, introducing.
2106. Hiram May, introducing.
2117. Andrew J. Wandick, white slavery.

Monday, April 10.

1908. Ed E. Lewis, making false entry.
1909. Ed E. Lewis, making false entry.
1910. Ed E. Lewis, misapplication of funds of national bank.
1911. George Lewis, misapplication of funds of national bank.
1912. George Lewis, unlawful certification of check on national bank.

The above criminal cases have by order of court been assigned for trial in the United States District Court at the April, 1916, term, at Tulsa, in the order set forth. All defendants in such cases are required to be in attendance upon said court on the date when herein assigned.

D. H. LINEBAUGH,
United States Attorney.

CIVIL TRIAL ASSIGNMENT.

Thursday, April 13.

2360. United States *v.* J. Knox Greer et al.
2361. United States *v.* J. Knox Greer et al.
2366. United States *v.* Charles Roper et al.
2381. United States *v.* Twenty-three 60-pound Tubs of Uncolored Oleomargarine, and so forth.

Friday, April 14.

2328. Continental Gin Co. *v.* W. L. Stocker et al.
2280. Andrew Reed *v.* A. L. Atchison.
1404. In re Orpheum Theater, bankruptcy.

Saturday, April 15.

2120. Clint Moore *v.* Midland Valley Railroad Co.
2248. Richardson Dry Goods Co. *v.* Elmer Coon.
2268. Richardson Dry Goods Co. *v.* Rachel C. Brady.

Monday, April 17.

1853. Annie Silas *v.* W. E. Waddle et al.
2049. Reinforced Concrete Co. *v.* August Nelson et al.
2118. S. Phillips *v.* J. W. Boen et al.

Tuesday, April 18.

2253. Missouri, Kansas & Texas Railway Co. *v.* Bartlesville Supply Co.
2332. Edward C. Mahan *v.* St. Louis & San Francisco Railroad Co.
2365. Receivers St. Louis & San Francisco Railroad Co. *v.* Oce Allen, county treasurer of Rogers County.

Wednesday, April 19.

2348. Harry S. Evans *v.* The Board of County Commissioners of Hughes County.
2376. Miami Lead & Zinc Co. *v.* James S. Mabon et al.
2392. Minnie Goodell et al. *v.* St. Louis, Iron Mountain & Southern Railway Co.

Thursday, April 20.

235. Thomas L. Sloan *v.* World Publishing Co. et al.
2239. Thomas L. Sloan *v.* The Petroleum Publishing Co.

EQUITY TRIAL ASSIGNMENT.

Monday, April 24.

2211E. Harry Lee Taft et al. *v.* Joe McIntosh et al.
2019E. A. H. Sharum *v.* Whitehead Coal & Mining Co.
2174E. Loues Friedman *v.* Regina M. Kaadt.

Tuesday, April 25.

2192E. James A. Swindle *v.* Lon C. Hill et al.
2238E. Finley Shuck *v.* William Spencer.
2271E. Wade S. Stanfield *v.* Winnifred T. Stanfield et al.

Wednesday, April 26.

2010E. T. N. Barnsdall *v.* Charles Owen.
2023E. Alluwe Oil Co. *v.* Morgan-Nelson Oil & Gas Co. et al.
2037E. Charles A. Bosworth, Trustee, *v.* Frederick Oil Co. et al.

Thursday, April 27.

2216E. The Presto-Lite Co. *v.* The Western Auto Supply Co. et al.

Friday, April 28.

2090E. Joseph Burns et al. *v.* John Finlayson et al.

The next term of court for the eastern district is the first Monday in June, 1916, after the term in April at Tulsa.

Mr. THOMPSON. In the western and eastern districts they do not have any lines between the courts. They do business all over the entire district, and Muskogee being the headquarters, they try most of the business there, and so necessarily the judge sits there most of the time.

Mr. DAVENPORT. A date is fixed in each place for holding court in the eastern district. They commence on a certain day at Tulsa and they have three or four weeks assigned, and use such time as is necessary to dispose of the cases for trial. The docket is always disposed of before the time is up. In Muskogee in the Federal court there is a large docket. I want to say to the gentleman that while the counties sought to be transferred are not in his congressional district, they are in the western district of Oklahoma, and I do not believe there is a single man interested in the Federal court proceedings in the two counties who has not asked to have these counties transferred to Tulsa where the railroads lead into the town and where nearly all men having business with the court can leave home in the morning or early in the night and get there for court the next day instead of having to go a very much greater distance.

Mr. THOMPSON. Mr. Speaker, I will say that I have a great many protests against the change, for the reason that the eastern counties were in the original territory of Oklahoma, and under Oklahoma law, and the two jurisdictions down there, the eastern district and the western district, were entirely separate. If you transfer these two counties out of the western district you transfer them out of the code of laws under which they have been since the enabling act and you will put them into a district that has had the Arkansas laws, entirely dissimilar. I have a great many protests and I have telegrams from the counties affected showing that they want to remain in the western district, because they say they can get their business transacted down there expeditiously, whereas they can not, if the two counties are transferred to the eastern district.

Mr. DAVENPORT. Mr. Speaker, I am surprised that the gentleman, a lawyer by profession, should make such a statement when he knows that since November 16, 1907, the whole State has been operating under a universal code of laws.

Mr. THOMPSON. I understand the question involved here comes up under the question of construction of treaties. The questions involved will be questions of Osage treaties in Osage County, and do not apply to the Five Civilized Tribes of the eastern district, and the court in the eastern district would not be familiar with that question, whereas the judge of the western district has tried many of those cases.

Mr. DAVENPORT. I know and I realize the opposition of my colleague. Guthrie is one of the cities where court is held and they do not want to lose jurisdiction.

Mr. THOMPSON. That is not the question. The people affected feel that it can not be done as well in the eastern district as in the western district.

Mr. DAVENPORT. If the gentleman wants to object, he can do so; but I would like for him to put his telegram and protests in the RECORD from the bar or business men, either or both, of

the counties—business man or lawyer—who are opposing this bill.

Mr. THOMPSON. I will say to the gentleman I can put in a letter from the Attorney General that was written to the gentleman himself showing that he thinks there should be an entire rearrangement.

The SPEAKER. Is there objection?

Mr. DAVENPORT. And the Attorney General suggests that in the gentleman's district there should be some of those counties transferred to the western district in order to make it more convenient for litigants who have to attend Federal court.

Mr. THOMPSON. Our people object to that for the same reason that those people object to being transferred to the eastern district.

The SPEAKER. Is there objection?

Mr. THOMPSON. I object.

The SPEAKER. The gentleman objects. Both gentlemen ask leave to extend their remarks in the RECORD. Is there objection? [After a pause.] The Chair hears none.

The matter referred to above is as follows:

PAWHUSKA, OKLA., *February 9, 1916.*

Hon. JAMES S. DAVENPORT, M. C.,
Washington, D. C.:

At a call of the meeting of the Osage County Bar Association the following resolution was adopted:

"*Resolved*, That the Osage County Bar Association is unanimously in favor of the transfer of Osage County, Okla., from the jurisdiction of the Federal court, western district of Oklahoma, to the eastern district of Oklahoma. We also believe proposed change meets the approval of all the citizens of Osage County, Okla."

C. S. MACDONAL,
L. F. ROBERTS,
E. E. GRINSTEAD,
Committee.

—

TULSA, OKLA., *February 9, 1916.*

Hon. JAMES S. DAVENPORT,
Care House of Representatives, Washington, D. C.:

It is the consensus of opinion of the bar of Tulsa County that Osage and Pawnee Counties should be transferred from western to eastern Federal district. We urge the Oklahoma delegation to support bill and desire that you transmit this communication to Chairman Webb of the Judiciary Committee.

TULSA COUNTY BAR ASSOCIATION,
By ALBERT H. BELL, *President.*

—

BIG HEART, OKLA., *March 27, 1916.*

Hon. JAMES DAVENPORT,
Washington, D. C.:

The citizens of this section are strongly in favor of Tulsa for several reasons. Better railroad center; closer accommodations; better in general. If I can be of any further service, call.

K. L. COLLEY.

—

HOMINY, OKLA., *March 28, 1916.*

JAS. S. DAVENPORT,
Washington, D. C.:

Citizens of this section are heartily in favor bill relative to Federal court. We are all with you.

CARL MULLENDORE.

—

DEPARTMENT OF JUSTICE,
Washington, D. C., March 22, 1916.

Hon. JAMES S. DAVENPORT,
House of Representatives.

SIR: Referring to your letter of the 17th instant relative to H. R. 11148, transferring the counties of Osage and Pawnee from the western judicial district to the eastern judicial district of Oklahoma, you are respectfully informed that this matter was considered to some extent in connection with the bill introduced some time ago providing for the division of the eastern district of Oklahoma into three divisions, etc. The following information is submitted from the files of the department:

According to the views of the officials in the western district of Oklahoma, as expressed in the past, the proposed transfer of Osage County would be objectionable. This view was expressed at the time the bill for dividing the eastern district was under consideration. In connection with that bill the department recommended that it might be advisable to transfer the counties of Grady, McClain, Garvin, Stephens, Murray, Carter, Jefferson, and Love from the eastern judicial district to the western judicial district on account of the railroad facilities in that section of the country.

The district attorney and marshal for the eastern district of Oklahoma were in Washington some time ago and suggested that the counties specified above be transferred to the western district and that Osage and Pawnee be placed in the eastern district. There appears to be no real objection to the proposed transfer of the two counties in question. As far as the department is concerned, the transfer would be satisfactory.

If it is desired that an expression of the views of each of the court officials in each of the two districts of Oklahoma be procured, please advise, and arrangements will be made to secure the same.

Respectfully,

SAM J. GRAHAM,
Assistant Attorney General
(For the Attorney General).

—

DEPARTMENT OF JUSTICE,
Washington, D. C., March 28, 1916.

Hon. JAMES S. DAVENPORT,
House of Representatives, Washington, D. C.

SIR: In reply to your letter of the 23d instant relating to H. R. 11148, you are respectfully informed that the information furnished by department letter of the 22d instant was obtained from the files of the office. The last reports bearing in any way upon the question of transfer of the counties mentioned in the bill were made in 1910, and no additional facts have been procured since that time. This being the case, it is impracticable for the department to make any further statement than that contained in its previous communication.

Whatever change is considered best by those affected in the two districts of Oklahoma with reference to the counties in question will be entirely satisfactory to the department, as it has no other interest in the matter.

As heretofore stated, the views of the several court officials will be obtained, if you so desire.

Respectfully, for the Attorney General,

SAMUEL J. GRAHAM,
Assistant Attorney General.

—

UNITED STATES DISTRICT COURT,
EASTERN DISTRICT OF OKLAHOMA,
Muskogee, Okla., March 31, 1916.

Hon. JAMES S. DAVENPORT,
Washington, D. C.

MY DEAR MR. DAVENPORT: Answering yours of the 29th relative to your bill to add Osage and Pawnee Counties to the eastern district of Oklahoma for judicial purposes, I agree with you that from the standpoint of railroad facilities the people of these two counties can no doubt reach Tulsa, a place of holding court in the eastern district, more conveniently than they can any court town in the western district; and if I could have the relief which you say the department suggests by way of attaching certain of the western counties of the eastern district to the western district I would consider it a wise "swap" from the standpoint of the convenience of the litigants and the courts. I do feel, though, that if the additional litigation arising in Osage and Pawnee Counties be added to the eastern district, this additional burden should be compensated by some such corresponding relief as the department suggests, especially in view of the already large volume of business in this district. It always has seemed to me an unwise arrangement of the districts which necessitates my going right through Oklahoma City, a court town in the western district, on to Chickasha, 60 miles farther, to hold court for the eastern district. If it seems best to Congress to make the change contemplated by your bill, I shall, of course, not complain, but I do think if any change is made at all it should be such an adjustment as will not result in increasing rather than lightening the load this district now carries.

Yours, very truly,

RALPH E. CAMPBELL, *Judge.*

HOMESTEAD ENTRIES OF MINORS.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 16) permitting minors of the age of 18 years or over to make homestead entry or other entry of the public lands of the United States.

The Clerk read the title of the bill.

The SPEAKER. Is there objection?

Mr. STAFFORD. Mr. Speaker, reserving the right to object——

Mr. MANN. Mr. Speaker, I object.

The SPEAKER. The bill goes off the calendar.

Mr. TAYLOR of Colorado. Mr. Speaker, will the gentleman withhold his objection for a moment?

Mr. MANN. What is the use? We have had this up a dozen or more times.

Mr. TAYLOR of Colorado. This bill has been up for consideration by unanimous consent once or possibly twice before, and the bill has never been considered by the House at all yet. The gentleman will observe this bill has been modified a great deal from the form in which it was a year ago. It does not apply now to anything except homestead entries, and does not permit entry until the entryman becomes 24 years of age. It merely allows a boy or girl to go and select a piece of land. It is to induce boys to stay on the farm and to give them some incentive to work and get a start in the world. It seems to me there could be no better use of the public domain than to encourage our boys to undertake to take it up and improve it and let them have something to work for when and before they reach their majority. The people of the West are very much interested in the matter.

Mr. MANN. Mr. Speaker, it would make a world of difference, to hear some men talk, whether a minor got a homestead a year earlier or a year later.

The SPEAKER. Is the gentleman from Illinois going to object?

Mr. MANN. I am not going to object, but I did object a moment ago.

Mr. TAYLOR of Colorado. Did not the gentleman withhold it?

Mr. MANN. No; I did not.

Mr. TAYLOR of Colorado. I feel we ought to give our boys every chance we can in this country. I want to read into the RECORD a few statements from the report of the Public Lands Committee on this bill, as follows:

As will appear from the report of the Secretary of the Interior, this bill was favorably approved and reported upon by the Interior Department during the Sixty-third Congress. The bill was passed by the Senate and unanimously and favorably reported by the Public Lands Committee of the House, but was never reached for consideration in the House before the adjournment of that Congress.

The bill as it passed the Senate authorized a minor to make any kind of entry of the public lands. The bill as it was reported to the House by the Public Lands Committee on March 19, 1914 (Rept. No.

419), favorably recommended the bill allowing minors to make homestead and desert-land entries only, and in that form the bill was again introduced on the first day of this session as H. R. 16 by Mr. TAYLOR of Colorado. Your committee, however, has deemed it advisable to limit the authorization of entries by minors to the homestead right only, and it also deems it advisable to prohibit final entry until the entryman has attained the age of 24 years. The amendment does not require six years' residence, but merely the usual period of three years' residence after attaining the age of 21 years.

While the bill in this form is very greatly limited in its operation, as compared with the form recommended by the Interior Department, as well as by the Department of Agriculture, which reported thereon favorably on June 14, 1914 (S. 2419); at the same time, the bill as recommended by your committee will be of considerable benefit.

The main object of this legislation is to induce the boys to stay on the farm by giving them an opportunity of initiating a right to a piece of public land upon which they can make improvements, and have a small start in the world when they have reached their majority, and thereby induce them to continue in the improvement of the land and the making of a home thereon.

It is believed that this law would be in accordance with sound public policy and in the interest of the development of the West. The Legislature of the State of South Dakota has memorialized Congress urging the passage of this measure, and the platforms and public resolutions of various parties and communities of the West have urged the passage of the bill. The demands for this measure have come primarily from the Northwestern States by reason of the fact that the Dominion of Canada has a law much more liberal than this provision. Their minors of the age of 18 years are permitted to make public-land entry and at the same time reside with their parents, and a very large number of ambitious boys who have been compelled to make a living before attaining their majority have gone to Canada for the purpose of acquiring a home.

Your committee after having this matter pending before it and in Congress for nearly three years are still of the unanimous opinion that this legislation would be a wise and beneficent measure in the interest of encouraging the youths of the country to make a home upon the public domain, and thereby very greatly assisting in the development of the country.

ADDITIONAL COURT TO BE HELD AT SALINA, KANS.

The next business in order on the Calendar for Unanimous Consent was the bill (H. R. 6914) to amend section 82, chapter 231, of the act to codify, revise, and amend the laws relating to the judiciary.

The Clerk read the title of the bill.

The SPEAKER. Is there objection?

Mr. STAFFORD. Reserving the right to object, Mr. Speaker, I ask that the bill be read; it is short.

The SPEAKER. The Clerk will read the bill.

The Clerk read as follows:

A bill (H. R. 6914) to amend section 82, chapter 231, of the act to codify, revise, and amend the laws relating to the judiciary.

Be it enacted, etc., That section 82, page 1112, part 1, volume 36, of the act to codify, revise, and amend the laws relating to the judiciary be amended to read as follows:

"SEC. 82. That the State of Kansas shall constitute one judicial district, to be known as the district of Kansas. It is divided into three divisions, to be known as the first, second, and third divisions of the district of Kansas. The first division shall include the territory embraced on the 1st day of July, 1910, in the counties of Atchison, Brown, Chase, Cheyenne, Clay, Cloud, Decatur, Dickinson, Doniphan, Douglas, Ellis, Franklin, Geary, Gove, Graham, Jackson, Jefferson, Jewell, Johnson, Leavenworth, Lincoln, Logan, Lyon, Marion, Marshall, Mitchell, Morris, Nemaha, Norton, Osage, Osborne, Ottawa, Phillips, Pottawatomie, Rawlins, Republic, Riley, Rooks, Russell, Saline, Shawnee, Sheridan, Sherman, Smith, Thomas, Trego, Wabaunsee, Wallace, Washington, and Wyandotte. The second division shall include the territory embraced on the date last mentioned in the counties of Barber, Barton, Butler, Clark, Comanche, Cowley, Edwards, Ellsworth, Finney, Ford, Grant, Gray, Greeley, Hamilton, Harper, Harvey, Hodgeman, Haskell, Kingman, Kiowa, Kearny, Lane, McPherson, Morton, Meade, Ness, Pratt, Pawnee, Reno, Rice, Rush, Scott, Sedgwick, Stafford, Stevens, Seward, Sumner, Stanton, and Wichita. The third division shall include the territory embraced on the said date last mentioned in the counties of Allen, Anderson, Bourbon, Cherokee, Coffey, Chautauqua, Crawford, Elk, Greenwood, Labette, Linn, Miami, Montgomery, Neosho, Wilson, and Woodson. Terms of the district court for the first division shall be held at Leavenworth on the second Monday in October; at Topeka on the second Monday in April; at Kansas City on the second Monday in January and the first Monday in October; and at Salina on the second Monday in May; terms of the court for the second division shall be at Wichita on the second Mondays in March and September; and for the third division, at Fort Scott on the first Monday in May and the second Monday in November. The clerk of the district court shall appoint three deputies, one of whom shall reside and keep his office at Fort Scott, one at Wichita, and the other at Salina, and the marshal shall appoint a deputy who shall reside and keep his office at Fort Scott."

The committee amendment was read, as follows:

Page 3, after the word "Scott," on line 11, insert the words "and the marshal shall also appoint a deputy who shall reside and keep his office in Kansas City."

Mr. MANN. Where does that amendment come from? It is not in my copy of the bill.

Mr. CONNELLY. It comes from the Committee on the Judiciary.

The SPEAKER. The Clerk has the correct copy.

Mr. STAFFORD. Mr. Speaker, I ask unanimous consent that the amendment may be reported again so we will know exactly what it is.

The SPEAKER. Without objection, the amendment will be again reported.

There was no objection.

Mr. STAFFORD. Mr. Speaker, reserving the right to object, there are one or two matters I would like to inquire about of the gentleman who introduced this bill. First, I notice he provides the term of court for the second Monday in May, at Salina.

Mr. HELVERING. Yes.

Mr. STAFFORD. Whereas, under existing law and in this bill the gentleman provides for a term of court to be held on the first Monday of May, at Fort Scott. I wish to ask this practical question of the gentleman, whether there is sufficient interval of time between the first Monday in May and the second Monday in May whereby court could be held at Fort Scott, and whether it would not be better to make a different date for the holding of court at Salina?

Mr. HELVERING. As I understand, in drawing this bill, the work at Fort Scott is very light and that in the Kansas City division——

Mr. MANN. There is no change from existing law.

Mr. STAFFORD. No change from existing law; but at the term herein provided for holding court on the second Monday in May the court would not have sufficient time to dispatch even a jury trial which might be in progress at Fort Scott in the term beginning on the first Monday in May.

Mr. MANN. That is the case now.

Mr. STAFFORD. No; it is not compulsory now to hold court in Salina. It is optional with the judge, so that he can, if he wishes to, under existing law, postpone the term of court that is provided to be held at Salina. I would like to ask the gentleman whether he has considered that overlapping?

Mr. HELVERING. We did consider that, and we considered that the judge could dispose of the work that week and come home and go out to Fort Scott and Kansas City.

Mr. STAFFORD. There is not sufficient time to give for a jury trial.

Mr. HELVERING. The way the business is transacted, it goes to Kansas City rather than to Fort Scott.

Mr. STAFFORD. I think it will be more corrective to have it on the third Monday in May in Salina, and provide for that contingency in case there was a jury trial on the first Monday in May at Fort Scott.

Mr. HELVERING. The time for holding court at Fort Scott and Salina has been changed.

Mr. STAFFORD. Heretofore it has not been obligatory to hold the court at Salina on the second Monday in May.

Mr. MANN. It is just as obligatory as it is now. Absolutely no change in that respect.

Mr. STAFFORD. Under the existing law it was left to the judge whether he would hold court there or not.

Mr. MANN. Oh, no. It was left as to what cases he would try.

Mr. STAFFORD. It was left as to whether he would hold court there or not.

Mr. MANN. I have the language of the law in front of me, and there is no such thing in the law.

Mr. STAFFORD. I read the law recently, and I recall it as I have stated.

Mr. HELVERING. We know that under the law the judge never held court there. Since the western part of the State has become so thickly settled, it is better to take the court to the litigants rather than to bring lawyers and litigants 400 miles in order to try these cases. Therefore we thought it better to introduce this bill rather than to introduce the bill for a special district, as many are asking us to do.

Mr. STAFFORD. Are there any jury trials at the term of court held on the first Monday in May at Fort Scott?

Mr. HELVERING. I am not advised. There are likely to be.

Mr. STAFFORD. It is very possible the judge could not get through a jury trial if it was a lengthy one inside of a week, and he would be compelled to adjourn court and open the court at Salina on the second Monday in May.

Mr. WEBB. The question was raised in the Judiciary Committee and the gentleman from Kansas [Mr. TAGGART], who represents part of Kansas on the committee, said that there would be no trouble in getting from Fort Scott on Saturday to Salina on Monday morning.

Mr. STAFFORD. Did the committee consider the possibility of the holding over of a jury trial at Fort Scott, say, on the first Monday in May, that would go over to the following week, and the judge would not be able to hold court on the second Monday in Salina?

Mr. WEBB. The judges in one week will not take up an important case on Friday or Saturday, for the very reason that they would not want to hold the jury over.

Mr. STAFFORD. Here is an instance where the court only holds a session once every six months in these cases where there might be need of having a jury trial, and yet the court could not expedite the case for hearing because there is a mandatory expression to hold court on the next Monday at another place.

Mr. WEBB. I see the force of the gentleman's suggestion, and if there is any trouble about it we can have it fixed later on.

Mr. STAFFORD. But we are making permanent law.

Mr. WEBB. There are numbers of cases in the books which provide one term shall follow immediately after another. This provision is nothing new.

The SPEAKER. Is there objection?

Mr. STAFFORD. Reserving the right to object——

Mr. CANNON. Is there any business at Fort Scott whatever?

Mr. WEBB. I can not say. I can only say that the evidence before the committee says so.

Mr. CANNON. Twice a year they do summon a petit and a grand jury at Fort Scott?

Mr. WEBB. I think so.

Mr. HELVERING. I will say it has been the practice at Fort Scott at the spring term to take up such matters as could be easily disposed of, and in the fall term take up cases that the gentleman refers to. I understand it will be no hindrance to the work of the judge. I understand they never call a jury at Fort Scott in the spring.

Mr. CANNON. They dispense with it at least for one term in the year?

Mr. HELVERING. I will say to the gentleman that this law, as I have introduced it, simply makes it compulsory on the judge to hold court at Salina——

Mr. CANNON. There is no business, practically, at Salina or Fort Scott, is there?

Mr. HELVERING. At Salina now, no; but we contemplate that there will be a great deal of business there on account of the way the western part of the State has settled up. The object of this bill is to take the court out as far west as we can, where we have a public building and a court room already established, and hold court in the western part of the State.

Mr. CANNON. Why do you not do away with the Fort Scott court?

Mr. WEBB. I suppose it has not been suggested, for one reason.

Mr. HELVERING. We could not do that.

Mr. CANNON. You could do it by legislation.

Mr. HELVERING. We could, but I do not think it would be just.

Mr. WEBB. If you will take up the map of Kansas, you will see the western part of the State is without court facilities.

Mr. CANNON. I am talking about the southern part of the State. Primarily these things are an excuse to get a public building. You have got a public building at Salina?

Mr. HELVERING. Not in this case.

Mr. CANNON. But primarily. In my home State there was a court held at Cairo pro forma and in Quincy pro forma, and I think in several other places, which resulted in public buildings. As I understand it, it is not necessary to have the jury at Fort Scott but once a year instead of twice.

Mr. HELVERING. I will say it is the practice to have a jury meet at the fall term, which is a longer term than the spring term, which is only, under the original law, one week in length.

The SPEAKER. Is there objection?

There was no objection.

The SPEAKER. This bill is on the Union Calendar.

Mr. WEBB. I ask unanimous consent, Mr. Speaker, that the bill be considered in the House as in Committee of the Whole.

The SPEAKER. The gentleman from North Carolina [Mr. WEBB] asks unanimous consent that the bill be considered in the House as in Committee of the Whole. Is there objection?

There was no objection.

Mr. MANN. Mr. Speaker, I move to amend by inserting, on page 1, line 4, after the word "thirty-six" the words "Statutes at Large," and then inclose the language beginning with "page 112" and ending with the word "Large" in parenthesis.

The SPEAKER. The Clerk will report the amendment.

The Clerk read as follows:

Insert, page 1, line 4, after the word "thirty-six," the words "Statutes at Large," and inclose the language "page 112, part 1, volume 36, Statutes at Large" in parenthesis.

The SPEAKER. The question is on agreeing to the amendment.

The amendment was agreed to.

The SPEAKER. The question is on agreeing to the committee amendment.

The committee amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. HELVERING, a motion to reconsider the vote whereby the bill was passed was laid on the table.

RELIEF OF INDIANS IN ARIZONA, NEW MEXICO, AND CALIFORNIA.

The next business on the Calendar for Unanimous Consent was the bill (S. 3391) to amend an act entitled "An act for the relief of Indians occupying railroad lands in Arizona, New Mexico, or California," approved March 4, 1913.

The title of the bill was read.

The SPEAKER. Is there objection?

There was no objection.

The SPEAKER. This bill is on the Union Calendar.

Mr. FERRIS. Mr. Speaker, I ask unanimous consent that the bill be considered in the House as in Committee of the Whole.

The SPEAKER. The gentleman from Oklahoma [Mr. FERRIS] asks unanimous consent that the bill be considered in the House as in Committee of the Whole. Is there objection?

There was no objection.

The SPEAKER. The Clerk will report the bill.

The Clerk read the bill, as follows:

Be it enacted, etc., That all of the provisions of an act entitled "An act for the relief of Indians occupying railroad lands in Arizona, New Mexico, or California," approved March 4, 1913, be, and the same are hereby, extended for a period of two years from and after the 4th day of March, 1916.

The SPEAKER. The question is on the third reading of the bill.

Mr. MANN. I would like to know what anybody expects to accomplish by this bill unless it is amended.

Mr. STEPHENS of Texas. It is the bill of the gentleman from New Mexico [Mr. HERNANDEZ], and he will explain it.

Mr. MANN. He did not draw the bill.

Mr. HERNANDEZ. Mr. Speaker, the House bill, H. R. 9131, of similar import, has been reported to the House. It is a similar bill.

Mr. MANN. Yes. I am familiar with both bills, but I call the attention of the gentleman from New Mexico to the fact that this only extends all the provisions of a certain act, which act limited the amount of land that could be disposed of under it, and that that land has all been disposed of already.

Mr. HERNANDEZ. My understanding is that there has been very little of the land that the original bill provided for allotted to these Indians.

Mr. MANN. But the Secretary of the Interior says that the records of the Indian Office show that the area applied for in Arizona exceeds the authorized area by possibly 2,000 acres, and he makes a similar statement practically in regard to New Mexico, where 16,000 acres have been applied for, while the limit in the act which it is proposed to extend is not to exceed 3,000 acres in Arizona and 1,000 acres in New Mexico and 5,000 acres in California. All that could be applied for under the original act has already been applied for, so that the extending the act would not accomplish what is desired. I offer an amendment to correct it.

The SPEAKER. The gentleman from Illinois offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. MANN: At the end of line 8 insert the following after the word "sixteen":

"*Provided*, That there may be exchanged under the provisions of the act named herein a total area not exceeding 10,000 acres in Arizona and 25,000 acres in New Mexico."

The SPEAKER. The question is on agreeing to the amendment.

The amendment was agreed to.

The SPEAKER. The question is on the third reading of the bill.

The bill was ordered to be read a third time, was read the third time, and passed.

On motion of Mr. HERNANDEZ, House bill No. 9131, of similar tenor, was laid on the table.

LAND FOR OMAHA INDIAN CEMETERY PURPOSES.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 6417) to provide for the selection by the Omaha Indians and the setting apart of reservation lands for tribal cemetery purposes.

The title of the bill was read.

The SPEAKER. Is there objection?

There was no objection.

The SPEAKER. This bill is on the Union Calendar.

Mr. STEPHENS of Texas. I ask unanimous consent, Mr. Speaker, that the bill be considered in the House as in Committee of the Whole.

The SPEAKER. The gentleman from Texas asks unanimous consent that the bill be considered in the House as in Committee of the Whole. Is there objection?

There was no objection.

The SPEAKER. The Clerk will report the bill.

The Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of the Interior be, and he is hereby, directed to reserve from sale, under the terms of the act of May 11, 1912 (37 Stat. L., 111), the following-described tracts of land within the Omaha Agency Reserve in Nebraska: The northwest quarter of the southwest quarter of the southwest quarter, formerly used by the Presbyterian missionary; and the northeast quarter of the southwest quarter of the southwest quarter, in addition to the 8 acres in the southeast quarter of the southwest quarter of the southwest quarter which have already been set apart; all in section 24, township 25 north, range 9 east, of the sixth principal meridian; said lands to be used by the Omaha Indians for cemetery purposes.

SEC. 2. That the Secretary of the Interior, in his discretion, may likewise cause to be set apart for Indian cemetery purposes unappropriated lands as follows: Not to exceed 10 acres other than herein described in the south half of the southwest quarter of section 24, township 25 north, range 9 east, and not to exceed 40 acres in two or more tracts in other parts of the reservation, said tracts to be selected by the Indians.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

AMENDMENT OF THE COPYRIGHT LAWS.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 8356) to amend sections 28 and 30 of an act entitled "An act to amend and consolidate the acts respecting copyright," approved March 4, 1909.

The title of the bill was read.

The SPEAKER pro tempore (Mr. CARAWAY). Is there objection?

There was no objection.

The SPEAKER pro tempore. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That sections 28 and 30 of the act entitled "An act to amend and consolidate the acts respecting copyright," approved March 4, 1909, be amended to read as follows:

"SEC. 28. That any person who willfully and for profit shall infringe any copyright in any work protected under the copyright laws of the United States, or who shall knowingly and willfully aid or abet such infringement, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punished by imprisonment for not exceeding one year or by a fine of not less than $100 nor more than $1,000, or both, in the discretion of the court: *Provided, however*, That nothing in this act shall be so construed as to prevent the performance of religious or secular works, such as oratories, cantatas, masses, or octavo choruses by public schools, church choirs, or vocal societies, rented, borrowed, or obtained from some public library, public school, church choir, school choir, or vocal society, provided the performance is given for charitable or educational purposes and not for profit.

"SEC. 30. That the importation into the United States of any article bearing a false notice of copyright when there is no existing copyright thereon in the United States, or of any infringing copies, matter, or material of any work copyrighted in the United States, is prohibited."

With a committee amendment, as follows:

On page 2, line 6, strike out the word "oratories" and insert the word "oratorios."

The SPEAKER pro tempore. The question is on agreeing to the committee amendment.

The committee amendment was agreed to.

The SPEAKER pro tempore. The question is on the engrossment and third reading of the bill as amended.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

CHARITON COUNTY, MO.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 11792) transferring Chariton County from the northern division of the eastern district to the western division of the western judicial district of Missouri.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the present consideration of the bill?

Mr. MANN. Let the bill be read, Mr. Speaker.

The SPEAKER pro tempore. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the county of Chariton, in the State of Missouri, be detached from the northern division of the eastern judicial district and attached to the western division of the western judicial district of the State of Missouri: *Provided*, That courts of the northern division of the eastern district shall retain and exercise jurisdiction over all causes and proceedings, civil and criminal, arising in or coming from said county and begun and pending at the date of taking effect of this act and of all criminal offenses committed in said county prior to the date this act goes into effect, the prosecution of which have not begun, as completely as if this act were not passed.

The SPEAKER pro tempore. Is there objection to the present consideration of the bill?

Mr. MANN. Reserving the right to object, in view of the very illuminating statement in the report, which is simply a recommendation that the bill do pass, I would like a little information on the subject, and on the form of the bill.

Before the gentleman makes a statement as to the form, I will say that the Judiciary Committee has fallen into the practice of reporting some bills, making slight changes in various judicial districts, and changes in the time of holding courts, by amending the sections of the Judicial Code in some cases, and in other cases by paying no attention at all to the section of the Judicial Code, but putting in an independent statute. It seems to me that the committee ought to have a uniform practice, one way or the other, and adhere to it. We passed the Judicial Code a few years ago and divided up the States into districts, naming the counties, and so forth; and for a time most of the amendments to that code were passed by amending the section, repeating it and making the change in the section, so that anyone who had the amended act would have the whole thing before him. Now bills are introduced, some of them doing it in that way and some in the other way. The Judiciary Committee ought to have a practice on the subject to which it conforms, and have all of these alike, so that anyone examining the statute can know what the custom is.

Mr. IGOE. Mr. Chairman, when this bill was considered that question was raised, as to whether it might not be the better practice to set out the statute as it would read when amended, and some of us were informed that on another occasion when that had been done the Senate changed the practice and reported back the bill in some such form as this.

Mr. MANN. The gentleman's information was incorrect. There has been no such case. There has been no case where the House passed a bill amending an original section, where the Senate struck that out and inserted a mere change of the law.

Mr. IGOE. As to the necessity for this, the gentleman from Missouri, my colleague [Mr. RUCKER], who drew the bill and introduced it, and who comes from Chariton County, will explain the necessity for it.

Mr. MANN. I suppose it was on account of the importance of it that the gentleman from Missouri, my friend [Mr. RUCKER], did not have any information contained in the report.

Mr. RUCKER. Mr. Chairman, I have no doubt the criticism of the gentleman from Illinois——

Mr. MANN. I am not making any criticism—far from it.

Mr. RUCKER. I have no doubt the remarks of the gentleman are well founded, and possibly it would be better to follow the suggestion he makes. The fact is, however, that this bill is in the form in which like bills have frequently passed the House.

In this particular matter the gentleman asks for information because the report does not fully disclose the reasons for the bill. I will say that Chariton County, Mo., in which I reside, was always in the western division of the western district of Missouri until a few years ago, when a certain judge presided over that court before whom the lawyers were so reluctant to try their cases that at their request and the request of the people I introduced a bill, in form like this one, by which Chariton County was transferred from the western to the eastern division of the State. Since that time a new occupant of the bench has appeared, before whom the lawyers are perfectly willing to try their cases, and for convenience they desire to be put back into the western district.

I will say that the county seat of Chariton County is on the main line of the Wabash Railway and close by Kansas City, so that it is very convenient to travel backward and forward, while the court in the eastern district is much more inconveniently located, requiring a longer time, a greater distance, and at least one, if not two, transfers on the railroad, with the incidental delay in waiting for trains, and so forth.

Mr. MANN. How long is it since we transferred this county to the eastern district?

Mr. RUCKER. I do not remember definitely, but I would say about 10 years.

Mr. MANN. And now we are transferring it back?

Mr. RUCKER. Yes.

Mr. MANN. How long does the gentleman think it will be before we transfer it back again?

Mr. RUCKER. Whenever we get another judge on the bench like the one who was there at the time it was transferred before.

Mr. MANN. That excuse hardly goes.

Mr. RUCKER. I have told the gentleman frankly why this county was taken out of the western district some years ago and why it is desirable to put it back now.

Mr. MANN. I know; but the gentleman says they took one county out of the district because that county did not happen to like the judge.

Mr. RUCKER. The gentleman well knows that proceedings of a different character were threatened here; and this is not the only county, but a number of other counties were taken out of the jurisdiction of a certain judge; and when he saw that something was being done that interfered with his jurisdiction, he retired from the bench, as he had the right to do under the law, and then the trouble disappeared.

Mr. MANN. As I understand it, if somebody in Missouri thinks the judge is looking cross-eyed at him, he wants his county moved into another district.

Mr. RUCKER. I will say to the gentleman that there can be no quarrel between him and me about that, because the judge I have reference to was appointed by President Cleveland and happened to come from this side of the House, the side I represent. We could not get along, and that is all there is about it. I will say to the gentleman that if he had been in the court and had seen what I have seen he would not have hesitated to do what has been done.

Mr. MANN. I can understand now why the report did not contain any information.

The SPEAKER pro tempore. Is there objection to the present consideration of the bill?

There was no objection.

The bill was ordered to be engrossed and read a third time, and was accordingly read the third time and passed.

On motion of Mr. RUCKER, a motion to reconsider the last vote was laid on the table.

DESERT-LAND ENTRIES IN RIVERSIDE COUNTY, CAL.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 11081) to exempt from cancellation certain desert-land entries in Riverside County, Cal.

Mr. FERRIS. Mr. Speaker, the corresponding Senate bill was passed Saturday by unanimous consent; and I ask unanimous consent that this bill lie on the table.

Mr. MANN. This House bill, the Raker bill, has already been laid on the table.

Mr. FERRIS. Yes; it is unnecessary to have it done again.

BRIDGE ACROSS MISSOURI RIVER, YANKTON COUNTY, N. DAK.

The next business on the Calendar for Unanimous Consent was the bill H. R. 10836, granting the consent of Congress to the Yankton County Bridge Co., a corporation, to construct a bridge across the Missouri River at a point between Yankton County, S. Dak., and Cedar County, Nebr.

Mr. DILLON. Mr. Speaker, I ask unanimous consent that the bill S. 4190, a bill of the same tenor, be substituted for the House bill.

The SPEAKER pro tempore. Is there objection to considering the Senate bill in lieu of the House bill? [After a pause.] The Chair hears none.

The Clerk read the Senate bill, as follows:

An act (S. 4190) authorizing the Yankton County Bridge Co., a corporation, to construct and maintain a bridge or bridges and approaches thereto across the Missouri River at a point between Yankton County, S. Dak., and Cedar County, Nebr.

Be it enacted, etc., That the Yankton County Bridge Co., a corporation organized under the laws of the State of South Dakota, its successors and assigns, be, and they are hereby, authorized to construct, maintain, and operate a bridge or bridges and approaches thereto across the Missouri River at a point suitable to the interest of navigation, in section 13, township 93 north, of range 56 west, Yankton County, S. Dak., to the shore opposite thereto, at a point in section 11, township 33 north, range 1 west, Cedar County, Nebr., in accordance with the provisions of an act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906.

SEC. 2. That the right to alter, amend, or repeal this act is hereby expressly reserved.

The bill was ordered to be read the third time, was read the third time, and passed.

On motion of Mr. DILLON, a motion to reconsider the vote whereby the bill was passed was laid on the table.

The bill H. R. 10836 was laid on the table.

BRIDGE ACROSS MISSOURI RIVER, MONT.

The next business on the Calendar for Unanimous Consent was the bill H. R. 10750, permitting the Mondak Bridge Co. to construct, maintain, and operate a bridge across the Missouri River, in the State of Montana.

The SPEAKER. Is there objection to the present consideration of the bill?

There was no objection.

The Clerk read the bill, as follows:

Be it enacted, etc., That the consent of Congress is hereby granted to the Mondak Bridge Co., a corporation organized under the laws of the State of Montana, and its successors and assigns, to construct, maintain, and operate a bridge and approaches thereto across the Missouri River at a point suitable to the interests of navigation at or near sections 14 and 15 township 26 north, range 59 east, Montana principal meridian, in the counties of Sheridan and Richland, in the State of Montana, in accordance with the provisions of the act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906.

SEC. 2. That the right to alter, amend, or repeal this act is hereby expressly reserved.

The following committee amendment was read and agreed to:

Line 1, page 2, after the word "Montana," insert the following: "at least one-half mile distant from the existing bridge of the Great Northern Railway Co. in that vicinity.

The bill as amended was ordered to be engrossed and read the third time, was read the third time, and passed.

On motion of Mr. DILLON, a motion to reconsider the vote whereby the bill was passed was laid on the table.

AMENDING SECTION 17 OF THE BANKRUPTCY LAW.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 12195) to amend section 17 of the United States bankruptcy law of July 1, 1898, and amendments thereto of February 5, 1903.

The SPEAKER. Is there objection?

Mr. MANN. Let the bill be read.

The Clerk read the bill, as follows:

Be it enacted, etc., That section 17 of an act entitled "An act to establish a uniform system of bankruptcy throughout the United States," approved July 1, 1898, as amended February 5, 1903, be amended so as hereafter to read as follows:

"SEC. 17. Debts not affected by a discharge.—A discharge in bankruptcy shall release a bankrupt from all of his provable debts, except such as (first) are due as a tax levied by the United States, the State, county, district, or municipality in which he resides; (second) are liabilities for obtaining property by false pretenses or false representations, or for willful and malicious injuries to the person or property of another, or for alimony due or to become due, or for maintenance or support of wife or child, or for seduction of an unmarried female, or for breach of promise of marriage accompanied by seduction, or for criminal conversation; (third) have not been duly scheduled in time for proof and allowance, with the name of the creditor, if known to the bankrupt, unless such creditor had notice or actual knowledge of the proceedings in bankruptcy; or (fourth) were created by his fraud, embezzlement, misappropriation, or defalcation while acting as an officer or in any fiduciary capacity."

The SPEAKER. Is there objection?

Mr. MANN. Reserving the right to object, I would like first to ask in reference to a matter of form which is not, perhaps, important. I notice that the gentleman introducing the bill changes "one" to "first," "two" to "second," "three" to "third," and "four" to "fourth." It is not quite the form of the bankruptcy act. I want to ask out of curiosity why the change was made?

Mr. DANFORTH. I will say that that was against the wishes of the introducer of the bill. The copy was changed twice so as to make it accord with the original section, but the Government Printing Office insisted on substituting the words "first," "second," and so forth.

Mr. MANN. I think it is about time that the Public Printer had some one down there who knew how to follow copy. He has frequently and impudently made changes from the copy.

Mr. DANFORTH. I think the rules that the Printing Office prescribe require these words to be used.

Mr. MANN. The other day we sent to the Printing Office the record of some pairs which did not in the slightest degree concern the Public Printer in any way that I know of. He did not like the form in which the pairs were put and so he changed them arouud—thought it was none of our business—and fixed up the pairs the way he wanted them, giving no information. He deliberately cut it out. He has done that a number of times lately. Here is a bill introduced amending a section of a long law, drawn on certain lines. The original act might have said "first" instead of "one," but it did not. All through it is divided up into one, two, three, four, five, and six. The Public Printer thought "first" would look better than "one," so he changed it; he thought "second" would look better than "two," so he changed that. It is not possible to have the Public Printer print an amendment to a law following the language of the original law. I think it is about time it was stopped.

The SPEAKER. Is there objection. [After a pause.] The Chair hears none.

The bill was ordered to be engrossed and read the third time, was read the third time, and passed.

On motion of Mr. DANFORTH, a motion to reconsider the vote whereby the bill was passed was laid on the table.

LEASING OF IRRIGABLE ARID LANDS.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 6782) providing for the leasing of arid lands which are irrigable belonging to Indian allottees and fixing the maximum time for which such leases may run.

The Clerk read the title to the bill.

Mr. STEPHENS of Texas. Mr. Speaker, I ask unanimous consent that that bill be passed without prejudice.

The SPEAKER. The gentleman from Texas asks unanimous consent that that bill be passed without prejudice. Is there objection?

There was no objection.

UNITED STATES COURT AT AIKEN, S. C.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 9819) to amend the act of March 3, 1915, providing the time for the holding of the United States court at Aiken, S. C.

The SPEAKER. Is there objection?

Mr. MANN. Reserving the right to object, let the bill be reported.

The Clerk read the bill, as follows:

Be it enacted, etc., That section 5 of the act of March 3, 1915, entitled "An act to provide for the appointment of a district judge, district attorney, and marshal for the western district of South Carolina, and for other purposes," be, and the same is hereby, amended to read as follows:

"SEC. 5. That terms of the district court for the eastern district shall be held at Charleston on the first Tuesdays in June and December; at Columbia on the third Tuesday in January and the first Tuesday in November; at Florence on the first Tuesday in March; and at Aiken on the fourth Tuesdays in March and October."

The SPEAKER. Is there objection?

Mr. MANN. Reserving the right to object, I assume that this bill is possibly to accommodate or, if not to accommodate, to accord with the recommendation of Judge Johnson.

Mr. WEBB. No; I can not say that it is.

Mr. MANN. If it is not in accord with his wishes, it has not the chance of a snow flake.

Mr. WEBB. I will say to the gentleman that the United States court and the State courts are held in the State courthouse in South Carolina. The holding of the United States court conflicts with the holding of the State courts, and in order to relieve the conflict and permit both authorities to hold their courts regularly this bill is recommended.

Mr. BYRNES of South Carolina. Mr. Speaker, will the gentleman yield?

Mr. WEBB. Certainly.

Mr. BYRNES of South Carolina. I can say to the gentleman from Illinois that this courthouse is not in the district in which Judge Johnson is presiding judge, but is in the district in which Judge Smith presides and is recommended by him. The bill is introduced for the purpose stated by the gentleman from North Carolina [Mr. WEBB].

Mr. WEBB. There is no other place for holding court in Aiken except the State courthouse.

Mr. MANN. This is amending the act of last year which created an additional judge down there?

Mr. BYRNES of South Carolina. Yes.

Mr. MANN. Did the act do any more than that?

Mr. BYRNES of South Carolina. Yes; it fixed the time for holding the courts at all of the points in the State. Through an error a date was fixed which conflicts with the holding of the State court at this point. For that reason a change is sought to be made in the time for holding the court at Aiken.

Mr. MANN. Mr. Speaker, I am rather slow at getting at what I want to say, but I arose simply to say that one of the ablest Members this House ever had, in my opinion, was appointed United States district judge in the State of South Carolina, Mr. Joseph T. Johnson, and I will take my hat off to him at any time, whether in the House or on the bench. [Applause.]

The SPEAKER. Is there objection?

There was no objection.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time. was read the third time, and passed.

LOCATING AND MARKING CONFEDERATE GRAVES.

The next business on the Calendar for Unanimous Consent was House joint resolution 171, to continue in effect the provisions of the act of March 9, 1906.

The Clerk read the joint resolution, as follows:

Resolved, etc., That the act entitled "An act to provide for the appropriate marking of the graves of the soldiers and sailors of the Confederate army and navy who died in northern prisons and were buried near the prisons where they died, and for other purposes," approved March 9, 1906; and continued in full force and effect for two years by joint resolution approved February 26, 1908; and for the additional period of one year by a joint resolution approved February 25, 1910; and for the additional period of two years by a joint resolution approved December 23, 1910; and for the further additional period of two years by a joint resolution approved March 14, 1914, be, and the same is hereby, continued in full force and effect for two years from the expiration of the present continuation, March 13, 1916; and the unexpended balance of the appropriation made by said act of March 9, 1906, is continued and made applicable for expenditure during the additional period of two years herein provided for: *Provided*, That the triplicate registers provided for in the original act shall include the time and place of death of each Confederate soldier prisoner of war: *Provided further*, That the compensation of the commissioner shall be fixed by the Secretary of War.

The SPEAKER. Is there objection?

Mr. STAFFORD. Mr. Speaker, reserving the right to object, I do not think there is a Member on either side of the aisle who is opposed to the worthy purpose covered by this resolution, but I do think there should be some evidence of a desire to terminate this work. I would like to inquire of the gentleman from Virginia [Mr. HAY] whether he thinks the work will be completed when the present unexpended balance of $40,000 is exhausted, or whether there will be this biennial call upon Congress to continue reviving the work of this commission and providing for additional funds when we are long out of Congress?

Mr. HAY. Mr. Speaker, it is impossible for me to answer that question, as I do not know how much more work has to be done. The present incumbent of this office has filed a very full report showing what has been done under his administration, and he says in the last part of that report that it is not possible at this time to definitely forecast the time required to complete the work, but that due diligence is being exercised to do so in the shortest time possible.

Mr. STAFFORD. Perhaps he meant by that that he might surprise Congress by completing the work within the two-year period?

Mr. HAY. Yes. I will say that the present commissioner is a gentleman of great industry and has discharged the duties of his office with great ability.

Mr. STAFFORD. The recent report shows that he has been very assiduous in the work, but I assume that the gentleman from Virginia is in sympathy with this work being concluded at some time?

Mr. HAY. Oh, certainly.

Mr. STAFFORD. We would all like to see the work brought to a close, and there is no reason why it should not be brought to a close.

Mr. HAY. Yes; I should think in two years it ought to be completed.

The SPEAKER. Is there objection?

There was no objection.

The SPEAKER. This resolution is on the Union Calendar.

Mr. HAY. Mr. Speaker, I ask unanimous consent that it may be considered in the House as in Committee of the Whole.

The SPEAKER. Is there objection?

There was no objection.

The SPEAKER. The question is on the engrossment and third reading of the House joint resolution.

The House joint resolution was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. HAY, a motion to reconsider the vote by which the joint resolution was passed was laid on the table.

ALSEA INDIANS, SILETZ RESERVATION.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 10307) authorizing the Secretary of the Interior to pay and to distribute the balance now in the Treasury to the credit of the Alsea and other Indians on the Siletz Reservation.

The Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of the Interior is hereby authorized, in his discretion, to pay to the heirs of any deceased person enrolled as living on the Siletz Reservation at the time of the ratification of the agreement with the Alsea and other Indians on the Siletz Reservation on August 15, 1894 (28 Stat. L., p. 324), the pro rata share of such deceased person in the fund of $100,000 set aside as a permanent fund by article 2 of the agreement.

The Secretary of the Interior is also hereby authorized to pay per capita to living members of the tribe any or all of any balance remaining from the $42,600 set aside by article 2 of the agreement for paying $75 each to "males of 21 years and females of 18 years or more, and all married persons, whether they shall be of age or not." The Secretary is also authorized, in his discretion, to expend all or any part of said balance for the care and support of aged, infirm, or destitute members enrolled under the provisions of the agreement.

The SPEAKER. Is there objection?

Mr. STAFFORD. Mr. Speaker, reserving the right to object, as I understand it, there are about 28 persons to whom this fund will be available.

Mr. HAWLEY. In the distribution of the first part of it, the balance of the $100,000.

Mr. STAFFORD. And there are some $42,600 now undistributed?

Mr. HAWLEY. Of the $42,000, the sum in the second part of the bill, there is about $4,600 yet undistributed, with some accrued interest.

Mr. STAFFORD. What I wish to inquire especially about is this: I could not get a clear idea from reading the report how much per capita will be paid to these heirs per stirpes.

Mr. HAWLEY. As I understand from the department's statement, the same amount as would have been paid to the original persons had they lived. Each heir will take that which would have been paid to the immediate ancestor.

Mr. STAFFORD. Where is there any such direction in the bill under consideration, that they shall receive no more than what their original ancestor would have taken?

Mr. HAWLEY. I can not answer that, except that the bill was prepared by the department in order to enable them to carry out that purpose. They have been doing this work before—distributing the money.

Mr. STAFFORD. To the heirs of the original persons entitled to it?

Mr. HAWLEY. Yes; and as they state in their report, they reread the terms of the agreement and concluded that it did not warrant them in doing that—about three years ago—and so they ceased the distribution that had been formerly made, holding it up awaiting this legislation to enable them to go on with the work as it had been heretofore carried on.

Mr. STAFFORD. Can the gentleman give estimate as to the amount of money that will be available for payment to these heirs?

Mr. HAWLEY. As I remember the report of the Commissioner of Indian Affairs, which I do not have before me at this time, there would be a few thousand dollars, I have forgotten how many but not a very large sum.

Mr. STAFFORD. Well, it says here in the report payment has been made to the heirs of all but 4 deceased persons, and in addition to those 4 persons there are now 24 living who are entitled to their pro rata share, making in all some 28. I was curious to find out what would be the basis of apportionment to those who are heirs, whether they would receive a larger percentage than the original ancestor would be entitled to.

Mr. HAWLEY. Well, I understood the practice of the department was to pay the heirs what their ancestors would have received.

Mr. STAFFORD. Of course, there is nothing here in the bill making such a limitation. I do not think it would be fair to pay the heirs a greater pro rata than what the ancestors were originally entitled to.

Mr. MANN. Why not? They usually treat an Indian as an Indian; I do not know what they do here, where every one is born it comes in as though he was a grandfather.

Mr. STAFFORD. These descendants are not necessarily members of the tribe.

Mr. HAWLEY. Oh, yes.

Mr. STAFFORD. Oh, no. They do not have to be members of the tribe. The original allottee did not receive the fund, because he was perhaps a shiftless person or noncompetent or for some other reason the money was held up. There are only 24 persons who have received the fund and there are 4 other shares of deceased persons whose heirs would be entitled to a share in the proceeds of this fund under this bill, and I am curious to know whether they are going to receive more or only the same portion as the original allotment.

Mr. HAWLEY. My understanding is that the 24 who did not receive the amount when it was originally distributed will receive their full share, and the heirs of the others will receive the part that their ancestors would have received.

Mr. STAFFORD. Would there be any balance of this $48,000 remaining after it is divided into 28 equal parts?

Mr. HAWLEY. Of the $100,000?

Mr. STAFFORD. There is only $42,000.

Mr. HAWLEY. That is the second part of the bill and in the last paragraph.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none. This bill is on the Union Calendar.

Mr. HAWLEY. Mr. Speaker, I ask unanimous consent to consider the bill in the House as in the Committee of the Whole House on the state of the Union.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none.

The bill was ordered to be engrossed and read the third time, was read the third time, and passed.

On motion of Mr. HAWLEY, a motion to reconsider the vote by which the bill was passed was laid on the table.

ENLARGED HOMESTEADS.

The next business in order on the Calendar for Unanimous Consent was the bill (H. R. 8654) to amend an act entitled "An act to provide for an enlarged homestead."

The Clerk read as follows:

Be it enacted, etc., That section 3 of the act entitled "An act to provide for an enlarged homestead," approved February 19, 1909, and of an act entitled "An act to provide for an enlarged homstead," approved June 17, 1910, as amended by an act approved February 11, 1913, and as amended by an act approved March 3, 1915, be, and the same is hereby, amended to read as follows:

"SEC. 3. That any person who has made or shall make homestead entry of the character herein described and who has not submitted final proof thereon, or who, having submitted final proof, still owns and occupies the land thus entered, shall have the right to enter public lands, subject to the provisions of this act, contiguous to his first entry, which shall not, together with the original entry, exceed 320 acres: *Provided*, That if there be no vacant land of this character contiguous to his original entry such person may enter as such additional entry other land situated in the land district where such former entry was made: *Provided*, That the land originally entered and that covered by the additional entry shall have first been designated as subject to this act, as provided by section 1 hereof."

The committee amendment was read, as follows:

Strike out all the matter just read and insert the following:

"That the act entitled 'An act to provide for an enlarged homestead,' approved February 19, 1909, be amended by adding thereto an additional section to be known as section 7:

"'SEC. 7. That any person who has made or shall make entry of less than 320 acres of lands of the character herein described, and who shall have submitted final proof thereon, shall have the right to enter public lands subject to the provisions of this act, not contiguous to his first entry, which shall not with the original entry exceed 320 acres: *Provided*, That the land originally entered and that covered by the additional entry shall first have been designated as subject to this act as provided by section 1 thereof: *Provided further*, That in no case shall patent issue for the land covered by such additional entry until the person making same shall have actually and in conformity with the homestead laws resided upon and cultivated the lands so additionally entered, and otherwise complied with such laws: *And provided further*, That this section shall not be construed as affecting any rights as to location of soldiers' additional homesteads under section 2306 of the Revised Statutes.'"

The SPEAKER. Is there objection?

Mr. STAFFORD. Mr. Speaker, reserving the right to object, I understand this bill goes farther than any bill passed by this House, as the additional land to which the former homesteader could make entry under former bills was to within 30 miles of his homestead, but this gives the privilege to go anywhere and take up an additional amount of land to make up his quota of 320 acres.

Mr. TIMBERLAKE. I will say he is restricted, however, to the character of land contained in his first application. This amendment was a recommendation by the Department of the Interior.

Mr. STAFFORD. But he is not restricted to any local district. He may go anywhere, even if he is no longer living on the land, even if he has sold his homestead right; he can make additional entry for an amount of land to equal 320 acres.

Mr. TIMBERLAKE. That is only in the case where 320 would be necessary for a homestead entry. There is a reason for that. They have undergone all the hardships incident to that country, and just when the time arrives when he could be recompensed for the work he had done he was barred by reason of the fact he had made final proof, and he sees his neighbor, who had not undergone the hardships, take an adjacent homestead giving him 320 acres.

Mr. STAFFORD. He had a preferential choice and he decided on land on which the entire homestead was sufficient to maintain him. He went ahead and entered and improved the property. Just because we passed an enlarged homestead law, because the remaining land was not sufficient to sustain a family, you are going to give this man, who may have abandoned the farm a year ago, the right to locate somewhere else and take up a second entry.

Mr. TIMBERLAKE. I would like to say to the gentleman that applied to the person who is given the benefits of this act. Now, three or four years later a settler settles in this same locality; the Government comes on and says that it requires 320 acres in order to make a comfortable living. Now, that man comes in there three or four years later than this man and he is given the benefit of the 320 acres.

Mr. STAFFORD. Those were cases where the man had not up to that time made final proof.

Mr. TIMBERLAKE. That is true.

Mr. STAFFORD. And, of course, granting to everyone who was then going to enter upon land the additional right to take up land of 320 acres, Congress was naturally influenced by the equitable side to extend it to those who had already entered but had not made final proof. But here you are giving a second homestead entry to persons who already may have abandoned their homesteads, a departure entirely from the policy of Congress which can not be justified, in my opinion.

Mr. TIMBERLAKE. Mr. Chairman, it seems to me there is every justification to give this to those people who went out to that country in an early day. It had not been said to him that

160 acres was ample for him to maintain himself and family, and they had gone out there presuming that they might be able to do so, and they underwent a hardship for five or six years on that 160 acres, and very nearly starved to death in many cases. They were required to make proof in seven years, which prevented them from getting the benefit of the 320 acres which Congress decided afterwards was necessary for a living on that character of public land, and the consequence is that they really received no benefit from this homestead entry. Now, the provisions of this bill require that they comply with the homestead law. It does not give it to them in fee. They have to go and cultivate it and reside on it for three years. And it does seem to me it is giving consideration to those who went to this country at an early day and underwent all the hardships of that region, and there is no justification, in my mind, for barring them.

Mr. STAFFORD. Does not the gentleman think it is giving them a second homestead entry to the land?

Mr. TIMBERLAKE. It is a second homestead entry, but it simply equalizes them with their neighbors who came in later and had not undergone all the hardships of that country that the earlier settler had undergone.

Mr. STAFFORD. This could not be used in conjunction with a homestead entry.

Mr. MANN. Under this they have to live on the new land.

Mr. STAFFORD. They may have sold their old entry, and this gives them a second homestead entry.

Mr. MANN. On this class of land.

Mr. TIMBERLAKE. Possibly some of them have sold it and the title has parted from them for the reason that they absolutely exhausted all they could get out of the land to keep their families and educate their children.

Mr. STAFFORD. The gentleman is taking an inconsistent position. He claims that formerly, under the original law, before the enlarged homestead entry, a man could not make a living on 160 acres of that character of land. Now, he has abandoned that land, and you are going to give him the right to enter upon a remnant of the 320 acres, the difference between his original entry and the 320, where it is acknowledged he could not make a living, just merely for the purpose, maybe, to get title to it and sell it.

Mr. MANN. Is not this the situation: We have given to those who are now on the land, and have their homesteads there, the right to 160 additional acres of the same class, without their even going to live upon it at all; that we will make them a present of it?

Mr. STAFFORD. Subject to the passage of the enlarged homestead entry.

Mr. MANN. Now, this proposition proposes to give those who did make a homestead and lost it, perhaps, or I might say sold it—but I take it that most of them practically lost it—a chance to try it over on the same class of land.

Mr. STAFFORD. On a smaller fraction.

Mr. MANN. Not a smaller fraction—the same fraction. What they could take before was 160 acres, and this would give them a chance to take a new 160 acres. Can we not just as well afford to take care of the fellow who lost his place as one who kept it?

Mr. STAFFORD. Are we not taking care of the fellow who has got an advantage in his original homestead entry of 160 acres, and now wishes to go and exploit another 160 acres?

Mr. MANN. I take it that in most cases they have lost it.

Mr. TIMBERLAKE. In 99 cases out of 100.

Mr. STAFFORD. This is not a case where a man goes and takes a piece of ground out of which he makes profit.

Mr. FERRIS. These must be investigated by the Geological Survey, and it must be found to be nonirrigated, nonmineral, and notimbered.

Mr. STAFFORD. And 320 acres are required and, therefore, you propose to give him 160——

Mr. FERRIS. The gentleman will recall that on our way out through The Needles there was land similiar to this. Suppose it did exist, and suppose he did worry along with it and get title to the first 160 acres, and then came along under the act of 1899, which gave a man a right to 320 acres, that amount is not too much.

Mr. STAFFORD. I would not object to granting to the man who is still living on his land the right to an additional 160 acres, provided it was tributary, but to grant him an additional right, no matter where the location is to be, I think is to adopt a policy that should not be approved by this House.

Mr. FERRIS. I wish to say that the gentleman from Colorado [Mr. TIMBERLAKE] has been in the Land Office himself as receiver, and his judgment is sound on that, and he is right about it. It is not too much to give a man an additional entry of 160 acres that already has 160 acres of this nonirrigable, nontimbered land.

If it was irrigable land, if it was timberland, if it was mineral land, I would be in agreement with the gentleman—and he and I agree about most things as to that kind of land—but Congress has got to display a little liberality toward those people, you know.

Mr. STAFFORD. Does not the gentleman think Congress has been displaying a considerable amount of liberality toward those persons who are on the land? I do not object to affording further rights to the man who is on the land, but to the man who has sold his entry I do not think we should do it.

Mr. FERRIS. They are constrained by the direst circumstances sometimes to part with their 160 acres. They may have only a team of ponies, worth about $25 apiece, and a barrel of water and a shanty, and they may be trying to raise a family and a little broom corn and a little sod crop, and they do not have much music while they eat, I can assure the gentleman.

Mr. STAFFORD. I will withhold my objection, Mr. Speaker, in response to the request of the gentleman from Colorado [Mr. TIMBERLAKE].

Mr. TIMBERLAKE. Mr. Speaker, I want to say that this is in line with the acts of Congress all the way through. The act of 1889 gave an additional homestead to the men who had filed on an earlier homestead, where it was deemed at first that 80 acres would be enough to keep a family. They went out to this territory, where it was designated that 320 acres were necessary to make a homestead, and the department allows them to take up, in all, 320 acres.

Mr. STAFFORD. Mr. Speaker, will the gentleman be willing to pass this over until next week without prejudice, when I can make further inquiry along the line of the gentleman's remarks?

Mr. TIMBERLAKE. Yes. I ask unanimous consent, Mr. Speaker, that we pass over this bill without prejudice.

The SPEAKER. The gentleman from Colorado [Mr. TIMBERLAKE] asks unanimous consent that the bill be passed over without prejudice. Is there objection?

There was no objection.

The SPEAKER. The Clerk will report the next bill.

ENLISTED MEN OF THE NAVY AND MARINE CORPS IN SERVICE OF THE REPUBLIC OF HAITI.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 12835) to authorize and empower officers and enlisted men of the Navy and Marine Corps to serve under the Government of the Republic of Haiti, and for other purposes.

The title of the bill was read.

Mr. MANN. Mr. Speaker, what became of Calendar No. 82?

Mr. STAFFORD. That was passed over by the Clerk without prejudice. [Laughter.] That is House Calendar 66, known as the Gordon bill.

The SPEAKER. The Clerk will report it.

REPEAL OF SECTION 1342, REVISED STATUTES.

The Clerk read the title of the bill, as follows:

A bill (H. R. 7619) to repeal section 3 of section 1342 of the Revised Statutes of the United States, enacted July 27, 1892.

The SPEAKER. Is there objection?

Mr. MANN. Reserving the right to object, Mr. Speaker, is this another star print? I do not recognize the bill from the copy that I have as read by the Clerk.

The SPEAKER. Is this the star print of this bill or not? The Chair understands that this is the original print.

Mr. MANN. The Clerk did not read the copy that I have in my hand. I ask that it be read over again.

The SPEAKER. The Clerk will again report the bill.

The Clerk read as follows:

A bill (H. R. 7619) to repeal section 3 of section 1342 of the Revised Statutes of the United States, enacted July 27, 1892.

Be it enacted, etc., That section 3 of section 1342 of the Revised Statutes of the United States be, and the same hereby is, repealed.

SEC. 2. That this act shall take effect and be in force from and after its passage, and shall apply to all pending prosecutions and existing causes of prosecutions.

The SPEAKER. Is there objection.

Mr. GORDON. I will ask unanimous consent to pass the measure without prejudice.

The SPEAKER. The gentleman from Ohio asks unanimous consent to pass the bill without prejudice. Is there objection?

There was no objection.

NAVAL AND MARINE OFFICERS IN HAITI.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 12835) to authorize and empower officers and enlisted men of the Navy and Marine Corps to serve under

the Government of the Republic of Haiti, and for other purposes.

The Clerk read the title of the bill.

Mr. MANN. Mr. Speaker, the gentleman from Tennessee [Mr. PADGETT] is out of the hall at present on committee work. I told him that I was not willing to let this bill be passed to-day. I ask unanimous consent that it may be passed over without prejudice.

The SPEAKER. The gentleman from Illinois [Mr. MANN] asks unanimous consent to pass the bill without prejudice. Is there objection?

There was no objection.

BRIDGE ACROSS WABASH RIVER, SILVERWOOD, IND.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 13006) to authorize the reconstruction of an existing bridge across the Wabash River at Silverwood, in the State of Indiana, and the maintenance and operation of the bridge so reconstructed.

The Clerk read the title of the bill.

The SPEAKER. Is there objection?

There was no objection.

The SPEAKER. The Clerk will report the bill.

The bill was read as follows:

Be it enacted, etc., That the Toledo, St. Louis & Western Railroad Co. and Walter L. Ross, its receiver, their successors or assigns, be, and they are hereby, authorized to reconstruct the bridge of said company and operate the same across the Wabash River at or near Silverwood, Ind., at a point suitable to the interests of navigation, on the line of the existing bridge of said company, in accordance with the provisions of the act entitled, "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906.

SEC. 2. That the right to alter, amend, or repeal this act is hereby expressly reserved.

With the following committee amendment:

Page 1, line 6, insert after the word "and" the words "maintain and."

The committee amendment was agreed to.

The bill as amended was ordered to be engrossed and read a third time, and was accordingly read the third time and passed.

On motion of Mr. CULLOP, a motion to reconsider the last vote was laid on the table.

COMMERCE.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 308) to amend the act to regulate commerce, as amended, and for other purposes.

The Clerk read the title of the bill.

Mr. ADAMSON. I understand the gentleman from Illinois [Mr. MANN] does not think we ought to consider this bill and the following bill and joint resolution to-day?

Mr. MANN. Yes.

Mr. ADAMSON. Then I ask unanimous consent that Unanimous Consent Calendar Nos. 85, 86, and 87 go over without prejudice until the next unanimous-consent day.

The SPEAKER. The gentleman from Georgia asks unanimous consent that Unanimous Consent Calendar Nos. 85, 86, and 87 be passed without prejudice. Is there objection?

There was no objection.

HOMESTEAD LAW IN ALASKA.

The next business on the Calendar for Unanimous Consent was the bill (H. R. 228) to amend the United States homestead law in its application to Alaska, and for other purposes.

The Clerk read the title of the bill.

The SPEAKER. Is there objection?

Mr. STAFFORD. Mr. Speaker, let the bill be reported.

The SPEAKER. The Clerk will report the bill.

The bill was read, as follows:

Be it enacted, etc., That every person who is qualified under existing laws to make homestead entry of the public lands of the United States who has settled upon or who shall hereafter settle upon any of the public lands of the United States situated in the District of Alaska, whether surveyed or unsurveyed, with the intention of claiming the same under the homestead laws, shall, subject to the provisions and limitations hereof, be entitled to enter 160 acres or a less quantity of unappropriated public land in said District of Alaska, and no more.

SEC. 2. Additional homestead entries authorized in Alaska: That every person who is the head of a family, or who has arrived at the age of 21 years, and is a citizen of the United States, or who has filed his or her declaration of intention to become such, as required by the naturalization laws, shall be and is hereby authorized to enter one quarter section or a less quantity of unappropriated public in the Territory of Alaska, under the provisions of the homestead laws of the United States, and the fact that such person has prior to such entry in Alaska entered or acquired title to a homestead entry under the homestead laws of the United States in any other State or Territory shall not be held to bar such additional entry in Alaska, and the Secretary of the Interior shall make such additional rules and regulations as may be necessary to carry out the provisions of this section: *Provided*, That said additional homestead may be located and entered upon surveyed or unsurveyed lands, and when so entered upon unsurveyed lands shall be so entered under the laws now in force in Alaska in relation to the entry of unsurveyed lands, except as modified by this act: *And provided further*, That this section shall apply to any person in Alaska who has in good faith entered upon said land for homestead entry prior to the passage and approval of this act.

With the following committee amendment:

Page 3, after line 2, insert the following as a new section:

"SEC. 3. That there shall be excepted from homestead settlement and entry under this act the lands in Annette and Pribilof Islands, the islands leased or occupied for the propagation of foxes, and such other lands as have been or may be reserved or withdrawn from settlement or entry."

The SPEAKER. Is there objection?

Mr. MANN. Reserving the right to object, I will ask the gentleman, have they got tired of 320 acres up there in Alaska?

Mr. FERRIS. Where the expense of clearing is great and the terms of the law are mandatory, as to cultivating a certain area, these provisions have proven burdensome to the people up there, and the Delegate from Alaska and numerous citizens who have written to the committee urge that the limit be cut down.

Mr. MANN. Is it mandatory on them to take 320 acres under the existing law?

Mr. FERRIS. No; but they do take it under the law, and they have to cultivate a certain proportion, I believe one-eighth of it, the first year and some additional each year.

Mr. MANN. But a man who protests against his right to take more than 160 acres may confine himself to the privilege of taking 160 acres. He may take more, but he is not compelled to.

Mr. FERRIS. Perhaps what the gentleman says may be true, although it is handled in this way: The Geological Survey goes out and makes an examination of certain lands and designates them as entitled to be entered under the 320-acre or enlarged homestead law or under the 160-acre homestead law. Now, if a man made application to enter 160 acres, in lands that were designated as dry-farming lands, or entitled to be entered under the 320-acre law, I am not sure that his application would be received.

Mr. MANN. I am sure that there is no law of the United States that requires a man to take a fixed quantity of land. He is permitted to do it, but he may take less if it is divided, and there is that division.

I am very certain that we have not learned all the reasons for the passage of this bill, because when people protest that the law permits them to take too much and they have the right to take less and they want the law changed, you have got to show me. [Laughter.]

Mr. FERRIS. I will yield to the gentleman from Alaska, who is more familiar with it. I know of no reason why the area should not be reduced if they desire it up there.

Mr. MONDELL. Before the gentleman does that will he yield to me for a question to refresh my memory. Have we extended to Alaska the limited homestead law, the law allowing a limited patent on mineral lands?

Mr. FERRIS. I think so. The gentleman from Alaska will probably know better than I about local laws up there.

Mr. WICKERSHAM. We have a special law in Alaska allowing the homesteader to take 320 acres.

Mr. MONDELL. That is not the question. Have we extended to Alaska what is known as the limited-title law, under which a homesteader may take lands containing certain minerals, secure a patent, reserving to the Government the minerals?

Mr. WICKERSHAM. I do not know.

Mr. FERRIS. We passed a law in 1898 extending the homestead law and in March, 1903, an act providing that the homestead law shall be applicable up there, and now the gentleman asks if we provided for a limited homestead, a surface patent.

Mr. MONDELL. What is erroneously called a surface homestead—was that law extended to Alaska?

Mr. FERRIS. I am not sure about that.

Mr. LENROOT. It is my recollection that in the coal-leasing law we did, but I am not certain about it.

Mr. MONDELL. Let me suggest this to the gentleman, that as to the second section, which seems to me to be the only part of the bill that is important, because the gentleman from Illinois has called attention to the fact that there is no necessity of reducing the area of a homestead if the object be to relieve the homesteader of the necessity of more clearing and cultivation, he can comply with that, because he can meet that situation himself. That matter is entirely under his control. But the second section contains a provision which, I think, is a very wise one, under which a former entry in the United States is not a bar to a homestead in Alaska. That could be provided for in a bill of two lines, and that is important. But the difficulty of the bill, as I see it, is that reenacting, as it does at great length and in extenso the homestead law, following, if it does, the law providing for a limited patent and containing no provision at all with regard to minerals, it raises a question of what class of lands you are confining.

Mr. FERRIS. I will yield to the gentleman from Alaska, who, I am sure, can give you the information.

Mr. WICKERSHAM. In regard to the point made by the gentleman from Illinois [Mr. MANN], the bill was not introduced in the interest of the man who has taken the homestead. It was not introduced for the purpose of preventing him from getting the benefits of the old law, but it was introduced because there is a small area of this good land in Alaska, and it is now being taken by men in these large tracts. There is not enough to go around, and we think 320 acres is altogether too much to allow a homesteader in valleys where there is such a limited quantity of this good land. Along the line of the new railroad there are thousands of people going in, and to allow each one 320 acres is to limit the population too much, which will happen if each one takes 320 acres.

Mr. MANN. Why did you not give the reason when the proposition came up instead of giving the reason that it required them to cultivate too much, which on its face is an absurdity?

Mr. WICKERSHAM. Both reasons are good.

Mr. MANN. The gentleman does not claim that it is a good reason to say if a man has a right to take 160 acres or 320 acres that he wants a law passed saying that he can not take over 160 acres because he can not restrain himself from work.

Mr. WICKERSHAM. We find that where they can take 320 acres or 640 acres they invariably take the maximum and then groan about it.

Mr. MANN. Let them groan.

Mr. WICKERSHAM. I want to limit them so that some other man can get a chance.

Mr. MANN. That is another reason, but it is not the reason set forth in the report. We all know that people have to restrain themselves, restrain their passions and appetite in eating and drinking, and so forth, but to say that a man must restrain his passion for work on a homestead entry by law gets me.

Mr. FERRIS. If the gentleman will yield, in Congress a few years ago we passed the enlarged-homestead act giving the right to enter 320 acres, and they now say they only want to enter 160. Now, what earthly objection can there be to that?

Mr. MANN. No objection on my part, but as a reason on its face it is palpably incorrect. I asked the question hoping that I might find out the real reason for the passage of the bill. It is absolutely silly to say that a man who has the right to take 160 acres or 320 acres insists that Congress shall limit him to 160 acres. He can take 160 acres if he wants it. Everybody knows that that is not the reason for the passage of the bill.

Mr. FERRIS. What is the reason? I know of none other than the one assigned and the additional one, that they desire it.

Mr. MANN. That is what I am trying to find out.

Mr. WICKERSHAM. I stated the reason to the gentleman from Illinois.

Mr. MANN. The gentleman from Alaska may have given the reason, but that is not the reason assigned in the report. The reason assigned in the report is so palpably incorrect that I wanted to know what the real reason was.

Mr. WICKERSHAM. I have given the gentleman the real reason.

The SPEAKER. Is there objection?

Mr. STAFFORD. Mr. Speaker, reserving the right to object, I would like to inquire of the chairman of the committee whether, in considering the question of granting an additional homestead right to those who had heretofore exercised that right in the United States, the committee considered those instances where persons merely go on to timberlands, strip the timber off, and dispose of it, without any idea of making it a permanent home. I know, on a visit to Canada some years ago as a member of the select committee on pulp and paper investigation—the Mann Committee, so called—we found numerous instances in northern Canada where persons made it a practice of locating on timberlands with the sole idea of stripping the lands of the timber, selling it, and then abandoning the land. We all know that in Alaska there are large timberlands.

Mr. FERRIS. But the timberlands are all in the forest reserves.

Mr. STAFFORD. Oh, there are some lands outside of the forest reserves that necessarily have timber on them, and the idea came to my mind whether this would not permit that character of exploitation?

Mr. FERRIS. Mr. Chairman, I will give the theory of the committee. Of course, what the gentleman says now touches section 2 of the bill, and what the gentleman from Illinois [Mr. MANN] was talking about was section 1.

Mr. STAFFORD. Yes; I referred to section 2.

Mr. FERRIS. The committee were of opinion that if any citizen of the United States, whether he had had lands in the States or not, was willing to go up to Alaska and amid the rigid climate there reduce any part of that Territory to a homestead and put it in cultivation he ought to have the right to do it.

Mr. STAFFORD. Mr. Speaker, I am in sympathy with that idea, that those up there should, if they wish to make a permanent home, even though they have heretofore exercised the right of homestead in the United States, be given the privilege in Alaska.

Mr. FERRIS. And let me give the gentleman another reason. There are 370,000,000 acres of unentered land in Alaska, and only two homesteads have ever gone to patent up there. There are 35,000 people, or thereabouts, in the entire Territory. Congress has seen fit to appropriate thirty-five or forty million dollars for a railroad to open that Territory up, and it seems to me the height of folly to remain rigid and binding and hold that country back when there is so much public land there waiting to be taken up by anyone.

Mr. STAFFORD. Can the gentleman inform the House why but two homestead entries have been availed of up there in the frozen north? I know the gentleman was violently opposed to the policy of extending the railroad up into those frozen regions.

Mr. FERRIS. Mr. Speaker, I did not care to go into that feature of it at all, although I think what the gentleman says is true. I thought it was appropriating too much money for such a sparsely settled country. We have such a multiplicity of needs at home. However, it is passed and it is now my duty to help all I can to make it a success.

Mr. STAFFORD. Why is it that but two homesteads have gone to patent up there?

Mr. FERRIS. I think I can tell the gentleman. A few years ago during the Ballinger-Pinchot controversy a great flare went up all over the land that made everyone think, whether rightfully or wrongfully, that they were trying to steal all of the coal mines and the copper mines in that country. The President, perhaps rightfully, withdrew the accessible areas of that land from entry for mineral purposes, not knowing where it was or what it was, and the Geological Survey did not have enough money to enable them to find out. The President by a blanket order withdrew it all, and much of it was not open to any sort of entry and people did not try to go there. If they did, they were abused like pickpockets, if they went there and tried to develop the country. Under those conditions there could not be any development or settlement, and with 370,000,000 acres waiting to be developed, with scarcely any of the land entered, I think we better let these sturdy fellows who have gone on the frontier press a little farther west and develop that territory.

Mr. MONDELL. Mr. Speaker, will the gentleman yield?

Mr. FERRIS. Yes.

Mr. MONDELL. I think if the gentleman from Alaska [Mr. WICKERSHAM] thinks that these homesteads ought to be reduced in size in Alaska we should do it, for he is probably more familiar with the situation than anyone else. He has now given what strikes me as being a good reason for it. The second section is important, and I am entirely in harmony with it, but I want to suggest to the gentleman from Oklahoma that in view of legislation that is following the original homestead act it is not wise to put a new homestead act on the statute books if we can avoid it, and all that is necessary to do to accomplish that which is proposed by section 2 is to say at the end of section 1, "and a former homestead entry in any other State or Territory shall not be a bar to a homestead entry in Alaska." You will accomplish everything, and you avoid several questions that seem to me would be raised under the language in section 2.

Mr. FERRIS. The gentleman from Alaska will probably know better than I, but I think that is a good suggestion.

Mr. WICKERSHAM. I have no objection to that.

The SPEAKER. Is there objection?

There was no objection.

The SPEAKER. This bill is on the Union Calendar.

Mr. FERRIS. Mr. Speaker, I ask unanimous consent that it be considered in the House as in the Committee of the Whole.

The SPEAKER. Is there objection?

There was no objection.

Mr. MONDELL. Mr. Speaker, I offer the following amendment, to come in at the end of section 1, which I send to the desk and ask to have read.

The Clerk read as follows:

Amend, on page 3, by adding, after line 2, the following: "And a former homestead entry in any other State or Territory shall not be a bar to a homestead entry in Alaska."

Mr. FERRIS. Mr. Speaker, the Committee has no objection to that amendment.

The SPEAKER. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. MONDELL. Mr. Speaker, I now move to strike out section 2 of the bill.

The SPEAKER. The question is on the amendment offered by the gentleman from Wyoming to strike out section 2.

The amendment was agreed to.

Mr. FERRIS. Mr. Speaker, I will ask the Clerk to report the committee amendment.

The Clerk read as follows:

Add as a new section the following:

"SEC. 3. That there shall be excepted from homestead settlement and entry under this act the lands in Annette and Pribilof Islands, the islands leased or occupied for the propagation of foxes, and such other lands as have been or may be reserved or withdrawn from settlement or entry."

The SPEAKER. The question is on agreeing to the committee amendment.

The committee amendment was agreed to.

Mr. FERRIS. Mr. Speaker, I ask unanimous consent that the section just adopted be numbered 2 instead of 3.

The SPEAKER. Is there objection?

There was no objection, and it was so ordered.

Mr. LENROOT. Mr. Speaker, I offer an amendment.

The SPEAKER. The gentleman from Wisconsin offers an amendment, which the Clerk will report.

The Clerk read as follows:

On page 1, in line 10, strike out the word "hereof" and insert "of the act approved March 3, 1903, chapter 1012, United States Statutes at Large, page 1028."

The SPEAKER. The question is on agreeing to the amendment.

The question was taken, and the amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. FERRIS, a motion to reconsider the vote by which the bill was passed was laid on the table.

AID TO PARIS, TEX., FIRE SUFFERERS.

The SPEAKER. The gentleman from Texas [Mr. BLACK] has a bill which the Chair thinks is an emergency matter, and, if there is no objection to it, he will recognize him to call it up.

Mr. MANN. Why does not the gentleman make a request to suspend the rules?

Mr. GARNER. If there is no objection to it——

The SPEAKER. The Chair will say to the gentleman from Illinois that this matter——

Mr. MANN. I know not what it is; but I think on unanimous-consent day, even on this matter, it is wiser to recognize him to suspend the rules.

Mr. GARNER. I understand the gentleman from Illinois [Mr. MANN] simply does not want to make a precedent of this character?

Mr. MANN. I did not say that.

Mr. GARNER. I wanted to get the gentleman to say it, if I could.

The SPEAKER. The gentleman from Texas [Mr. BLACK] moves to suspend the rules and pass the bill (H. R. 13769), with an amendment, which the Clerk will report.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of War is hereby authorized to supply for temporary use, under such rules and regulations as he may prescribe, a sufficient number of tents to afford shelter for the sufferers from the recent conflagration in Paris, Tex., who are in need of the same.

SEC. 2. That the sum of $60,000 is hereby appropriated, out of any money in the Treasury not otherwise appropriated, to be expended under the direction of the Secretary of War in the purchase and distribution of tents, cots, and blankets to such destitute person as may require assistance in said conflagration district.

Mr. MANN. Mr. Speaker, I ask for a second.

Mr. BLACK. Mr. Speaker, I ask unanimous consent that a second may be considered as ordered.

Mr. MONDELL. Has the amendment been read?

The SPEAKER. No. The Clerk will read it right now.

The Clerk read as follows:

Pages 1 and 2, after the enacting clause, strike out all of the language of the bill and insert in lieu thereof the following:

"That the Secretary of War is authorized to supply for temporary use, under certain rules and regulations as he may prescribe, a sufficient number of tents to afford shelter for the sufferers from the recent conflagration in Paris, Tex., who are in need of same, and to furnish such cots, blankets, and supplies as in his judgment are necessary to relieve the destitute persons who may require assistance in such conflagration district."

The SPEAKER. Is a second demanded?

Mr. MANN. Mr. Speaker, I demand a second.

Mr. BLACK. Mr. Speaker, I ask unanimous consent that a second may be considered as ordered.

The SPEAKER. Is there objection?

There was no objection.

Mr. MANN. May I ask the gentleman whether the word "supplies" in there includes food?

Mr. BLACK. I will say to the gentleman from Illinois that I assume that matter would depend on such construction as the Secretary of War might give it.

Mr. MANN. I have no doubt of that, but I would like to ascertain in advance what the construction is.

Mr. BLACK. I do not think any rations will be necessary at all, and it is not contemplated that rations will be furnished, unless the situation requires it. I will say to the gentleman from Illinois that the people of Paris have raised locally, so I am informed, the sum of $22,000, and the neighboring cities have raised about $23,000, to take care of these immediate necessities for food supplies. These amounts will probably care for all the emergency needs for food.

Mr. MANN. I would like to ask the gentleman from New York [Mr. FITZGERALD], the distinguished chairman of the Committee on Appropriations, who I believe drafted the amendment, whether this is intended to cover the furnishing of rations or food?

Mr. FITZGERALD. Yes; if it is found to be necessary. I mean that the intention was that if a situation existed there in the emergency where it is thought by the War Department to be necessary to issue rations to persons in that district, they should have power to do so.

Mr. MANN. This bill, which was ordered reported and dropped in the basket on Saturday, has not yet come into my hands, and I was informed on Saturday that the Committee on Military Affairs had decided not to recommend the furnishing of food. I do not know whether that is correct or not. But that was the impression I got.

Mr. GARNER. The gentleman from Illinois is in error about that. The Committee on Military Affairs reported a bill carrying an appropriation of $60,000 for cots, tents, and rations.

Mr. BLACK. And supplies.

Mr. MANN. I am afraid the gentleman from Texas [Mr. GARNER] is in error now.

Mr. BLACK. I will say to the gentleman that the Committee on Military Affairs in the bill that they have reported to this House, and which is the bill introduced by me on March 27, used the same language as is used by the gentleman from New York [Mr. FITZGERALD] in the amendment which he has proposed. The only difference is that his amendment eliminates the specific appropriation of $60,000 and authorizes the Secretary of War to go ahead and give such relief as he finds necessary, and the sum expended will be covered by a deficiency appropriation later on. This is the effect of the amendment prepared by the gentleman from New York [Mr. FITZGERALD].

Mr. MANN. Was there a question raised in the Committee on Military Affairs as to whether we should furnish rations or not?

Mr. BLACK. I will say to the gentleman that the bill as originally drafted did use the word "food."

Mr. MANN. Did not the committee cut that out?

Mr. BLACK. They did; and used the same language as used here by the gentleman from New York [Mr. FITZGERALD] in his amendment which he drafted, which eliminates the word "food" and substitutes in lieu thereof the words "and such supplies as in the judgment of the War Department are necessary."

Mr. FITZGERALD. This amendment contains the language from the bill as reported from the Committee on Military Affairs and simply rearranges it some. I was under the impression from statements that have been made to me that there might be a condition where it would be highly desirable, if not important, to issue rations and supplies for temporary use. Therefore such provision was left in the bill, at the request of the gentleman from Texas [Mr. BLACK].

Mr. MANN. Oh, I appreciate that; but I thought that the Committee on Military Affairs had decided that they would not recommend the furnishing of food, and I did not desire then, through the inadvertence of the gentleman from New York [Mr. FITZGERALD] in drafting an amendment to cover it, to let it go without anybody knowing it. I supposed the gentleman from New York was informed.

Mr. FITZGERALD. The wording of the amendment as now proposed is no broader than the bill as reported. It contains no additional wording and no additional language.

Mr. MANN. Very well.

Mr. FITZGERALD. The word "ration" or "food" is not mentioned, but in order to avoid a specific appropriation it

could only be done by combining the two separate sections of the bill in one section to have it read with anything like consistency.

Mr. MANN. In my recollection we passed a joint resolution not long ago to furnish supplies to people on the Mississippi River, and the War Department raised a question about it—about there being no appropriation.

Mr. DAVIS of Texas. Mr. Speaker, will the gentleman yield there?

The SPEAKER. Does the gentleman from Illinois yield to the gentleman from Texas?

Mr. MANN. In a moment.

Mr. FITZGERALD. In that case this was the situation, if I recall correctly: The department had no plantation rations, which were different from the Army rations, and it wanted authority to be able to obtain supplies to issue the plantation rations in case it was necessary. The department would prefer a specific appropriation to be made, but there will be a deficit in these appropriations, anyway, and, because of the number of resolutions of this character that continuously come before Congress, it is believed better to clothe the department with the power to do what is necessary under these emergencies and let Congress provide the money subsequently.

Mr. MANN. I have no objection. I yield to the gentleman from Texas.

Mr. DAVIS of Texas. Mr. Speaker, I wish to say to the gentleman from Illinois [Mr. MANN] that I represent the State of Texas at large and, besides, that is one of my neighboring cities. It was one of the most disastrous fires that ever occurred in the United States. About the fourth building that was burned was the power house, leaving the town helpless, with no power to throw water, and the flames swept through in front of a vast gale, which, I understand, left 240 acres practically bare, making hundreds of families homeless. We do not want to let anything go by default, and we want the House to know exactly what we are asking. But we ask that something be done speedily and without hesitation.

The SPEAKER. The question is on suspending the rules and passing this bill.

The question was taken; and two-thirds having voted in the affirmative, the rules were suspended and the bill was passed.

RELIEF OF SETTLERS WITHIN LIMITS OF GRANT TO NEW ORLEANS, BATON ROUGE & VICKSBURG RAILROAD CO.

Mr. ASWELL rose.

The SPEAKER. The gentleman from Louisiana [Mr. ASWELL] is recognized.

Mr. ASWELL. Mr. Speaker, I move that the rules be suspended and that the bill H. R. 540 as amended be passed.

The SPEAKER. Is the amendment in the bill?

Mr. ASWELL. Yes.

The SPEAKER. The Clerk will report the bill.

The Clerk read the title of the bill, as follows:

A bill (H. R. 540) for the relief of settlers within the limits of the grant to New Orleans, Baton Rouge & Vicksburg Railroad Co.

Mr. CRAMTON rose.

The SPEAKER. For what purpose does the gentleman from Michigan rise?

Mr. CRAMTON. To make the point of order that there is no quorum present.

The SPEAKER. The gentleman from Michigan makes the point of order that there is no quorum present. The Chair will count. [After counting.] Evidently there is no quorum present.

Mr. CRAMTON. Mr. Speaker, I withdraw the point.

Mr. MANN. It is too late, Mr. Speaker.

The SPEAKER. It is too late.

Mr. CRISP. Mr. Speaker, I move a call of the House.

The SPEAKER. The gentleman from Georgia [Mr. CRISP] moves a call of the House.

A call of the House was ordered.

The SPEAKER. The Doorkeeper will close the doors, the Sergeant at Arms will notify the absentees, and the Clerk will call the roll.

The Clerk called the roll, and the following Members failed to answer to their names:

Abercrombie	Carlin	Davenport	Flynn
Adair	Carter, Mass.	Dempsey	Gallagher
Bacharach	Cary	Dent	Gallivan
Barchfeld	Casey	Dewalt	Gardner
Beales	Charles	Dill	Garrett
Borland	Coleman	Dooling	Glass
Browning	Cooper, Ohio	Doremus	Godwin, N. C.
Bruckner	Costello	Dowell	Graham
Buchanan, Ill.	Crago	Drukker	Gray, N. J.
Burnett	Crosser	Dunn	Griest
Butler	Curry	Edwards	Guernsey
Callaway	Dale, N. Y.	Fairchild	Hamill
Cantrill	Dallinger	Finley	Hamilton, N. Y.
Carew	Darrow	Flood	Haskell
Hay	London	Nichols, Mich.	Scully
Hayes	Longworth	North	Sells
Henry	Loud	Oakey	Shackleford
Hill	McAndrews	Olney	Siegel
Hilliard	McCracken	Overmyer	Slayden
Houston	McCulloch	Padgett	Slemp
Humphreys, Miss.	McDermott	Parker, N. J.	Smith, Minn.
Husted	McFadden	Patten	Smith, N. Y.
Hutchinson	McKellar	Peters	Snyder
Jones	McKenzie	Platt	Stedman
Kearns	Maher	Pou	Sutherland
Keating	Martin	Powers	Swift
Keister	Meeker	Price	Tilson
Kennedy, Iowa	Miller, Del.	Ragsdale	Tinkham
Kennedy, R. I.	Montague	Reavis	Vare
Kiess, Pa.	Mooney	Riordan	Walker
Kreider	Moore, Pa.	Roberts, Mass.	Wason
Lafean	Moores, Ind.	Rodenberg	Watkins
Lesher	Morin	Rowe	Watson, Pa.
Lewis	Morrison	Rowland	Williams, Wm. E.
Liebel	Mott	Rubey	Wingo
Lloyd	Neely	Sabath	Wood, Ind.
Loft	Nicholls, S. C.	Scott, Pa.	Young, Tex.

The SPEAKER. On this vote 285 Members, a quorum, have answered to their names.

Mr. KITCHIN. Mr. Speaker, I move to dispense with further proceedings under the call.

The SPEAKER. The gentleman from North Carolina moves to dispense with further proceedings under the call.

The motion was agreed to.

The SPEAKER. The Doorkeeper will unlock the doors, and the Clerk will report the bill.

The bill (H. R. 540) for the relief of settlers within the limits of the grant to the New Orleans, Baton Rouge & Vicksburg Railroad was read, as follows:

Be it enacted, etc., That the Secretary of the Interior be, and hereby is, authorized and directed to immediately take up and resume the adjustment and adjudication of all rights and privileges relinquished, granted, conveyed, and confirmed to the New Orleans Pacific Railway Co., as the assignee of the New Orleans, Baton Rouge & Vicksburg Railroad Co., by the act of Congress approved February 8, 1887, and entitled "An act to declare a forfeiture of lands granted to the New Orleans, Baton Rouge & Vicksburg Railroad Co., to confirm title to certain lands, and for other purposes," subject to all the provisions and conditions therein contained for the protection of actual settlers, their heirs, and assigns.

SEC. 2. That on the application of persons to make entry in accordance with the provisions of the act aforesaid, the rights only of those who were actual settlers at the date of definite location, their heirs, or other persons to whom they may have assigned their possessory rights prior to December 1, 1913, shall be given consideration as against the outstanding patent or patents to the New Orleans Pacific Railway Co.

SEC. 3. That in determining rights asserted by or on behalf of actual settlers, their heirs or assigns, proof showing actual settlement at the date of definite location and the existence of such settlement and occupancy at the present time shall be deemed prima facie evidence of the continuity of the settlement claim.

SEC. 4. That all claims adverse to the New Orleans Pacific Railway Co., or its successors in interest, which are not asserted as herein provided within the period of two years from the passage and approval of this act shall be deemed and considered forever barred.

The SPEAKER. Is a second demanded?

Mr. CRAMTON. Mr. Speaker, I demand a second.

Mr. ASWELL. I ask unanimous consent that a second may be considered as ordered.

The SPEAKER. The gentleman from Louisiana asks unanimous consent that a second be considered as ordered. Is there objection?

There was no objection.

The SPEAKER. The gentleman from Louisiana [Mr. ASWELL] has 20 minutes and the gentleman from Michigan [Mr. CRAMTON] 20 minutes.

Mr. ASWELL. Mr. Speaker, I yield five minutes to the gentleman from Oklahoma [Mr. FERRIS], chairman of the Committee on the Public Lands.

Mr. FERRIS. Mr. Speaker, in 1871 the New Orleans, Baton Rouge & Vicksburg Railroad Co. received a land grant, a part of which was in the district represented by the gentleman from Louisiana [Mr. ASWELL]. He has introduced a bill providing that certain settlers may have their rights adjudicated before the Interior Department. To pass such a bill is but scant and tardy justice. The bill was drafted by the Interior Department. Two drafts were made, draft No. 1 and draft No. 2. The department was of the opinion that draft No. 2 was the best one. Draft No. 2 was brought out as a substitute for the original bill. Draft No. 2 last year, as well as this year, received the favorable report of the committee and passed the House last Congress with little or no opposition. In fact, I think it passed by unanimous consent last year. The railroad grant was for approximately 3,000,000 acres of land to the New Orleans, Baton Rouge & Vicksburg Railroad Co., upon condition that they build certain lines of railroad. They did not build the railroad, or at least built only a small part of it, and the grant failed. Later, some 8 or 10 years afterwards, I think in 1885, the grantee railroad company, by deed, transferred what rights they had to another railroad company. It developed that they had no

rights to convey, and the new railroad company came to Congress and asked it to pass an act giving them the right to build the railroad and further to confirm the grant. On their application an act was passed in 1887 confirming the title of the railroad to certain of the lands where the railroad had built the line and forfeiting that part where the railroad had not constructed the line.

Section 2 and section 6 of that act both provided that, in so far as any of the lands contained within the grant had settlers residing upon them, the title should not pass. However, the grantees under the railroad company later came to Washington and received patents to their lands, notwithstanding the fact that settlers were actually living on the lands. But all of the patents presented to us in the hearings—and I therefore assume they all contained it—specifically provided that the grant of title should not and did not pass, except under a certain reservation which was set up in the patent.

The timber companies who now own most of these lands say they should not be disturbed, because they bought from the railroad, which held a Government patent. They did buy from the railroad, which had obtained a patent, but it was a limited patent, having in it the express condition that the grant was subject to the reservation in the act of 1887.

The issuance of these patents ignoring the settler was erroneous, and the Interior Department now wants to be given authority to reinvestigate this erroneous issuance of patents, and adjust and, in all things, adjudicate the controversy.

This is not too much to ask. This violates no vested rights. This only affords a day in court those who had their rights patented away without any such day in court.

We will be told these lumber people purchasing this land are innocent purchasers, for value, and so forth. This, we think, could not be, as the patents and the law all put purchasers on full notice of the limited title that could be acquired.

Mr. CHIPERFIELD. Will the gentleman yield for a question?

Mr. FERRIS. I have only a moment, but I yield to the gentleman.

Mr. CHIPERFIELD. Have the committee a copy of the language used in the reservation in the patent?

Mr. FERRIS. We have the entire patent in the hearings.

Mr. CHIPERFIELD. I wish the gentleman would give that language to us.

Mr. FERRIS. I have not the time to do it, but it appears in the hearing, and the provision is very specific. The gentleman from Louisiana will have a little more time, and perhaps he can give it to the gentleman. It is here on the desk.

Now, it has been said here that this act ought not to pass, on the theory that to pass it would be to take away vested rights. We do no such thing, and the bill does not even attempt it. It merely authorizes the Interior Department to do plain justice in readjudicating the relative rights. We repeal no law; we upset no vested rights. The report of the Interior Department is very full and complete. The hearings are quite complete. There should be but very few votes against this bill. It ought to pass by unanimous consent. Under the procedure to-day two-thirds of those voting must vote "yea" to suspend the rules.

This is but scant and tardy justice to these old settlers. They have been denied their titles for almost 50 years now.

The SPEAKER. The time of the gentleman from Oklahoma has expired. Does the gentleman from Michigan want to use any of his time?

Mr. CRAMTON. I yield 10 minutes to the gentleman from Michigan [Mr. FORDNEY].

Mr. FORDNEY. Mr. Speaker, the lands affected by this bill were withdrawn for the purpose of aiding in the construction of a railroad through Louisiana in 1871. The definite line of location of the road was established in 1881 and 1882. Two-thirds of the lands in this grant were patented prior to 1885, and the Government reserved to the actual settlers upon the land at the time of the definite location of the line of the road all the rights of those settlers.

There have been acts of Congress and agreements entered into. Later on a Member of Congress and one or both Senators from Louisiana, representing these claimants, entered into an agreement with representatives of the railroad company that the actual settlers upon the land at the time the definite line of location of the road was fixed were to have two years within which to come in and settle and obtain title to their lands. A great many did come in and obtain title.

There are two questions involved in this matter, gentlemen. On March 2, 1896, Congress passed an act which provides that the holder of any patent erroneously issued by the Government shall become possessed of a good title unless the Government within five years proceeds to cancel the same. That act further provided that patents issued in the future should be unassailable by the Government after having been in existence six years; that is to say, that the statute of limitations should run in favor of that patent, and the Government be barred from proceeding to cancel it after six years.

None of the lands in question are owned to-day by the railroad company that earned them or any other railroad company. They are in the hands of bona fide purchasers. For years those lands were absolutely worthless. Homesteaders did not want them because they could not utilize the timberlands for farming purposes until the country was opened up by the railroads and the sawmills established in the country, whereby the timber became valuable. As an illustration, in 1890, on the 10th of April, 147,000 acres of these lands were sold at public auction at 13.56 cents per acre, or $20,000 for the whole 147,000 acres.

Mr. ASWELL. Will the gentleman yield?

Mr. FORDNEY. Yes.

Mr. ASWELL. Will the gentleman state who sold and who purchased the land?

Mr. FORDNEY. It does not make any difference who sold or who bought the lands; they were bid in for 13.56 cents per acre.

Mr. ASWELL. The same man that sold it bought it, did he not?

Mr. FORDNEY. The same man that brought suit to have them sold; but is it not true that the bidding was open to the whole public to bid on the land? Now, a fact that the gentleman perhaps will not tell you is that these cases now are in the courts of the United States, and last week on the 29th and 30th days of March in the Court of Appeals in the State of Louisiana five of these cases as test cases were argued and have been submitted and are now awaiting decision. And yet the gentleman would come in and ask that the right be taken away from the court to settle the disputed question between the bona fide purchasers of these lands and these would-be claimants. I believe that I am safe in saying to the gentleman from Louisiana that there is not a single claimant now claiming these lands that was a settler upon the land at the time the railroad company's rights attached to the land.

Mr. ASWELL. Will the gentleman yield. I will ask the gentleman if he says that not a single claimant was an original settler——

Mr. FORDNEY. I think I am safe in saying that there is not a single claimant to-day that was a settler on the land at the time the rights of the railroad attached in 1881 and 1882.

Mr. ASWELL. If that be true, how does it happen that at the first hearing before the Public Lands Committee of the House the heirs of Jay Gould came before the Department of Justice and paid 38 of these settlers, and I have a sworn statement——

Mr. FORDNEY. Will the gentleman yield me some of his time if he is going to take up mine? The bill provides that you are going to adjust the claims of the settlers, their heirs and assignees. I was present at the hearing before the Committee on the Public Lands two years ago when the first bill was being considered, which you introduced, it was there stated that a man came in and claimed to be the assignee of an original settler.

Let me show you what an assignee can do. Here was a case where a man settled upon the land down here, and by courtesy permitted his brother to move onto the same land which he claimed, and the brother cleared a little patch of land and lived there. The original settler sold his right and moved away, and so did the brother. Later on the brother comes in and claims to be the original settler on the land and assigns his claim. A settler upon 40 acres in the center of a section, either one of these four center forties can assign 600 acres, 15 contiguous forties, one to the other. Many assignments can be made by the same man where he had settled on 40 acres. If I only had the time, I could explain this more clearly. But the objection to this bill is that the people who now claim to be the bona fide purchasers of these lands, holding title under a Government patent, two-thirds of which was patented prior to 1885, and in face of the fact that there is a law on the statute books that bars the Government by statute of limitations to begin a suit to cancel a patent after it has been in existence six years.

The SPEAKER. The time of the gentleman has expired.

Mr. CRAMTON. I yield to the gentleman two minutes more.

Mr. FORDNEY. This bill now proposes to put the power in the Secretary of the Interior to take the title away from these people that have purchased and paid a valuable consideration for the land and paid taxes on the land all these years. Not a single one of these men whose claims are now pending as-

serted any rights to these lands until after the lands had become valuable for the timber thereon.

Gentlemen, let me say that in 1893 I was in the State of Louisiana looking at lands on even sections right where these lands are located, and the choicest locations of fine timber at that time were offered to me for $2.50 an acre. Nobody wanted timber in Louisiana, for timber then had but little value. I say the 147,000 acres that were sold at 13½ cents are just as good farming lands and better than these timber lands, because the timber lands can not be used for cultivation until the timber has been cut off.

The real "nigger in the fence" is the fact that the bill provides that the assignees of the old original claimants are the men that can get these lands, and the bill ingeniously states that if he has presented his claim or settled on the land prior to 1913.

You and I know that an unscrupulous man can purchase an assignment from another unscrupulous man and put in any date he sees fit to. There are in suit 16 of these cases to be decided by the court within the next 30 or 60 days—five test cases. These gentlemen want to take the right away from the courts to settle this great and important question on so much valuable land and place it in the hands of the Secretary of the Interior. I say, gentlemen, it is absolutely wrong and cruel and beyond the rights of Congress to do a thing of that kind, and you will bring these people into court and cause extraordinary expense in litigation if you pass this bill.

The SPEAKER. The time of the gentleman from Michigan has again expired.

Mr. ASWELL. Mr. Speaker, I yield five minutes to the gentleman from Wisconsin [Mr. LENROOT].

Mr. LENROOT. Mr. Speaker, the gentleman from Michigan [Mr. FORDNEY] has made two points that would be well taken if they were applicable to this bill. He says, first, that we propose in this bill to take away from the courts the jurisdiction to decide the questions involved, and, in the second place, that we propose to give to the Secretary of the Interior the right to take title of these lands from the purchasers. We do neither of these things by the pending bill. As has been stated, in 1871 a land grant was given to the New Orleans & Pacific Railway. They failed to fulfill the terms of the grant, and they assigned to the New Orleans, Baton Rouge & Vicksburg Railway Co. such rights as they had in the grant. On February 8, 1887, Congress forfeited a certain portion of that grant and confirmed a certain other portion to the New Orleans, Baton Rouge & Vicksburg Railway Co., but in making that grant there was a proviso that reads as follows:

Provided, That all said lands occupied by actual settlers at the date of the definite location of said road and still remaining in their possession, or in possession of their heirs or assigns, shall be held and deemed excepted from said grant and shall be subject to entry under the public-land laws of the United States.

Mr. Speaker, the pending bill relates only to lands that had actual settlers upon them at the time referred to, and as to those lands there never was a grant to the railroad at all under the express provisions of the grant. Further on in the bill it is provided that where the lands have been patented those lands shall also be deemed subject to the rights of the settlers. This was February 8, 1887.

On March 3, 1887, a little less than a month later, Congress passed a general act providing for the general adjustment of all land grants, and these purchasers claim, because that act had an innocent purchaser's clause in it, that they are entitled to the benefits of that act, but this act of February 8, 1887, especially provided that the New Orleans, Baton Rouge & Vicksburg Railway Co., before they were entitled to the benefits of the act, should accept it in all its terms, and in April, a month after the passage of the general act, in March, the railroad filed its acceptance with the Secretary of the Interior, getting the benefits and assuming the burdens of the grant. Then in March, 1896, the general statute of limitations act was passed applying to all land grants in general, by which it was provided that the Government should be barred after five years after the passage of the act from bringing any action on any patent erroneously issued, and as to all future patents erroneously issued action should be brought within six years or they should be forever barred.

This railroad company did sell, as has been stated, to various purchasers, and it was admitted before our committee that unless the acts of March 3, 1887, or the general act of 1896 protected them because they were innocent purchasers, they had no title to these lands and the settlers were entitled to make homestead entries. And so, Mr. Speaker, the only question is a question of law. The question is whether or not these people are entitled to the benefit of the statute of limitations of the two acts to which I have referred. The reason this comes before Congress is that a number of years ago the Department of the Interior held that the act of 1896 and the act of 1887 did apply to this particular grant, notwithstanding its acceptance by the railroad company, and notwithstanding the specific provisions contained in it. The department now is of opinion that those decisions were erroneous, and has stated that if it was open as an original question it would reverse the decisions made many years ago in relation to this grant.

The SPEAKER. The time of the gentleman from Wisconsin has expired.

Mr. LENROOT. Can I have two minutes more?

Mr. ASWELL. I grant the gentleman two minutes more.

Mr. LENROOT. But in view of that line of decisions that shut out all these settlers the department has said that they did not feel warranted in opening this matter up unless they had a legislative direction from Congress to do so, and that is what this bill does and nothing more. It directs the Secretary of the Interior to reopen this matter and adjust this grant, leaving the act of 1896 to apply if it ought to apply, leaving the act of 1887 to apply if it ought to apply. It does not deprive one of these purchasers of a single right that he has. If the Secretary of the Interior shall find that the act of 1896 does not apply, or the act of 1887, he will presumably allow entries of these settlers for homestead entries, but if he does that every one of these purchasers well have his remedy in court to get a decision on the questions involved, because that is purely a question of law that is not binding upon these purchasers in any degree. It gives these settlers an opportunity to get an adjudication of their rights. It deprives these purchasers of timberlands of no legal rights that they possess.

Mr. FORDNEY. Mr. Speaker, will the gentleman yield?

Mr. LENROOT. Yes.

Mr. FORDNEY. Have not practically all of the cases that have been decided by the court been decided in favor of the bona fide purchasers?

Mr. LENROOT. I hold in my hand a letter from the Government counsel. Some of the cases are now pending in the United States Circuit Court of Appeals, and the Government counsel asserts that in his opinion there is no question but that these timber purchasers will not succeed in the court of appeals but——

Mr. MAPES. They did succeed in the court below.

Mr. LENROOT. If the court of appeals does decide this in their favor, does decide that the act of 1896 applies, then the Secretary of the Interior in readjusting this grant will, of course, follow the law as laid down by the circuit court of appeals.

The SPEAKER. The time of the gentleman from Wisconsin has again expired.

Mr. CRAMTON. I yield three minutes to the gentleman from Illinois [Mr. MADDEN].

Mr. MADDEN. Mr. Speaker, I think wherever there is a case in court in process of adjudication it ought not to be legislated out of court; that the final adjudication of the matter should be left to the court. There is no reason why this body should assume jurisdiction while the case is under consideration by the courts of the land. There can be no doubt but that a right conclusion will be reached by the court if the matter is allowed to go to a conclusion. And it is because of my belief that never under any circumstances should this body assume jurisdiction of a case that is in litigation——

Mr. ASWELL. Will the gentleman yield?

The SPEAKER. Will the gentleman from Illinois yield to the gentleman from Louisiana?

Mr. MADDEN. No; I have but a minute or two.

So my opposition is based entirely on the fact that the questions involved in this case are in process of litigation, and because of that fact this House ought to move slowly. I am told that the case is likely to reach a conclusion in the not far-distant future—not to exceed 30 or 60 days—and if that be true this body can well afford to wait. And if after the courts have reached a conclusion there is any legislation necessary, this House will still have jurisdiction. Now, why hurry the case? Why run pell-mell into the enactment of a law to take away from the courts of the land the consideration of a question as important as this? I recall, not long since, another bill of this character, where on the face of the bill itself there was no evidence whatever that an attempt was being made by the House to legislate the case out of court, but during the consideration of the bill questions were asked, and the answers disclosed that if the bill became a law the question would be taken away from the courts. And so the House very wisely decided that ought not to be the case. Although I believe the House was almost unanimously in favor of the bill to begin with, when

the facts were disclosed they refused to pass the bill. And I hope they will do that in this case.

The SPEAKER. The time of the gentleman has expired.

Mr. CRAMTON. Mr. Speaker, have I four minutes remaining?

The SPEAKER. Yes.

Mr. CRAMTON. Mr. Speaker, the act was passed in 1871, which provided the first grant. That was assigned to a second company, which built the road which called for the lands in question. In 1887 an act was passed confirming the title of the second company as to all the lands in question. The settlers at that time were taken care of by two provisions—first, a provision that any lands actually occupied at the time of the location of the road by settlers should be thrown open to homestead entry; so these settlers could have homesteaded the land. And, second, settlers in possession of the land at a certain time could purchase the land of the company at $2 an acre, one-third down—about 66 cents—and the balance in four annual payments—an annual payment of 33 cents a year. Those were the terms provided, and practically no one availed himself of them. Practically none of them were homesteaders. They were simply squatters, hunters, who were hung up there temporarily, with no desire to buy. Now the lands have gone into the hands of the fifth and sixth purchasers, and have gone up in price, and they desire to overturn the act of 1896, which was to quiet title within a period of five or six year. Within that period of six years a suit was brought by the United States. The district attorney curried over the whole area and dug out all the cases he could find that gave any promise of merit—some 150. These were embraced in a suit brought by the Government. That suit not being pushed, eventually he selected from those 150 a smaller number, which claims were embraced in another suit, and that is now in the courts, was argued last week, and a decision will soon be reached.

So it is apparent to anyone here that has had the time to examine the records that the act of 1896 does apply and ought to apply. Can you imagine the difficulty of defending the title against these squatters down there in their own neighborhood who can under this act establish title if they can once prove that they have had possession in the remote past? They are not required to prove they have had continuous possession. The bill only requires proof that they were in possession in 1887 and that they are in possession now. The period in between is not covered by this act, and these people, these men, largely from the North, who have gone down there and invested their money in good faith, fifth or sixth in the chain of title, are asked to surrender their title on any evidence that can be trumped up.

They tell us that the United States Court of Appeals is going to do so-and-so. What have the courts done? There have been 26 law cases and 9 equity cases involving these lands, and in every one the settlers have been defeated. There have been five of those equity cases appealed, and they are now pending. Why not wait and see what are done in those cases? There are two cases in Louisiana State courts in which the settlers were defeated. Why not let the law take its course, instead of Congress in 40 minutes trying to pass on litigation 40 years old?

Mr. ASWELL. Mr. Speaker, the statement made by the gentlemen who have preceded me are erroneous in many respects. In the first place, the arguments made by the gentleman from Michigan [Mr. FORDNEY] have been made five times before the various committees of the House and Senate during the past three years. Even those very maps were brought before those committees and presented, practically the same maps, without any effect, because committees understood the absurdity of the proposition presented at that time and now.

The gentleman from Michigan, for whom I have the profoundest respect, made a speech on the floor of this House in the Sixtieth Congress, in 1908, in opposition to the Senate joint resolution authorizing the Attorney General of the United States to punish violators of the Oregon land grant. The contest was waged here for three hours, led by the gentleman from Wyoming [Mr. MONDELL], and opposed by the gentleman from Michigan [Mr. FORDNEY].

Mr. FORDNEY. Will the gentleman yield?

Mr. ASWELL. Let me finish my statement. And after three hours of debate this House voted 247 in favor of that Oregon resolution, and exactly 7 voted with the gentleman from Michigan [Mr. FORDNEY].

Mr. FORDNEY. Mr. Speaker, will the gentleman yield?

Mr. ASWELL. Yes.

Mr. FORDNEY. The gentleman is in error. I have opposed that bill so far as the bona fide purchasers were concerned, and their titles have been confirmed by the Government, sir.

Mr. ASWELL. And this same measure, Mr. Speaker, that was passed by the House the Supreme Court has confirmed. A bill is now favorably before the Public Lands Committee for $50,000,000 to be returned to the Government.

It has been stated that these settlers have not tried to be heard. Mr. Speaker, for 30 years and more those settlers, who have not had the money to come to Washington or to prosecute their cases before the courts, have been trying to be heard. It was only during the last Congress that they were ever given any recognition, and the settlers came to this city and presented their case in person. The efforts of the opposition all the way has been and is for delay. As to the old settler who testified before the committee and to whom the gentleman referred as having purchased his home at a very small price, strange it is that he was in such wrong that the guilty Jay Gould heirs at the close of that hearing took him out and gave him $300 in money and a deed to his home. If he had no claim, why did the Jay Gould heirs pay him for his timber and deed him his home?

Mr. FORDNEY. Mr. Speaker, will the gentleman yield there?

The SPEAKER. Does the gentleman from Louisiana yield to the gentleman from Michigan?

Mr. ASWELL. Yes.

Mr. FORDNEY. Is it not true that these settlers made a perfect title, so that title could be passed?

Mr. ASWELL. This bill is intended to permit the Land Office to adjudicate the title so that all men can know to whom the lands belong. And let me say to the gentleman from Michigan [Mr. FORDNEY] that when it comes to a contest between the Lumber Trust or any other trust and the average citizen of this Republic you will always know where to find me.

Mr. FORDNEY. Mr. Speaker, will the gentleman yield?

Mr. ASWELL. I decline to yield further.

Mr. FORDNEY. I yielded to the gentleman.

Mr. ALLEN rose.

Mr. ASWELL. I yielded to the gentleman twice. I now yield to the gentleman from Ohio [Mr. ALLEN].

Mr. MANN. The gentleman will not make anything by that.

Mr. ALLEN. About two weeks ago I received a letter from former Gov. Harmon, of Ohio, stating that a good many years ago he purchased for cash, at a good price, some timberlands in Louisiana that are affected by this bill and stating that they are within the St. Landry and Calcasieu Parishes. Now, the gentleman from Louisiana was good enough to write me a statement, which I forwarded to Gov. Harmon last week, but, unfortunately, he has had illness and death in his family, and I have not had time to receive an answer from him. But I would like to inquire of the gentleman——

Mr. ASWELL. I will say to the gentleman from Ohio that this land grant is not near those two counties or parishes. The governor's land holdings are not in this grant. I took the pains since I discussed the matter with the gentleman from Ohio to have the court records searched, and Gov. Harmon's lands, I find, are not in this grant.

Mr. ALLEN. Those lands would not be affected?

Mr. ASWELL. Those lands would not be affected. And I will say, further, at this point that the gentlemen who are interested in opposition to this bill have gone to the greatest extremes in the last few weeks. They have tried to enlist the influence of gentlemen like the gentleman to whom my friend from Ohio refers, they brought a lobby to this Capitol, and some of them are in the galleries of this House now. One is hiding now behind his hat.

Beyond that they have gone to the State of Arkansas and employed a gentleman to come here as a legal attorney probably because he served in the House with two Members of the Senate. And, Mr. Speaker, they have gone beyond that and have appealed in the magic name of "conservation," trying to make it appear that this little bill, merely putting up to the Land Office the right to adjudicate some of these cases in the eighth district of Louisiana, would affect the great question of conservation in the United States and in all the world. They tried to fool the senior Senator from Georgia on this point.

Mr. FORDNEY. Mr. Speaker, will the gentleman yield?

The SPEAKER. Does the gentleman from Louisiana yield again to the gentleman from Michigan?

Mr. FORDNEY. I will ask to have the gentleman's time extended.

Mr. ASWELL. I yield, but you can not extend my time.

Mr. FORDNEY. Is it not true that under the laws of the State of Louisiana a peaceable possession for 10 years under color of title passes title?

Mr. ASWELL. It is not true.

Mr. FORDNEY. And 30 years are required?

Mr. ASWELL. Thirty years are required.

Mr. FORDNEY. Therefore these men do not need 30 years.

Mr. ASWELL. The statute of limitations does not operate against the Government, but some of these settlers have waited 50 years without a decent hearing.

Mr. FORDNEY. It is the statute of limitations you are attacking.
